A 6½ hr. long lesson learnt on way to Bangalore and back.

8.00 a.m.: Tring Tring, rings the phone! And off I am, rushing to Bangalore on behalf of my boss. To make it in time for the Dealer Conference. And I do! (despite a 2 hour flight delay).

In the excitement of addressing the conference, I forgot everything. Even my tired, aching feet, full of blisters. But not for long.

Evening saw me at a shoe store. It's there that I came across Windsor shoes. "Genuine Leather with an exclusive PU sole, with heel. Try it Sir," the Salesman said, "very comfortable."

He was right. I must say.

Life's been a song since then. No pinches. No aches. Until today, 3 days later. For 1 hr off Bangalore, I realised, I was wearing my old shoes again. God! If only I'd worn my Windsors. ***Life's so much easier with them.***

LETTER FROM THE PUBLISHER

Who must we hold responsible for the mess we find ourselves in today? If one thinks about it carefully, there are probably less than a dozen people who determine the economic fate of India's 844 million people (according to the latest census). On a day-to-day basis foreign exchange issues are looked after by the finance minister, his finance secretary and a few senior officials; the commerce minister, his secretary and a few senior officials; the governor of the Reserve Bank and a few others there too — all of course under the overall guidance of the prime minister. and a few of the senior civil servants in the prime minister's office. Since the government has changed recently, the corresponding individuals holding these offices a year ago must also be included. Yet knowing the "system", nobody will face the music.

In any other democratic country politicians and officials holding similar positions would be forced to explain their actions (or inaction). Yet surprisingly, after 45 years of democracy none of the key players feels compelled to offer any explanation for his conduct or failures.

Interestingly, these very people pretend to be omniscient and in full control when dealing with the Indian public. But in dealings with the World Bank, the IMF or foreign private bankers and rating agencies they are only too willing to admit that they have been wrong and that they have run out of ideas.

In any other country, the banking and financial sector would have dealt with the situation in a normal business-like manner. But our nationalised banks and financial institutions, being under tight government control, have to await orders. The only persons who have carried on business normally, and who have made fortunes, are those in the *havala* business, for whom there is simply no balance of payments problem. As Keynes said, for every buyer there is a seller. It is simply a question of price.

We at *Business India* have consistently argued that our exchange control policy has been dead wrong. At the beginning of the Rajiv Gandhi government, not so many years ago, we asked a senior economics bureaucrat what could possibly happen if exchange control was freed up. The answer was that the dollar would jump to Rs.15. And industry would not be able to stand the shock of open markets and competition. But clearly, the present system of tight exchange control (administered by a few) and industrial licensing (also dictated by a few) has reached a dead end.

Our economy has much greater strength and resistance than these few politicians and bureaucrats allow. Historically we have been a great trading nation, always with a trade surplus. To be sure, a sudden sweeping away of rigid exchange and import controls might have an adverse impact for a very short period. But other countries, with fewer resources, like Indonesia, Malaysia (and more recently in a somewhat guarded manner) Pakistan have cut controls and become competitive in the world economy.

Why can we not do the same?

Ashok H. Advani

How to think positive when there's no power.

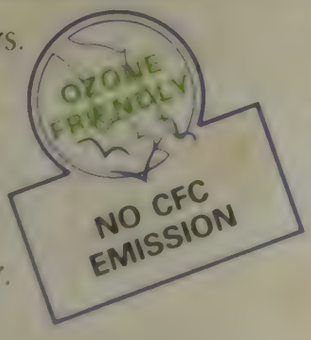
Thermax invites you to switch to steam-operated vapour absorption machines.

Discover the No.1 cooling alternative. A power-saving solution that has silently but swiftly revolutionized energy management — Thermax-Sanyo Vapour Absorption Machines.

The No.1 Power Saver

Our vapour absorption machines aren't powered by scarce, costly power. (A godsend in the worsening energy crunch.) So you can put your power to productive use. And for process and space cooling, use our machines. Thermax has already installed over 23,000 tonnes of steam-operated refrigeration capacity in three years!

The No.1 Cost-efficient Machine



Since our machines operate on waste heat or live steam (even steam at 0.5 kg/cm^2 g will do), they work out to be extremely cost-efficient. In fact, they save 30% energy on every ton of refrigeration capacity. You also get the option of generating steam through a wide variety of inexpensive fuels like bagasse, coal, wood, husk, etc. The benefits of negligible maintenance. (No moving parts). And the relief of noise-free operation.

The No.1 Financial Option

Financially too, you can relax. Your operating costs are lower by 50%. Also 100% depreciation in the first year itself, leaves your cash flow undisturbed.

The No.1 Environment Protector

The Thermax-Sanyo machines are even environment-friendly. They do not emit chlorofluorocarbons (CFC) like conventional compression chillers. A blessing, since India is participating in the worldwide effort to ban all CFC emitting machines to save the ozone layer.

The No.1 Indian Best Seller

These machines are the collaboration of Thermax and Sanyo, Japan. Together, we bring you the only indigenously manufactured and completely factory-tested vapour absorption machine. No wonder, over 60 well-established organisations across India form our clientele. They have discovered that positive thinking was never so powerful.

India's largest refrigeration machine (1400 TR) manufactured by Thermax for Bhilai Steel Plant

Never say no to life.

• Get your basics right

Your interview with Surinder Goyal (4 March) highlights the continuing lack of clarity on the basic aspects of money and economics.

In reply to a question on the problems that affect your economy, we are given the age-old myth that "rising prices and... external payments" are the cause. Surely, the learned Goyal should know that these are the effects or results of a poor economy and not the cause? Why is it that most people continue to confuse economics with money matters?

Economics is *not* the study or application of money! The ingredients of a nation's economy are its natural resources, human skills and technology, and it is the management of this mix that determines its national economy. Money, alas, has nothing to do with it!

Perkins Engines (Shrewsbury) Ltd
England

• Unhappy customer

In the feature on Essen Computers (Enterprise, 18 February), the company's managing director, Apurva Parikh admits that the weaknesses of his group is that, "We lack the ability to get a product to the market". His acceptance of this reality is heartening. But what is disturbing is the fact that his organisation still fails to do anything about the matter.

We have had an unfortunate experience in our dealings with this organisation — a supply to a very valued customer has been delayed for over a period of 30 days from the committed date. Essen has no strong platform from which to launch itself if it does not treat the customer as king. Let them do a customer satisfaction analysis. The figures will speak for themselves.

• Poor quality costs

The article 'Quality does *not* cost more' (Management, 18 February) made relevant reading. Poor quality has hidden opportunity costs ranging from lost sales, fall in morale and prestige, the cost of reworking returned goods, the loss of key personnel and the subsequent costs of recruitment and training. Unless stringent quality audits are made mandatory, quality will fail to be more than a convenient catchword.

MIRA DESAI
Ahmedabad

• A socialist dreams

Your interview with the prime minister, Chandra Shekhar was candid and to the point, (Cover Feature, 18 February). When he demands one per cent of the net worth from the industrialists, he should understand that in the case of the Tata empire, the Tatas themselves hold only 2 per cent.

When a company declares a big profit, it usually means that its inventory, outstandings and borrowings have increased disproportionately and very little is available to spare by way of ready cash. This reality is never understood by a socialist.

TATYA TENDULKAR
Kolhapur

• Buckling under pressure

Your report on the accumulation of stocks in Mahindra (Corporate Report, 18 February) blames the diesel shortage. The critical factor responsible is the failure of marketing strategies. Mahindra's marketing which has always worked in a sellers' market now concentrates only on tractors and neglects jeeps. In this situation, it is not surprising for those in the know that Mahindra is building up inventory.

Now that the Maruti Gypsy, the Bajaj Tempo Trax and Tatamobile (Tata Sport 4-wheel drive is on the way) are currently its major competitors, the top management of Mahindra is buckling under pressure.

J. THARAKAN
Ernakulam district

• Outstanding village

I am a native of Dharmaj village featured in 'A village with no poor!' (Places, 7 January). At Dharmaj, we receive credit from all visitors. Our village has a rural atmosphere with all urban facilities. Perhaps Mahatma Gandhi visualised similar villages all over the country for its all round development and to reduce the concentration of population in a few cities.

I would like to point out that the name is spelt as Dharmaj and not Dharmej as printed in the article.

RAJESH PATEL
Kheda district

• A correction

This refers to 'A quiet success' (Corporate Report, 4 March). We wish to point out that our representative has inadvertently stated that the company has exported one million units of miniature circuit breakers. What we had exported was distribution panels containing miniature circuit breakers as components to the USSR.

ASHOK SHAH
For M.J. Exports Ltd
Bombay

• Entity in itself

Broad-basing the equity by ICICI (Letter from the Publisher, 4 February), cannot be termed privatisation. ICICI was never a public sector or government company as defined by section 617 of the Companies Act. It was only a deemed government company under section 619B of the Companies Act and continues to be so even after the present dilution of its equity. Only when ICICI issues at least 50 per cent of its equity to the public, will it be able to get away from the Comptroller and Auditor General of India under section 619 of the Companies Act.

In fact, it is not correct to bring in the CAG for the audit of the ICICI when Parliament itself has exempted various financial institutions and nationalised banks from such audit. It is hoped that ICICI will soon increase public participation in its equity to the extent of 50 per cent, and utilise the funds so raised for various innovative schemes for the rapid industrial development of the country.

LAXMI NARAIN
Hyderabad

• No window-dressing

In 'The case for input-output analysis' (Column, 4 March) the author has referred to the practice of taking interest credit on "unadvanced deposits" as window-dressing. It is possible that the author is referring to surplus funds transferred to the head office by the branch, which are eligible for a minimum return from the HO. As a well-established practice of transfer pricing, such a return is always taken into account. Obviously, there is no window-dressing involved; rather, the rate cited would be at best a conservative estimate of a return on investment.

Further, in the case of banks in India, blame for any inefficiency in utilisation of resources cannot be entirely laid at the door of the branch. The funds managers of the bank sitting in the controlling/head offices are also accountable. As criteria for performance evaluation of a branch, therefore, the efficiency of utilisation of resources may not be appropriate; but such evaluation has to be based on a branch manager's specific responsibilities.

ARUN KAMATH
Bombay

4 Critical reasons to go in for UI's machinery breakdown insurance policy

1 THE PRODUCTION REASON

"One important machine down and the whole assembly line comes to a standstill. Production schedules go awry.

2 THE MARKETING REASON

"Availability and flow of products into the market can make or break a company. Failure to keep up to delivery schedules will result in losing faith of distributors and customers. And will allow competitors to get their foot in."

3 THE FINANCE REASON

"Cash flow disruption. Working Capital is unproductively locked up in this investment. All this can make a big difference to profits."

4 THE MAINTENANCE REASON

"Turbines, compressors, pumps, generators, transformers — all costly equipment. I can control routine repairs, but not unforeseen breakdowns or losses."

Any kind of mechanical and electrical machinery— at work; at rest; or being cleaned, inspected, overhauled, removed or re-erected within the insured premises... UI covers them against any unforeseen loss or damage. This policy can also be extended to cover loss of profits following breakdown.

So whether you are the manager of a big factory or a small scale industrialist, make sure sudden loss of machinery and lack of re-financing doesn't bring your operations to a standstill.

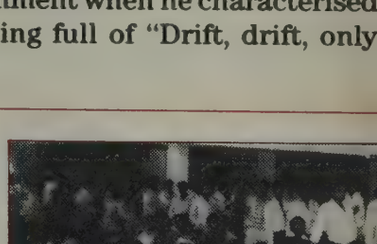
Devaluing imports

The latest Reserve Bank move to raise margins on foreign letters of credit is part of a series of such moves designed to make imports more costly in rupee terms (i.e. a *de facto* devaluation for importers). In a very limited sense — applying equally to any form of price control over rationing — the RBI could have done worse. In earlier times, it would certainly have banned certain categories of imports. Also, it is argued that since the margin money will earn interest at fixed deposit rates, the burden is less than it appears.

All these arguments may make sense for large companies with cash surpluses or unused lines of credit, but the RBI's moves have created panic among smaller businessmen who lack such spare liquidity. Many of these now have no option but to draw down stocks, live with shortages and wait till June until a new government comes in with a new policy. Such a situation cannot but put the functioning of the economy at risk thanks to the emerging shortages of raw materials, components and capital goods. Lower exports and a lower rate of growth are inevitable.

It is a wholly unnecessary risk and exposes the government's bankruptcy of professional competence. To put the matter in perspective, the country is (for the second time in the past 8 months) in the ludicrous position where foreign trade worth over $40 billion each year is jeopardised by a cash-flow problem of about $2 billion (to last until the Aid India club makes fresh commitments this June). There is no good economic reason why a liquidity shortage should occur.



The current problem is particularly unnecessary because it was entirely foreseeable. Given that the country uses up a net $400 million of foreign money every month, and that the oil crisis of 1990 used up the year's available foreign exchange credits, the $1.8 billion borrowed from the IMF in January was expected to last for just 4 months.

The government should instead have used the breathing space provided by the IMF loan to develop workable strategies. One is not talking here of essential medium-term strategies such as the floating of the rupee or longer-term strategies such as the opening of the economy to foreign investment and other structural changes. The current government is a caretaker government and will correctly argue that such major policy shifts are not its prerogative. But certainly short-term measures are possible and it is, in fact, any legal government's job to anticipate and deal with problems such as these.

In the short term, the government could have used its financial institutions to tap foreign markets more shrewdly. The quantity of money needed by India is minuscule compared with daily international capital flows in excess of $3 trillion. There are several Indian public sector financial institutions with a track record abroad which could have systematically tapped over the last few months such short-term funds (albeit at a higher cost than IMF money) from their networks outside India.

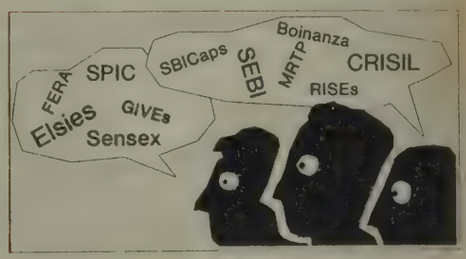
The margin requirements are, instead, the equivalent of throwing in the towel. It lacks credibility and can only delay the problem. What the government is, in effect, telling the public is that the much-touted professional reputation of the likes of the State Bank of India and the Industrial Credit and Investment Corporation of India do not match up to the creditworthiness of a bankrupt arms dealer or other such *dalals*. If this is its approach, what will it do when the Rs.25,000 crore of non-resident money starts to be withdrawn in response to such a perception? The Finance Minister put it well for his own government when he characterised his predecessor's policy as being full of "Drift, drift, only drift."

An untapped jackpot

The argument that India's non-commital stand on the Gulf war has prejudiced India's manpower exports may not be entirely without merit but it disguises the wider issue of what government ought to have done about manpower exports. Or, for that matter, what it *should* do in future, the rhetoric about eradicating unemployment notwithstanding.

It is perhaps a case of misplaced optimism to expect the external affairs ministry to consider only manpower exports while formulating foreign policy in any given situation; especially when the responsible ministries appear to be least bothered. It should be an important function in a labour-rich economy like ours for the ministry of labour to project and analyse future trends in world employment with a view to exporting skilled and qualified manpower. In fact, through the much criticised policy on insisting that foreign employers be responsible for sending the pre-travel allowance (PTA) to their Indian employees, the labour ministry has succeeded in making our labour unattractive in comparison with that of other nations. Until now, such exports have grown despite successive governments' indifference and lack

of real policy. This alone should give the cue to the government to exploit the manpower demands best.



The suggestion is not that government intervene in this area, but that some guidance be given to private enterprise through embassy and consular channels. Projections of respected international think tanks and organisations such as the Interational Labour Organisation (ILO) should give the bureaucrats a fairly decent idea as to the likely areas of thrust in months — and years — to come. Such activity has been going on in economies similar to ours, like the Philippines, Korea and Sri Lanka, where manpower exports are far better organised.

In the $50-billion Gulf labour market, India's share is a measly $3 billion. Of course, analysts are pointing out that the recent cessation of hostilities presents excellent opportunities for India in terms of manpower exports. Although the US has managed to corner the prime contracts for rebuilding Kuwait, it is hoped that political considerations will be discarded in the choice of sub-contracts and that many Indian construction workers will find employment in Kuwait. However, this should be no reason to become complacent.

Often government initiatives, including the Emigration Act, 1983, which provided for such offices as the protector of emigrants, have been restricted to preventing labour from being exploited and cheated by recruiting agents and local employers. Whilst these concerns are unimpeachable, there are wider and more serious policy issues at stake. Indians abroad, in comparison to Phillipinos and Sri Lankans, receive far less protection from the government through our consulates and embassies. No proper insurance schemes are formulated for the purpose of providing security to employees and no standard contracts are prepared to ensure fair treatment. Ultimately, these workers will return to India having sent their savings in foreign exchange to Indian banks. One need not spoil them, but pampering to a certain extent will go a long way in attracting the much needed foreign exchange.

In the post-war Gulf scenario, something like 400,000 vacancies are projected. Intelligent analyses can yield dividends in terms of assessing opportunities in new areas — the service sectors, software and manufacturing opportunities. After all, like some other developing countries, manpower exports is not just a foreign exchange earner, it can be the strategy for development as well. The one resource India has in abundance, after all, is its people.

The ETA syndrome

All Indians are equal. But some are more equal than others when it comes to the arcane art of first picking long, cumbersome names for institutions and then shortening them. The corporate sector and the government are particularly prone to the "elongate, then abbreviate" (ETA) syndrome. So, much of what people in it say is gobbledegook to others.

Nothing, though, can beat the stockmarket at practising ETA. It might be because brokers are usually in a hurry these days, thanks to the BSE's Sensitive Index having become unusually sensitive of late. For example, ask broker Suresh Shah why he smiles when the Sensex rises. Because Ordinary, Loco, Motor and Auto are rallying on the BSE, you see. And SPIC's doing fine on the Madras line. There's a boost from UTI's buying and fizz to come from Canpep. What about the budget, even if postponed? The Third World's official slogan — "No problem" — is trotted out as the response. The IMF will force PSU sales and FERA companies (actually ex-FERA) will always do well.

If broker Sureshbhai was to say the above in full, the market would close by the time he finished summarising its condition.

The life of an abbreviation or an acronym depends on what's behind it. FERA and MRTP have lasted not because they roll off the tongue very well but because saying the whole thing is too daunting. On the other hand, Sensex has become the tony English-speaking analyst's choice for the BSE's (sorry, Bombay Stock Exchange's) Sensitive Index over the past year, but the typical "native share and stockbroker" — that's his official name— is not comfortable with it and still prefers to call it just "the Index".

Since the actual user determines the future life of an ETA word, Sensex is probably doomed. So also Elsies, now making the media round as an acronym for Equity Linked Savings Schemes. Elsies have their own cute incarnations as Canpep and Masterplan. But since they are all issued by the public sector financial institutions, which know best how to clone each other, they are all identical and boring to check into.

On the other hand, Ordinary for Tata Steel has a historical basis. It refers to the time when equity shares were ordinary — as opposed to preference shares — and Tata Steel was the only actively traded share. So also Auto and Motor for the times when Premier Automobiles and Hindustan Motors were the only automotive companies listed long before the likes of Bajaj Auto drove up.

Very few ETAs have been deliberately chosen and have turned out successful. However, SEBI for the Securities and Exhange Board of India and CRISIL for the Credit Rating and Information Services of India Limited have caught on.

In any case, it is never boring. One looks forward to the time when Sureshbhai tells us that SBI Caps combined with a CanCan had saved him from losing his shirt

Holding the boss's hand

What more can anyone want when he's the boss? Help apparently, because stress often cuts one down to size.

The Swedes are taking the problem seriously with a number of initiatives aimed at assisting higher level staff to cope with their problems. The Swedish daily business paper, *Dagens Industry*, offers a telephone service every Monday after 5 in the evening for managers in difficulty.

This service has received hundreds of calls since it was started three years ago. While it cannot solve its callers' problems what it does offer is a soothing voice uttering a few well chosen words, to soothe the frantic caller. The distressed stereotype they've discovered is aged between 40 and 45. Half have worked at MD level, the rest are from middle management. A quarter are women.

People power

Unmindful of the inconvenience caused to the general public, employees of the essential services' sector — electricity, transport, telephones, water supply — strike every now and then. Recently, the private bus owners of Cochin did the same. Only this time their plan boomeranged.

They went on a three-day strike demanding an increase in bus fares because of a 25 per cent rise in petrol and diesel prices. But when they restarted the bus service after the strike, they were in for a shock. This time the general public stopped these buses from plying. And the people's argument was: "We managed without you for three days, so why not the fourth also."

Madras

The friendly touch

When M. Karunanidhi was the chief minister of Tamil Nadu, he introduced the pension scheme. Pensioners received the amount every month by money order. To give a personal touch to the scheme the money order coupons carried a printed message "from your friend M. Karunanidhi". What surprised pensioners was that even after the imposition of President's rule, they continue to get the same message even though their benefactor now is out of office.

Big biz in video-conferencing

While most industries suffered during the Gulf war, one segment did roaring business — dial-up mobile video-conferencing. Operators reported an "unprecedented" increase in demand for their facilities. They were working close to maximum capacity.

Video-conferencing was introduced in the early eighties as a means of bringing groups of people together over long distances by the use of live video pictures transmitted over international telecommunication lines. People at three or more locations can see, hear and talk to each other and even exchange and discuss high resolution drawings and images from slide projectors, whiteboards and video recorders. There are now more than 2,000 dedicated public and private video-conferencing lines worldwide.

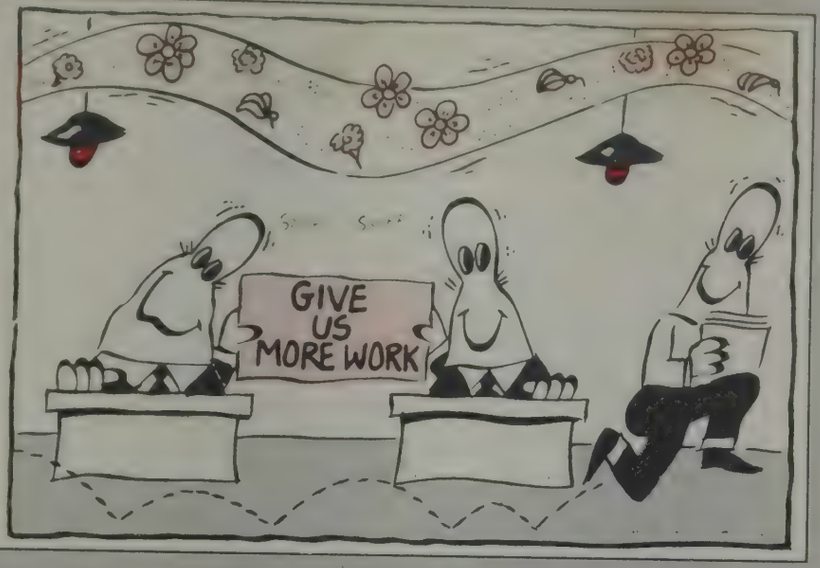
Now a British company has developed a more sophisticated version called i-Link. Its compactness allows links to be set up in normal conference rooms and offices rather than specialised video-conference studios.

HRD via video

The in-house video craze is catching on. While Voltas and Glaxo have developed in-house video magazines and the Rourkela steel plant its own cable network, the Steel Authority of India Ltd (SAIL) has adopted the educational approach.

SAIL has developed three video films on performance appraisal. The first one titled, *A measure of success: Performance Appraisal System in SAIL*, explains the system, its components, implementation and impact. The second one, *Open Forum*, explores various problems and issues experienced in implementing the performance appraisal system and suggests ways of overcoming them. The third, *Dream or Nightmare*, discusses various aspects of the performance review and highlights concepts and attitudes required to make such appraisals a useful exercise.

Although the cassette was initially developed for in-house viewing, several executives and HRD managers from other organisations who viewed these films found them useful. SAIL has therefore decided to market the cassettes via the Ahmedabad-based Academy of Human Resource Development.



Business India invites readers to send original unpublished contribution to this page. The snippets can be humorous, insightful, outrageous or simply informative. Each snippet must carry this coupon.

Rs. 50 paid for each published contribution.

Dill for the diligent!

By making use of mint and lavender, a major Japanese perfume manufacturer hopes to raise the productivity of its personnel by 25 per cent.

Employees receive a 'scent watch' that pervades their homes with the aromas of lavender, camomile and dill, as these herbs contribute towards a good night's sleep. In the morning, these industrious Japanese workers will be awakened to the scents of pine and eucalyptus.

The final countdown

The proposal to give financial institutions (FIs) membership of the Bombay Stock Exchange (BSE) ended in an anticlimax.

By the end of a four-hour long debate even the BSE ex-president, Mahindra Kampani, who had seconded the motion changed his mind. When a vote by a show of hands was proposed, nobody raised his hand.

R.D.
Bombay

Towards a better life

Uruguay has taken a small step in solving its problems of poverty and pollution. In Montevideo, the Uruguayan capital, rubbish pokers numbering between 2,000 and 8,000 may be seen rummaging in rubbish bins. The materials are then sorted out and sold to intermediaries, who pay disproportionately low prices for them. The intermediaries however make enormous profits when they resell these materials to different industries — which in turn save money by not having to import raw materials. Rubbish pokers have thus become an important part of the Uruguayan economy. Yet, they live in impoverished conditions. To aid them, the 'Movement in favour of a More decent life' (MOVIDE) is setting up co-operatives to distributing profits as equitably as possible.

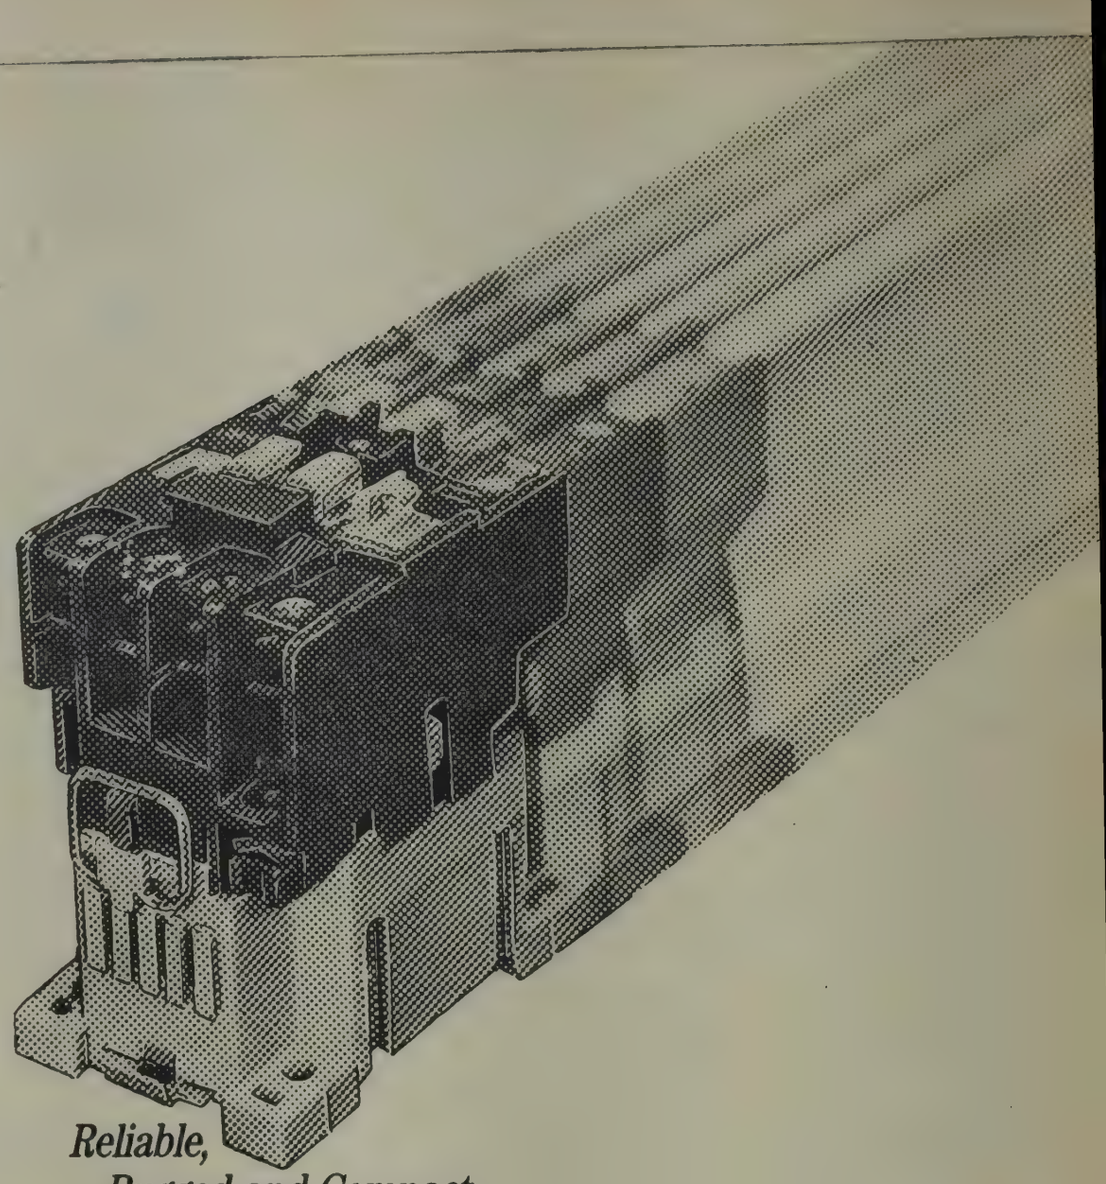
Even the system of collecting rubbish has been organised. A project has been drawn up that includes the creation of five dumping sites for the rubbish collected in the city. After rubbish pokers have finished collecting reusable articles, the remains will be carried to a biogas factory. It has been calculated that the biogas factory can produce 45 to 50 cubic metres of gas per day saving the gas company 25,000 litres of naphtha.

What's up with ad agencies?

Abracabdra and what do you get out of the ad bag of tricks? If you're in Sweden, you get the point literally. Swedish ad agencies are now contemplating using the hypodermic syringe to advertise their wares. The proposal also includes advertising on patient registration cards, shoe covers, disposable cups, forms and hand towels.

Closer home foreign companies are concentrating on the sublime rather than the ridiculous. British Airways is offering Indians a free ride to London on 23 and 24 April and Pepsi is luring 'dying to meet Kapil buffs' with a free subscription to *Sports Channel*, the first Indian sports video magazine.

Among the Indian companies, Allwyn is carrying out a survey and drawing up an 'honours list' of customers who have owned an Allwyn fridge for the last 25 years. And Kinetic Honda is said to be offering a four wheeler, in a lucky draw, to customers who have bought two two-wheelers.



What the opportunists do?

A recently enacted law in Singapore prohibits its citizens from driving out of the city state without having filled at least three-fourths of their car tanks. This is to prevent them from buying cheaper fuel in neighbouring Malaysia. But in spite of this legislation, Singaporeans continue to drive out for a cheap buy.

A similar trend seems to be emerging here as well. Of late, more and more car owners in Thane have been buying their requirement from nearby Mulund. In the process, they are able to save 55 paise on every litre filled. Thus, a tankful of 30 litres entails a saving of Rs.16.60. The reason: since Thane falls outside the jurisdiction of the Bombay Municipal Corporation, the fuel sold here attracts the mandatory octroi duty.

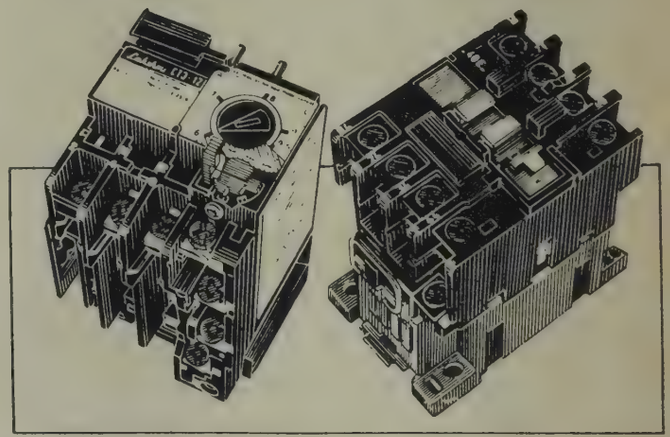
Reliable,
Rugged and Compact

Discover the three-in-one advantage of contactors from Batliboi

Lakshmi contactors from Batliboi. Their advantages to original equipment manufacturers and actual users, are threefold:



Superior Electrical and Mechanical Properties: High AC3/AC4 ratings. Eliminate contact failure and down-time. Add-on blocks, mechanical latches, mechanical interlocks and surge suppressors, common to all contactors in the range. Common coil for auxiliary and power contactors upto 30A rating.

Higher resistance to damage in transit: The contactors are made from high-grade plastic, not bakelite.

Compact design: Occupy minimum space in the panel. Have higher thermal ratings, to enable mounting contactors in close proximity to each other.

The thermal overload relays have built-in safeguards against single phasing. Auto/manual reset facilities along with two independent trip contacts are available as standard features.

All backed by Batliboi's prompt after-sales service.

BATLIBOI *For a century, the engineers' engineers*

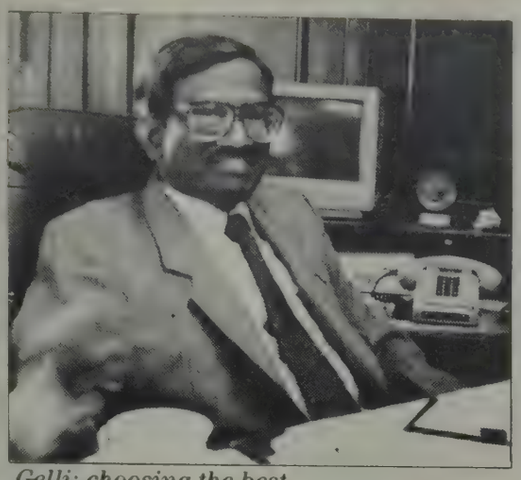
The right impression

While all attention has been focused on the American rating agencies Moodys and Standard & Poor, little attention has been paid to the equally important Japan Bond Rating Institute (JBRI). So far, the Japanese have given an A– rating (they do not have triple A like the Americans) to Indian government instruments. But if the rating slips two notches, then even the most successful public-sector companies like ONGC and State Bank of India will not be able to raise the Samurai bonds as they have been doing in recent years.

A Japanese team is visiting India currently, and one can only hope that they go away with the right impression.

Timely help



Yet another business group is all set to enter the media business. The Lucknow-based Sahara group, more known for the controversies surrounding its deposit schemes, is gearing up to launch dailies in three languages — English, Hindi and Urdu — in Uttar Pradesh. The managing worker of the group — as the chairman and managing director of the group Subrata Roy likes to call himself — is an old friend of telecommunication minister Sanjay Singh. Roy is trying to launch his newspapers before the elections so that he can provide some *sahara* to his beleaguered friend and his ilk.

Unusual diversification

BPL, the Rs.600 crore consumer electronics group, has decided to go in for coffee plantations. The group plans to acquire at least 3,000 acres of coffee land. According to its managing director, T.P.G. Nambiar, "It is a diversification activity." The company has already made the initial payment to a leading planter for 300 acres of land.

Job offers galore

Ramesh Gelli, chairman, of Vysya Bank, the number one private sector bank, was recently offered the chairmanship of UCO Bank. Gelli has reportedly declined. Apparently, there are at least two more similar offers coming up. Gelli, who took over

Gelli: choosing the best

the chairmanship of Vysya Bank in 1983, is at present on extension until February 1992. There are indications that he may soon be picked up by the finance ministry to head a nationalised bank. Meanwhile, Vysya Bank is also hunting for a successor to Gelli.

A new Thapar venture

The L.M. Thapar group is setting up a new company for food processing and prawn farming at Nellore in Andhra Pradesh. Called Thapar Waterbase Ltd the new unit is coming up in collaboration with a Taiwanese company called Luxe. The Rs.30 crore project will have a foreign equity of 12 per cent. At present, work is in progress for setting up the grow-out ponds on 500 acres. The location has been selected by Luxe.

Hindustan Lever HO: tie-up with Mckinsey

Thin end of the wedge?

The large US multinational consulting companies which have been working on getting some assignments in India for a couple of years now finally seem to be making some headway.

Reportedly, the New York-based firm Mckinsey, considered to be the most high-powered strategic consulting firm, has been awarded a contract by Hindustan Lever to look at a new export strategy. The foreign exchange component of this study is being funded by an ICICI credit line. Meanwhile, Mckinsey's competitor, Boston-based Arthur D. Little, has been retained by Tisco to chalk out long-term corporate strategy.

The US firms started looking at India seriously when they began hiring Indians at very senior levels. Many of their employees wanted "to do something" in India.

Are these contracts the first step to opening offices in India?

Capital fillip

A new committee has been appointed by the government to re-examine all the guidelines that have been followed by the office of the Controller of Capital Issues (CCI).

Reportedly, M.J. Pherwani, currently chairman of Infrastructure Leasing and Financial Services as also the National Housing Bank (NHB), has been appointed the chairman. It appears that the government has also been willing to appoint several leading figures from the private sector to the committee. Reportedly, N.A. Soonawala, the Tata finance chief, and Shitin Desai, director of DSP Financial Consultants, a leading merchant bank, have also been included.

The committee has a wide mandate to go over all the guidelines including those on valuation, issue of debentures and preference shares. It can even frame new rules for new instruments.

If the government seriously implements any recommendations such a committee proposes, it is bound to give a big fillip to the capital markets

INDIA CEMENTS

Gamble pays off

The current year's (ending March 1991) results of the Madras-based India Cements Ltd (ICL) is expected to be the best in its 40-year history. Its turnover is expected to be around Rs. 250 crore (Rs.146 crore), with a gross profit of Rs.40 to 45 crore (Rs.13 crore). ICL's daring but timely acquisition of the 1 million tonne cement plant of Coromandel Fertilisers Ltd (CFL) based at Andhra Pradesh last year is paying rich dividends (see *Business India* 14 May 1990).

N. Srinivasan, who took over the management of the company 18 months ago, is satisfied. Not only has he steered ICL out of the woods and re-established its pre-eminent position in the south, but has also emerged as a highly respected spokesman for the south Indian cement industry.

Good combination. When the financial institutions decided to give the management control of ICL to the original promoters' family in September 1989, Srinivasan was appointed managing director after almost 10 years in the wilderness. Sanmar group's N. Sankar got the chairmanship, as both their families had promoted the company — a combination which has worked out well, for once justifying the FIs' action.

ICL was not doing well in 1989. Prices had crashed in the cement industry and the company had been demoralised by a leadership vacuum. The modernisation of one of its two wet plants in the Tirunelvely district of Tamil Nadu was taking time. During 1988-89, ICL had finished with an operational loss of Rs. 5.5 crore on a turnover of Rs. 137 crore and had to sell off its shares in Chemplast for more than Rs.4 crore to balance this loss.

ICL's aquisition of CFL's cement at a price of Rs.105 crore was considered rash in some circles. But Srinivasan was confident. "Cement prices had started improving in the South. We could see that the coming years were far more promising," says he. Also, Coromandel's limestone reserves were plentiful, while at ICL's plants at Tamil Nadu, it was in short supply. "I was really hoping to make the future of ICL as a cement company secure," adds Srinivasan.

The ICL team was also convinced of the technical viability of the Coromandel plant. Though the highest bidder (outbidding companies like Gujarat Ambuja and Larsen & Toubro) at Rs.105 crore, ICL had to raise only Rs.30 crore as it was taking over the liabilities. It got a bridge loan of Rs.17 crore from the IDBI and was able to raise the rest of the funds internally. The deal was through by December.

Cement industry sources agree that ICL has been making money from Coromandel from the very first month itself. "What we did was not rash, but a calculated risk. We are looking for growth and may be more acquisitions synergetic with our existing operations. It will all be done step by step. But when the time comes, we will act quickly," says Srinivasan with quiet confidence.

■ SUSHILA RAVINDRANATH

B&C MILLS

Heading for closure

The situation at the Buckingham and Carnatic (B&C) Mills in Madras is tense. The 6,000 strong workforce is waiting and watching as production slows down to a trickle. Despite a rejection of the management's application for a closure by Tamilnadu's commissioner for labour last month, B&C Mills will soon down its shutters for the third time in its century-old history. "Yarn supplies are running out. Suppliers have refused to extend credit. It is a question of time before production peters out," maintain sources at Binny Limited, which owns the unit.

B&C Mills, Madras: closing time?

Bone of contention. The labour union in the company alleges that "a closure is being engineered by the management in collusion with suppliers and lending institutions." At the union's general body meeting, workers unanimously supported a resolution against the move to shift the processing house to Bhuvanagiri in the Cauvery basin, 200 km south of Madras. The management is determined to move. The processing house requires a continuous supply of water and power, which is not available in Madras. "Bhuvanagiri presents a permanent solution to this problems," says the Binny management.

Unless this issue is sorted out, the IDBI-led consortium of banks and financial institutions will not release the funds for Binny's Rs. 60 crore modernisation exercise which will cover the mills at both Madras and Bangalore, (see *Business India* 3 September, 1990).

The modernisation exercise involves setting up the processing house at Bhuvanagiri at a cost of Rs.20 crore. A scientific lay-out is planned to make the mills in Madras more compact. Open ended spinning machines will also be introduced. Binny Ltd is projected to break even by 1996, and wipe out the accumulated losses of Rs.44 crore by 2000 AD.

Part of the labour union's mistrust stems from the fear that the entire operations will be eventually moved out of Madras and the surplus land sold. Says K Srinivasa Rao, finance director, Binny Ltd, "The sale of surplus real estate is a must. Binny owes Rs.122 crore to the banks and financial institutions." The management has offered the workers three options — a voluntary retirement scheme, absorption of the workers opposed to the move in Madras and the remainder to be relocated at Bhuvanagiri.

But the union won't be persuaded and is pressing for a takeover of B&C by the state or the central government.

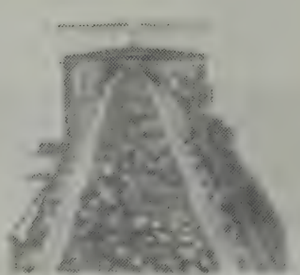
THAT'S FENNER'S CONVEYOR BELTING



No one is better built to take a grip on India's core sector conveyor belt needs and lift them to world standards than Fenner. With strength, staying power and reliability, Fenner's contributions carry weight.

THAT'S FENNER'S CONCERN

For decades Fenner has applied its thinking to risk-reduction and worker safety as no one else has. Fire resistant solid-woven Fenaplast belts are Fenner's vital contribution to coal mining, thermal power plants, chemical, fertilizer plants and other industries. The mining industry depends on Fenner so much that half the belts used in underground mines are Fenaplast solid-woven.

THAT'S FENNER'S ACHIEVEMENT

Fenner is a thinking company. The undisputed leader for over 60 years. With formidable advances in research that have made every Fenner product a winner. No wonder Fenner is a front runner.

Fenner

ECONOMY

More in the revenue kitty

The total central revenue collected up to February 1991 is Rs.46,128.66 crore, which is higher by 10.68 per cent over the figure for the corresponding period last year. Combined realisations from customs and central excise for the same period is Rs. 39,600 crore, 11.93 per cent above last year's figure of Rs.35,378 crore. The central excise collectorates and custom houses, where shortfalls were noticed, were instructed to step up the pace of collections. The customs house made elaborate arrangements to clear as much cargo as possible in March. Also, the net collection of direct taxes — Rs. 6,529 crore — recorded an increase of Rs.229 crore this year.

PSUs overtake targets

Thirty-three public sector undertakings under the department of heavy industry of the industries ministry have achieved nearly 20 per cent higher production in February 1991 than the corresponding figure for the same period last year. The aggregate value of production of these units was Rs. 939 crore as against Rs.779 crore last year. In addition, consultancy and contracting enterprises under the department have touched a total turnover of Rs.32 crore, well over the target of Rs.27 crore for this year. Among the public sector undertakings which overshot their production targets were Andrew Yule & Co. Ltd, Bharat Heavy Electricals Ltd, HMT Ltd and Maruti Udyog Ltd.

Fall in REP licence premium

The Reserve Bank has imposed severe restrictions on imports by stipulating 133 per cent margin money on opening LCs. Though the RBI has not clarified the specific licences that will be included, it is believed that REP and additional supplementary licences will be affected. This explains the decline of the premium on REP and additional licences.

The premium on REP import licences has declined to 15 per cent from the previous 35 per cent following the restrictions imposed by the Reserve Bank of India on opening letters of credit.

Idle forex

The Reserve Bank transferred all capital goods imports from commercial banks to financial institutions in a drive to conserve foreign exchange. Unutilised foreign currency credits available with the financial institutions is estimated to be around $600 million, including sectoral loans of about $250 million. Among the major institutions, IDBI has nearly $200 million of available foreign exchange and ICICI, around $130 million.

Petrol import likely

India is likely to import petrol during 1991-92 — 470,000 tonnes — after a gap of nearly three years. This indicates that the days of self-sufficiency in petrol are over, or at least till new refining capacity is created.

Increased demand and delays in setting up refining capacity has led to a shortfall of petrol. Hence there is likely to be a provision in the foreign exchange budget from 1991-92 onwards for petrol imports.

Fodder from the US

The US Department of Agriculture awarded six grants totalling Rs.81 lakh to support cooperative agricultural research projects at several Indian institutions. These grants are primarily meant for preserving staple food supplies or increasing the yields of important food resources. Among the institutions which have been awarded the grant include the Orissa University of Agriculture and Technology, the Central Soil Salinity Research Institute, the National Bureau of Plant Genetic Resources and Punjab University's Department of Zoology.

No more newsprint cut

The government has lifted the 10 per cent cut in the release of imported standard newsprint. This cut was announced on 14 March by the State Trading Corporation (STC). Efforts are now being made to meet the increased requirement of newsprint for the coming Lok Sabha elections.

CORPORATE

IPCL-GEP joint venture

Indian Petrochemicals Corporation Ltd will set up a Rs.700-crore joint venture with General Electric Plastic BV (GEP) of Netherlands to manufacture advanced engineering plastics like polycarbonates and polyphenylene, in India. GEP is the engineering plastics division of General Electric. A Memorandum of Understanding has been signed between the public sector company and the multinational. The venture will also cover neighbouring countries and the Middle East in its area of operations. IPCL has already obtained a letter of intent for the project.

AI to acquire aircraf

Air India has received clearan from the Public Investmer Board for the acquisition of fo Boeing 747-400s. The aircra which are estimated to c around Rs.1,362 crore, will place four old Boeing 747-20 Two of the new aircraft are to acquired in the next financ year, while two more will co in 1993-94.

New shock absorber plant

In early March, Gabriel Ind Ltd opened its new shock a sorber plant at Nasik in Mah rashtra. The plant has been s up with an investment of Rs. crore to manufacture tw wheeler shock absorbers. Er ploying around 120 people, it expected to have a turnover around Rs. 25 crore. The sho absorber has been designed the Yamaha Motor Co of Japa while the project is in collabor tion with its subsidiary, Soc Gabriel also plans to manufa ture front forks for th Kawasaki Bajaj later this year

TUL enters Japanese market

The computer consultancy di sion of Tata Unisys Ltd has e tered the Japanese market wi a major order for software se

vices relating to the Unisys Standard Airlines System (USAS) programme. The order, worth more than $1 million a year, is to be executed over the next three years.

A team of Nihon Unisys managers visited Tata Unisys in December. Following an agreement between the two Unisys companies, a group of consultants have been working on the USAS project in Tokyo. The system, which is used by Japan Airlines, Lufthansa, Air France, Cathay Pacific and Air India, is one of the most sophisticated airline packages available.

CRL's plant commissioned

Cochin Refineries' captive power plant was commissioned on 15 March, a month ahead of schedule. The gas-based turbine

plant will be able to generate around 20 MW. The equipment has been supplied by BHEL, and will cater to the entire power requirements of Cochin Refineries once it is in operation.

Essar increases stake in SISCO

Essar Shipping Ltd recently increased its stake in the South India Shipping Corporation from 9.1 per cent to 22 per cent. The Ruias of Essar have now moved decisively into controlling positions at SISCO — Shashi Ruia is chairman and Ravi Ruia a director on the company's board.

Essar purchased the shares for Rs.1,500 each and intends to make an open offer to SISCO's shareholders of 50 equity shares of Essar (face value: Rs.10) for one share of SISCO (face value: Rs.100).

IOL welding division transferred

IOL Ltd has decided to transfer its welding division to Esab India Ltd. At present, the turnover of this division is around Rs. 60 crore. Esab India expects to consolidate its position in the market through this acquisition, which will also enable it to introduce advanced products like submerged arc fluxes.

To part finance this acquisition, Esab India is planning a rights issue of partly convertible debentures totalling Rs.18.82 crore. Esab's Swedish parent holds around 40 per cent of the equity through the UK-based Esab Holdings Ltd.

RPG's French tie-up

The RPG group has signed an agreement with Hospitex SA, a part of the French government-owned financial institution, Caisse des Depots, to provide hospital consultancy services in India. Paramount Hospitex India Ltd, a joint venture company, has been formed with a French stake of 40 per cent. Hospitex is internationally known for hospital engineering, design, planning, equipping and operating modern hospital projects.

Paramount Hospitex India has already signed a project monitoring contract with the Calcutta-based Peerless General Finance and Investment Company to set up a 300-bed hospital in Calcutta.

INDUSTRY

Expansion curbs relaxed

In a bid to step up industrial production, the industries ministry has relaxed norms for capacity expansion subject to certain conditions. The exemption will not apply to the 26 industries for whom compulsory licensing has been prescribed.

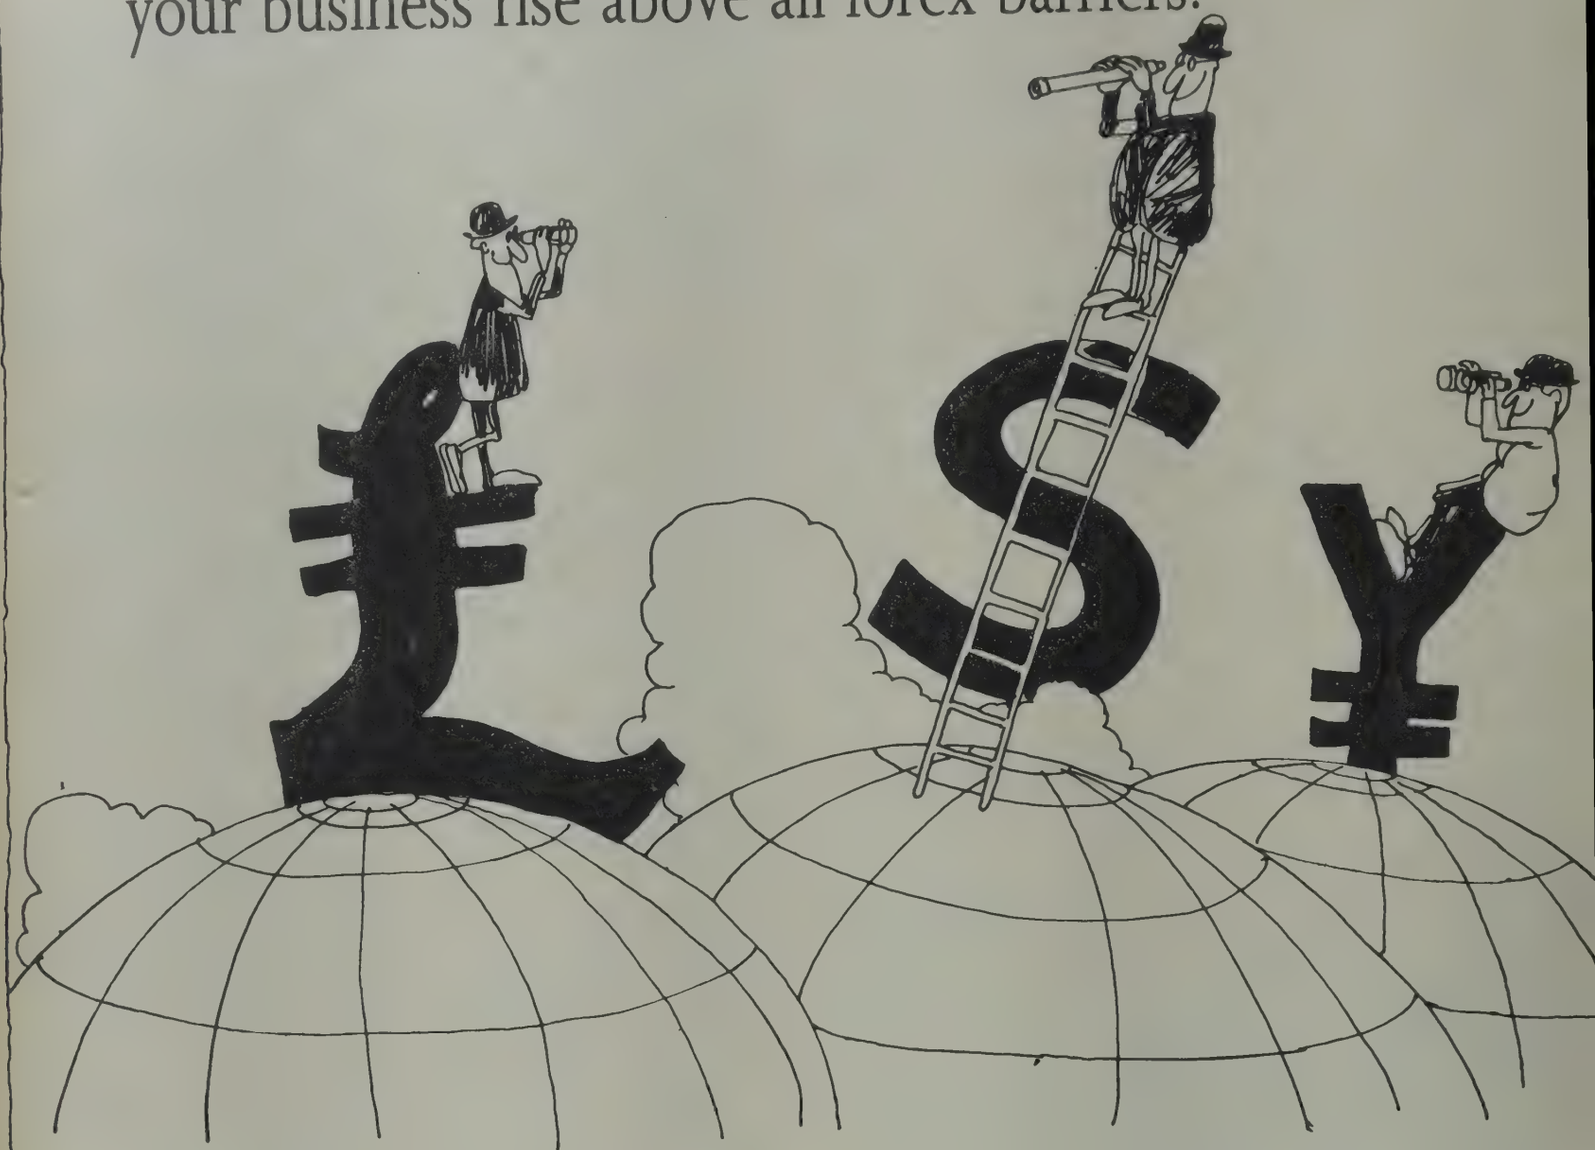
The conditions are that the expanded capacity to be re-endorsed on the licenser registration certificate will be limited to the highest production achieved during any of the financial years between April 1, 1988 and March 31, 1990. Also, the items of manufacture should not be those reserved for the small scale sector. The export obligations will apply equally to the enhanced production achieved.

Upgrading glass technology

The ministry for science and technology has entrusted the National Productivity Council with the task of devising a technology upgradation programme for the glass industry. The recommendation came after a study showed that such a programme was required to revitalize the productivity levels in the existing glass units. Their competitiveness can be improved only by achieving reduction in both manufacturing costs and the rejection rate.

New steel guidelines

The Iron and Steel commissioner is considering a modified distribution and pricing policy for the industry. The revised guidelines allow even new units access to the 2-3 per cent quota (from the total allocable steel) which was so far earmarked only for potentially sick companies.



Another provision adds two per cent of the total re-rollable products such as billets, blooms and slabs to a reserved category. The galvanising industry is included in the priority list, whereas the spun pipe manufacturers have been shifted from Group B to Group A on the list.

Drug packaging review

The packaging material costs of the pharmaceutical industry may be reviewed soon, following the submission of a report by the Bureau of Industrial Costs and Prices (BICP). The study commissioned by the ministry

From March 14th, Standard Chartered Bank can help your business rise above all forex barriers.

In the fierce marketplace of forex business, the real obstacles are information and responsiveness.

To overcome these, a global elite of forex traders are rapidly discarding the outdated telephone-telex way of doing business and are going on-line – with monitor dealing screens.

The Reuters monitor dealing service allows forex dealers to contact other dealers within seconds from the keyboard of their dealing screens, complete a deal, confirm and record the transaction instantly.

And from March 14th, Standard Chartered Bank's Central Dealing Room in Bombay also goes on-line with monitor dealing screens. Joining a network of over 2,000 traders – in different time zones – who are in communication with each other at the touch of a console key, whether they are in the same city or on the other side of the world.

A significant development that will help Standard Chartered Bank bring the benefits of unparalleled speed and responsiveness to your business needs.

In effect, Standard Chartered's forex expertise can now help your company get even better value from its foreign currency transactions. Because time and information are no longer barriers to responsiveness.

To find out how you can make Standard Chartered Bank's forex skills work for your company, write to:

D/ITD/

of petroleum and chemicals is nearly complete and the BICP has already initiated a discussion on its preliminary findings.

A new set of rules for the calculation of packaging material costs will lead to a revision of the retail prices of controlled drugs. At present, the prices of these drugs are fixed after taking into account bulk drugs conversion and packaging costs.

Plastic units hit

Raw material shortages have forced plastic units to cut down production by almost half in the last few months. The steep rise in the price of polymer — which costs around $ 400 per tonne — may force over 50 per cent of the 20,000 units to close down shortly. The units are also severely hit by the prohibitive import duty of 125 per cent. Domestic producers who supply about 50 per cent of the raw materials have also hiked up their selling prices

Cement shortage coming

The demand for cement is likely to go up to 68 million tonnes by 1995, according to an assessment made by the cement industry. The study takes 1990 as the base year, with a demand of 45 million tonnes. Assuming an average capacity utilization of 80 per cent, the country will require a capacity of 85 million tonnes by 1995, according to the assessment. The projects in the pipeline at present cover 15.32 million tonnes. However, to meet the projected demand, fresh capacity needed is 23.5 million tonnes, which means there will be a shortfall of 8.5 million tonnes.

Handloom industry stifled

The labour intensive handloom industry, based mainly in the rural areas, is being stifled by a combination of organised mills, the powerloom sector and high raw material costs. While the composite mills use up the yarn spun in their spinning sectors for conversion into cloth, the handloom sector has to pay 30 per cent more than the cost of the yarn due to costs of transportation.

Jute schemes revised

The union textiles ministry has amended the internal and external market assistance schemes to encourage the ongoing diversification programme in the jute industry. The government has lowered the necessary jute content in blended jute products from 50 per cent to 34 per cent.

Under the schemes, which are valid for three years, diversified jute products are now eligible to a ten per cent subsidy. The government is also stressing the development of jute blended garments with the Jute Manufacturers' Development Council.

The union government has also fixed the minimum support price for the basic variety of raw jute, tossa desi, grade five at Rs.375 per quintal ex-Assam for the 1991-92 jute season beginning July 1. This is a record Rs.55 increase over the current season's support price of Rs.320 per quintal.

LABOUR

DA hike

The government recently announced an increase of 5 to 8 per cent in dearness allowance for all central government employees. This is with effect from 1 January 1991 and will be included in the March pay packet. The additional instalment will be paid in cash at a rate of 8 per cent to employees with a

monthly basic pay upto Rs.3,500. For those having a monthly basic pay above Rs.3,501 it will be credited to their PF account.

One-day strike

Jute industry workers in West Bengal recently went on a token strike for a day. The strike call was given jointly by the CITU, INTUC and the Bharatiya Mazdoor Sangh with a four-point charter of demands. These included a complete ban on all types of synthetic packaging materials, normal wages and nationalisation of the industry.

According to the Indian Jute Mills Association (IJMA), the apex body of the jute mills in the country, the strike resulted in a production loss amounting to over Rs.5 crore.

Central Bank staff stir

The prolonged agitation by the All India Central Bank Officers' Federation is likely to delay the bank's annual financial results. Central Bank of India has 15 zones, of which at least six have alerted the bank on this issue.

Meanwhile, the federation has stepped up its agitation programme, beginning with sit-in and relay hunger strikes. The federation has also directed its members to hand over cash keys to their respective regional managers.

Strike threat

The All-India Bank Officers' Confederation has threatened to launch a nationwide agitation if their demand for pension is not fulfilled. According to Umed Singh, vice-president of the confederation, limited pension was being provided only to the officers in the State Bank of India. The demand for pension to officers of all banks is still awaiting clearance from the government.

AI contract staff

A division bench of the Bombay High Court directed Air India to pay each of the latter's 260 canteen employees and sweepers on contract, an additional sum of Rs.1,000 a month.

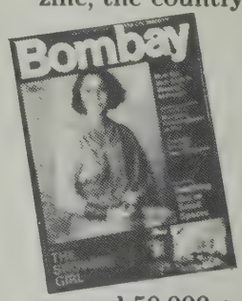
The Sarva Mazdoor Sangh had demanded that the workers be made permanent since their work was permanent in nature. The judges asked Air India to submit a report within a month whether it could comply with the union's demand. Meanwhile, the corporation was barred from terminating the services of any worker and from entering into any new contract with regard to the work done by the 260 people.

Stir in Narang Hotel

Workers of Narang International Hotel's flight kitchen have been agitating against the alleged illegal termination of the services of 50 colleagues. According to a spokesperson of the Hotel Mazdoor Union, the management has neither been paying minimum wages, nor complying with provisions of the Provident Fund Act. To escape these liabilities, the management has allegedly been employing 40 per cent of its workers as trainees. The union has demanded that the workers be reinstated, the suspension of union leaders be revoked, and that all unfair labour practices be stopped forthwith.

LANDMARKS

Resigned, K.P.P. Nambiar, from his post as special advisor to the Kerala government ostensibly over differences with the ruling Left Democratic Front bosses in the state. In the early seventies, the high profile Nambiar founded Keltron, which was a model for several state owned electronic companies all over the country. He later became chairman of Indian Telephone Industries and the secretary of Department of Electronics. The Left Front brought him back to Kerala in late 1988 to put Keltron, which by then had fallen into bad times, back on the rails.



Appointed, Manmohan Singh, as chairman of the University Grants Commission. The distinguished Cambridge-educated economist has held senior government positions at various times including those of governor of Reserve Bank of India, finance secretary and deputy chairman of the Planning Commission. He is currently economic advisor to the prime minister. In his new capacity, he will have the status of a cabinet minister.

Elected, Tanil Kilachand (53), managing director of the Rs.112-crore Polychem Ltd, as president of the Indian Merchants' Chamber, Bombay for 1991-92.

Selected, Indian Aluminium Company, Gujarat Ambuja Cements and Cochin Refineries for the 1990 Harvard Business School Association of India-*Economic Times* award for corporate performance. The winners wer selected by a panel of judges which included N. Vaghul, chairman, ICICI, N.M. Desai, ex-chairman of L&T; Gurcharan Das, managing director of Procter & Gamble; and T.N. Ninan, editor, *The Economic Times.*

Ceased publication, *Bombay* magazine, the country's first city magazine, after nearly 12 years in the business. Part of the *India Today* group, it rode the crest of the glossy magazine boom of the early eighties. The fortnightly had peak circulation of around 50,000 copies but fell into hard times in the last few years following all round competition.

For paints, dyes, tyres, plywood, leather and aluminium industries –the trusted name in chemicals

SAIL Chemicals. Touching your everyday life.

Everybody knows SAIL makes steel. But SAIL also makes a whole range of chemicals, required by a vast array of industries. Benzene for making plywood, detergents, pesticides and nylon yarn. Toluene for paints, printing ink, adhesives. Naphthalene to make dye intermediates and tanning agents. Carbon Black Feed Stock (CBFS) for tyres and conveyor belts. And Pitch for the making of aluminium, electrodes and drycell torches.

SAIL Chemicals are also required to make drugs, herbicides, artificial sweeteners and many other products.

SAIL Chemicals. One way or the other, they touch your everyday life.

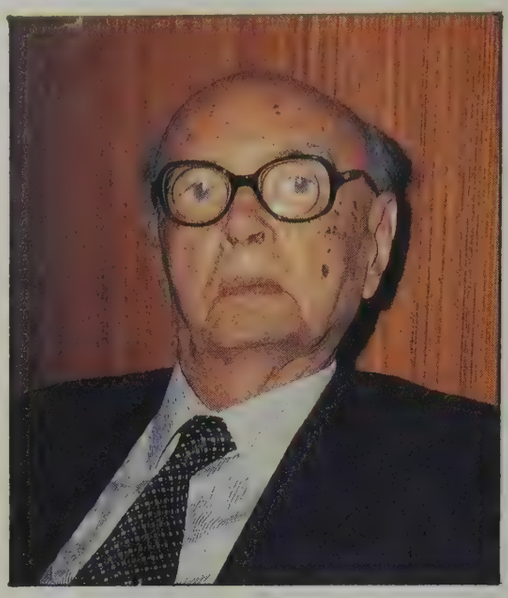
CENTRAL MARKETING ORGANISATION

1 R. N. Mukherjee Road, Calcutta - 700 001

C.P. KRISHNAN NAIR

C.P. Krishnan Nair, the loquacious chairman of Hotel Leela Venture Ltd, the company that runs Bombay's Leela Kempinski and Goa's newly opened Hotel Leela Beach, quotes from the Vedas to emphasise his point. He sees India, like the West, moving towards being a cashless credit card society. And he made his contribution towards this effort last fortnight by launching the Leela Centralcard, a joint venture between Leela, Central Bank and



Mastercard.

The card will be honoured by 16,000 establishments all over the country and the holders will be entitled to a 15 per cent discount in select hotels in leading metros. Central Bank chairman N.M. Mistry who was also present at the release of the card said that his bank gets business worth Rs.3 crore every month from the 10-year-old Centralcard and this new venture will increase the figure by 15 per cent.

D.L. SHAH

Among the several recipients of Shiromani award this year, the one who stood out was the octogenarian D.L. Shah, chairman of Perfect Machine Tools (PMT) and former president of Indian Machine Tool Manufacturers Association. Shah, who was the

first to produce automatic lathes in India during his six decade career in the machine tool industry, was conferred with the award for his outstanding achievements in quality promotion.

According to Shah, no fresh investment is one of the reasons for the stagnating growth of the machine tool industry in India. "As the average return on investment in this industry is lower than that in other engineering sectors, in case of a recession in the economy it is the first to be hit," he warns.

ANIL SACHDEV

A good number of consultants are armchair theorists with little or no field experience. Anil Sachdev, director in charge, Eicher Consultancy Services, is refreshingly different. He has had years of hands-on experience in management and was personnel director of Delhi-based Eicher Goodearth Ltd before he took up consultancy. For the automobile company, this diversification made sense because "our strength lies in people management," he says.

Eicher Consultancy's focus is on management of change. It has chosen to specialise in three key areas: culture change, total quality and productivity. They have also tied up with the Ohio-based Sims Consulting group for materials management and plant layout. "And shortly," promises Sachdev, "we should be swinging into business from other cities too."

SURESH KRISHNA

Sundram Fasteners Ltd. (SFL) has achieved the distinction of being the first Indian company to get its quality management system certified for conformance to ISO 9000, a rating that accredits organisations for their quality control programmes. Says Suresh Krishna, managing director of SFL and former president of the Confederation of Engineering Industry, "The ISO 9000 accreditation would now enable us to tap quality conscious markets in the west, especially OEM buyers."

A flagship company of the TVS group, SFL is set to touch the Rs.100 crore mark in exports by 1995, making it one of the top fastener manufacturers in the world. This accreditation will give the company access to 40 industrialised countries of the world.

C.P. RANGACHAR

The Bangalore-based hydraulic equipment manufacturer, Yuken India Ltd, in technical collaboration with Yuken Kogyo of Japan has some ambitious plans. They will "help double our turnover from Rs.10 crore in 1990-91 to Rs.20 crore in 92-93," says its managing director, C.P. Rangachar. By the second half of this year, the company will be launching three new products — low noise vane pumps, piston pumps and proportional electro hydraulic

controls. It also has plans to go in for mobile hydraulic equipments in future. "To manufacture high-torque low-speed motors, we have floated a new joint venture company, SAI (India) Ltd in collaboration with SAI of Italy," he adds.

BIN NAGAI

Bin Nagai the managing director of Harima Ceramics, the refractory subsidiary of Nippon Steel of Japan, was in Calcutta and Rourkela last fortnight to lay the foundation stone of the

joint venture project with the Bajoria group's Indo Flogates. Harima Ceramics is one of the world leaders in high temperature ceramic refractories used in the steel industry. The Rs.20-crore joint venture project, IFGL Refractories Ltd will produce continuous casting refractories in India. Continuous casting helps save energy and costs as wastage is less. Says Nagai, "In Japan, 95 per cent of the steel produced is by the new continuous casting process, while in India it is only 27 per cent. "That's why we've come here, as the market for this process will grow in this country."

PAUL GRIESSE

"We heard good things from the V.P. Singh government but did not see anything happen; we did not hear anything good from the Chandra Sekhar government nor did we see anything happen," says Paul Griesse, vice-chairman of the US section of the Indo-US Joint Business Council, after his week long visit to India as head of a delegation of American businessmen. Griesse was obviously very disappointed at the pace at which decisions were being made by the government in this country. Investment applications from America worth at least $200 million are pending on the US Commercial Consul's desk in New Delhi.

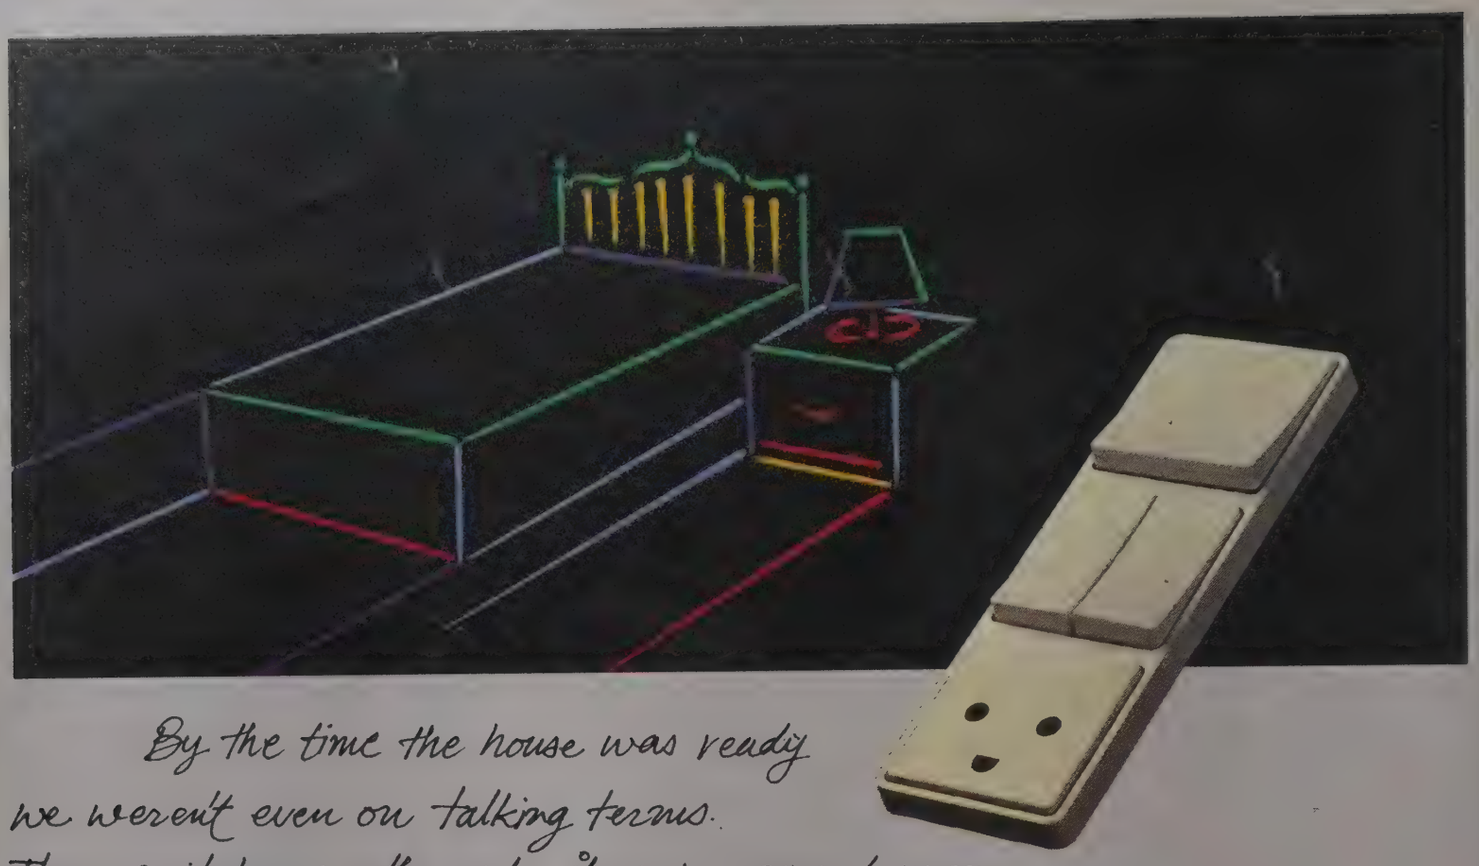
But at a personal level, Griesse does not have much to worry about. He is the president of a medium-sized US company based in Ohio called Bry-Air Inc and his 13-year collaboration venture with the Delhi-based Arctic India to manufacture industrial dehumidifiers continues to do well. Called Bry-Air India, the company recorded sales of Rs.50 crore last year and the two collaborators are now setting up a joint venture — Bry-Air Malaysia. But Griesse feels Bry-Air India could have grown four times faster if its Indian partner did not have to spend 40 per cent of its time dealing with government regulations.

R.D. AGA and VIJAY BHATKAR

From boilers, to supercomputers — that's the way Thermax has progressed. R.D. Aga, the company's chairman, recently signed a technology transfer agreement with the Centre for Development of Advanced Computing (C-DAC) to manufacture PARAM, a super computing system. An in-house R&D product of C-DAC, PARAM is a parallel processing computer that can support configurations of 16 to 256 nodes.

The company, which has been developing parallel computing software since 1985, became the first private sector company to receive manufacturing technology from PARAM. Parallel processing has now become a frontier technology in super computing. Says Aga, "It will enable India to achieve computing power in line with imported supercomputers like Cray and Convex at very competitive prices." The cost of a machine with 256 nodes will be in the range of Rs.3.5 crore.

Adds Vijay Bhatkar, C-DAC's executive director who signed the deal, "Supercomputers have now become a strategic tool for resource development in areas like seismic data processing, oil reservoir modelling, remote sensing, weather forecasting and defence." Thermax was preferred to Keltron and ITI who were also in the race for the technology transfer deal. "Tata Unisys has also applied for the technology transfer, but a formal agreement is yet to be signed," reveals Bhatkar.



PRANAB BARDHAN

Economist Pranab Bardhan — Professor at the University of California, Berkeley, and Chief editor of the *Journal of Development Economics* was recently in Bombay to deliver the sixth

EXIM Bank commencement day lecture. Speaking of the ways in which the comparative advantage of a nation changes, he said countries like Taiwan and South Korea had progressed largely because of "aggressive and judiciously selective" state intervention. This was also the best mechanism to build India's dynamic comparative advantage.

He does not accept that liberalisation is a more efficient alternative to state intervention.

SPONGE IRON

Time to resolve problems

The great rush is still on. More and more steel producers are discarding scrap as a raw material in favour of sponge iron. Big manufacturers like Mukand and Mahindra Ugine Steel Co (MUSCO) had taken a fancy to the new material a few years ago. Now, a number of smaller producers, especially from among the 166 mini steel units (total capacity: 5.2 million tpa), have been tempted. Of the total sponge iron used in the country, 70 per cent is consumed by these units. On the other hand, the consumption by big integrated steel plants is only 8 per cent. But even though both, users of sponge iron and their manufacturers, are hyperactive these days, they need to resolve some problems which have crept up.

Sponge iron works: sunrise industry, but stumbling-blocks still

According to government sources, there are plans to increase the capacity of sponge iron in the country from the present 600,000 tonnes to 2 million tonnes by the end of the current 5-year plan. While old players like Sponge Iron India, Ipitata Sponge Iron, Orissa Sponge Iron and Essar Gujarat have already made their presence felt, many new entrants are on the way. In all, new capacity of 8.83 million tonnes is being created at a cost of Rs 2,790 crore.

Evidently, the efforts initiated by the government three years ago to encourage the production of sponge iron are now beginning to pay off. The industry ministry had accorded "Priority Sector" status to sponge iron manufacturers by exempting them from the provisions of the Industrial Licensing Act and the MRTP Act. Another carrot: mini steel plants were allowed to expand their capacities upto 150,000 lakh tonnes or set up new plants if they agreed to use sponge iron in a big way.

Why is the Centre making sponge iron production so attractive? According to one estimate, the requirement of scrap will be around 4.34 million tonnes by next year while availability will be only 2.34 million tonnes. At present, manufacturers of steel are dependent on imported scrap to the extent of 60 per cent. In 1989-90, the country imported scrap worth a whopping Rs.900 crore! In order to save foreign exchange, the government recently made it mandatory for mini steel units to use sponge iron to the extent of 70 per cent of their requirements.

Most steel manufacturers are taken up by the advantages of sponge iron. Compared to scrap, which does not come in a fixed shape or size, the symmetrical structure of sponge iron allows it to be fed much more easily in the smelter.

But sponge iron has its disadvantages too. Some steel manufacturers say that they are being forced to use sponge iron though they would rather stick to scrap. "The same quantity of scrap and sponge iron yields steel to the tune of 93 per cent and 88 per cent, respectively," says one steelman. "And, sponge iron consumes more power in the smelting process."

The quality of the raw material is another sore point. According to R.N. Dasgupta, production manager at Western Mini Steel, Bombay, the problem lies in the fact that the best sponge iron can be obtained only through the gas route, but here there's the supply constraint. Since no particular supplier can be relied upon to provide top-quality sponge iron, this often plays havoc with production schedules.

Another problem is rising prices. The landed price of a tonne of sponge iron produced by Orissa Sponge Iron, for example, is around Rs.5,000 and it gives an yield of only 85 per cent. In the international market, however, sponge iron is Rs.4,800 per tonne, and has a yield of 94 per cent. But sponge iron consumers blame manufacturers, rather than raw material quality or market forces, for the increasing prices. One allegation: after the Gulf war broke out, the government increased the duty on imported scrap from 25 to 45 per cent. This led to the price of the raw material shooting up by more than Rs.800 per tonne. No sooner did this happen than "sponge iron manufacturers too hiked up their prices," according to the managing director of a Tarapur-based mini steel unit.

Another cloud looming over the heads of sponge iron users relates to the growing trend of manufacturers going in for backward integration. Essar Gujarat, Kalyani Steel, Nippon Denro and Grasim are among the units who plan to set up steel units using in-house sponge iron as the basic raw material. "We thought they would be merchant suppliers but if they decide to become users too then there is surely going to be a big shortage of sponge iron in the future," complains K. Ramachandran, senior adviser, MUSCO.

Ramachandran offers solutions to some of the problems faced but some of them appear too radical. "The government should allow us to import scrap to the extent of 30 to 40 per cent," he says. And what about the foreign exchange outflow? "It is very much cheaper to import scrap than to import finished products." An alternative, though, would be to import from rupee payment areas.

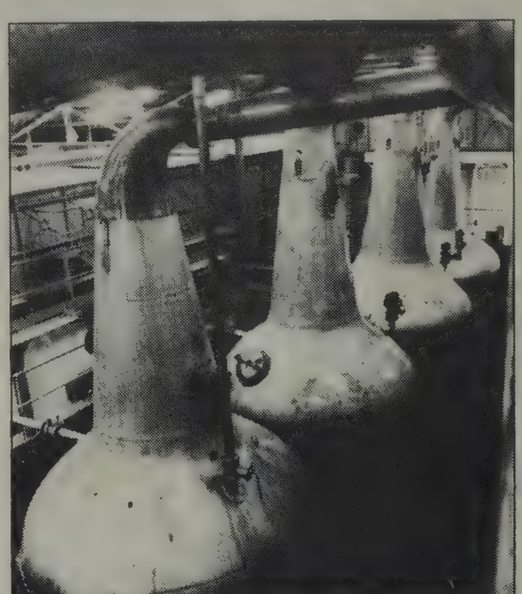
The problems are aplenty but not insurmountable. India has an abundance of the raw materials that go into sponge iron manufacture — iron ore, coal and natural gas — and their judicious deployment can easily make it a major international force in this area.

■ RAJU BIST

INDUSTRIAL ALCOHOL

High and dry in Tamil Nadu

It has been an open secret for quite some time — Tamil Nadu's liquor industry has been guzzling such vast quantities of alcohol, that the alcohol-based industries have been running dry. Reason: for the government, there are more bucks to be made from liquor. This has now been officially confirmed by V. Karthikeyan, the advisor to the governor of Tamil Nadu.



"I am constantly refusing allotment of alcohol for industrial purposes as we will then not be able to supply alcohol to the licensed IMFL shops in the state. The revenue from liquor is much higher than that from industrial alcohol. And revenue is a greater consideration for the government," Karthikeyan admits.

The annual revenue from the liquor industry is about Rs.200 crore and accounts for nearly 10 per cent of the total income for the state exchequer. In 1989, when the DMK party assumed power in the state, chief minister M. Karunanidhi said that he had inherited an "empty treasury". The only way to fill the state's coffers was to lift prohibition and let the liquor flow. And it did, especially the cheap variety.

Arbitrary announcement. The annual production of alcohol from molasses is 64 million litres. The state government had allotted 57 million litres to various alcohol-based industries and issued commitment letters. "Though officially the government allocated an annual quota for industrial purposes, no one actually received their full quota. But, after the introduction of cheap liquor, industries have been completely ignored. The government arbitarily announced the cut in allotment. In many cases, the cut is upto 50 per cent," complains P.K.N. Panicker, vice-president, Chemical Industries Association (CIA). Production in the alcohol-based industries which consist of 40 small scale and two large scale units with a combined annual turnover of Rs.100 crore, has been halved due to the non-availability of industrial alcohol. "The government's liquor policy is ruining the health of its citizens as well as of its industrial infrastructure," says Panicker.

The state government then introduced a new quota scheme under which alcohol was released only on a monthly basis. This monthly quota system has virtually snuffed out the smaller alcohol-based industrial units of the state. Under this scheme, the excise department officer has to certify the quantum of consumption every month. Then the unit has to prove that it has indeed utilised the amount. This again has to be certified by the excise department to secure the next month's quota. This bureaucratic intervention has resulted in a cumulative delay of three months. According to Panicker, the allotment for the month of January was released only in March.

Now, the government is introducing a new policy from 1 April 1991. According to this, industries will not be allotted rectified spirit but rather denatured spirit. The licence for rectified spirit will be totally eliminated. Hence, all applications for it have been turned down and industries have been asked to apply for the denatured variety. According to Karthikeyan, this move would curb the illicit diversion of alcohol from industries for potable purposes.

Liquor industry has been guzzling vast quantities of alcohol

Alternate sources for producing alcohol are tapioca, potatoes and sweet potatoes. The problem is their high cost of production. While the cost of alcohol from molasses, where the prices are controlled by the government, is Rs.3 per litre, that from alternate sources works out to about Rs.12 per litre.

Proposal rejected. The CIA wants the government to divert at least 70 per cent of the alcohol produced from molasses to industries. It also wants the government to rely on the alternate sources for potable purposes.

In 1990-91, 24 million litres of alcohol was diverted for potable purposes. The projected figure for 1991-92 is about 41 million litres. The government has rejected this proposal outright. "If the state-produced liquor had to depend on non-molasses alcohol, revenue would drop by 65 per cent. Indeed, it would defeat the primary objective behind the lifting of prohibition," says a senior official in the state government.

Chemplast, the largest user of industrial alcohol in the state (about 37.5 million litres a year) is dealing with this problem by importing a substitute product, ethyl dichloride (EDC) to feed its PVC plants. The present foreign exchange crunch is bound to affect the flow of the import substitute.

However, everyone points out that the situation is much better in Tamil Nadu than in the other southern states. "In Andhra Pradesh, 90 per cent of the alcohol is diverted for potable purposes and in Karnataka 85 per cent is used thus. We are now fighting only to prevent our state from going that way," says Panicker.

The state government expects a 200 per cent increase in the sale of liquor over the next eighteen months. This would in effect mean that the entire alcohol produced would be diverted to the liquor industry. And the alcohol-based industries would be left totally high and dry.

■ A.S. PANNERSELVAN

DAIRIES

In a bind

In November 1990, the government of Maharashtra had issued a notification to all cattle shed and stable owners stating that the city of Bombay and its suburbs were prohibited areas under the Maharashtra Transportation and Keeping of Cattle in Urban Areas (Control) Rules of 1976. But, neither did the owners heed the notice nor was any action taken against them. Now, again, Anantrao Thopte, the Maharashtra dairy development minister, recently announced his decision to make all private cattle sheds and stables shift from Bombay and its suburbs to Dapcheri in the Thane district.

These two were not the first instances of such notices being issued. As far back as in 1949, the government had first asked the owners to shift from the main city to areas beyond Mahim. The owners then settled in lesser developed areas like Andheri, Jogeshwari and Goregaon. In

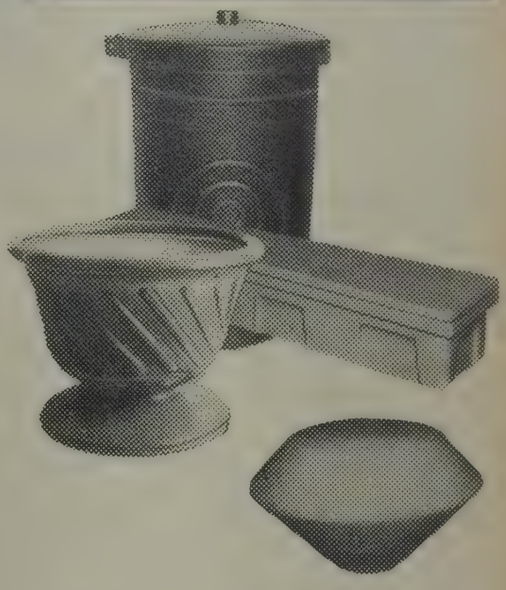
Cattle sheds: owners have reservations about shifting

1962 again, the idea of shifting the cattle ranges was mooted. However, the actual orders for the shift came only during the tenure of chief minister Shankarrao Chavan in 1976. But these were cancelled by Vasantdada Patil in 1977. The matter was once again raised by the government in 1983. The proposal this time was to build a dairy estate in Dapcheri, similar to the Aarey Milk Colony. But before the matter could progress, it was stalled due to the change in government.

Large scale protest. The government's recent move has evoked large scale protest among shed owners. Many feel that it is unfair since a shift to a remote area like Dapcheri would destabilise their existing business. There are 3,139 licence holders in the city who have 1,238 stables with over 75,000 animals.

Although the stable owners have, in principle, accepted the current notification, they have some reservations about the new site. Says a member of the 975-member Bombay Milk Producers Association, "It's not possible to shift the animals immediately. The process could take days. Secondly, we don't know whether the animals will adjust to the new environment."

According to Sulaman Saleh, secretary of the association, with only water and electricity provided by the government, owners would have to construct their own sheds as well as build housing for workers. This means that each member must come up with Rs.4 to 8 lakh soon.



However, J.D. Jadhav, secretary to the government for animal husbandry, dairy development and fisheries, feels that the owners are exaggerating the problem. He says that the government is willing to extend full support to the owners to help them settle into the new area quickly, as well as provide lay-outs for the construction of sheds. The government will also provide financial assistance for construction activity.

Elaborating further, Jadhav says that the government would also provide legal assistance to the owners. The latter, in turn, will be required to sign agreements with the Dapcheri Dairy Estate stating that the land would be used only for dairy development and not for the construction of farm houses or holiday resorts.

Crucial question. Apart from these basic problems, the crucial question before the owners is how to transport the raw milk to the city. With Dapcheri being located 150 km away, it could take over four hours to reach the city. By that time the raw milk would surely curdle. The only way around is to pasteurise the milk at Dapcheri itself.

Here the government showed initiative and foresight. In anticipation of a shift from Bombay, and following upon the 1983 proposal, it has already set up a co-operative at Dapcheri, the Dapcheri Milk Estate, with modern dairy processing facilities. Owners who move to Dapcheri can avail of its services. This not only solves their problem with curdling but also strengthens the co-operative. Besides, it is in tune with the government's stand that dairy development is a rural occupation and must remain so. Says Jadhav, "The owners are under no compulsion to give their milk to the estate." In reply, Mohammed Qazi who owns over

Custom Moulding from Sintex

You name it, we can do it !

At Sintex we have refined the craft of custom moulding to an art.

In any industry the specifications vary from job to job and the standard containers might not be able to satisfy your need.

The next time you are stuck up in such a situation,come to us, give us the specifications and we will make a satisfactory product out of it. In fact, we have already developed a host of innovative products for a variety of customers.

Keep up with International business week after week

after week.

What does it take to bring you the world's best, most powerfully reported global business news every week — week after week?

News of the reshaping of Europe, the surge of America, the creative ferment of the Orient — and all that means to you and your business?

It takes a crew of 200 reporters and editors, plus countless photographers and graphic designers posted in New York and in 26 bureaus in the U.S. and overseas — all to bring you the never-ending stream of global business news, dramatic news photos, and other interpretive graphics you'll find every week in Business Week International.

It's truly global business news designed to be read and digested by the hyper-busy international business leader who must stay world informed, yet wants things simple, and quick. And who is by no means easy to please.

If you're serious about wanting world business news — presented in a way that is considerate of your limited time, you should be reading Business Week International.

To receive a one-year subscription to Business Week International, just fill in the reply card below and mail.

100 animals, says, "We are left with no choice. Either we risk bringing it to the city or give it to the dairy."

As Dinshaw Nariman of Parsi Dairy Farm points out, "Bombay requires over 3 million litres of milk a day. Of this private milk traders supply over 1 million litres, which gives them a daily turnover of Rs.95 lakh." Small wonder then, that the cattle owners are in a bind. If they oppose the government, they will face charges for illegal occupation of land. And if they shift to Dapcheri, their hold on a large share of the milk market in the city becomes shaky.

LEATHER

Discord at the CLE

Ever since its formation on 26 June 1984, the Council for Leather Exports (CLE) has maintained a sober front. Impervious to the rulings of scandals and rumours, the CLE has kept a watchful eye over the growth of leather exports. However, in early March this year, the Leather Industry Protection Committee (LIPC) — a Madras-based association of leather exporters claiming a membership of 200 — chose to rake up the issue of elections to the committee of the CLE. "Elections to the council have not been held since its formation," alleges K. Sanaullah, honorary secretary, LIPC.

The CLE, which functions under the aegis of the ministry of commerce, was registered as a company under the Companies Act 1956. In June 1984, it was formed as a result of a merger of the Leather Export Promotion Councils (LEPCs) at Madras and Kanpur which were functioning as separate bodies. At the time of the merger, the government nominated a committee of administration consisting of 18 office bearers. M. M. Hashim, who had earlier served as chairman of the LEPC at Madras, assumed charge as chairman of the CLE.

For genuine exporters. Thereafter, when the time for elections drew near around 1985, Taj Leather Exports, a Madras-based firm, filed a writ petition in the Madras high court, challenging the articles of association of the council. The problem related to the fact that members with an export turnover below Rs.3 lakh were not given voting rights. "The intention was to maintain the CLE as a forum for genuine exporters. The figure of Rs.3 lakh is peanuts in leather exports," explains Hashim.

Obviously the view was not shared by the entire fraternity. The writ challenges this discrimination, explains Shafir Ahmed, managing partner, Taj Leather Exports. Whatever be the intentions of the writ petition it has ensured that elections have not been held to the council. The question of franchise to members affects the election process itself. "Elections have been stayed on account of nonresolution of this issue," explains Hashim. And the wheels of justice have moved slowly.

The CLE has been discussing the issue at its meetings periodically. In May 1989, the committee decided to communicate

Hashim: an exemplary spokesman

to the government that "it would not be possible for them to continue carrying on the management of the council beyond 31 December 1989." CLE suggested that the government should initiate urgent measures to get the petition pending before the Madras high court disposed off expeditiously. The office bearers even toyed with the idea of resigning *en masse*. But legal opinion established that this would amount to contempt of court, says Hashim. He predicts an early solution to the issue since the petitioner seems willing to withdraw the writ petition against the council. On the other hand, Shafir Ahmed denies any intention to withdraw the petition. And so, the stalemate continues.

The only solution is for the authorities to intervene and sort out this problem. Even the LIPC admits that Hashim "has been an exemplary spokesman for the industry," but still there are signs of discontent. The issue of extending the date for the enforcement of a quota system for finished leather brought some of this discontent out into the open. Sources in CLE, however, question the authenticity of the LIPC as representative of the industry.

Allegations were made against committee members for "not representing the views of the finished leather fraternity adequately" and then came the plea for changes. The leather industry totalled up exports of the value of Rs.2,030 crore during 1989-90. "Several of the entrepreneurs have acquitted themselves creditably and it is time others got an opportunity to serve on the committee," says Sanaullah. Clearly the issue cannot be swept under the carpet much longer.

■ DHARANI K. PANI

GULF FLIGHTS

Business as before

The Gulf war took a toll of business all over the globe. But, perhaps the visibly worst affected was the airline industry. Rising fuel prices and disrupted flight schedules translated into plummeting passenger loads. Thanks to Saddam Hussein, 11,000 flights were cancelled worldwide, putting 51 airlines of the International Air Transport Authority (IATA) to a whopping loss of $1 billion in January alone.

In India, the industry is taking stock of its losses and slowly returning to normal. Air India suffered a loss of Rs.200 crore due to the war. This does not include the expense of 466 sorties to airlift 1,20,000 Indians out of Kuwait. Says Jitender Bhargava, chief public relations manager, Air India, "We are now flying as per our announced schedules, and everything should be normal by 1 April." However, he says, Air India is flying at only two-thirds its capacity to the Gulf region. This, according to him, is because people are as yet reluctant to head Gulfwards.

Different picture. The picture is altogether different for most other airlines, which are reporting a rush for seats. At Saudia's office in south Bombay the queue begins to form as early as 7 in the morning. By noon, there is a 500-strong crowd which has to be controlled by security officers. The airline suspended operations in the second fortnight in January

Sales Tax Holiday for 11 years to industries in Rajasthan

And 15% to 20% Subsidy as well.

A very attractive package of incentives to industries is being offered by the State Government in Rajasthan under the new Industrial Policy.

SALES TAX INCENTIVE

A lucrative incentive is available to industries by way of Sales Tax Exemption/Deferment for a period of 9 to 11 years :

- Very prestigious industries (Rs. 100 crore or more investment) get 90 per cent exemption for 9 to 11 years.
- Prestigious industries (Rs. 25 crore to Rs. 100 crore investment) get 75 per cent exemption for 7 to 9 years.
- For small/medium/large projects (up to Rs. 25 crore investment) the exemption limit is 75 per cent for 5 to 7 years.
- No sales tax on purchase of raw material and machinery for industries like cement, tobacco, textiles, sugar, food processing and mineral based industries.

ELECTRONICS

For all electronics industries, the limit of fixed capital investment has been abolished for computing Sales Tax. It is also applicable in case of expansion and diversification. The very prestigious units get 100 per cent exemption for 11 years all over Rajasthan. Others get 75 per cent exemption for 9 years.

SUBSIDY

- 15 per cent Subsidy (maximum Rs. 15 lakhs) for Large/Medium Scale projects.
- 20 per cent Subsidy (maximum Rs. 20 lakhs) for Small Scale projects, units set up by NRIs, 100 per cent Export Oriented Units and for units based on resources available in Rajasthan.

OCTROI

- Exemption from Octroi on raw material for new units and on imported plant and machinery for new units (also for expansion of units)

A number of other benefits like exemption from power cuts, relief in power rebates, well-developed Industrial Areas quite close to potential markets and, above all, active assistance from RIICO, RFC and Directorate of Industries for your project ideas.

Visit or just write to us your area of interest

RIICO

and resumed its normal service of nine flights per week in February. A Saudia spokesman says that seats are available only for end-April.

Gulf Air, too, which operates 26 flights out of Bombay to the Gulf is now flying full loads. Says R. Thomas, a sales executive with the airline, "While there was a significant drop during the war our seats are now full."

Cathay Pacific, which stopped all its Gulf flights for a week each in January and February, coinciding with the beginning of the ground and aerial wars, was back to normal schedules by March. According to Dominic Purvis, marketing manager (India), "We are doing better than we normally do. Load factors are 85-90 per cent these days."

Emirates flies directly only to Dubai from India, and continued to do so during the war. In fact, due to the cancellation of flights by other airlines, this was one airline flying chock-a-block even as the missiles were heading for their targets.

British Airways reported that business was down by 20 per cent during the war, but expects its summer schedule, starting April, to be on course.

With the anticipated boom in reconstruction in the Gulf, the airlines can expect a bumper season, not just from India but also from South East Asian countries like the Philippines, Malaysia and Thailand. Ironically, then, after contributing to the original malady of the airline industry, the war might now contribute to its cure.

STAR SHOWS ABROAD

Unglamorous methods

In a recent investigation, Enforcement Directorate officials interrogated seven film stars in connection with alleged *havala* transactions. These stars had reportedly accepted Rs.9 lakh each in advance for shows they were slated to perform abroad. The officials say the deal was carried out by one Dhimant Mulchand Doshi who paid part of the amount here, having obtained it through *havala* channels, in violation of the Foreign Exchange Regulation Act (FERA).

During a similar major investigation conducted in November 1990, the Enforcement Directorate officials had nabbed Ravindra Sony, an American green card holder. At that time, as many as 15 film stars were interrogated and ultimately charged. The film stars admitted to having accepted amounts varying from Rs.25,000 to over a lakh each through *havala*.

Legal channels. Officials from the directorate point out: "We aren't bothered about the amounts they receive. But only want them to register it through legal channels and produce a inward remittance certificate."

Film star Jeetendra, for example, has recently legally signed an agreement for doing six shows abroad at Rs.50,000 each. He has declared an additional income of Rs.3 lakh and paid the necessary tax. By signing an agreement like this, the star not only makes the proceedings legal but also receives a 75 per cent tax rebate on their total free. The same could apply to all.

The reasons why stars do not do this are many. More often than not, such shows are not put up by registered professional organisers. That itself creates legal problems and arrangements per force have to be informal. For example, Amitabh Bachchan recently toured London, New York and Africa on such an informal arrangement. And he did not go alone; he had convinced a few others, like Anupam Kher, Govinda and Sridevi, to join him for the shows. So one can well imagine the kind of money involved.

After the primary work is done, the fee is decided and the mode of payment is discussed. A certain amount is paid in advance to convince a star to do a show. It is this amount that many film stars accept through *havala* to avoid legal hassles and taxation.

After this, each film star receives several other benefits. These include a first class or executive class air ticket (depending on the popularity of the star), reservations in one of the best hotels, pocket money for shopping, as well as payment in kind. In addition, an extra ticket is provided to whoever accompanies the star. Quite often, a star ensures that the show coincides with a holiday. Again the expenses, including shopping, are taken care of by the organisers.

Earlier, stars could get away with this. However, the recent crackdown has shown that the government is not in the mood to allow this to continue.

Concentration — by default or design?

The fiscal year 1990-91 will be remembered for its multiple events both domestically and internationally. In the domestic sector the Mandal Commission agitation disrupted trade and industry. On the international front the Gulf crisis put a severe strain on the balance of payments and foreign exchange reserves which are still being felt, despite the IMF loan. While agricultural production this year [illegible] is expected to be a record 179 million tonnes, industrial growth is expected to slow down to 7.5 per cent, as against 8.3 per cent last year.

Even though there has been a general decline in industrial production the industry that has been hit the hardest is the automobile sector. In the first nine months of 1990-91 production of cars and jeeps was down 1.6 and 4 per cent respectively. Nevertheless, despite certain infrastructural constraints the underlying trend is not as dismal as it sounds. This is because Indian industry has matured over the years and has become competitive and more responsive to market needs.

This is largely the result of the liberalisation process initiated in the early eighties. Measures such as broadbanding, minimum economic scale of production, nationalisation of tax structures, change in the exim policy and the partial withdrawal of controls on the closure of unviable units have facilitated industrial growth. Certain industries like cement and aluminium were brought out of the ambit of price and distribution controls.

Higher industrial production

The impact of the liberalisation measures have manifested in higher production. The index of industrial production during 1985-90 grew at an annual average rate of 9 per cent per annum, as against 5.7 per cent per annum between 1966-80.

However, one of the avowed aims of liberalisation is to increase competition. But a study on the sale pattern of market shares of over 350 industrial products prepared by the Centre for Monitoring Indian Economy reveals that the number of industries with a high market concentration increased between 1987-88 and 1989-90. This concentration is especially high in intermediate industries like chemicals and non-ferrous metals, but low in consumer non-durable products like food and clothing. In 1987-88 about 76 per cent of the industries surveyed had a concentration ratio (the share of the top four firms in the total market for an industry) of more than 50; but in 1989-90 this went up to nearly 80 per cent of the industries surveyed.

The study reveals that " the chemical industry has a very high degree of concentration particularly in organic chemicals, polymers and man-made fibres. In most of these industries the top one or two companies account for nearly all the production. Of the 47 chemical products for which concentration ratios were worked out, 32 were found to have a concentration ratio of 100. Only one product was found to have a concentration ratio of less than 50 per cent".

Share of top firms

Also, market concentration is found to be high in non-ferrous and transport equipment industries, where the top four firms account for nearly 100 per cent, as in the case of aircraft, medium and heavy chemical industry, passenger cars, jeeps, motorcycles, three wheelers and piston rings. Of course, in practically all the cases the top company accounts for over 50 per cent of the production. Even though concentration is high in the non-electrical machinery industry there is more equitable distribution between the top four companies.

Industries that show less concentration are mainly consumer non-durable products like sugar, vanaspati, vegetable oils, tea, fabrics and garments. Consumer durables, like electric fans, dry cells, televisions, mopeds and bicycles show a high concentration ratio.

The study clearly reveals that Indian industry has yet to see true competition and that the process of liberalisation should be stepped up if more and more companies are to emerge, thereby reducing the concentration ratio. Much will depend on the direction the industrial policy takes and what the government envisages as the role of the public sector.

To the average person, 3 of them will not survive.

To a Lion, they will all live to see the future.

Every 20 seconds, 3 Indian babies fall prey to measles, polio, tetanus, tuberculosis, diphtheria and whooping cough.

Simply because of lack of proper immunisation.

Which if neglected, could cause complications leading to blindness and death.

What we need is a nation-wide health programme. To emphasize the benefits of timely immunisation.

Like the 'Measles Minus' programme conducted by the Lions.

A task that needs dedication and concentrated effort. And above all, single mindedness of purpose. To gift health to millions of babies.

But not all understand this.

That's why it has always taken a special kind of person to be a Lion.

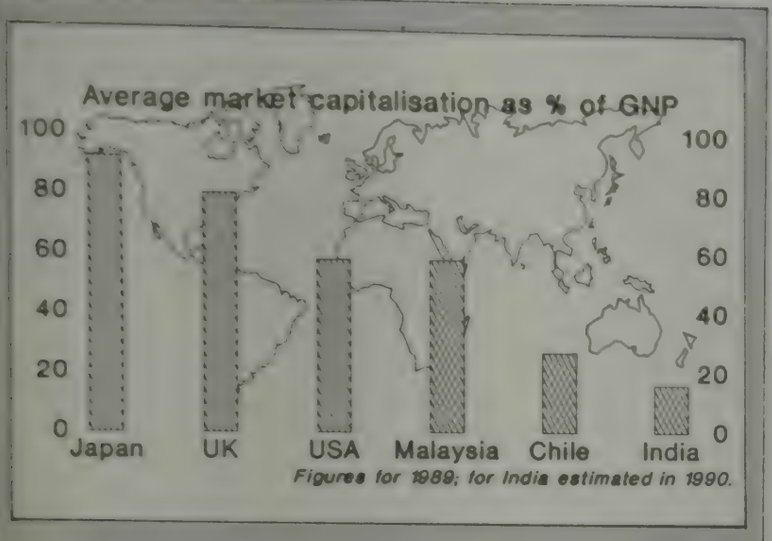
Special men and women who share a common concern. A concern for the society in which they have succeeded.

Who realize that beyond the achievements of everyday life is that most elusive object: inner satisfaction.

And who have come together to touch the lives of others less fortunate than themselves.

Needless to say; people like these aren't many.

After all, if everyone in the world had the vision of a Lion, there wouldn't be an average person.



Millions of people make up this world. But just a few shape it.

LIONS CLUBS INTERNATIONAL

Karishma/LCI/3/2820

Average market capitalisation as a percentage of GNP was around 15 to 16 per cent in 1990. The figure for Singapore is over 100 per cent, while for Japan and the UK it is 92 and 80 per cent respectively — which means that India has a long way to go. Even developing countries like Malaysia and Chile have market capitalisation ratios far in excess of India's.

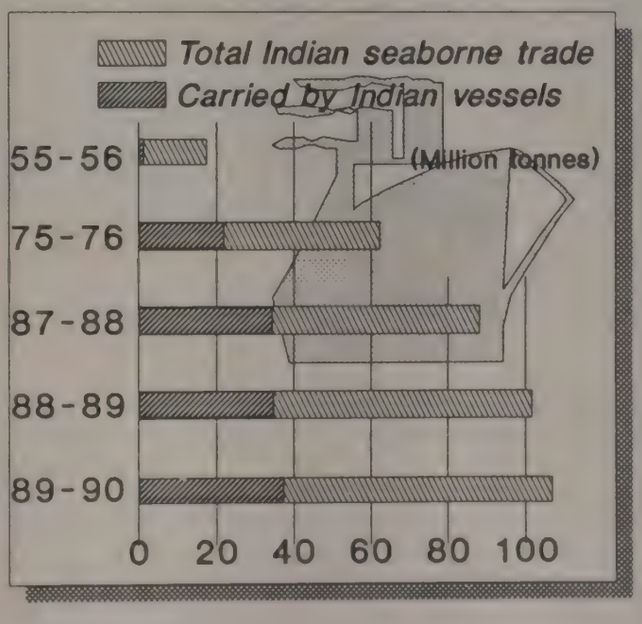
The Indian capital market, which had been lying dormant in the 1970s, has experienced a remarkable boom in the 1980s. Resources raised have increased from Rs.164 crore in 1980 to Rs.6,000 crore in 1989-90. The bulk of these are through the issue of debentures.

Wholesale price index: The wholesale price index for all commodities was marginally up (0.47 per cent) during the month under review. In the index for primary articles, the index of fibres was up 4 per cent.

(1981-82=100)

	2 Mar '91	2 Feb '91	3 Mar '90	% change over Month	% change over Year
All commodities	190.4	189.5	169.5	0.47	12.33
Primary articles	195.9	195.1	166.2	0.41	17.87
Manufactured products	187.8	186.9	173.6	0.48	8.17

Money and Banking (scheduled commercial banks): Broad money (M3) was up nearly 3 per cent in the month ending 22 February 1990. This had a cascading effect on aggregate deposits and bank credit which rose by 2.2 per cent and 2.9 per cent respectively. Food credit during the same period was up 6.5 per cent.



(Rs crore)

	22 Feb '91	25 Jan '91	23 Feb '90	% change over Month	% change over Year
Broad money (M3)	2,60,597	2,53,023	2,26,082	2.99	15.26
Aggregate deposits	1,88,920	1,84,824	1,64,148	2.21	15.09
Bank credit	1,12,191	1,08,935	97,572	2.98	14.98
Food credit	4,613	4,330	1,974	6.53	133.68
Credit/deposit ratio	59.39	58.74	59.44		

Bullion prices and stockmarket index: Both gold and silver were down by 3.9 per cent and 1.6 per cent respectively in the month up to 25 March 1991. The BSE index though up last year, reacted bearishly to the uncertain political situation.

	25 Mar '91	22 Feb '91	25 Mar '90	% change over Month	% change over Year
Gold (Bombay)	3,399	3,538	3,465	-3.9	-1.90

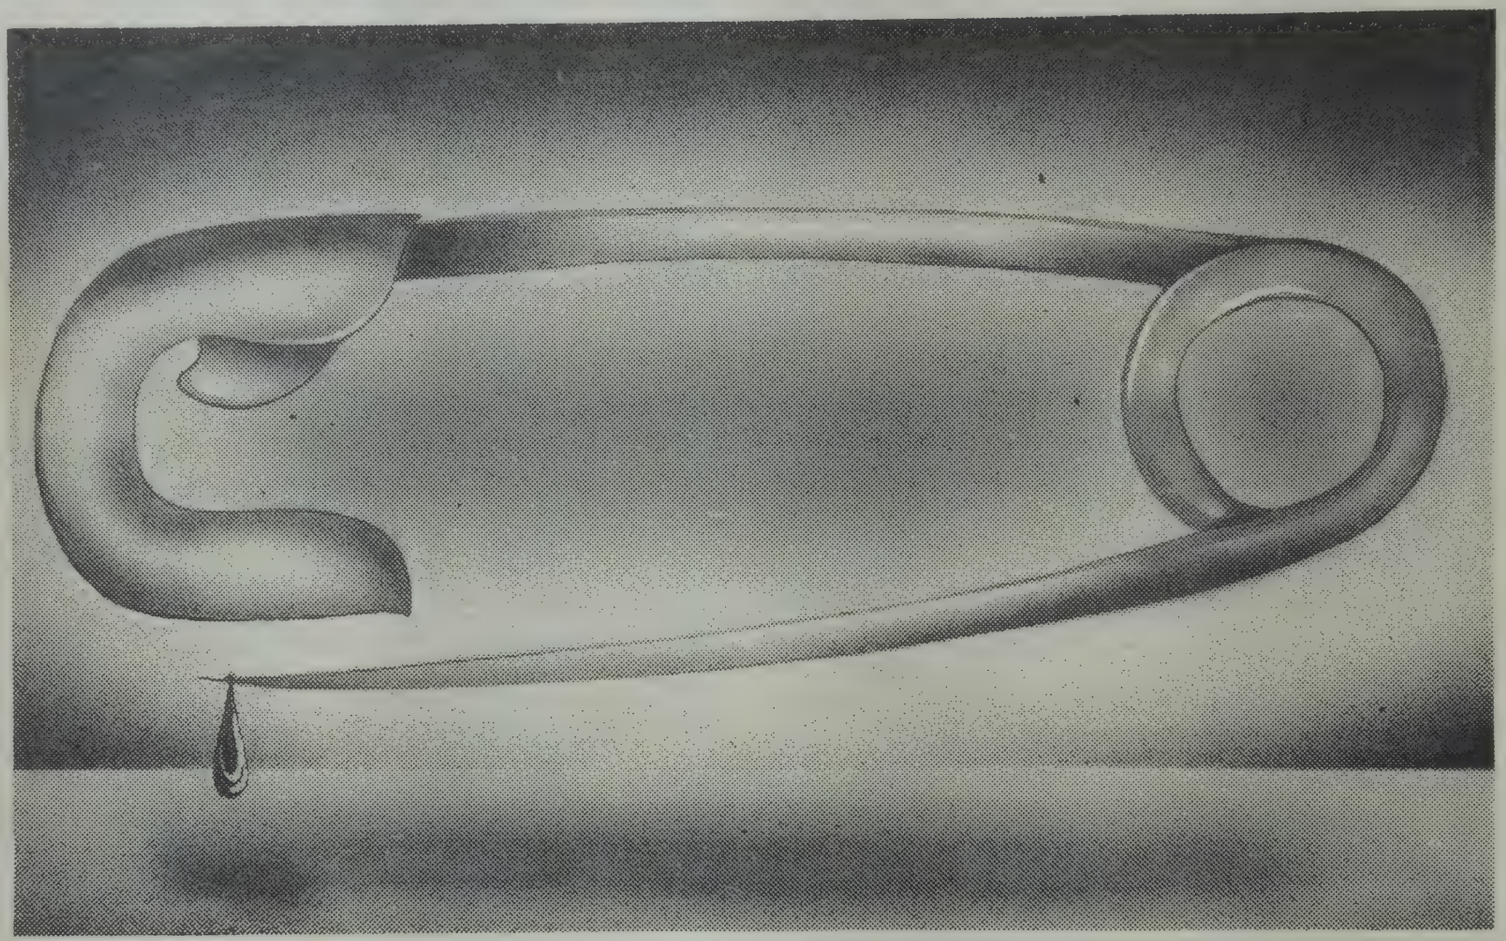
BSE index	1,156.46	1,179.3	757.8*	-2.0	52.30
(1978-79=100)					
27 March 1990					

Price of gold is in rupees per 10 gms and silver in rupees per kg



Shipping

The shipping industry has grown significantly since independence, from around 193,000 GRT (gross rated tonnage) on the eve of independence to around 6.06 million GRT as on January 1991. Total capital employed in shipping in 1988-89 was around Rs 4,000 crore. For the same year, freight and charter earnings stood at Rs 1,335 crore.

Seaborne trade

There has been a steady increase in India's seaborne trade over the years. For instance in 1955-56 traffic carried by Indian ships totalled 1.13 mt (million tonne) which was 6.5 per cent of total overseas traffic. This rose to 21.76 mt in 1975-76 and crossed 37 mt in 1989-90, around 35 per cent of the total global traffic. India's overseas seaborne trade is expected to increase to around 148 mt by 1994-95. While coastal seaborne trade is expected to increase from 22 million tonnes in 1988-89 to 48 mt in 1994-95, the strength of the Indian fleet is expected to go up from 9.86 million DWT on March 1990 to 14.89 million DWT by the end of the Eighth Plan.

ONCE IN A WHILE EVEN THE SAFEST PRODUCTS COULD LET YOU DOWN.

And involve you in Product Liability Claims

Sometimes even a safe product can cause unexpected damage:

Claims for compensation by the affected end user could be astronomical to cripple your company financially. In fact, liberal product liability claims are common abroad, amounting to millions.
In India too, general public is awakening to such compensation rights. The Government has set up Forums under the Consumer Protection Act which enable the public to pursue claim for compensation in respect of accidents resulting in death or bodily injury to Third Party or damage to Third Party Property arising out of any defects in the product. The courts are also sympathetic towards the victims.

Legal Compensation – A Consumer Right:

Food products, pharmaceuticals, tyres, chemicals, petrochemicals etc., may all have been manufactured under strictest quality control standards. Yet, one cannot rule out the possibility of the product causing injury or loss of lives and damage to property.

Product Liability Insurance - A boon to Manufacturers and Exporters.

General Insurance Corporation and its subsidiary companies offer Product Liability Insurance Policy, indemnifying you against legal liability to pay compensation to Third Party arising out of accidents due to any defects in your product covered under the policy including the cost of litigation.

So whether your product is marketed in India or abroad, Product Liability Insurance is a must.

For details contact any office of the subsidiary companies of GIC.

Smart bureaucrats

Bureaucrat-baiters, eat your words. The mandarins in Union ministries are no less adept at business or getting around edicts than the enterprising citizen. In this year of cuts on avoidable or postponable ministerial expenditures, they have found ways to exhaust their budgeted funds (which lapsed on 31 March). For example, while cars cannot be bought, by a government *diktat* photocopiers are not taboo. Advice from the smart salesman from Modi Xerox has come in handy for those who were faced with the ignominy of failing to spend the annual allotment, and the year is ending at a sweet note for them as well as the company after all.

Reinstated Swamy

Some days ago, commerce minister Subramaniam Swamy received a letter from the director of the Indian Institute of Technology, Delhi. It directed him to report back for duty within three days. No, the IIT boss was not asking Swamy to report back for duty at Udyog Bhawan, but at the IIT where Swamy was a professor before he was sacked in December 1972.

Swamy: justice at long last

Last fortnight, Swamy, who also holds additional charge of the law and justice portfolio, ultimately got justice when the Delhi civil court upheld his contention that he had been sacked in contravention of the law. The letter of the director, IIT, was a sequel to this judgement.

Interestingly, Swamy's case was fought by none other than his better half, who is a lawyer. But it has taken 18 long years for the tortuous battle to come to a conclusion. Swamy is, of course, not going back to his old job. "Now I would rather be a politician than a professor," he says. But the judgement does mean that he will not be entitled to collect the backlog of arrears of salary (from 1972-91).

Rail tales

Officials of the Railway Board are hopping mad these days. And the ones that are driving them up the wall are railway minister Janeshwar Mishra and his minister of state, Bhakta Charan Das.

A few days ago, Mishra forced railway officials to pass a proposal to stop the Howrah-Delhi Rajdhani Express at Allahabad, the constituency he represented in the lately dissolved Lok Sabha. And now, he is trying to bulldoze the bureaucrats to introduce 52 additional halts for different trains in India. Officials estimate that this will lead to an additional cost of Rs.1 crore annually, since each halt means that trains have to reduce speed before they stop, involving additional fuel costs. Also it throws the whole system out of gear, the number of lines being limited.

Mishra has been briefed about all this, but is unrelenting. "Carry out my orders," he says. But this is not all. A little while ago, Mishra allotted a few rakes to a certain party, ignoring the claims of earlier indenters and the advice of his officials. But here he had to eat crow, because the parties he had ignored went to court and got a stay order.

Das, who recently discomfited passengers aboard an IA flight by forcing it to make an unscheduled halt at Ahmedabad, is also bothering railway officials. He wants to award contracts for kiosks in different stations.

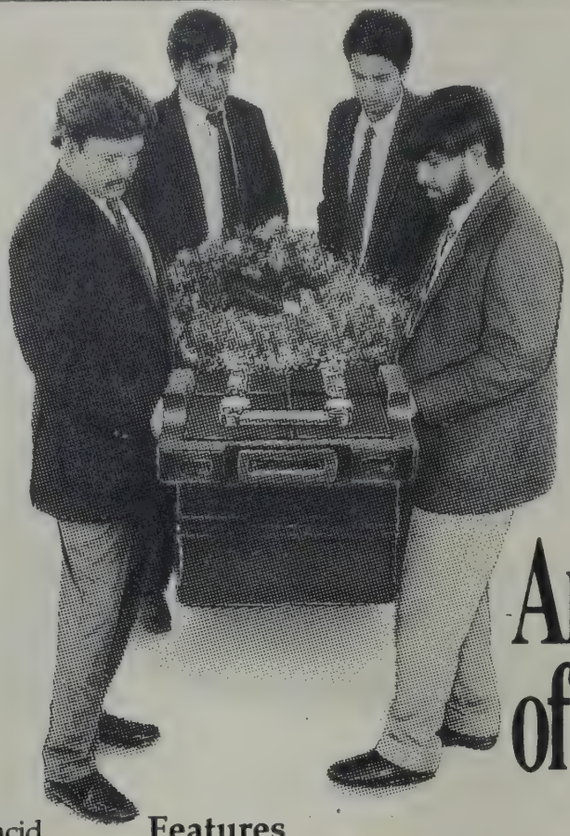
The budget that was not to be

Now that the vote on account has been passed and the government has also fallen, what did the budget which was ready but never presented actually contain?

Those who framed the budget — the political leadership and bureaucrats — are still not talking, but reliable sources suggest that it contained taxation proposals amounting to Rs.4,000 crore. What is worse, this was sought to be raised by an across-the-board increase in taxes, with the potential of affecting practically every section of society. According to one who was privy to the budget, the increases were arbitrary and any goods on which taxes had not been hiked for the last 2-3 years was targeted by the finance minister. Obviously with this sort of budget, the Congress (I) could not go to the polls in Tamil Nadu.

Are Oswal's trying times over?

Abhey Oswal's Bindal Agro Chemicals has finally been awarded the capital goods import licence that was holding up the progress of its Shahjahanpur fertiliser project. Over the last year Bindal has seen some trying times. The V.P. Singh government had revoked Shahjahanpur's letter of intent granted by the Rajiv Gandhi government in August 1989 which was revalidated by prime minister Chandra Shekhar.



Oswal: turn for the better

Nuclear trouble

The co-operative fertiliser company, Krishak Bharati Co-operative Limited (KRIBHCO), which completed its fertiliser project ahead of schedule, was chosen by the department of atomic energy to execute its heavy water plant in Gujarat. This project, however, has run into problems with its technology supplier, the American firm Kellog, which supplied technology for KRIBHCO's ammonia plant at Hazira.

The company has reportedly refused to supply technology as the heavy water facility can be used to develop nuclear warheads. That India is not a signatory to the nuclear non-proliferation treaty has also made the technology transfer uncertain.

The end of one battery era.

And the beginning of another.

Gaston Plante's original lead-acid battery technology (developed in 1860) used by every manufacturer in India, is rapidly fading into history.

India now has Sealed Maintenance-free batteries. Manufactured by Amara Raja Batteries Ltd., in collaboration with GNB Inc.- USA.

SMF batteries offer upto 20 years of truly maintenance-free service. And practically revolutionise the concept of battery-derived power.

Everything you never expected

No initial charging. No specially ventilated rooms. Floor space savings as they operate in any position. And superior electrical characteristics make them a ready replacement for conventional cells.

Fit. Forget. And Save.

Two ranges - (35 AH - 250 AH) and (100 AH - 4360 AH) meet all applications in UPS, Telecommunications, EPABX and RAX, Power Plants, Sub-stations, Photovoltaic systems and the Railways.

Switch to Amara Raja Batteries. And discover what a truly maintenance-free source of power can offer.

Features	Benefit
Absorbed Electrolyte	No free Acid
Protective Top Cover	No Maintenance
Sealed Construction	Spill Proof & Leak Proof
Recombination System	No External Gassing
Resealing Safety Vents	Explosion Resistant
Integral Terminals	Improved Connections
Multi-cell Container	Simplified Installation
Special Hybrid Alloy	Deep Cycle Capability
Factory Charged	Minimal Installation Time

Now from Amara Raja Batteries Ltd.
India's First Sealed Maintenance-free Lead-Acid Batteries.

CONGRESS(I)

Reaching for a new vote bank

Since the last Lok Sabha elections which took place just fifteen months ago, events of such import — like the Ram temple episode and the Mandal agitation — have taken place that the traditional vote bank of the Congress(I) consisting of Muslims and Harijans has been considerably eroded. Faced with this reality, Rajiv Gandhi and his coterie of advisors (which include a former newspaper editor, a top government official, and the head of an advertising agency) are busy finalising a strategy that will overcome this problem.

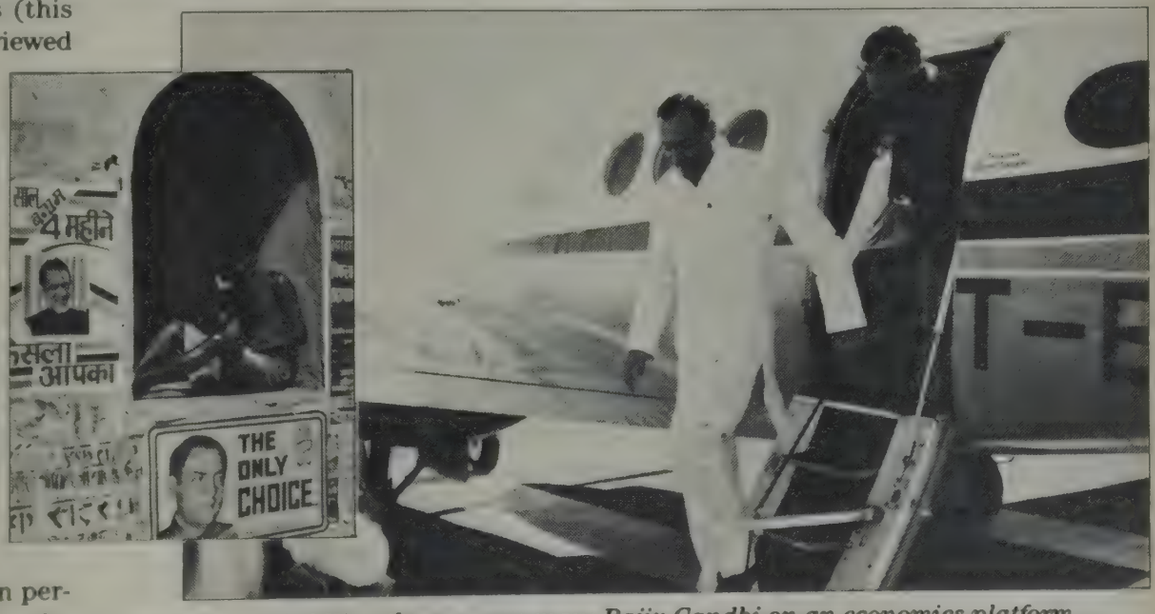
According to sources, Gandhi and his advisors have been working at a solution, which takes into account certain ground realities (missed by other parties, by and large), and arrive at a winning strategy — in addition to the projection that the Congress(I) can provide the only stable government in the country. Said one of Gandhi's advisors, "Various parties (this includes the Congress too) have viewed constituencies from the angle of caste and community until now and completely overlooked the economic angle. Our belief is that there is a disposable income group (DIG) in each constituency which cuts across caste and community lines. No one has lent a thought in this direction. This group should be targeted as a vote bank in each constituency."

Changed perceptions

Gandhi believes that, over the years, the whole demographic profile of the country has changed. The number of the poor in percentage terms is less today than at the time when the powerful *garibi hatao* campaign of 1971 was unleashed. Says a Gandhi aide, "You can't deny that the savings and investments made in this country is one of the highest in the world. Consumerism has made its advent into rural areas. You find companies like Hindustan Lever and Usha International hawking their products in remote villages. This is part of an ongoing economic process which has instinctively been grasped by the Congress party and no one else."

It is also Gandhi's genuine conviction, sources say, that economic issues cannot be confused with political issues. According to Gandhi, this economic momentum should be realised and not frittered away on caste and religious vote banks as is the practice with some parties. Comments the advisor, "Till recently, we were a model for growth for the world, but today it is no longer so. This message will also be incorporated in our campaign."

But can this entire thought process be packaged and made attractive to be a vote catcher? Says Rajiv Desai, chief of Indian Public Affairs Network (IPAN), "I do agree that the only way out is a high rate of industrial growth, but the hitch is that promoting economics does not sell as a campaign strategy. The political culture is based on the premise that there is a large number of poor people here, on whose back one should ride. In other words, the vote catchers have a vested interest in promoting the poor. The strategy of the Congress(I) is one which is based on an appreciation of this change. One does not know how many realise this."



Even Congressmen are not too sure that determining the disposable income group is likely to move them in the direction of a winning strategy. As a senior Congressman says, "India is still a semi-feudalistic society where values based on religion and caste sell more strongly. Gandhi's strategy, being proposed by his whizkids is a model followed by developed countries and it is not likely to work in India, at least not now. Moreover, it takes years to cultivate a particular group. The time is not yet ripe for this. The only way to counter issues like *Ramjanmabhoomi* and caste-based reservation, rekindled by V.P. Singh, is to din into the minds of the masses the price of instability and the benefits of stability."

Unsure tactics

Members of other political parties scoff at Rajiv Gandhi's ideas. Says a BJP functionary, "If this is what he is planning, it means that Rajiv has not learnt from last time's experience. Such harebrained ideas do not work in India." Comments a Janata Dal official, "Can you really believe that this disposable income factor will raise more passions than Mandal? After all, we also have to appeal from an economic platform. We promise equality to all. It is nonsense to say that the percentage of the poor has decreased. In absolute numbers, the poor are increasing. There is great impoverishment and indebtedness in parts of rural India. You cannot brush it away by saying that they have access to consumer goods like soaps and lanterns."

Faced with this argument, Gandhi's advisor counters, "Well, may be the slogans seeking a stable economy to fulfil peoples' aspirations may not work in India, but nonetheless, the idea will sell. And as you would probably realise, stability at least lays down the conditions for economic growth. This will not be true, say, in the case of a slogan for the Ramjanmabhoomi episode, especially when it is combined with appeals for *roti* (food) and *insaf* (justice) in the way the BJP has attempted

SUDHIR MULJI

The road to Lebanon

"The road to Lebanon" is the new buzz phrase to describe the sort of uncontrollable chaos that countries like Iraq and Yugoslavia are moving towards; India may not be that far behind. We have not suffered a disastrous military defeat, nor perhaps is our nationalist problem as corrosive as Yugoslavia's, but we are nonetheless in the middle of a first class balance of payments crisis bad enough to rapidly compound our other political and economic difficulties.

Perverse though it may seem, lack of foreign exchange is not our real problem. Even if we had possessed ten times as many dollars, we would still find ourselves in the same fix, for we would be sure to fritter away our resources in greater subsidies to some section or the other of our population. Nor is our problem one of waste; no one can honestly maintain that those who the government subsidises do not deserve it, on the contrary, if you have more than three hundred million people below the poverty line there never will be a dearth of those who deserve government support. But it is one thing to deserve and quite another to afford it. Our real problem is that we no longer have any self-correcting mechanism to assist us in reversing the extravagance of our masters. We have so thoroughly replaced the discipline of markets with the indiscipline of politicians that we do not know how to get out of the mess we are in.

It is one thing to deserve and quite another to afford it. Our real problem is that we no longer have any self-correcting mechanism to assist us in reversing the extravagance of our masters

The bureaucrats are no help. Their error is to be conned into supporting every silly pledge that the politicians unhesitatingly commit themselves to. The common man and the bureaucrat suffer from the great delusion, popularised by the series *Yes Minister*, that the politician sings to the bureaucrat's tune. That is entirely false; the relationship between the civil servant and the politician is better characterised by the story of the distinguished governor of the Bank of England who used to go regularly into the prime minister's office threatening to resign unless government spending was curbed immediately. The prime minister would entirely agree with the governor, promise that from next year the budget would be severely restrictive, but propose that at least for the time being the governor should support the increase in government expenditure "to strengthen the prime minister's hand in the future so that the governor's policy could be enforced"

No confrontation

These subtle blandishments may be characteristic of England, but in India, politicians are much cruder. A disobedient civil servant will either find himself being transferred to some remote district or worse still, facing a CBI enquiry for some obscure procedure that he has failed to observe. As a result, no governor of the Reserve Bank, no secretary to the government and least of all any public sector chief will dare to confront a minister, let alone the prime minister. Civil servants pretend they do; in private they all like to think that they have behaved like heroes in defending the right policies; but actually the role of the bureaucrat is to turn every absurd demand of a carpetbagging politician into a thoroughly reasonable, sensible policy.

If the reader believes this to be an exaggeration I will simply remind him of the time when I had warned that V.P. Singh's populist policy of cancelling rural loans would prove disastrous. There were many important civil servants who thought as I did, but no one could do anything about it. So the usual plan of deception was adopted; the expected losses were concealed by statistical fudges to make the policy look as sensible as an absurd whim can be made to look; but of course concealing the real deficits does not alter the reality, the price of folly has to be paid.

The cost of all this cheating is now coming home to roost; for as the poet says, "Oh what a tangled web we weave when first we practice to deceive"; it is this intricate attempt to hoodwink the public that is now rebounding against both politicians and bureaucrats. They have been preaching for so long that a controlled economy is superior to the uncertainties of markets that people are expecting miracles from them; but this time the authorities will not be able to find a solution, not even a bogus solution. All the gimmicks of the past that they are comfortable with are closing against them, even that rotten guardian angel of bad economic policy — the IMF — is not prepared, thank goodness, to bail us out. The game is up and the only policy left that might succeed is one that our bureaucrats have scoffed at and dare not try.

The role of the bureaucrat is to turn every absurd demand of a carpetbagging politician into a thoroughly reasonable, sensible policy

For, the only hope is to return to a market economy. What is more, in order to prevent the interference of politicians we need to be more rigorous in our adherence to markets than any ordinary western economy has been. To begin the process the very first policy decision we must make is to float the rupee, for the heart of the controlled economy lies in exchange and trade controls; once that mechanism of control is broken all the rest will follow.

The economic argument against abandoning controls is that it will lead to inflation; but the Indian economy is relatively well insulated in this regard. Essentials like food and clothing are domestically produced and would only be marginally affected by a sudden drop in rupee value. But the most reassuring fact is that the free or black market value of the rupee is only 20 per cent below the official rate. This does not indicate any dramatic flight of capital. In brief, if we take the risk of opening the economy there is every possibility that we will be able to get away with it, but if we do not we may find ourselves in Lebanon long before other fellow travellers.

Say 'good morning' in Frankfurt.

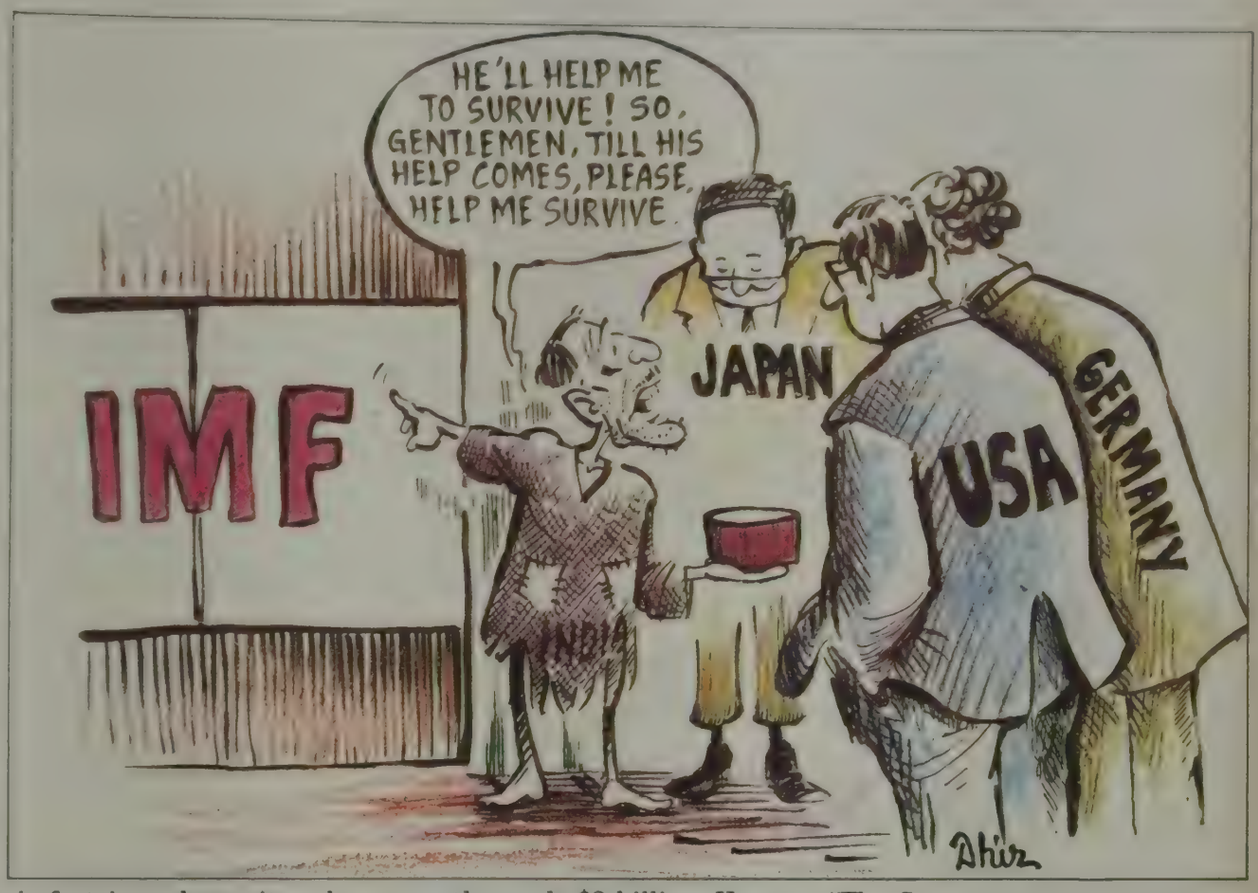
The foreign exchange squeeze

India is currently experiencing a severe foreign exchange shortage. But the government's attempts to manage the crisis by clamping down on all imports, including those needed for exports, may well cause more damage to the economy

For the past few months, especially in the aftermath of the Gulf crisis, India has been going through a severe foreign exchange crunch. However, the squeeze has been obscured by the political uncertainty that has beset the country. But its existence was sharply brought into focus on 20 March when — at the behest of a panic stricken finance minister, the finance secretary and chief economic advisor to the government of India — the governor of the Reserve Bank of India, S. Venkitaramanan, clamped down on imports. In an effort to conserve foreign exchange, he announced a total ban on the import of capital goods (with the use of free foreign exchange), and imposed cash margins ranging from 50 to 133 per cent on the import of other goods.

Normally, a matter of such significance would have been brought up in a cabinet meeting. But at the meeting of the Cabinet Committee on Political Affairs (CCPA), on the day before the RBI announcement was made, there was no mention of this. What is worse, finance minister Yashwant Sinha and finance secretary, S.P. Shukla, did not bother to formally inform their counterparts in the commerce ministry, Subramaniam Swamy and Montek Singh Ahluwalia, about their proposal even though it directly affected matters under their purview.

Mockery of collective responsibility



Sinha, with the traditional regulatory approach of a bureaucrat-turned-finance minister, was apprehensive that his move would not find favour with Swamy, who is known for his liberal views. As it turned out, Sinha had his way. But it was only at the cost of having the commerce minister severely indict the step the next day, in the process, making a total mockery of the concept of the cabinet's collective responsibility.

When contacted by *Business India*, Yashwant Sinha said, "What else could we do, there was no other way." And his deputy, Digvijay Singh remarked in a facile manner, "We had to act fast. With elections around the corner, ministers were planning to go to their constituencies. A decision had to be taken before they dispersed."

Surprisingly, a senior minister who was unwilling to become a party to the quarrel between the two ministries says, "The government should have remained cool. It shouldn't have panicked. This step has only compounded the damage done by Madhu Dandavate's repeated statements about empty coffers."

A bureaucrat of the finance ministry, however, justifies the step. He says, "We came to the conclusion that it was imperative to protect the foreign exchange reserves at their present level of Rs.4,000 crore. And we thought the last thing that we could afford to do was to default on our interest payments. So, we were forced to take tough steps."

He adds: "We were looking for an instrument that would be temporary and nondiscriminatory. Simultaneously, we wished to ensure that steps could be taken without a change in the present import regime." Though the increased margins on letters of credit (LCs) have caused problems,

they are a better bet than the alternative proposal to set up a committee that would have scrutinised each import application. For, if the stiff margins are unpalatable, such a committee would have been an unworkable proposition.

But this is no solace to most businessmen. Day-to-day operations in banks are now subject to enormous delays. And usually this delay is deliberate: an effort by banks to buy time before making any commitment. Many foreign banks in India have begun to politely refuse to open LCs as their parents are keen on bringing down the Indian risk on their portfolios. The latter have, in fact, issued unwritten instructions not to open LCs. To deal with this, foreign suppliers have quietly begun to get their Indian LCs co-accepted by banks abroad.

No need to panic

Over the past three months, it has become extremely difficult to borrow in the international commercial markets. And concessional aid has also been affected by the domestic political bickering. The Gulf war brought NRI remittances to nought, and the rise in oil prices caused a higher foreign exchange outgo. The result of this on the balance of payments was obvious: what is usually a rolling account, with both inflows and outflows, saw only the outflow of foreign exchange. However, knowledgeable circles are yet confident that India's problems are temporary and that it will be able to tide them over. Says M.J. Pherwani, chairman of National Housing Bank, "There is no need to panic. Our economy has the strength and resilience to come through this crisis."

Subramaniam Swamy talked to *Business India* in a similar vein. He said, "The situation is bad. But I don't share the finance ministry's view that it was imperative to cut imports. At present, when we are trying to boost exports, all that this measure is going to achieve is a lower level of disequilibrium than the present one." This is clearly not a desirable outcome.

Swamy adds that the move was particularly unwelcome because it had come at a time when he was planning to negotiate country-to-country loans worth nearly $2 billion. He says, "The finance ministry claims that nobody would give us loans. I totally disagree. I'm positive that the finance ministry has not seriously explored all the possibilities."

Sources in the government, however, say that the finance ministry had indeed made several efforts to raise finances from abroad. At the end of last year, when the crisis first started assuming dangerous proportions, North Block mandarins drew up a plan that included various proposals:

- raise bilateral aid from the Gulf countries,
- channelise private savings from the Gulf to India,
- increase external commercial borrowings from the western money markets.
- and accelerate aid disbursements from the World Bank and IMF which had already been cleared.

But due to the interplay of various factors, the plan was a non-starter. Also, it was a plan worked out by a few *babus* acting in isolation. It had little clarity and was largely unrealistic.

The country's poor diplomacy did not exactly make it a favourite with the rich Gulf countries that were being considered as sources of funds, either. And, as a senior official of North Block points out, foreign governments are now unwilling to give India overdrafts or any kind of a bridge loan quickly. "There are no short-cuts. We will have to go through the usual long process of consultations and negotiations," he says, explaining the finance ministry's position.

This bleak scenario is of recent origin. Till last

year, institutions like ICICI, IDBI, ONGC and SBI could easily pick up a couple of hundred million dollars from the international capital markets at just about any time they wanted to. Now, with two quick downgradings of India's credit rating by Moody's and Standard and Poor, two of America's premier rating agenices, Indian paper has overnight been downgraded — still investor grade, but only just. This has forced ICICI to shelve its Samurai bonds issue for the time being. None of the institutions want to go out at this time and return empty-handed. The risks of doing so, are obviously, quite large at present.

Credits cut

For example, SBI's banker's acceptances (which are usually used to finance imports like oil) have been cut. Out of its current facilities of about $3.5 billion in the US, SBI will lose $900 million of its acceptances shortly. In effect, India's reserves will thus drop by Rs.1,600 crore. Also, even a net foreign exchange earner like Air India has not yet been able to get credit for the four new Boeings it has contracted to buy for about $400 million.

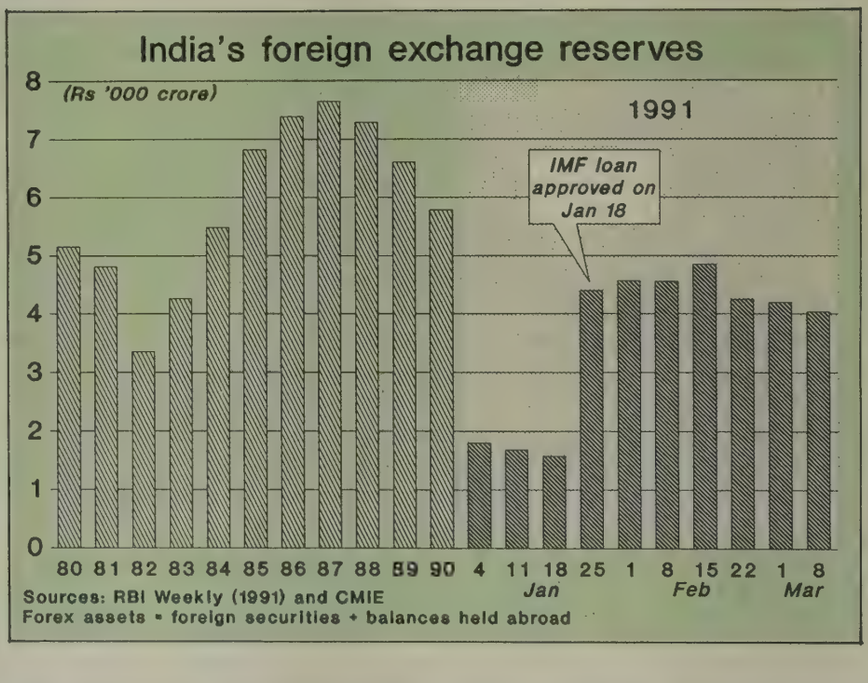
International bankers, who had queued up outside the financial institutions and banks in India till last year, each one offering more attractive rates than the other, have now dropped India like a hot potato.

The decision to pull out of India is of course a direct outcome of the increased Indian risk. Says the Indian chief executive of a UK-based foreign bank, "I am in a peculiar dilemma of divided loyalties." On one hand, he is an employee duty-bound to keep his foreign employer fully informed of the Indian scene. On the other, he realises that if his bank withdraws its credit line on his advice, India will suffer. He says, "I keep to facts while reporting on India. But it feels like I'm on a tight-rope all the time."

Given these facts, the traditionalists argue that it is difficult to tell whose assessment, Yashwant Sinha's or Subramaniam Swamy's, is more valid. However, one important point must be noted. The finance ministry, by the very nature of its job, is concerned with the day-to-day management of resources. Therefore, it tends to have a short term approach to problems. The commerce ministry, on the other hand, has a medium term view because it concerns itself with matters of longer duration like the boosting of exports and the management of imports.

Yet, the fact that the two ministries do not share a common perspective to the problem is surprising to lay observers. Explains Kamal Morarka, the ubiquitous minister of state in the prime minister's office, "This is not the first time that the two have been in disagreement. And it won't be the last."

According to rough estimates by economists in both North Block and Udyog Bhavan, the present measures would save the country about Rs.800 to 900 crore a month. But in the long run, they would compress exports as their impact begins to tell on the entire industrial sector. Some of these effects have already begun to show.



A bolt from the blue

In fact, for many small and medium entrepreneurs, the measures were a bolt from the blue. Many of them need to import machines for their projects and have now been left in a lurch. The irony lies in the fact that large projects comfortably financed with institutional loans, will not be affected as they have lines of credit available for their imports. And though sources in IDBI point out that the FIs will consider requests for imports of capital goods from smaller units on a case-by-case basis, the fact remains that there is little surplus foreign credit available with the institutions which can be diverted in this manner.

Even if the credit becomes available, small importers of capital goods will then have to pay a much higher rate of interest — between 20 and 23 per cent. This is against the 14 per cent interest on free foreign exchange that they had counted on getting from commercial banks.

According to analysts, a more sensible approach by the government could have been phased and selective. The RBI and the Controller of Exports and Imports could then have been told to be more selective with licenses and with finance. But capital goods for upgrading technology could have been allowed.

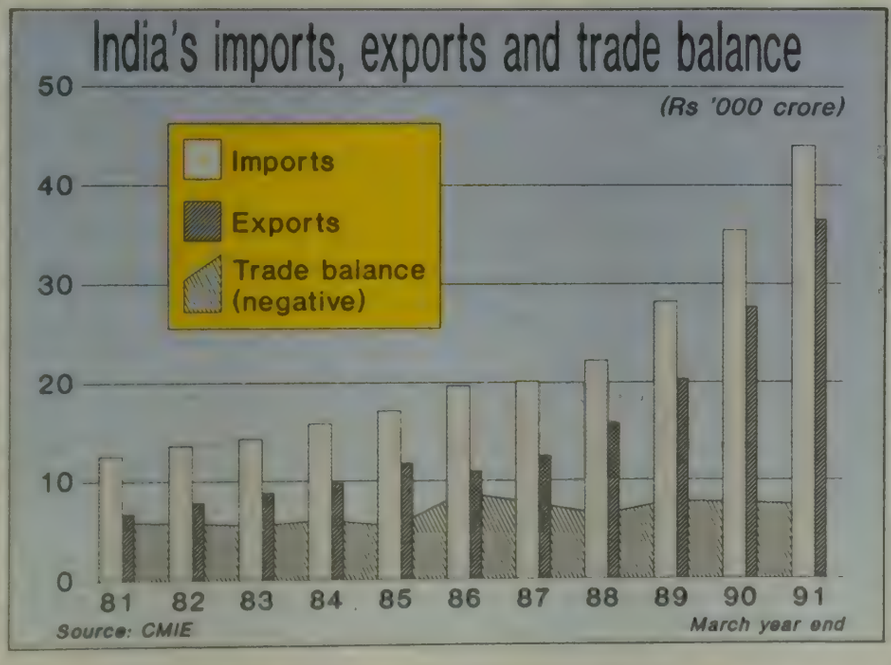
Analysts also point out that while imports will obviously be cut drastically by the current measures, import-linked exports would also suffer. "This sledgehammer way of dealing with the problem is idiotic," says a senior officer in the prime minister's office. Such wrangling between top policy makers is not unusual. In times of stress it just comes out into the open.

Says Kalyan Banerjee, chairman and managing director of the Export Import Bank of India, "The system cushions us. One does not feel the heat till there is a fire under the seat." But this approach obviously encourages blinkered and inconsistent policy responses. As a banker points out, the intention behind making even Rs.25 lakh worth of imports go through the RBI seems more to delay the foreign exchange outgo than to prevent it.

Any other way?

Even if the present crisis came about because the finance ministry failed to augment foreign exchange resources, there is still one question that remains unanswered: was there another way by which the present crisis could have been tackled?

Many people feel there was. Says T.K. Bhaumik, assistant secretary general of the PHD Chamber of Commerce, "Imports of edible oil could have been postponed. Part of the fertiliser imports which account for Rs.800 crore every year could have been postponed too. And defence-related imports, which account for nearly Rs.6,000 crore, could have been put off. So, a reprioritisation of imports was probably a viable solution."



Finance ministry officials explain that they were aware of this. However, they say, "In an election year, these options are unworkable. If we had gone in for them, one section of society would have gained at the cost of another. And, of course, defence imports are a holy cow over which we have no jurisdiction."

Experts feel plenty of other fire fighting measures would have been more effective. A banker with an American bank suggests, "We can lend a part of our gold reserves to other central and first class commercial banks abroad and earn 1 to 2 per cent interest instead of maintaining them as idle assets."

Confiscated gold could also be sold in international markets. And with yet another bumper wheat crop in the past year, wheat could be exported, keeping only a minimum buffer stock. At today's international prices, if India sold 100 million tonnes of wheat it could earn as much as Rs.120 crore. However, the bureaucracy has shown no inclination to look at these options. "Why can't they take commercial decisions?" asks an institutional banker, lamenting the inaction.

Bad management

Whatever be the fire fighting measures taken to conserve reserves over the short run, everybody agrees that scarce foreign exchange will continue to be a long term problem, given the system as it is today. So, what is the solution in the medium or long term? Has the problem merely been caused by mismanagement or is it an inevitable offshoot of development? Charan Das Wadhwan; an economist at the Centre for Policy Research, feels it is bad management that has been primarily responsible. He says, "We were faced with a similar forex crisis in 1957 but we made the necessary corrections in time. Now, even a partial slowdown in exports, unmatched by changes in imports, will create a serious BoP imbalance, given our precarious reserves position. But we must remember that achieving a zero trade deficit has not been our policy and it is not even desirable."

The problem is not debt but to what use is the debt being put? If borrowings are productively used, they generate the cash required to repay the debt.

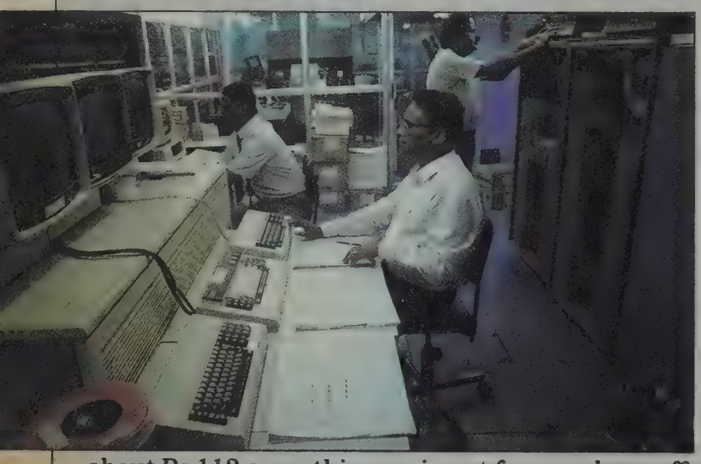
Unfortunately, says an informed source, "India has perpetually used commercial borrowings — domestic and external — for its current expenses. The foreign currency borrowings of the financial institutions have been used for rupee loans. This means that the foreign exchange has been purchased by the government and frittered away."

As a result of this, further borrowings finance debt repayments instead of financing additional productive capacities. This is why the increase in India's external debt — from 11.7 per cent of GDP in March 1980 to 18.4 per cent in March 1990 — arouse concern.

No initiative

Subramaniam Swamy also feels the problem has been created by mismanagement. He points out that India enjoys trade surpluses with most developed countries; a fact that shows Indian manufactures are fairly competitive in world markets. However, India has trade deficits with smaller countries like Saudi Arabia and Malaysia, mainly on account of oil imports. And these can be gotten rid off by signing government-to-government agreements. But the government has taken no initiative in doing so.

Swamy claims that he had readied a three-stage strategy to manage the BoP problem in the long run just before the current measures were announced. In the first stage, the strategy sought to expand REP licenses. In the second stage, it proposed that REP licenses become, practically, a second floating currency. And in the third stage, it aimed to make the rupee fully convertible.



The increased use of REP licences and the exchange rate adjustments that convertibility would ensure could both make it unnecessary to increase cash compensatory support (CCS) to exporters and also to eliminate the subsidy element in exports. This is clearly a desirable long term solution.

Finance ministry mandarins, however, cling to the view that free convertibility of the rupee would cause it to depreciate further. Their main argument is that since India's bulk imports are inelastic in nature, we would have to pay a higher bill. This, of course, flows from the hide-bound view that has strangled the Indian economy for the past 20 years. Mainly, that free convertibility and the ensuing exposure to market forces can only cause the

Getting squeezed

COMPUTERS: "The new guideline has put both financial and physical control and both will hurt us," says Manohar L. Tandon, chairman of Santacruz Electronics Export Manufacturers Association at the Santacruz Electronics Exports Promotion Zone (SEEPZ). The latter is the nation's largest free trade zone almost exclusively devoted to computers and electronics.

The total export of electronic items from all FTZs during the current year is expected to touch Rs.800 crore with a net foreign exchange earning of Rs.320 crore. SEEPZ expects to earn about Rs.112 crore this year in net foreign exchange — against imports of about Rs.12 crore a month.

The recent RBI directive has bewildered the domestic computer industry. Says Ashok Jain, CEO of International Computers Indian Manufacture Ltd, "We have contracts for large exports. Now those restrictions on imports will create major problems for us."

Pravin Gandhi, managing director of Hinditron believes, "Only companies that are cash rich will survive, the majority will not." Another impact will be on the cost of inventory. The industry on an average has an inventory of about 3 months; Gandhi says, "The additional margin money will double the cost of carrying inventory." A more significant impact will be on prices. "The increased cost of funds will push prices up by 10 to 15 per cent," says Ashok Soota, president of Wipro Infotech Ltd.

Fortunately, software exporters have not been affected. Says, Y.P. Sahri, senior vice-president and general manager of Tata Consultancy Services, "We mainly use the EXIM bank and ICICI line of credit, and until this line is exhausted, we don't expect to have a problem."

■ AROON SARKER and SHEKHAR GHOSH

LEATHER: "Export and perish is the message being conveyed to the industry," says M.M. Hashim, chairman of the Council for Leather Exports (CLE). The import content in leather exports ranges between 10 and 15 per cent. Chemicals like wattle extract, accessories, hides and skins in semi-finished and finished form are the main items of import. "It will be difficult to reach the export target of Rs.3,400 crore by 1991-92," says Hashim. (Exports this year are expected at around Rs.2,700 crore.) Due to the foreign exchange crunch, duty drawbacks have not been disbursed since January 1991, and CCS was stopped in March. The accumulation of funds on account of these is estimated at Rs.150 crore.

The RBI stipulations have affected the whole gamut of companies — from small to big. The Gaitonde group for instance, which has turnover of Rs.40 to 45 crore, imports about Rs.10 crore worth of goods, like accessories for its new range of high fashion men's shoes. "All our cash is locked up in investories of raw material, and the banks will not entertain our demands. We are stuck," complains K.V. Gaitonde, president of the group.

The industry is worried about the long term impact on exports. An investment of nearly Rs.40 crore in modernisation and expansion programmes were planned during the year by the industry. Several of these decisions will be postponed or put in cold storage.

■ DHARANI K. PANI

DIAMONDS: Following the RBI restrictions, fresh imports have come to a halt. The industry's existing stock can only keep the over 700,000 artisans and workers occupied for the next two weeks. "Our image is tarnished in the international market," says Bharat Shah of B. Vijaykumar & Co. And the 1990-91 target of Rs.6,000 crore will be difficult to meet.

The industry is entirely dependent on imported rough diamonds, on which there is a 38 per cent value addition when exported. Remittances for imports are normally made within 24 hours after the goods arrive. "But with the current strictures, 50 per cent cash margin will have to be deposited in advance with the bank for three months when we import," explains Shah.

The industry also fears that the four months suppliers' credit so far available to them will also dry up, as the latter have lost confidence in Indian processors.

And as one diamond unit owner laments, the Diamond Trading Corporation suddenly seems to have realised now the need to devote more attention to other neighbouring countries like Thailand, Sri Lanka, Indonesia and China. And in any case, labour is cheap in these countries.

■ LANCELOT JOSEPH

SHIPPING: The RBI circular created confusion in the shipping industry. It states, "Imports of all capital goods irrespective of value will henceforth be only under foreign currency lines of credit available."

Ships are not classified as capital goods. Also acquisition of a vessel is not considered an import and no duty is levied. Says K.M. Sheth, managing director of Great Eastern Shipping, "The restrictions do not really seem to apply to us."

But, considering the high foreign exchange outgo involved in the purchase of vessels, there is doubt whether free foreign exchange would be released by the RBI.

In fact, even the RBI could not clear the confusion when queried on this point by a leading shipowner. The shipowner was told that the release of foreign exchange would be decided on a case-to-case basis.

However, if the restrictions do apply to the shipping industry, it will have to tap the Shipping Credit and Investment Company of India's (SCICI) lines of credit. SCICI has a credit line for $250 million. Says N.C. Singhal, managing director of SCICI, "We can provide for all fund requirements till 1991-92."

But if the loan is in foreign currency, shipowners will have to bear the exchange loss risk. In such an eventuality, the cost of funds will almost double. Financially sound companies though will have the option of directly accessing foreign loans.

■ GEORGE ALBERT

PETROCHEMICALS: "The small polymer proccessors in this industry can at best afford a 10-per-cent margin; 133 per cent margin will kill them," says P.P. Kharas, president of Organisation of Plastic Processors in India (OPPI).

Against the total demand of 750,000 tonnes of plastic raw materials, only 350,000 tonnes are made in the country. The rest is imported. The import bill for this is about Rs.750 crore, which means the margin money alone will be nearly Rs.1,000 crore.

In a situation like this, the small plastic manufacturers can either cut down their imports or borrow from sources other than the banks. Either way, their profitability will decline.

Meanwhile, larger plastic manufacturers, like Milton Plastics, Eagle and Brite Plastics, will be in a relatively better position to tide over this crisis. They can not only rustle up the money, but also, some of them carry inventories that will last two to three months.

Another industry that is dependent on imports is the PSF and PFY manufacturers. A large chunk of these industry's raw material needs are met through imports. What is worse, after stiff increases in excise duty recently, PSF, PFY and NFY industry's margins are already under squeeze.

■ SHAMPA KAR

rupee to fall in value. This is an untenable proposition, except in badly managed economies with excessive controls. Market forces can as easily cause a currency to appreciate as they can cause it to lose value. Fifty years ago, with much less industry and fewer controls, the rupee was convertible and yet strong in world markets.

Many independent analysts agree with what Swamy has to say. For instance, D.H. Pai Panandikar, secretary general of FICCI says, "Foreign exchange is a resource and therefore there should be a free market for it." He suggests that import controls should be abolished and that exporters should be allowed to sell their REPs in the market for any premium that they can get. "The high premium will check imports while exporters will try to export more, to earn more on REPs," he says. Similarly, NRIs who repatriate foreign funds ought to be able to realise the true market value of these funds.

Unutilised lines of credit

Along with blinkered policies, chronic procedural delays have exacerbated India's present problems. Lines of credit made available to India lie unutilised for many years. In fact, as of March last year, as much as Rs.48,107 crore of foreign aid — most of it concessional — was lying unutilised. This aid has been sanctioned by multilateral agencies like the IMF, WB, IDA and the IFC and it is tied to specific projects. The drawing down of these loans is linked to the progress of the projects. If projects get delayed, the aid naturally remains unutilised. And this makes it difficult to approach the agencies for fresh funds.

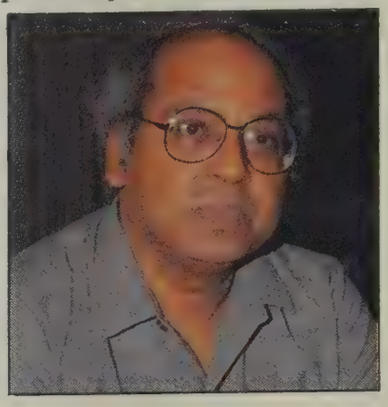
Yet, given the right approach, multilateral institutions are, even today, willing to offer funds to India. The Housing Development Finance Corporation, for instance, secured an IFC loan of $40 million, at attractive rates, only last week. It was the first part of a total loan of $100 million raised, interestingly, without a government guarantee. The IFC has also recently lent $15 million to Infrastructure Leasing and Finance Services. A commercial banker adds, "Some German, French and even Italian banks are still willing lenders." Moreover, if the stockmarkets were rising, as they did till last year, everyone is naturally interested in participating in the growth. Thus, the need of the hour is for India to sit up and review its policies; to take quick and prudent decisions; and to then act without delay.

That India can act if it wants to is undeniable. And there are some positive signs in this picture of seeming gloom. Compared to the fifties and sixties, for example, India does have a higher commercial debt to service ratio but its capacity to earn foreign exchange is also greater today. Moreover, India is not as vulnerable on the foodgrains front as it was 30 years ago.

Better use of debt

But things can become really better only if there is a strong will to ensure the appropriate end-use of debt funds. "If necessary, we should establish an independent agency accountable only to Parliament to monitor the end-use of debt," suggests a banker.

Entrepreneurship in the country should also be concretely encouraged. And foreign investments should be invited in with enthusiasm. There should be a freeing up of controls choking the economy. Recently, a World Bank report advocated the liberalisation of the financial sector. This is imperative to ensure that monies, both foreign and domestic, flow into productive channels.



Given these requirements, the present RBI directives are merely a step in the wrong direction. They will have a major adverse impact on several industries in the country. Those sectors, which depend on imported raw materials, no matter how small the import content — like plastic manufacturing, mini steel, consumer electronics, computers, diamond processors, leather, paper, synthetic fibre and yarns, and pharmaceuticals — will be the worst hit. "The directives will lead to serious liquidity problems for the public sector, the private sector, and for internal trade and consequently, the government," says Viren Shah, chairman of Mukand Ltd and a member of the Rajya Sabha.

Also, there will be important repercussions that will lead to a restructuring in the market shares of companies in many industries.

For example, there will be a shake-up in the Rs.1,400-crore colour television market. Sagging demand has already dampened sales in the past one year and poor margins have made many units sick. Four of the largest manufacturers already control nearly half of the total market. While these cash rich units will not have problems in providing cash margins of 133 per cent for their imports, smaller units who have always lived from hand to

mouth, will have to close shop. Yet imports account for only Rs.750 of the total cost of a TV set. Their withdrawal will give even more of the market to the large players. Says a large television manufacturer, "With lesser players around, a few of us will call the shots in the market".

Similarly, in the case of the paper industry, the current restrictions will hurt the smaller units which depend on imported waste paper and wood pulp. "Nearly 80 of the 210 small paper units may have to close down due to a cash crunch," says a spokesman of the Small Paper Mills Association.

S. Venkitaramanan: myopic measure

Kalyan Banerjee: systemic failure

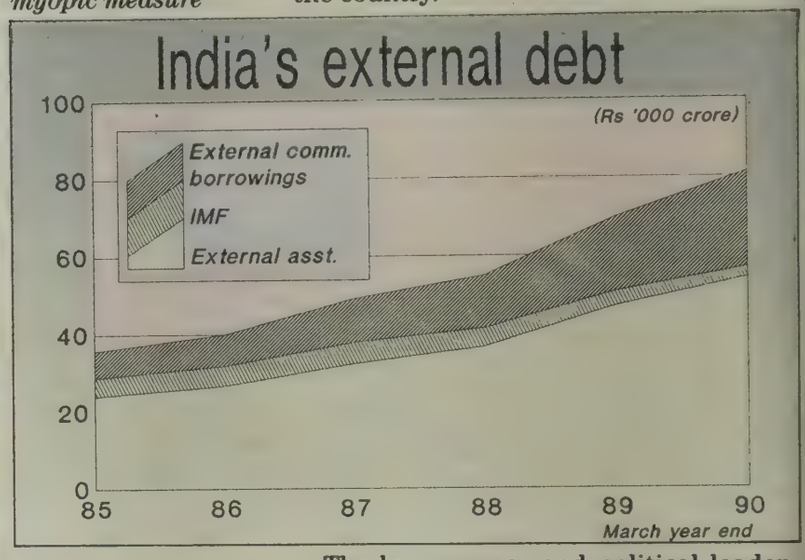
Boon for some

The RBI directives will also benefit some domestic raw material manufacturers who would otherwise have had to compete with imports. Mini steel units, for example, depend largely on imported scrap, for which the domestic substitute is sponge iron. With scrap becoming more expensive and difficult to import due to procedural delays, the demand for sponge iron is bound to rise. Sponge iron prices, in fact, have already firmed up from Rs.4,000 per tonne in November to Rs.4,800 now. The largest sponge iron producer, Essar Gujarat, is in fact expected to make a whopping profit this year.

This will also be true in the case of domestic producers of petrochemicals for plastics manufacturing, like IPCL, NOCIL and PIL, who are otherwise in a market where half of the demand is met by imports. "The government should not allow them to raise prices and make money at our cost," says Vijay Merchant, president of the All India Plastic Manufacturers Association.

There is also bound to be a major row between companies which depend on imported raw materials and those which don't. Take the old rivals, Bombay Dyeing and Reliance. Both manufacture raw materials for making polyester — Bombay Dyeing makes DMT and Reliance makes PTA. But while Bombay Dyeing uses imported paraxylene as a raw material, Reliance uses naphtha supplied by the government.

"The 133 per cent margin money for our imports will raise our input costs and force us into an uncompetitive position," says Harish Bijawat, managing director of Bombay Dyeing. Bijawat also fears that the delay in getting import clearances from RBI might jeopardise his production programme, naturally benefitting his competitor.



Even worse, there will be serious repercussions on exports. Most export-oriented units are small but they are now required to deposit a 50 per cent cash margin for their imports. This will raise their interest costs and create cash flow problems which could choke them completely. Moreover, the physical delay in imports will delay the delivery of finished products, and foreign buyers will probably not find that acceptable.

Targets out of reach

"Delays in exports may even force foreign buyers to shift their sourcing from India to other countries," says Manohar Tandon, chairman of the Santacruz Electronics Export Manufacturers Association. During the current year, the units in the free trade zones had expected to post net foreign exchange earnings of Rs.320 crore. Now that seems difficult.

Diamond processors, also large foreign currency earners, have in fact, already sent delegations to many south-east Asian countries to explore possibilities of shifting their businesses out of India. If this happens, the country will lose huge amounts of foreign exchange and the RBI directive will prove to have been totally counter productive. And as it has happened so often in the past, the government's remedy will turn out to be worse than the disease.

The current foreign exchange squeeze is merely a symptom of the systemic failure in the economy. Sadly, this failure is not really a reflection of the economy's intrinsic strengths and weaknesses. It is really a reflection of the blinkered, hidebound policies that have prevented its natural dynamism from establishing a smart tempo of growth and prosperity for the country.

The bureaucracy and political leadership have consistently demonstrated an amazing bankruptcy of thought; not only when they are actually called upon to address crucial economic issues, but even when they are asked, by the people they govern, to account for the rationale behind their policies. "A protected but controlled economy" is justified even now on grounds that have been discredited everywhere else in the world. As is "high quality state intervention". But even an awareness of the real issues seems to be beyond the "planners".

The bankruptcy of these ideas and their professors is clear when the latter are confronted with a single question: for how many more years is such protection and control to be continued? To this they have no answer.

As long as *babus* and *netas* who have made a mess of most economic policies continue to believe that their maladroit interventions in the economy are more efficient than market forces could be in a truly liberal economy, India will continue to lurch from one crisis to another.

FERTILISER CO-OPERATIVES

From strength to strength

Both the fertiliser companies in the co-operative sector are sitting pretty with substantial cash reserves and plans for expansion. Rivals in other sectors have been left behind. With eight more new projects expected to come into their fold and the market more or less guaranteed, shopping for technology has already begun

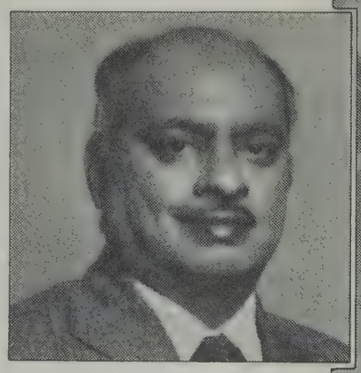
Hefty surpluses and eagerness to expand notwithstanding, the two fertiliser co-operative companies, Indian Farmers' Fertiliser Co-operative (IFFCO) and Krishak Bharati Co-operative Ltd (KRIBHCO) have been finding themselves restrained by an unwilling government all these years. Now, over the Eighth Plan, that picture may change with IFFCO and KRIBHCO, in tandem, expected to take away at least eight new projects, to be executed over the next five years. Together, these projects will require investments of Rs.2,200 crore.

All, perhaps, in recognition of their cash surpluses or as the co-operatives insist, "a better ability at handling technology." Whatever be the reason, the recognition has come very slowly. Through the eighties, the government looked to the private sector to relieve it of the need of continuously investing within the fertiliser sector. And there were compelling reasons for that: fertiliser plants are expensive, needing upward of Rs.700 crore investment of which the government usually contributes half. So a resource-constrained government hoped to induce private capital to increase the urgently needed fresh capacity. But for one reason or the other, private investment has been uncertain.

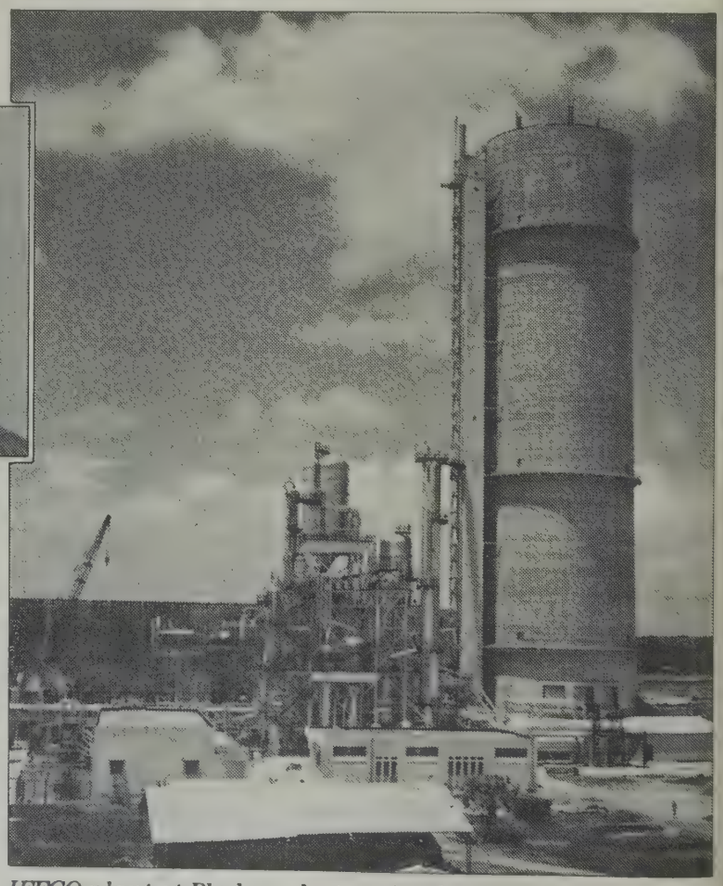
Rivals surpassed

Now, a disillusioned government has little alternative but to turn to the co-operative sector to bring in fresh investments. And for good reason. For some time now, KRIBHCO and big brother IFFCO have been continually finishing ahead of competition. "Statistics are not always the perfect indicators but they certainly show that we have surpassed the others, private and public," says KRIBHCO's managing director H.S Kohli. Capacity utilisation of the nitrogenous fertiliser plants of the co-operatives averaged 110.6 per cent compared to the 98.1 per cent of the private sector. The public sector finished a poor third with a utilisation of 67 per cent.

Not everybody is, however, convinced that the co-operative sector is superior. "Comparing sectors is unfair," says Pratap Narayan, director of the Fertiliser Association of India. Admittedly, there are good companies in the public and the private sectors too. Both National Fertilisers Ltd (NFL) and Rashtriya Chemicals and Fertilisers (RCF) have turned in good performances and so has Indo Gulf and even Shri Ram Fertilisers' twenty-year-old plant that averaged a over 100 per cent utilisation. "Besides, capacity utilisation can only be one criterion. Also, not all of IFFCO's plants are doing as well as the Aonla plant."



The co-operative sector's performance, nevertheless, ought to bring them the coveted letters of intent (LoI) for two of the four ammonia/urea complexes conceived for the next five years, two phosphoric acid plants, two diammonium phosphate plants and a zinc sulphate plant. "There isn't any reason why we should not be awarded a major share of the projects over the next plan," says C.P Mathur, IFFCO's managing director.



But, for some years both companies have been going through a phase of uncertainty. IFFCO's Aonla expansion (adding 1,350 tonnes per day ammonia and 2,200 tonnes per day urea capacity) was approved in principle a good two and a half years ago, but there has been practically no following action. So is the case with some of its other projects also. When KRIBHCO lost Shahjahanpur's LoI to Abhey Oswal's Bindal Agro in August 1989, it planned to invest in an alternative sector, petrochemicals. It was however prevented from doing so by the co-operatives' charter that disallows entry into industries unrelated to agriculture. Then, it invested Rs. 10 crore in Nagarjuna Fertiliser's upcoming plant at Kakinada in Andhra Pradesh.

Cash rich companies

For the new projects, the clincher will be the co-operative companies' prolific cash generation. KRIBHCO closed 1989-90 with net profits of Rs.91.51 crore and its reserves and surplus stood at Rs.254.83 crore (sufficient to pay for a new plant). Two years earlier, in 1987-88, it had done even better — net profits of Rs.126.80 crore — a figure yet unsurpassed in the fertiliser industry. IFFCO's case is very similar. With its four plants, it made

Mathur: "Why shouldn't we get major projects?"

IFFCO plant at Phulpur: last project by the Americans

profits of Rs. 55.91 crore and had reserves of Rs.327.03 crore for the year 1989-90. The comfortable reserves position has encouraged both IFFCO and KRIBHCO to take a token Rs.1 crore each from the Planning Commission for fresh investments.

The co-operative fertilisers' handsome reserves could be attributed to two factors in particular. One, the decision to set up projects in future with a debt equity of 2:1 instead of 1:1 as was the case with the co-operative and public sector in the past, and two, the stipulation of a lower dividend. The difference in capital structure sets the co-operative sector and public sector apart from the private undertakings. (Private companies are allowed to use a debt equity ratio of 4:1 when equity issues are used to finance big fertiliser projects (ie relying less on owned funds, equity, and more on borrowed funds, debt). This, even against the commercial wisdom of loading a young company with debt).

Fulfilling debt obligations becomes decidedly simpler for the the co-operatives and the public sector companies because of their lower debt equity ratios. "If the government had given us that kind of money, we also would have been in such a good position," says an executive from a private sector fertiliser company. Cash generations of both KRIBHCO and IFFCO is also aided by their governing bylaws that stipulate a dividend not higher than 6 per cent. Private companies, on the other hand, must declare a minimum dividend of 15 per cent.

Apart from these two crucial differences in capital structure, there are other factors that set the co-operative sector apart. In the sixties, India's nascent agriculture co-operatives became conscious of the need to own their own fertiliser production facility to improve distribution. The idea then seemed to be to set up small plants in each district to facilitate local distribution. Later, it was given up in favour of larger plants which offer substantial scale advantages in energy consumption.

Not much intervention

Says an industry official, "A great deal of the inefficiency witnessed in the public sector can be explained by bureaucratic intervention. But the government has refrained from behaving in the same fashion towards the co-operatives. Foreign presence too made a difference. IFFCO was incorporated in 1971 in collaboration with the Cooperative Fertiliser International (CFI) of the US which was a great success with fertiliser co-operatives there.

The collaboration set the tenor of the co-operatives' culture. CFI had substantial investments in IFFCO's Kalol and Kandla plant and had its own personnel managing them in tandem with Indians. "That made the difference," says A.K. Mukhopadhya, KRIBHCO's project manager. "The Americans didn't allow interference with recruitment, were extremely open and held everybody accountable." They disinvested in favour of the government and departed after executing the Phulpur project.

Aonla plant: uncertainty prevails

Incorporated in 1971, with investments of a mere Rs.22 crore, IFFCO was too small a company then to be of value to a politician. Since then, it has grown unnoticed and is now responsible for a little over 30 per cent of the country's total fertiliser production. KRIBHCO was incorporated in April 1980, when IFFCO found that executing the huge Hazira project was diverting its attention from existing plants' operation.

Foreign presence not only precluded government intervention in the fertiliser plants, but also created a consciousness for plant maintenance. That both IFFCO and KRIBHCO's plants have averaged well over 110 per cent capacity utilsation is an adequate testimony to that. It is precisely because of that culture and emphasis on training that the two companies have accomplished consistently good performances. The efficiency of a fertiliser plant is primarily dependent on the technology and the performance of the ammonia plant which finally determines its energy consumption. The feedstock for fertiliser plants (natural gas) is so highly priced that marginal improvements in energy consumption reduces costs quite dramatically.

Better blend

Energy management is what is crucial to a fertiliser company's performance. "And a blend of better technology and human resources to support it has allowed us to perform successfully," says KRIBHCO's marketing director S.N. Pandey. Besides, the co-operatives have enjoyed a great deal of freedom in choosing technology. That hasn't been so for the public sector companies who on several occasions in the past, have been used to experiment with new technology.

KRIBHCO chose Pulman Kellog to execute its ammonia plant instead of Haldor Topsoe which had executed Rashtriya Chemicals and Fertilisers' Thal plant. Topsoe had used unproven energy efficient technology which did not work so well. So while Thal's use of capacity has never surpassed 97 per cent, the Hazira plant has consistently averaged 115 per cent. IFFCO's Aonla plant uses technology identical to KRIBHCO's and has produced remarkable results averaging 110 per cent.

That, in fact, has been another cornerstone of the co-operatives' success. "We have excelled at duplicating plants," is the reaction of a KRIBHCO official to the query about why the company's Hazira plant consistently performs at 115 per cent capacity. "We never insist on a made-to-order plant or incorporating new features. Just choose an efficient plant elsewhere in the world and build an identical one here." That may be an unusual attitude from one of the country's premier fertiliser companies. But at IFFCO and KRIBHCO, it has been a happy and winsome dictum to adopt.

Stringent safety checks

As against a manufacturer's recommendation of 35 days' shutdown a year for mandatory inspection and maintenance, "we accomplish them in only 15", says Kohli. "Besides, each manufacturer builds in 5 to 7 per cent margins into its designs." The plant go through stringent safety audits to improve reliability. Energy conservation

TVSE
TVS ELECTRONICS

NOW THAT THE BEST PRINTERS HAVE BEEN SHORT-LISTED TO TWO, YOUR DECISION SHOULD BE EASY.

Choosing the right printer has never been simpler. It's either the MSP 45 or the MSP 55 Plus.

Presumptuous? Not at all.

Setting new records this year two TVSE printers have been voted way above competition, with PC Quest's 'Best Indian Products Award' in dot matrix printers*.

You probably know why.

Both offer six easy paper handling options. Controls on the front panel (not in the dip switches!).

Both incorporate 'paper parking' as a standard feature.

Both keep your future in mind, to grow as your needs grow.

Font cards. Cut-sheet feeder. And in the MSP 55 Plus, a user-installable colour kit.

And they're both reliable workhorses. Ready for 24-hour non-stop use.

And how about the price? Charming. And just right.

Now, we ask you: Which of them fits your needs perfectly?

** Announced by PC Quest in their issue dated November 1990.*

too is a passion at KRIBHCO. Thal was designed to use 8.01 million kilo calories to produce a tonne of ammonia compared to Hazira's 8.44 mkcal/t. Now by incorporating an ammonia converter retrofit that alters gas flows, energy consumption will come down and reduce gas intake to 1.4 million cubic metres instead of 1.6 million cubic metres a day. It has recently procured a digital distributed control system at an investment of Rs.85 crore that will save energy by another 8.5 per cent.

Kohli: "We have surpassed the others"

But there have been allegations that KRIBHCO has been flogging its Hazira plant, that has in some months averaged a spectacular 124 per cent. Mukhopadhya disagrees, claiming that pushing capacity beyond 100 per cent is done very systematically. "You increase production gradually and watch how the plant behaves. If you notice a component that is beginning to show any strain, you replace it with a sturdier one. Then push the plant a little further, replace another component if necessary and gradually take up capacities.

P. Mittal, a president at Indo Gulf Fertilisers, does not think that there is anything remarkable about achieving high capacities. "It really is a trade-off. You push your plant now, and you will be paying for higher maintenance costs and, perhaps, need to replace your plant sooner than necessary." In any case, plants elsewhere in the world also register capacity utilisations well beyond 100 per cent, even 140 per cent in certain cases.

What of the co-operative participation in the companies themselves? Democracy inevitably leads to chaos, would be anybody's first thought. But for the fertiliser co-operatives, democracy has worked wonderfully. At the moment, there are 29,821 member co-operatives in IFFCO and 2,564 member co-operatives who have contributed Rs.22.08 crore to KRIBHCO's equity and several of whose members sit on KRIBHCO's board. "For everything that we do, we have them at the back of our minds," says Kohli.

Seva kendras

That has persuaded the co-operative to adopt 634 single and 28 village clusters and establish 61 *seva kendras* along the line of IFFCO's service centres — agriculture supermarkets that provide farmers with integrated agriculture services under a single roof, whether it be implements, pesticides, insecticides, a soil testing facility or fertilisers. Both co-operatives will invest in an integrated agriculture development plan that will include bringing together agricultural inputs as well as providing agricultural education through lectures and seminars on dryland farming for the farmers' benefit. "The future holds greatest promise in the successful cultivation of these," says Pandey.

Private sector companies, on the other hand rarely take on such commitments. Only six villlages each have been adopted by private companies until now. This is where co-operatives can stay ahead of the others in terms of marketing fertilisers. There have been other incentives too, like offering discounts on fertilisers — Rs.10 on urea and Rs. 13 on NPK and DAP which have been added attractions. The success of such a policy is demonstrated by the fact that even in the two worst drought hit years of 1986-87 and 1987-88, when the fertiliser industry witnessed negative growth, KRIBHCO managed sales of 1.3 million tonnes.

Plant at Hazira: consistently good performance

Now, after some years of lull, there will be much to do over the next five years. IFFCO will expand Aonla's capacity, instal twin phosphoric acid plants of 1,500 tonnes per day at Kandla and a 10,000 tonne per day zinc sulphate plant at a collective cost of Rs.1,100 crore. KRIBHCO will get a grass root fertiliser plant near Palwal in Faridabad district (capacity of 1,350 tonnes a day (tpd) of ammonia and 2,200 tpd of urea) needing an investment of Rs.758.89 crore. A 220 tpd phosphoric acid plant and a 450 tpd diammonium phosphate plant in Rajasthan with an outlay of Rs.147.52 crore. Then there is a 950 tpd nitrophosphate plant at Hazira that will take away another Rs.275 crore. These projects have satisfied the Planning Commission in principle but the coveted LoIs are yet to arrive. Nevertheless, KRIBHCO is proceeding with its detailed project report.

Synergic expansion

It is all a synergetic expansion. The nitrophosphate plant will use ammonia from the Hazira plant together with imported rock phosphate and phosphoric acid. The DAP plant at Rajasthan will use sulphuric acid from Hindustan Zinc Ltd and concentrated phosrock from Rajasthan State Mines and Minerals Ltd. The overseas DAP plant still awaits approval. Algeria or Malaysia is most likely to be preferred to Jordan now. because of the insecurity in the Gulf.

Shopping for technology has already begun. Kellog, Topsoe, Uhde and Toyo Engineering have been shortlisted for the crucial ammonia technology. The Norwegian company, Norsk Hydro will, in all probability, execute the DAP plant while BASF and Uhde are being considered for the nitrophosphate plant. Of the needed investment of Rs.1,181.41 crore, only Rs.1 crore will come through budgetary allocation, KRIBHCO itself providing the rest.

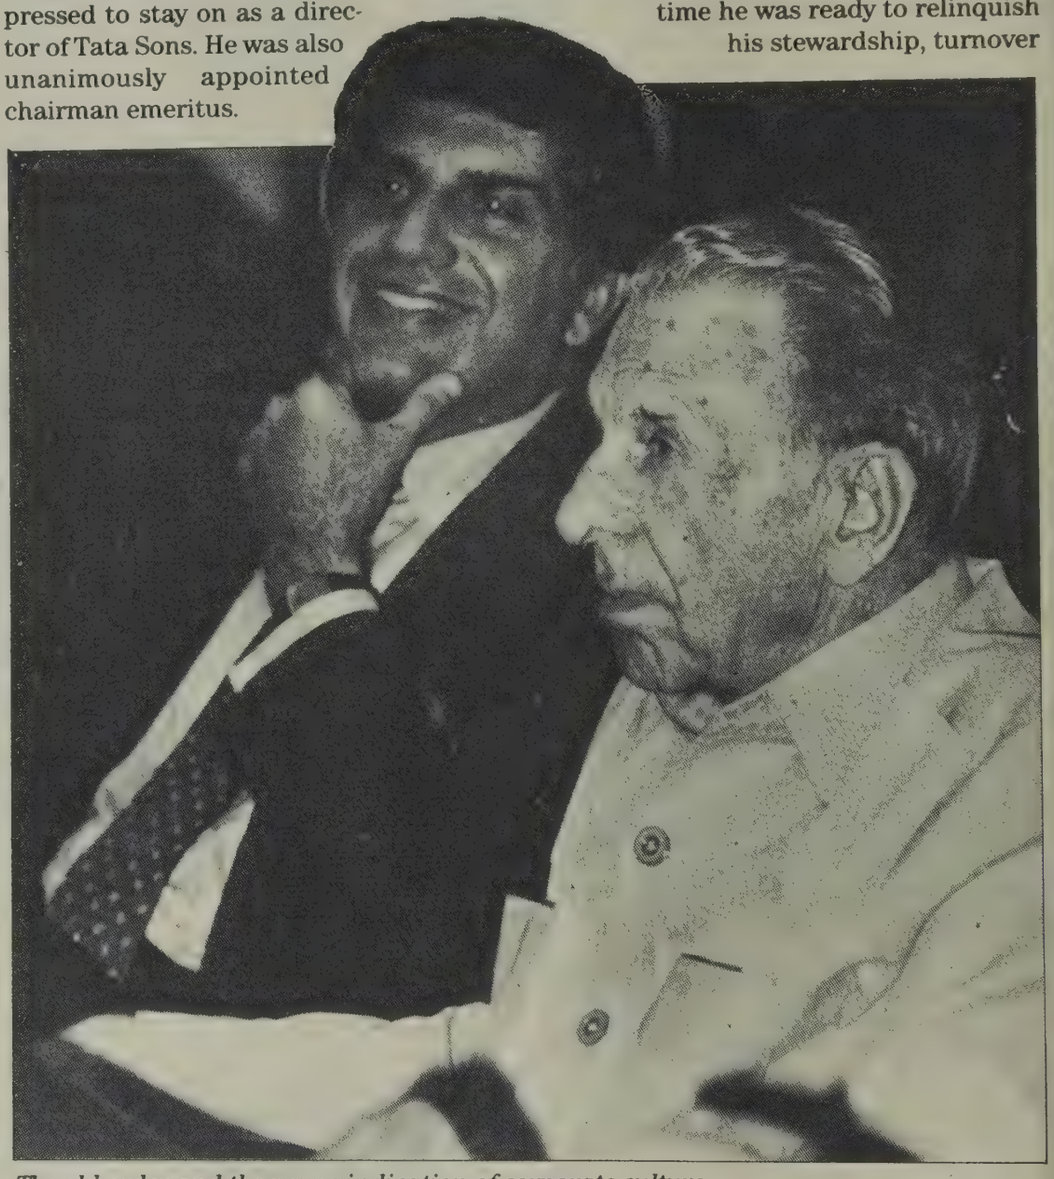
For a market, there is no need to worry. The Planning Commission's perspective plan shows that over the next decade, the country needs to add a little under a million tonnes of nutrients' capacity each year to produce the required 240 million tonnes of foodgrains by 2000 A.D. Nagarjuna will come in November 1991 and both Tata (Babrala) and Chambal (Gadepan) will go on stream by December 1993, all of them with a million tonne capacity each. Bindal Agro's at Shahjahanpur hasn't announced its zero date yet, all leaving a shortfall of approximately a million tonne ■

ARIF SHARIF

RATAN TATA

A smooth succession

J.R.D. Tata's stepping down as chairman of Tata Sons marks the end of an era for the entire corporate sector in the country. Ratan Tata, who spent many years as a member of a talented top management team, has now become J.R.D's successor



On 25 March 1990, J.R.D. Tata stepped down as chairman of Tata Sons, the holding company of the Tata group. His departure marks the end of an era not only for the House of Tata, now the largest one in the country, but for the entire corporate sector. J.R.D. chose a certain path for his companies that was in keeping with a responsible, value-driven corporate philosophy. This was not a path all companies followed even half a century ago when J.R.D., then only 33, first became chairman of Tata Sons in July 1938. And it is not the path most companies are willing or able to follow today when competition has made life much more difficult than it used to be.

J.R.D's example established that companies can be both value-driven and market-driven; that profits do not somehow preclude ethical behaviour; that growth is possible even if political patronage is not used to bend rules and cut corners, and quite simply that the pursuit of wealth can be a graceful and mannerly one. He personified the fact that the Indian businessman can succeed in conditions which are not ideal, without huckstering his way through. At a time when many business leaders seem to have forgotten this fact, his departure becomes all the more poignant.

Retirement no surprise

It did not, however, come as a surprise. He had planned on relinquishing the position he has held for the past 53 years in July this year, as soon as he had turned 87. But that was one milestone the grand old man of the corporate world was not destined to reach. Early this month, after a visit to the Tisco plant in Jamshedpur where he attended the Founders Day celebrations, J.R.D. had to be hospitalised. The diagnosis was simple: severe exhausation. So, he had to step down four months before he wanted to, for even if the spirit was as willing as it had been fifty years ago, the flesh was now undeniably weak.

At the directors' meeting where he announced his decision to step down, he was pressed to stay on as a director of Tata Sons. He was also unanimously appointed chairman emeritus.

The old order and the new: vindication of corporate culture

Not too long ago, corporate observers noted a clear but below the surface power struggle, among top managers of the companies in the group, for the top job. Many did not believe that there would be a smooth transition. But in the last year or so as Ratan Tata took over key positions in major Tata companies it looked like he would be the next chairman. But even then it was not evident that he would go unchallenged. After Ratan Tata was appointed deputy chairman of Tata Sons a few months ago, however, it was only a matter of time. The fact that the transition was so smooth was a vindication of the corporate culture J.R.D. had assiduously built up over the years. And of his personal standing as a giant among giants.

By any reckoning, J.R.D. has had a spectacular career. When he took over as chairman of Tata Sons, the entire group's turnover was only Rs.280 crore. By the time he was ready to relinquish his stewardship, turnover had grown 35 times and touched Rs.10,000 crore. J.R.D. promoted Telco, now the largest heavy vehicle producer in the country; Tata Chemicals, now the largest soda ash manufacturer; and Tomco. And he founded what would eventually become Air India, when he set up Tata Airlines in 1932. In fact, he piloted the inaugural flight from Karachi to Bombay himself.

He was able to achieve this outstanding

growth because he allowed strong men like Russi Mody, Sumant Moolgaonkar and Darbari Seth to not only appear on the scene but to flourish and become empire builders in their own right. He was a professional who encouraged other professionals to do their job and gave them the freedom to do it well. And though the companies bore his name, J.R.D. did not own large stakes in them.

A combination of factors ensured that the Tata group companies were not really family-owned ones unlike, for example, those of the Birla group. So, even though a Tata has succeeded a Tata now, the succession is materially different from that in other family-owned concerns. And because it is different, there are no possibilities of the Tata empire facing disintegration.

As J.R.D. said in an interview just last month, "There is no Tata empire. Yes, certainly we are a very large group and a group, which, unlike other large groups in this country has not begun to disintegrate

Ratan Tata inherits J.R.D's mantle as a democratic leader, who must approach the future... as the first among equals

in the second or third generation... This cannot happen here. The original parent of this group was Tata Sons. It is still Tata Sons. Who is going to pull it apart?" All the heads of the Tata companies say it is not only a question of pride in the group's high reputation but they find there is a synergy, an advantage, in staying together." Tata Sons, of course, has all the heads of the Tata companies on its board. So, in a very real sense, it is not a holding company under the sole control of the Tata family.

Another major distinguishing fact between most family-owned companies and the Tata group lies in the fact that J.R.D. has never used the group to amass personal wealth. And Ratan Tata is very much in the same mould. Thus, the succession does not amount to the gaining of a position in which great personal gains could be the outcome.

J.R.D's views on this are clear: "What makes other Indian families start industries? It is the very fact that family members, including children and nephews and the companies in a group can be separated and broken up. This is not the reason why Tata companies have been started."

Ratan Tata thus inherits J.R.D's mantle as a democratic leader, as a man who must approach the future not as an emperor but as the first among equals. He seems acutely aware of this. When he spoke to *Business India*, he said, "I am very happy and satisfied at having been given this opportunity. I shall endeavour to follow the traditions established by J.R.D.. It was his decision to entrust me with this, without pressures from any source. He acted with enormous grace and good feeling. I feel particularly honoured to be chosen under these circumstances."

Ratan Tata is self-effacing, unassuming and essentially shy. J.R.D. was, perhaps more so in his youth than later, much more flamboyant. But there is little doubt that Ratan Tata shares his values. Certainly, being in the position that he is, Ratan Tata has had his share of the flak on a variety of issues. But he has several solid achievements under his belt. He drew up the group's strategic plan in 1983 that was not made operational but which was remarkably close in predicting what the Tata companies actually did over the next 7-8 years. Also, during his waiting period he worked steadily as a team player in several major Tata companies. For example, he willingly served under Sumant Moolgaonkar at Telco till it was time for him to take over

Ratan Tata may lack the mystique and the abiding respect J.R.D. built up over 50 years, but he has proved that he has a strategic vision and that he can work well as the member of a talented team. But now that he is in the top position, his time as the leader of the Tata team has come ■

NAVAL BURJOR GHIARA

CESC

Powering ahead

After taking charge, the Goenkas are gearing up with plans for the upgradation and expansion of this pioneering electricity company

It was a quiet triumph for Rama Prasad Goenka last month, when he took over as chairman of West Bengal's only private sector power company, the Calcutta Electric Supply Corporation, or CESC as it is better known. A couple of years earlier when Goenka had acquired nearly 13 per cent of the company's shares, there was a great deal of speculation.

Corporate observers were baffled as to why the takeover king wanted to acquire a utility company where returns and dividends were heavily regulated by a plethora of government laws. Yet, despite stringent regulations, CESC is a prize catch. After all, the company is one with a history, its origins dating back to 1897 when it was incorporated and its shares quoted on the London Stock Exchange. Even after the expatriates left, CESC continued to remain a blue chip company and today, with assets in the region of Rs.552 crore, it ranks among the top 50 Indian companies in the private sector.

For the Goenkas, acquiring control of CESC had become a prestige issue, especially after the RPG group's attempts to get into big league industry in West Bengal had repeatedly flopped.

Though it took the Goenkas nearly two years to consolidate their position at Victoria House, the prime location headquarters of CESC, they have come a long way, with their holding currently estimated at 28 per cent (48 per cent is held by the financial institutions and the balance is with the public). The stepping down of former chairman Bhaskar Mitter, supposed to be a close family friend, to make way for R.P. Goenka to take over as chairman, finally formalised the takeover.

Titagarh power station: satisfactory performance

Sanjiv Goenka, one of the directors on the CESC board and the younger son of R.P. Goenka, who manages the company on a day-to-day basis, defends the investment. He claims that despite difficulties in making spectacular profits in this area, future prospects are very bright. "In the Eighth Plan there is a target for the generation of 30,000 MWs of electricity involving an outlay of nearly Rs.76,000 crore. If CESC gets even a small slice of this, it would mean a great deal," he says. "Even if only 10 per cent of the power infrastructure is managed by the private sector, it will result in savings of up to Rs.5,000 crore by the government."

But CESC will have to become much more sharp if it

A focus of national interest

"The rise of Calcutta as the second most important city of the British Empire is truly inseparable from the story of CESC...." So goes the publicity brochure of the Calcutta Electric Supply Corporation (CESC). The company may not have been around as long as the city itself, but CESC's origins date back to 1897 — nearly a hundred years ago — when the Bengal Act IX, better known as the Calcutta Electric Lighting Act, was passed.

In 1897, Kilburn & Co were granted a licence, as agents of the Indian Electric Co Ltd registered in London with a capital of £ 1,000. A month later, its name was changed to the Calcutta Electric Supply Corporation. The share capital was increased to £ 100,000 and the company went public in May. Business, however, continued to be carried out from London, the seat of the board of directors, and it wasn't till the 1920s that the company shifted to the imposing Victoria House in Calcutta, its current headquarters.

Many stations commissioned. After the supply of electricity commenced around the turn of the century, several generating and receiving stations were commissioned. First came the generating station at Alipore, in 1902, followed by Howrah and Ultadanga in 1906. Then came Cossipore in 1912 and the southern generating station at Garden Reach in 1926, which is currently being expanded. Mulajore was opened in 1940. The only major generating station to be commissioned after independence (in 1983) was at Titagarh.

Indianisation came about in January 1970, when the control of the company was transferred from London to Calcutta. In 1978, the company became the Calcutta Electric Supply Corporation (India) Ltd. Now they prefer to be known as plain CESC. The company has long been the focus of national interest because of its assets which are now valued at Rs.709.99 crore and rank 11th in the Indian corporate sector rankings.

Around the mid-seventies, when its licence was due to expire, CESC was sought to be nationalised by the government. Later, its licence was extended, to continue till the end of this century. CESC officials have been pressing for modification of licensing norms, asking for a 30 year span instead of the existing 20 year term. With the government's inclination towards privatisation, more licences are likely to be issued and for longer periods.

Sanjiv Goenka: firm government policy essential

wants to derive the maximum benefit from the opportunities available. For, the company's performance, though admittedly better than that of the West Bengal State Electricity Board (WBSEB), leaves a lot to be desired, especially when compared with the previous year's.

Though the company's generating stations continue to perform satisfactorily, at a plant load factor (PLF) of 60 per cent, the first six months of the current year (1990-91) brought a pre-tax profit of Rs.4.43 crore which is almost half that of the Rs.8.42 crore chalked up during the corresponding period of 1989-90. This was mainly due to rising operational costs. While overheads rose from Rs.24.29 crore to Rs.25.52 crore, the interest too went up from Rs.21.82 crore to Rs.27.71 crore. At the same time the company's liabilities have increased with its biggest defaulter, the Calcutta Corporation, owing CESC around Rs.30 crore. For the full year, though results are yet to be audited, it is unlikely, according to managing director P.B. Ghosh, for the net profit to cross the Rs.13.25 crore of 1989-90.

Belated clearance

There are problems on other fronts too. The West Bengal government took its own sweet time in clearing the company's revised tariff package. A new package — designed to meet the rising costs of power generation and distribution — was to have become effective from April 1990 instead of which it was cleared belatedly in February this year. This meant that CESC was able to benefit only for the last couple of months instead of the whole year.

Besides, the Rs.12 crore gap in the package (CESC had asked for a Rs.48 crore package but the state government agreed to only Rs.36 crore) effectively means lower returns, though Ghosh appears more optimistic about the next financial year, when the revised rates would start showing better results. If they don't, CESC will continue to lag behind the other power companies at least as far as net profit margin (NPM) is concerned. For the year ended March 1990 CESC's NPM was only 2.59 per cent. This compared very poorly with Andhra Valley Power Supply Co (9.89 per cent), Bombay Suburban (3.8 per cent) and even Ahmedabad Electricity Co (2.90 per cent).

"In such situations, where the initiative rests largely with the government, the only viable solution is to try and assess the PLF, and go in for improvements," says Amal Mukherjee, general manager, commercial, CESC. "Constant upgradation in terms of both modern machinery and latest techniques is your only salvation," says a senior official at the Tata Electric Companies (TEC), which boast of a PLF of 80 per cent.

Sanjiv Goenka, however, points out that CESC's power stations are already running at the best possible capacity. The solution, therefore, lies in installing more capacity. This is expected to come about once CESC's massive investment programme totalling nearly Rs.2,600 crore comes through.

CESC's generating capacity, which

Pics by Sajal Bose

Victoria House: several upheavals likely

presently stands at 542 mega watts, will go up by the middle of this year once the 67.5 MW unit at its southern generating plant at Garden Reach goes into operation. But even then, it will remain inadequate, given Calcutta's requirement alone of approximately 800 MW. Much therefore will depend on the company's generation plans, which include the laying of a 132 km new transmission network at a cost of Rs.158 crore crisscrossing the entire city, and a Rs.1,200 crore 500 MW power plant at Budge Budge, the clearance for which is expected to come through any day now. In West Bengal, apart from its own stations, CESC will also run the SEB's turbines at Kasba, which require extensive repairing and modernisation, estimated at Rs.5 crore.

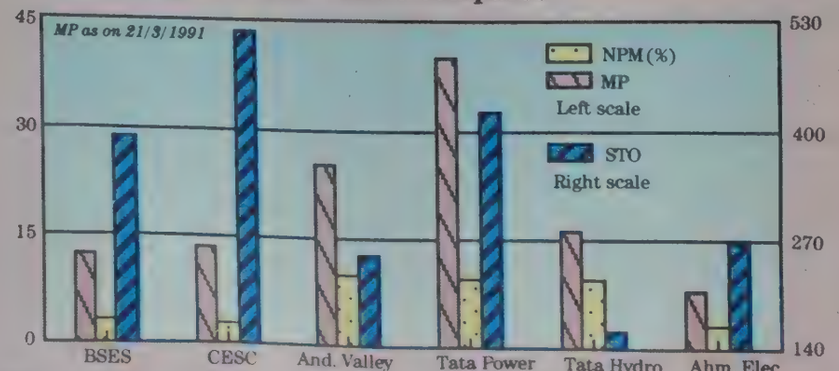
Garden Reach plant: new unit going into operation soon

Further afield

In addition, the Goenkas have been eyeing other states like Bihar, UP and Maharashtra. In Bihar, CESC is setting up the Chandil Electricity Corporation, for which a 500 MW unit projected at Rs.1,200 crore is to be set up. It is reliably learnt that in UP, CESC will run a state government power plant.

While the financing pattern is yet to be worked out, according to Ghosh, the bulk of the money is likely to come from overseas banks like the International Finance Corporation (IFC) and the Asian Development Bank (ADB). Each of them is expected to provide long term credit of around $20 million at very attractive terms.

Ghosh: financing pattern to be worked out



The balance will be raised through contributions from the financial institutions and through a public issue. "Rs.2,600 crore is quite a lot to invest for a single company," Sanjiv Goenka says. "What is really of immediate consequence is a firm policy by the government if private sector companies are to benefit in any way at all and maintain a healthy operating profit."

A lot too, will depend ultimately on how well the Goenkas manage to steer the company through its various plans for expansion, keeping deadlines in mind. So far, the proposals for expansion have the full support of the 13,000 strong workforce. "Far from redundancy, our workforce is likely to be fully utilised," says Ghosh. CESC, however, will have to think out clearly about its future fuel requirements. "At present all its plants are coal-based and the quality of coal CESC manages to buy leaves a lot to be desired," says the TEC official quoted earlier.

As a pioneering electricity company, CESC is likely to witness several upheavals in the near future as the company gears up to take on more competitive challenges in a changing industry. But a locational advantage — West Bengal's power woes are only too well known — and the backing of a powerful industrial group should augur well for the company in the future. ■

STERLING COMPUTERS

Going for the big time

The company is striking out into areas totally unrelated to computers. It plans to promote large joint ventures with TIDCO, which include a nitro aromatics enterprise and a titanium dioxide unit. Chemical industry watchers, however, are not impressed

C. Sivasankaran, the 35-year-old chairman of the Madras-based Sterling Computers Ltd, manufacturers of Siva PCs, is facing possibly the most critical phase of his professional life. The personal computer (PC) segment, in which his company made rapid strides in the last five years, is going through a sluggish phase. It finished with a turnover of Rs.60.10 crore during 1989-90 and made a profit after tax of Rs.5 crore. It sold 12,945 PCs compared to 7,755 the previous year. However, by Sivasankaran's own admission, 1990-91 is not going to be spectacular. "We have sold more PCs compared to last year. But prices have come down and margins have been squeezed. So our turnover is likely to remain the same," he says.

Thinking big

At this crucial juncture, Sivasankaran has finalised his diversification plans which are totally unrelated to the electronics industry. And he is not thinking small. He is promoting joint sector projects with the Tamil Nadu Industrial Development Corporation (TIDCO), which include a Rs.130 crore nitro aromatics venture, a Rs.42 crore tungsten metal powder plant, and a Rs.250 crore titanium dioxide unit. Another diversification which is taking shape is a real estate project which, if Sivasankaran is to be believed, will be a middle class dream come true. And this is expected to cost around Rs 200 crore.

There are many sceptics who feel that Sivasankaran's plans are mere hot air. It is said that he has over-reached himself and is planning to get out of the computer business. Chemical industry sources raise their eyebrows and say that Sivasankaran has possibly landed himself with propositions which may not be all that viable. Besides, an air of mystery surrounds the real estate project.

Sivasankaran is amused by these criticisms. "I think it is in my horoscope that I always have to confront rumours about my intentions," he laughs. "I will never get out of the computer business. I like taking quick decisions, I enjoy learning new things, and the business is full of thrills. It is entirely suited to a creative entrepreneur like me," he adds.

An unsophisticated young man with no background in the electronics industry, and who had burnt his fingers earlier trying to sell Osborne word processors, Sivasankaran burst on the PC scene in 1985. Thanks to his pricing, which was considerably lower than that of his competitors and his ability to deliver on the same day, the Siva PC was an instant success. Sivasankaran's sourcing became his strength and he started supplying to many original equipment manufacturers as well. With his low overheads, he was able to thumb his nose at the more established manufacturers like Wipro, HCL, and others. On their part, computer industry watchers have all along felt that sooner or later, Sivasakaran's strengths would become his weakness in a market which is growing increasingly complicated.

Sivasankaran: a touch of flamboyance

Says an industry source, "How can you build a business on price alone? There is nothing else to Siva except good price and good delivery. The computer industry can no longer be treated as a mass producer of consumer durables. It is now getting more and more sophisticated. Concepts like local area network (LAN) are catching on. Only the manufacturer who can go in for total solutions (offering hardware, software and allied services) will grow." He feels that Sivasankaran is still not paying attention to after sales service and marketing.

Right strategy

Sivasankaran is convinced that there is nothing fundamentally wrong with his strategy. He thinks it is no big deal to offer LAN to his customers. "If that is what they want, they will get it from me," he declares.

Now that there is no great price difference between the various PCs, Sivasankaran has come up with his own innovative ideas to counter competition. He is offering a five-year warranty for his Siva PC. His contention is that many manufacturers make a lot of money on maintenance contracts. Instead of going in for this, a five-year warranty will give him a distinct advantage.

While this may be dismissed as a mere marketing gimmick, Sivasankaran points out that he has been strengthening his production process and is introducing new products into the market. Says J. Vijay, Sterling's director in charge of production, "There are certain gaps in Sterling's production facilities but nothing of significance. At the same time, there are also a number of areas where it is better than others."

Sterling is in the process of introducing Fujitsu 24 wire DL3400 printers into the market. The company plans to sell 10,000 printers in the first year. Sources in Ster

ling claim that there is no match for this product in India. Certainly competitors like L & T and TVS Electronics are looking at the printer with interest. They do not deny that it is a good product. However, they say that Sivasankaran's success in this area will depend on his capacity to indigenise the product, which they feel he will not do.

Vijay thinks differently. "We have tied up with Fujitsu to produce 50,000 keyboards. Also on the anvil are work stations. Sterling is integrating itself vertically and will be offering a much broader range, and with lots of efficiencies built in. We are investing about Rs.2 to 3 crore for all this. By 1991-92, the turnover from computers should be around Rs.125 crore," he says.

The nitro aromatics project had been lying around with TIDCO for a number of years with no takers. Companies like the public sector Madras Fertiliser Ltd and private sector Thiru Arooran Sugars did examine the project, but did not pursue it. They did not find the package, as TIDCO offered it then, very attractive.

Integrated project

But Sterling was able to secure an integrated project, which consists of ammonium nitrate (30,000 tonnes), weak nitric acid (36,000 tonnes), concentrated nitric acid (6,000 tonnes), aniline (10,000 tonnes), aniline derivatives (5,000 tonnes), and the ammonia terminal to be located near Tuticorin in Tamil Nadu.

According to R. Sivasailam, director in charge of implementing the diversification plans, the company has studied this proposal carefully and is convinced that it can make a success of it. The technology for ammonium nitrate and nitric acid has been tied up with Norsk Hydro of Norway. "We are in an advanced stage of tying up the technology for aniline and its derivatives," says Sivasailam.

The most attractive part of the package and the money spinner is aniline and its derivatives which are essential raw materials for pharmaceuticals, and are used in the processing of leather, the manufacture of rubber chemicals, and in the paint industry. The tungsten metal powder (500 tonnes per year) project is coming up in Cuddalore, Tamil Nadu, and is expected to go into production by the end of 1992. "This is a strategic intermediate which will be manufactured for the first time in the country and has applications in lots of industries," states Sivasailam. The titanium dioxide project is likely to take about two years before it gets going. This is because the government has to first put up the beneficiation plant.

Strong financial position

How is Sivasankaran going to fund all these projects? "It is not a problem, as it is made out to be," says Charles Chacko, finance manager, who has been with Sterling since 1986. According to him, Sterling is in a very strong financial position. The company went public in 1989. The share was given a Rs.15 premium and was oversubscribed 15.25 times. "On a paid up capital of Rs.5 crore, we have reserves worth Rs.18 crore and our net worth is around Rs.24 crore. It is foolish to use this for short term purposes. According to the share holding pattern, in the joint sector projects we have to bring in only 25 per cent of the equity. We have already bought the land for the real estate project and the rest of it is self-financing," Chacko explains.

In 1990, Sterling got 'trading house' status from the minstry of commerce. Although the company's export performance in the areas of computers itself is expected to be disappointing in the current fiscal year, it has managed to ship out diverse commodities like textiles and food products. "I will export anything that brings in foreign exchange from shrimps to rice husks. This does not mean that I will not be exporting computers and parts. I will enter the American market in a big way and will end up exporting to 70 countries this year," Sivasankaran says with his customary bombast. Failures do not worry him. His export turnover during 1987-88 touched Rs.22 crore. It fell to Rs.2.7 crore last year. "I will get back with a bang," he says.

This touch of flamboyance characterises all his plans. "I am going to provide high style living at a reasonable cost. This will be Sterling's contribution to the city of Madras," says Sivasankaran grandly about his dream housing project. He has already acquired 50 acres (at a very reasonable price according to Sterling sources) on the outskirts of Madras.

Making friends

Sivasankaran has the enviable quality to win friends and influence people in the most unlikely places. His friendship with liquor baron Ramaswamy Udayar did not stand in the way of Sterling getting joint sector projects during the DMK regime, when the DMK cannot abide Udayar as he was a close associate of MGR.

Another criticism directed against Sivasankaran is that he has not bothered to build up an organisation. He himself feels otherwise. Professionals have been appointed in key areas like production, accounts, stores and inventory. He hopes to get a senior person in marketing (a weak area) soon. But professionals who join Sivasankaran have to get used to his style which can be only described as unconventional.

Sivasankaran is a man the computer industry loves to hate. People predict his downfall periodically. Will he emerge as a maverick tycoon or remain a mere Johnnie-come-lately?

Siva PC assembly line: an instant success

THE INSTITUTE OF CHARTERED FINANCIAL ANALYSTS OF INDIA

(In collaboration with The Institute of Chartered Financial Analysts, Virginia, USA)

ADMISSION NOTICE

THE CFA PROGRAMME

The American Institute

The Institute of Chartered Financial Analysts, set up in 1959 at Virginia, USA is the only institution of its kind in the world. It offers a three year training programme leading to the designation Chartered Financial Analyst (CFA) which is a highly valued professional qualification. Since its inception it has awarded the CFA designation to about 12,500 candidates. Interested in advancing the cause of professionalism in the field of financial analysis, it is collaborating with the Institute of Chartered Financial Analysts of India, in offering the CFA Programme in India.

The Indian Institute

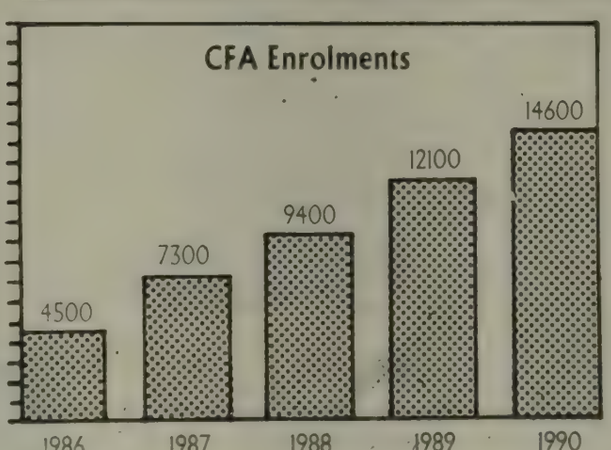
The Institute of Chartered Financial Analysts of India has been established in 1984 as a non-profit educational society. ICFAI is a member of Asian Securities Analysts Council, Japan. The Charter awarded by ICFAI is fast emerging as a symbol of professional excellence. Currently there are 59 CFAs, occupying senior positions in banking and corporate sectors. By 1991-92, the number of CFAs is likely to be around 100. Leading institutions such as RBI, IDBI, UTI, ICICI and IFCI reimburse the CFA Programme fee to their staff.

The CFA Programme

The CFA Programme is a three year training programme primarily focusing on financial analysis and its application in three broad areas: Corporate Financial Management, Investment Management and Financial Services.

The CFA Programme is divided into three levels :

Preliminary Level



Financial Accounting	Quantitative Methods
Financial Management	Economics

Inter Level

Economic Legislation	Security Evaluation
Management Accounting	Project Appraisal

Final Level

Adv. Financial Management	Investment Management
Financial Services	Indian Financial System/ International Financial Mngt.

Eligibility

Graduation (any discipline). Final year degree students can also apply. The applicants are required to qualify at the Admission Test (Date: July 14, 1991) to be conducted at 25 centres. Certain categories of applicants such as CAs/CWAs/ACSs/MBAs/CAIIBs/First Class Graduates/First Class Post-Graduates are exempted from the Admission Test. Candidates with specified qualifications such as CA/CWA/ACS/MBA/CAIIB are directly admitted into the Preliminary Level. All others have to successfully complete the Foundation Course, to become eligible to take the examinations of the Preliminary Level.

Prospectus

Please write with complete address and a DD for Rs. 60 drawn in favour of 'ICFAI' to : The Admn. Officer (CFA),

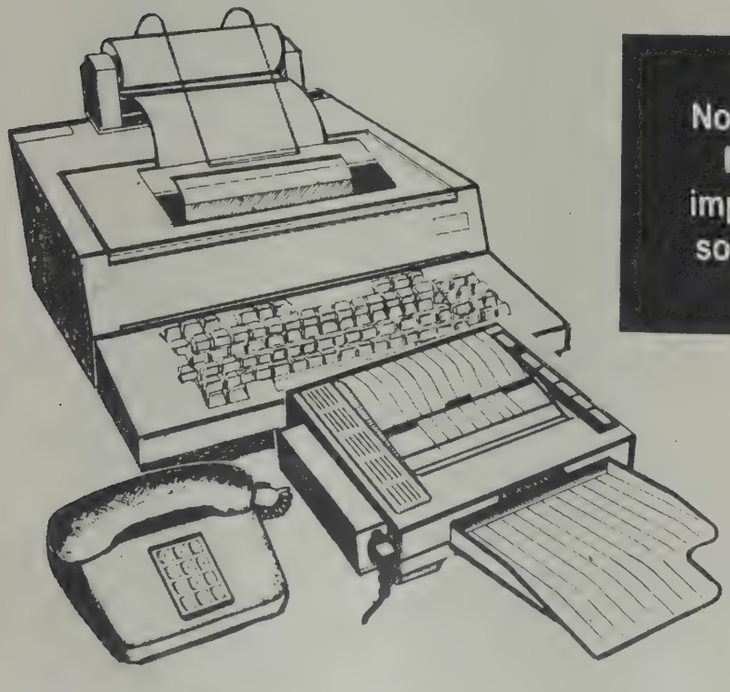
(exclusive of local sales tax, octroi, installation and training)

Install Aurelec PC-Telex

The cheap and convenient computer-age way to get your message across: Aurelec's PC-Telex card.

Although cheaper and more reliable than the phone, the telex is rarely used if you have to make do with a clumsy electromechanical telex machine, but with Aurelec's PC-Telex card, your computer makes your telex usage more attractive than your phone or Fax, with greater efficiency and far lower costs!



With a vast experience gained from over 1,000 installations, a vastly improved software and unique "no quibble" 30-days money back guarantee, you owe yourself a demo. Contact Aurelec for the address of your nearest dealer. We've got over 20 dealers throughout India.

- New improved software
- fast to install, easy to use
- pays for itself in rental saved and cheaper night transmissions tariff
- fits snugly INSIDE your PC and does not use up a serial port
- lets you use your PC normally
- superior immunity to noisy lines
- full multi-user support on LAN's
- superior features like:
  - password security
  - text editor with abbreviator
  - automatic reference numbering
  - 2 queues: normal & priority
  - group dialling
  - bills with estimated costs and department-wise break-up
  - user friendly menu driven software
- TRC approved
- Unique 30-day money back guarantee

SREE RAYALASEEMA

Insulating input costs

The capital-intensive caustic soda industry is thriving as end user industries grow. But problems with inputs has forced this company, the newest in the industry, to draw up plans to control input cost and increase profitability margins to gain an edge in the market

Being an industrial raw material, the demand for caustic soda depends on the growth of end user industries like paper, aluminium, textile soap, vanaspati and rayon. Between 1979 and 1983, however, demand for caustic soda from these industries had stagnated at around 600,000 tonnes a year. But, expansion activity started earlier, on the basis of optimistic pre-1979 demand estimates, had continued. As a result, a wide gap emerged between capacity and demand towards the end of the period. Capacity utilisation fell to between 65 and 70 per cent. And all these woes of the caustic soda industry was further compounded by the substantial and cheaper imports allowed under the open general licence policy.

But thereafter, things changed. As an industry observer says, "Fortunately for the industry, in early 1986, the government decided to include import of caustic soda in the canalised list. Then, in March 1987, it was shifted to the restricted list. This really helped the ailing industry to look up. The growth in offtake, which was a mere 6 per cent till 1987, moved up by 4 points in the very next year."

Licence in hand

Quick on the uptake in mid-1986 was T.G. Venkatesh, chairman and managing director of Sree Rayalaseema Alkalies and Allied Chemicals (SRAAC). This is a low profile Hyderabad-based company now engaged in the manufacture of caustic soda, liquid chlorine, hydrochloric acid and barium sulphate. The company was, at that time, holding a licence for caustic soda manufacture. Venkatesh drew up plans for a Rs.23-crore caustic soda plant, with an installed capacity of 22,440 tpa.

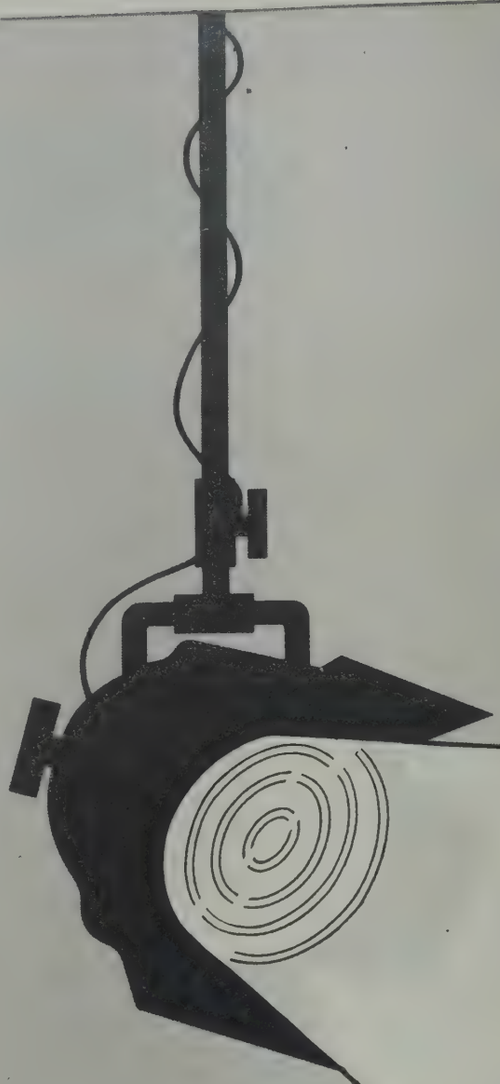
In August 1986 the company approached the public with a Rs.4.33-crore equity issue to finance the project. Even though, at that time, the industry was just about emerging from slack conditions and recovering from the onslaught of imports, both the enterprising promoter (then 35 years old) and the public he approached for equity funds were extremely confident about the project. Not surprisingly, the issue was oversubscribed five times.

Besides being capital-intensive, caustic soda manufacture is dependent on two vital inputs: industrial grade salt and power. Though prices of both have been rising over the years, better offtake by end user industries has helped all units (except Modi Alkalies) report substantial improvements in their margins. This was due to increasing selling prices.

Venkatesh: quick on the uptake

All in all, things were going well for the industry by 1988. SRAAC commenced commercial production in August that year. "From day one, the plant achieved 100 per cent capacity utilisation. The eight months of operation in that financial year ended with sales of Rs.11.14 crore and a net profit of Rs.78 lakh," says Venkatesh. There has been no looking back since then.

Within 18 months, the company increased its caustic soda capacity by 30 per cent to 30,000 tonne per annum. This cost Sree Rayalaseema Rs.4 crore, financed equally by internal accruals and loans from financial institutions. And now, according to M.T. Sreenivasa Rao, financial advisor to the company, "Based on the past 11 months' figure, the company is certain to cross sales of Rs.24 crore for the year ended March 1991. EPS will be about Rs.2.30 on the equity of Rs.7.74 crore."



Severe power shortages

The company's plant is located at Kurnool in Andhra Pradesh, a state which has been reeling under severe power shortages since 1985. For an industry where power constitutes 70 per cent of the total input bill, that is bad news. But SRAAC has, to a certain extent, managed to reduce the impact of these power cuts through its modern manufacturing technology. The company uses the superior membrane technology, the first in India to do so. P.R. Mohan Rao, general manager, technical, says, "The savings in power consumption by the membrane technology is around 30 per cent compared with the other processes used in India. Besides, it is pollution free."

The government has now directed that all future additions to capacity must incorporate only the membrane process. Currently, besides SRAAC, only Chemfab and part of Gujarat Alkalies' capacity use this technology. Says Venkatesh, "The power cuts in AP between 1987 and 1989 ranged between 35 to 40 per cent. We were able to tide the problem over by utilising the hydrogen released during process to generate the shortfall of power." He adds, "However, as we expand production of caustic soda by 15,000 tpa and diversify into the manufacture of 15,000 tpa of chlorosulphonic acid and 30,000 tpa of sulphuric acid, the power consumption will increase."

Venkatesh realises that, now, when the industry is thriving and manufacturers are raking in profits, it is important for individual companies to control input costs. Also, they must expand and diversify in order to sustain improvement in performance in the coming years.

In keeping with this, SRAAC, the most recent entrant in the caustic soda industry, is again tapping the capital market to raise Rs.3.26 crore. Of this, Rs.1.07 crore

Over the past two years, KVB has been associated with the public issues of several leading companies, as Managers, Co-Managers, Underwriters and Bankers. The reasons are obvious: KVB's evident competence, commitment to the job on hand and above all, the personalised service that KVB is known for. And KVB's reputation among investors and merchant banking establishments particularly SBI Capital Markets, Canfina and PNB Financial Services, speaks for itself.

In the years to come, KVB is all set to further consolidate its position as merchant bankers.

KVB

THE KARUR VYSYA BANK LIMITED

KARUR 639 002

75 years of fulfilling dreams...

B Baskaran
Chairman

1916 KVB 1990 PLATINUM JUBILEE YEAR

will be used to insulate the company against the vagaries of the power situation; this includes both loss of production due to power cuts and the high cost of power. The company is offering equity shares in the ratio of 42:100 on rights basis at par against the current market price of Rs.22 (1990 high Rs.40; low, Rs.13).

To take care of additional power requirements and to tackle the frequent power cuts of the Andhra Pradesh State Electricity Board (APSEB), SRAAC has installed diesel generator sets to produce 3 MW captive power. The installation of capacity for another 4 MW is in the pipeline.

No restrictions

In addition to this, the company has made arrangements with the Andhra Pradesh Gas Power Corporation (APGPC) to procure 4 MW of gas-based power by participating in the corporation's equity. According to Venkatesh, supply of power from APGPC is not subject to any usage restrictions. Thus, the company will be self-sufficient in power even during periods of severe cuts by APSEB. Besides this APGPC's tariff rate at Re.1 per unit, is 40 per cent cheaper than APSEB's. This alone will account for a saving of Rs.1 crore annually.

"While we have already started receiving APGPC's gas power since March 1991, the expansions would be completed within 18 months from now (mid-1992)," says Venkatesh. The effect of the two factors should be reflected in the company's results of 1991-92. "By then, we estimate an EPS of Rs.6 on the expanded equity of Rs.11.65 crore after the rights issue," says Venkatesh.

As a hedge against any scarcity in the other major input, ie, salt, Venkatesh has acquired a 50 per cent stake in the Martha salt unit in Tamil Nadu. He says, "This unit produces 50,000 tpa and SRAAC has tied up with Martha for firm supply on a long term basis."

While on the production, sales and profit fronts SRAAC has been a star performer year after year, foreign exchange and related problems have remained a major stumbling block. The company contracted for the imported component of plant and machinery in 1985-86. At that time, the customs duty applicable was 45 per cent. However, when the plant and machinery landed at the Madras port in 1987, the duty was doubled to 90 per cent. "This resulted in an increased project cost by Rs.9 crore from Rs.23 crore," explains Venkatesh.

The foreign exchange loans taken from financial institutions is repayable in Indian currency at the rate prevailing at the time of repayment. And with the rupee depreciating faster than expected, the company's repayment scheduled for eight years earlier has now been increased to 14 years.

The Kurnool plant: battling power cuts

Methanol plant

Meanwhile, Venkatesh has drawn up plans to float another company within the next two years. Styled Itachi Petrochemicals, the plans is to put up a Rs.110-crore plant at Kakinada in the East Godavari district to manufacture 100,000 tpa of methanol, a basic alcohol feedstock for manufacture of formaldehyde, besides drugs and pesticides.

A noteworthy feature of SRAAC as against its competitors, will be its sulphate recovery plant. Sulphate is an impurity in salt and form 50 per cent of the sludge, which manufacturers throw away. In SRAAC, 2 tonnes per day of sulphate is recovered from 4 tonnes of sludge. This is mixed with barium carbonate to produce barium sulphate, an import substitute used in photo films, storage batteries and tanning.

For the time being, Sree Rayalaseema's position in the industry is safe. According to the Alkalies Manufacturers Association of India (AMAI), no new grassroots projects are planned. Among the deterrents for new entrants is the fact that caustic soda plants are capital-intensive and have gestation periods of upto three years before they can go on stream. As per AMAI estimates, at current prices, it could cost around Rs.50 crore to set up a 100-tpd plant.

Better still, for Indian manufacturers like SRAAC, production of caustic soda is gradually being phased out in western countries due to strict environmental laws. "This gives Indian manufacturers a good chance for exports," comments the AMAI.

However, according to a market source, the downside is that in the short run, there is a chance of a recession setting in, following the Gulf war. Caustic soda being a derived demand product, it is directly related to general industrial production. The general downtrend emerging in the economy can be expected to have an adverse reaction in the industry. But if Venkatesh and his team at SRAAC play their cards right, as they have in the past, this will be a relatively easy hump to get over.

■ LANCELOT JOSEPH

CEMINDIA

Low-profile pioneer

This specialist construction firm which has performed quite steadily over the years, is now planning to expand and diversify

When Bhabha Atomic Research Centre (BARC) wanted a one kilometre jetty to be built on piles, using the precast concrete system for better weathering sea water damage, it chose Cemindia to do the job.

The port authority at Paradip chose the same company when they embarked on an expansion programme for a cargo berth capable of handling ships upto 40,000 DWT. Cemindia was contracted to construct a pile-supported deck and diaphragm walls (the construction of vertical walls to prevent the ingress of water during deep excavation and holding the surrounding ground in place).

The company has also constructed diaphragm walls, albeit with a different technique, for Calcutta's underground Metro.

So specialised are the company's operations that even a single type of work has various applications and the techniques for executing it can also vary. So, it is no wonder that when the work requires ground level or below the ground ministrations, Cemindia is one of the names thought of. In fact, the company's chairman and managing director, M.R. Punja introduces his company thus: "Cemindia makes any ground a fit place to build on."

Cemindia came into being about half a century ago but it is relatively unknown outside the construction industry. In the late twenties, Cementation Company plc, UK, was contracted to carry out some offshore work in India. The company realised that the demand for such specialised consultation would increase and so set up its Indian branch in 1931. This was converted into an Indian public limited company in 1978 and was christened Cemindia Ltd. In 1979, Cemindia floated its first public issue. However, 51 per cent of the equity capital is held by Cementation UK, giving the Indian company a FERA status. About 6 per cent of its total Rs.1.28 crore equity capital is held by the Unit Trust of India and the General Insurance Company, the balance being with the public.

Informal management

Cemindia is allowed 51 per cent foreign equity under FERA as it uses sophisticated technology which is capable of catering to a range of industries including construction, transport, mining and power. It has a very informal management style. "We have an excellent management information system that enables us to monitor our procedures, costs, progress, on a continuous basis," says Punja. He is a civil engineer whose association with the company has spanned two decades. Even today senior management personnel, including Punja, visit major work sites on a regular basis.

On the financial front also the company has done well. Turnover has grown four-fold from Rs.5.2 crore for the year ended September 1980 to Rs.23.06 crore for the year ended March 1990. Of course, there was a period in the mid-eighties, like the year ended September 1985, and, then again, the 18 months ended March 1989, when sales dipped as low as Rs.20.8 crore and Rs.17.3 crore (annualised), respectively.

The fluctuation can be attributed to many causes, such as cases where a contract has overrun its time-frame resulting in extra costs to be fitted in within the original contract price, points out M.G. Ranade, Cemindia's financial controller and company secretary.

Gross profit as a percentage of sales has shown a steady decline over the last five years from 15.52 per cent for September 1986 to 11.79 per cent for the 18 months ended March 1989 to 9.6 per cent for March 1990. The net profit percentage has however been steady at around four points of sales except for March 1990, when it declined to 3.15 per cent.

Punja explains this away as the vagaries of his trade. "Uncertainty is inherent in the industry. Ours is a special activity depending upon the clients' needs, there is no continuous flow here as in the case of manufacturing concerns," he says. However, there is one positive factor which cannot be ignored. "In our type of work the actual value of the contract may not be very high but its intrinsic value is much higher," says Punja. "And this is reflected in those instances when even while turnover has gone down, profitability remains unaffected."

Piling work in progress and (inset) *Punja: "Uncertainty is inherent"*

High real value

Adds Ranade, "It depends on the type of construction. If we have to use less material or if the government supplies us with the requisite cement, steel, etc, the real value of our job is almost doubled."

As much as 80 per cent of Cemindia's work is undertaken for the government or public sector

undertakings. Whilst such jobs reduce the risk element in terms of payment for the job, the government agencies are notorious for late payments. "Extracting payments is our only problem," agrees Punja. "At the same time, it is difficult for us to reduce our dependence on government clients".

However, Punja declines to comment on whether or not good margins could be obtained from government contracts. "It is difficult to generalise because most of our work is obtained after a lot of competitive bidding," he says. Nevertheless, he admits that working for the private sector is preferable as it entails better working conditions on the whole.

Cemindia's private client portfolio includes corporate sector giants like Tisco and Reliance (for whom the company has done a lot of work at their Patalganga plant).

Good track record

L.R. Chawla, a leading Bombay-based contractor, associated with the construction of the Oberoi and Leela Kempinski hotels agrees with Punja on the issue of competition and pressure on margins. "In the whole construction industry, margins depend on the demand. In tough times, good companies can manage to keep their heads above water and when the going is good they can name their price," says Chawla.

Chawla is full of praise for Cemindia, and describes it as a very well-managed company with a good track record. "It is one of the best companies in the business and can easily rub shoulders with Afcons which is its only competitor," he opines.

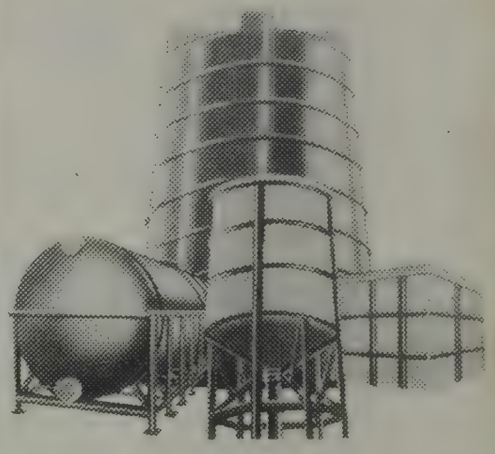
At present, the company is working at a site in Kandla where it is using the unique vibroflation technique which strengthens clayey soils, rendering the ground capable of supporting foundations for oil tanks. The same technique can be applied for strengthening dam embarkments or foundations for buildings.

The company has taken up prestigious projects for the railways in New Delhi. By employing the pipe-jacking process, Cemindia is widening the road beneath rail overbridges. The technique involves the construction of an underground passage whereby the work can be done without disrupting regular traffic overhead. These techniques, unique to the company, have proved to be Cemindia's strengths. "Through collaboration with our parent company and indigenised innovations, we have developed many new techniques in our field," says Punja proudly. The company's long portfolio of firsts includes the vibro stone column, jacked piles and quick grouting techniques.

It is its pioneering status that has kept Cemindia moving. Which is why even when the results for the half year ended September 1990 (turnover Rs.9.46 crore) are lower than earlier years', Punja expects "satisfactory" results for the full year. A point in the company's favour is its knack for good fund management which has resulted in steady interest costs and a low debt-equity ratio. The company's free reserves at Rs.8.58 crore compare well with its low equity base of Rs.1.28 crore.

Investor ignorance

Cemindia's share price has been stagnating around Rs.100 for some years. This is low considering the company's book value of Rs.77. One of the reasons for the lack of interest in the scrip is the lack of investor awareness. Many brokers, when asked about the company, admitted having no knowledge about it and the few who had heard about it gave a vague remark: "It's a steady share," displaying a certain amount of ignorance regarding the company and its line of business.



To date, the company has issued a bonus only once (ratio 3:5), in 1984. It has been a bonus candidate for the past two years but when questioned about it Punja countered with, "Isn't it better to service present capital well and give higher dividends on it than a lower dividend on increased capital?" However, he does not rule out a bonus issue. But his main concern is capitalising on the niche position that Cemindia has created for itself in the construction industry.

Punja won't reveal Cemindia's plans though he admits that expansion and diversification programmes are on the anvil. However company policy seems to be one of sticking to its knitting. Says Punja "We will confine ourselves to our specialist activities. Our main thrust will be to diversify in our own field by introducing new methods and going in for greater mechanisation."

Such an expansion will entail a good deal of capital expenditure and chances are that a couple of years down the road the company will approach its investors to fund its expansion plans. The future seems promising for the company. One may well see a rise in both turnover as well as share price, a few years hence.

Sintex
Industrial
Tanks

Tried, Tested &
Trusted
for over 15 years

Now the Sintex Industrial Tanks have been in service for more than 15 years. Withstanding the test of acids and chemicals. A performance that speaks volumes for the quality, reliability and utility that is assured with each Sintex Tank.

Moulded to seamless perfection from superior grades of polyethylene materials, they are light-in-weight, easy to install and totally maintenance free.

Available in different shapes and sizes of upto 25,000 litres capacity. The Sintex Industrial Tanks have today become the standards for the storage of chemicals and acids.

MODI INDUSTRIES

Sending out an SOS

Neck deep in the red, this one-time premier company of the Modi group has turned to the BIFR for help

Modi Industries Ltd — the one-time flagship of the Modi Group — is in the throes of a financial crisis. Having recorded a cumulative loss of Rs.23.03 crore till 1989-90, the company, according to insiders, is falling deeper into the red, with an estimated loss for 1990-91 of Rs.31 crore.

With no free reserves on hand and having eroded its paid-up equity of Rs.3.55 crore several times over, the Rs.204 crore turnover company is now visiting the Board for Industrial and Financial Reconstruction (BIFR) for a possible bail-out.

Modi Industries came into being in 1932 with a sugar unit put up by the Modi family patriarch — the late Gujar Mal Modi. It soon expanded into other fields, setting up units manufacturing sugar, steel, vanaspati, soap, paint, lanterns, gas, liquor and electrodes. While the company's turnover increased steadily to reach Rs.204 crore in 1989-90, its profit before tax for virtually two decades has remained in the Rs.one to two crore bracket.

Modi Industries, however, shored up its reserves, touching a peak of Rs.23 crore in 1986. Meanwhile it served as the promoter company for the other Modi giants — having helped promote Modipon in 1968, Modi Rubber in 1972, Modi Alkalies and Chemicals in 1984 and Bihar Sponge Iron Ltd in 1988.

Rough weather

After renouncing its status of flagship company to Modi Rubber Ltd, Modi Industries' nine units drifted along till 1986-87 when they ran into rough weather. Profit figures, earlier negligible, nosedived into the red, and reserves plummeted. The company recorded a loss of Rs.8.84 crore in 1988-89 and followed this with a further loss of Rs.14.17 crore in 1989-90, paving the way for its entry into the BIFR's corridors.

The downslide of Modi Industries coincidentally began with tremors within the Modi family over separation of assets, which finally led on a controversial division. The effect on Modi Industries of this altercation was far reaching. Its nine units went under the independent control of three different families and, overnight, it acquired three managing directors — Madan Lal Modi (overseeing the distillery unit), Umesh Kumar Modi (having control of the sugar and steel units) and Mahendra Kumar Modi (supervising the rest). The chairmanship was surrendered to the financial institutions.

Last year, the company, apart from its losses, owed Rs.58.2 crore in mortgaged loans (inclusive of interest accrued) and a further Rs.37.6 crore to sundry creditors. Its net fixed assets, on the other hand, were evaluated at Rs.36.8 crore. Further, the company has defaulted on paying interest on debentures for over three years.

U.K. Modi: division tremors

Company officials prefer not to comment on the company's misfortunes. "We have told BIFR what went wrong and we are hopeful of turning this company around," is all Mahendra Kumar Modi (K.N. Modi's son) will say. (He is interfacing with BIFR for Modi Industries.) A BIFR official who requested anonymity, however, said the management was told to sell its assets — primarily its holdings in other Modi companies — before seeking more help from financial institutions.

The real worth of Modi Industries is its investments, valued at historically low values, in newer, more profitable companies. Modi Industries today holds 700,000 equity shares in Modipon Ltd, 800,000 shares in Modi Rubber Ltd, 6,30,000 shares in Modi Alkalies and Chemicals Ltd, and 20,00,000 shares in the equity of Bihar Sponge Iron Ltd. With the values prevailing in the market today, the company can capitalise this asset to the tune of some Rs.18 crore. Among these companies Modi Rubber and Bihar Sponge Iron are today in the hands of the G.M. Modi family, while the other two are with the K.N. Modi family.

Modi Industries' holdings have been the bone of contention between warring sections of the Modi family, and disposing of them as per BIFR's instructions will not be so easy. While the G.M. Modi and K.N. Modi families have apportioned the group's companies among themselves, a valuation of the assets of the individual companies is underway and has to be completed before a final separation of assets can be worked out. In the meantime, both families are keeping an eagle's eye on the existing share distribution and appear wary of any change in the share holding pattern. However, as far as Modi Industries is concerned, the investments that this company has made is the only treasure in its chest which can help alleviate its liability burden.

Of Modi Industries' nine units, just three — sugar, vanaspati and distillery — are performing well in terms of capacity utilisation. These together accounted for 55 per cent of the company's turnover in 1989-90. According to reports, while the steel unit contributed Rs.56 crore to last year's sales, its books showed a hefty loss. The other units — paint and varnish works, lantern, gas and chemicals and arc electrodes — are contributing meagrely to turnover, adding in good measure to its piling losses.

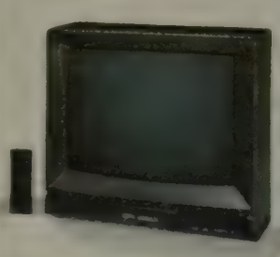
At a meeting with BIFR officials on 14 March, the company's management sought to secure further loans; these were not granted, on the ground that the company already had its assets mortgaged to the tune of Rs.58.2 crore. The company's plea that an infusion of capital to modernise some of the units would turn it around also got a negative response from BIFR, which stuck to its stand that Modi Industries first dispose of its holdings and some fixed assets to get its head out of the water.

With the Modipon share quoting at between Rs.95 and Rs.100 and with Modi Rubber standing at Rs.64 in the market, there will be no dearth of takers if their total of 15,00,000 shares are dumped by Modi Industries. The management wants to somehow avoid this step, but as a BIFR official puts it, "it's time for some tough decisions. The only way out for Modi Industries would be to capitalise its assets." ■

R.S. VENKATESH

BPL

BPL-SANYO MAKES HOUSEHOLD AFFAIRS A PUBLIC ISSUE.

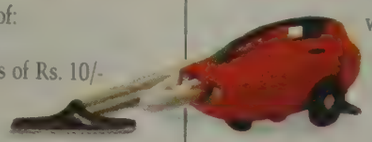


The world's latest Washing Machines, Dish Washers Microwave Ovens, and Vacuum Cleaners, will soon be manufactured by *BPL SANYO UTILITIES AND APPLIANCES LTD.*

An existing, profit-making company in the BPL Group that's already manufacturing Colour Televisions.

Project Plans

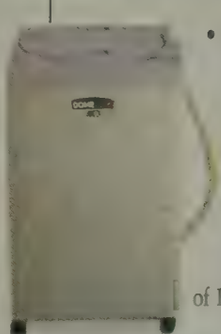
Contemporary SANYO technology will be used to manufacture stunning BPL-SANYO Home Appliances. At their modern manufacturing facilities near Delhi and Bangalore. The thriving Home Appliance industry that's growing rapidly every year will have a true world class member.



The Public Issue

Now, *BPL SANYO UTILITIES AND APPLIANCES LTD* is going public. It's an issue which has the best for every Investor. It's a simultaneous issue of:

a) 10,00,000 Equity Shares of Rs. 10/- each for cash at par.



b) 7,94,000 12.5% Secured Redeemable Partly Convertible Debentures of Rs. 150/- each for cash at par.

BPL SANYO UTILITIES & APPLIANCES LTD is a fortune knocking at your home.

HIGHLIGHTS

- Promoted by BPL GROUP – Leaders in Electronics.
- Existing Profit Making Company.
- Project for Manufacture of Home Appliances and Colour Televisions.
- Colour Television Project already commissioned and marketed under the well established BPL Brand.
- World Class Home Appliances based on state-of-the-art SANYO Technology.
- Strong Management Team-Key Personnel trained at BPL Group's facilities in India and at SANYO's facilities in Japan.
- Home Appliances to be marketed under BPL SANYO brand.
- 88A and other Tax Benefits for Investors.
- Locational Advantages – Sales Tax Holiday for Six years at NOIDA.

- Opportunity to get equity at PAR in a BPL Company.
- Participation by ICICI/UTI/SBI Mutual Fund/PNB Mutual Fund.

ISSUE OPENS 10th APRIL 1991

- Listing at Bangalore, Bombay and Delhi Stock Exchanges.

If the Company does not receive the minimum subscription of 90% of the issued amount the entire subscription will be refunded to the applicants within 90 days from the date of closure of issue. If there is a delay in refund of such amount by more than 10 days, the Company will pay interest at 15% per annum for the delayed period

Dare an engineer dream in technicolour? Or must he see the future only in Black & White?

Vikram Kirloskar (Managing Director)

As prisoners of the possible, we forget that the essence of engineering R&D is to conceive the impossible. And make it happen.

This needs, firstly, a company with the courage and the vision to look beyond the next balance sheet. I work for such a company.

Mysore Kirloskar.

Take our VMC-345 for example.

PRATIBHA, BLR. 91 MKL3

Four years ago, when we announced that we intended building —— indigenously and from scratch —— an advanced and very affordable CNC vertical machining centre, we created quite a sensation. Machining centres? Without ever having made milling or boring machines?

Some were indulgent. Most were openly sceptical. None were encouraging in the least.

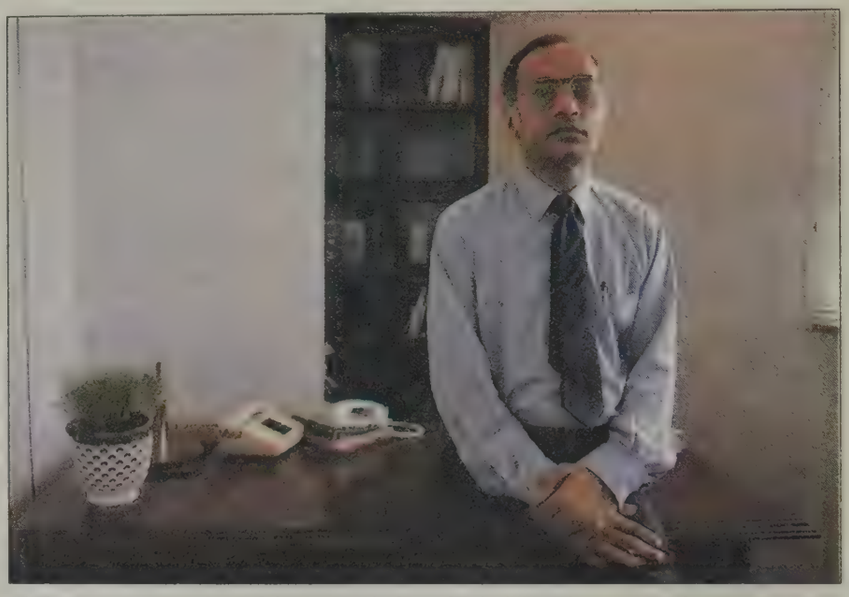
How inadequate words are to describe the two years that followed. Two years of blood, sweat and tears. And a crazy chemistry called teamwork.

It was at IMTEX-86 that we unveiled the first prototype.

We are engineers, so there were no champagne toasts, streamers or party hats. But from the smiles that refused to leave our faces and the noticeable absence of hilarity among the competition, it was obvious —— we had a winner.

From that prototype has come the machine that is expected to contribute Rs. 10 crores this year to our turnover. The VMC-345 has already been exported to France and various extensions and upgradations are on their way.

Five percent of our turnover goes to research. For a capital goods manufacturer like us, that's a lot of money. But the way we look at it, not investing in R&D would cost us a lot more.



DATE: 1941 — 1991

HARDWARE EXPORTS

Stymied by controls

Computer vendors know they have to export or perish. The information technology industry worldwide is import-intensive. Not a single country manufactures all the components and sub-assemblies that make a computer system. So, it needs foreign exchange to pay for imports. Given India's precarious balance of payments position, it is unrealistic to expect unrestricted imports. "Therefore, to import components the industry must earn foreign exchange. And the only method is by exporting," says Rajendra Pawar, president of the Manufacturers' Association of Information Technology (MAIT).

The value-added component — which was 25 per cent — has been reduced to 15 per cent for exports to general currency area (GCA) countries on a selective basis. Suresh Bansal, marketing director of Microedge Tech, a Bombay-based hardware exporter, points out, "Taiwanese companies operate on a value-added component of 3 per cent and we have to compete with them on prices. At 15 per cent to GCA countries we are on better footing."

Mehta: exporters' problems mainly administrative controls

Gearing up to reach the target of Rs.1,000 crore by 1993, the computer hardware exporters are focusing on the GCA countries. Last year, however, India exported Rs.258 crore worth of computers and related products and will close the current financial year with a similar figure — still far from the target.

Low growth rate

A stagnant domestic market is another reason why vendors have begun to look for new avenues outside the country. Until this year, the market here had been growing at a galloping pace. But higher input costs and lower prices slowed the growth rate to a mere 10 per cent.

Exports of fully assembled computers and sub-assemblies — keyboards, monitors, floppy disc drives — started in 1985 with Rs.34.5 crore worth of exports to Russia. "The real growth took place about two years ago when trading and export houses received large orders from Russia," says Bansal. "Almost every computer vendor received a Russian order. This had many advantages, the unit realisation was higher, it met the export obligation and included tax free profits." These exports were made on a bilateral basis to rupee currency areas. Exports grew and in 1989-90 the exports of Rs.258 crore was achieved with as much as 60 per cent to rupee currency areas.

But compared to the Taiwanese, who are considered suppliers to the world, this performance is dismal. In 1989 the exports from South-East Asian countries to general currency areas was a whopping $40 billion, of which India's share was minuscule. Says Pawar, "Most of these companies that are exporting today operate out of a small cubbyhole. They import raw materials, apply labour and skills, look for niches, focus on them and export." Today two companies which started as OEMs — Acer and Mitec — have launched products with their brand names in the US markets.

In India the exporter faces a maze of controls. Bharat Mehta, chairman of hardware panel of the Electronics and Computer Software Export Promotion Council (ESC), says, "We compiled a list of problems exporters faced: 90 per cent are administrative controls." Others lament the bureaucratic controls. Says Pawar, "A foreign buyer needs delivery within 30 days. By the time an exporter acquires licences and obtains foreign exchange, three to six months have gone by." Raj Saraf, managing director of Zenith Computers, says, "Duty drawbacks offered by the government take a long time in coming. There is too much paper work. We lose 1.5 per cent per month on interest charges and this adds to the cost."

Pertinent queries

What strategy should India adopt? Which products should be exported? Pawar suggests answers: "The object is first to sell to manufacturers on an OEM basis. India has the engineering talent. We can procure the same raw materials the Taiwanese do and manufacture a product for the export market." Bansal suggests a different tack. "We can focus on products from which the Taiwanese companies are moving out and fill the vacuum for low-tech products like monochrome monitors, XT and AT boards," he says. He sees another trend in India's favour: "The currency and cost of labour in countries like Singapore, Taiwan and Hong Kong are rising. With the rupee dipping every day, our products should soon be more competitively priced."

Identifying niches and going after them is the strategy adopted by Sum Electronics. The company recently signed a memorandum of understanding to provide a Unix (operating system) terminal to an American terminal manufacturer. Says Mehta, "The question is, can India sustain designing and manufacturing these products?"

India's drive to export computer hardware to GCA countries has just begun. Both ESC and MAIT have plans to push exports and have raised the issues of government policy and procedures. MAIT has put forth three recommendations: blanket advance licence for exporters; a simpler procedure to obtain forex; and empowering the exporter to transfer export benefits to domestic suppliers. The ball now is quite jerky in the government's court. Notwithstanding the foreign exchange crunch, industry and government are well aware of the hurdles and are keen to resolve them.

■ AROON SARKER

The activity analysis advantage

The chief executive of a leading industrial pumps company was astounded by the unexpected profit figures presented to him. He had been satisfied with his sales and manufacturing operations. Although bulk manufacturing of the company's core product had declined due to surprisingly strong competition, it had successfully added several new niche products which had gone down well with customers. Sales were up and manufacturing capacity was completely utilised. Inexplicably, profits had fallen.

A strategic cost analysis revealed that the traditional accounting system was the culprit: it did not provide the right signals on increased cost of product diversity. By using a direct labour hour basis of absorbing overhead, allocation of cost to the core product was much more than it caused. The new, more complex products, were under-costed and under-priced.

In today's competitive environment, total product related costs need tracking. Activity analysis is a management technique that many companies have been using in recent years to obtain a competitive advantage.

Understanding business operations

The first step in understanding the profitability of different products is an analysis of the basic business operations. All principal activities — ordering raw materials, materials movement, setting up machines, production planning, maintenance, inspection, distribution and after sales service — are first clearly identified and the cost of resources consumed by each activity is estimated. This forms the basis for product cost estimation and value chain analysis.

Most traditional costing systems allocate costs to products on the basis of measures such as labour hours, machine hours and material costs. In reality, most costs are 'caused' by other factors. For instance, machine set up and supervision costs in an extrusion shop depend on the complexity of the cast. The cleaning cost in a print shop depends on the number of colours required. Clearly, jobs involving multiple colours would absorb more costs per unit.

Traditional costing methods, however, allocate proportionately more costs to higher volume products even if they are simpler to make and demand less activity resources. The critical step here is identifying the appropriate cost drivers to relate costs from activity centres to products. With such activity based costing, managerially important factors such as excessive material handling, process complexity causing work-in-progress, build-ups, varying set up time and yield variations show up as components of product costs. In many companies, marketing and production managers are aware that their accounting system gives distorted product costs. What they are most surprised by is the magnitude of these cost distortions. In a protected market, such distortions lead only to lower profits. In a competitive environment it may threaten the very survival of a company.

Eliminating wasteful activities

Activity analysis also makes it possible to evaluate activities and classify them as "value adding" or "wasteful". For instance, inventory is treated as an asset by almost all accounting systems. Actually, inventory build-up indicates inadequate planning or sub-optimal production set ups. Managers must then translate this information into actions such as recasting the order quantities and speeding up production flow.

Activities such as moving, storing, waiting and reworking are inherently wasteful. The principal precepts of world class manufacturing methods, including total quality control and just-in-time inventory, involve elimination of such wasteful activities. Companies that initiate aggressive investment in time and resources in reorganising their operations to eliminate waste can compete more forcefully.

Managerial response to large set up costs used to be large batch sizes and consequently inventory build-ups and long delivery times. Japanese manufacturers gained important competitive advantage by reducing set up costs — the fastest erected Mc Donalds Restaurant was put up in Tokyo in less than two days instead of the normal time of one month. In most plants, stagewise quality testing and inspection allows the finished products to move to customers more quickly than would be possible if all products were centrally inspected before delivery. Realising the cost of rework and delays, world class manufacturers now refine their operations to eliminate the need for inspections by getting things right the first time.

Insights from activity analysis

Activity analysis has been successfully implemented in companies in which top management has strongly supported it. Involving the entire organisation to refocus its attention on the changing needs of the competitive environment, rather than simply maintain status quo, proves rewarding. Traditional management control systems that rely on budgets and variance reports have a strong static orientation, motivating managers to simply reduce costs of existing production. Activity analysis turns the focus around to how operations can be changed to compete more effectively. It asks the question: what is the value added (to the customer by our product) by each activity and is it sufficient to justify its cost? It identifies activities that need to be changed to increase the value realised, or to eliminate costly waste.

The principal precepts of world class manufacturing methods involve elimination of such wasteful activities. Companies that initiate aggressive investment in time and resources in reorganising their operations to eliminate waste can compete more forcefully

From a planning perspective, activity analysis helps identify products that require more activity resources than their price (which reflects the value supplied to the customer in a competitive world). Armed with this information, managers can then reposition their product lines to emphasise those that enhance long term profitability. From a control perspective, activity analysis enables the comparison of the value added and costs incurred for different activities, and thus helps identify wasteful activities. Managerial efforts are thus directed to channel resources to activities that provide value to the customers and in turn increase the company's profits.

PARADEEP PHOSPHATES

Strangled by unions

If the lack of industries is one of Orissa's original tragedies, even more tragic is the fate of some of the larger companies that already exist in the state. Paradeep Phosphates Ltd (PPL), set up in 1986 as one of the most modern fertiliser projects in the country, is a good example of how even an investment of over Rs.600 crore can yield very little when politics and politicians take over the running of labour unions.

The company, which had a turnover of around Rs.300 crore last year, has accumulated a loss of over Rs.75 crore; and things could get even worse. When it started out, PPL was the largest diammonium phosphates manufacturer in Asia. In 1988, PPL made 626,000 tonnes of the product. But in 1989, production was down to 250,000 tonnes. And things are equally bad this year.

Shortage of the imported raw material phosphoric acid is cited as one of the main reasons for PPL's consistent poor performance. But, the even bigger problem that has been dogging the company is labour unrest. In fact, the government of Nauru, the small rock phosphate producing island in the Pacific ocean, which has a 49 per cent stake in PPL's Rs.120-crore equity, now wants to pull out because of this.

Many unions

Though PPL has only about 700 employees, it has about 13 unions operating in various departments. Only one, though, is recognised. When the company started production in 1986, the recognised union was the Paradeep Phosphates Employees Union (PPEU) affiliated to the Congress (I)-controlled INTUC. But three years later, this union was de-recognised and the management accorded recognition to Paradeep Phosphates Staff Association, this one affiliated to the CPI-controlled AITUC. Says managing director P.N. Arunachalam, "We de-recognised the INTUC union because it was indulging in unlawful and unfair practices and often resorting to strikes resulting in huge production losses." Interestingly, after the Janata Dal came to power in Orissa 15 months ago, the PPEU union elected Pravat Samantray, a JD Rajya Sabha MP, as its president though the union continues to remain affiliated to the INTUC. PPEU's general secretary K.N. Patnaik went on a hunger strike in front of chief minister Biju Patnaik's residence in January this year with a long list of demands, including investigation into what he termed as rampant corruption at PPL.

The state's Janata Dal government subsequently served an ultimatum to the management to settle the problem or face the consequences. State labour minister Prafulla Samal told *Business India* at the time that if the PPL management did not solve the matter within a week, the government would be forced to withdraw all facilities given to the management, including police protection. Two police platoons had been deployed in the plant premises ever since labour unrest erupted nearly a year ago. But, the management was unfazed.

Not the only one

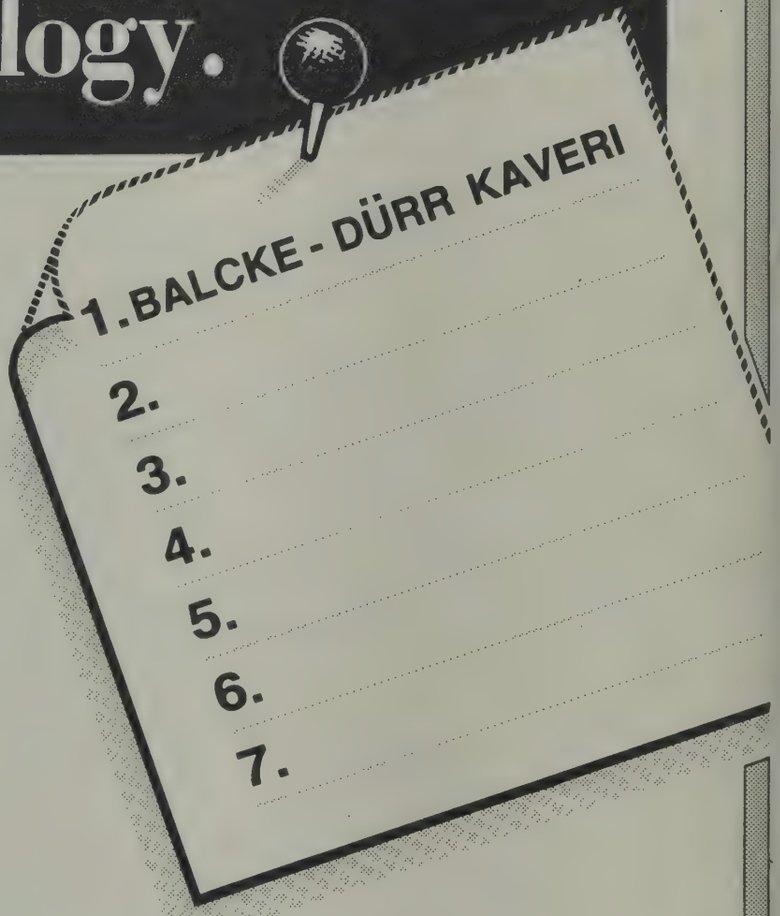
Patnaik was not the only labour leader to have gone on strike in protest against PPL's policies in recent times. Umesh Chandra Swain, a Janata Dal MLA and president of the Paradeep Phosphates Workers Union, went on a hunger strike too, demanding that the bagging contract at the plant be given to a Kalinga Bijay Multipurpose Labour Society, of which he is the president. Between 1987 and 1990 the bagging contract had gone to Rishi Samantray, owner of Siddhartha Construction Pvt Ltd and son of Nityananda Samantray, an influential Congress (I) MLA at that time. The top management of PPL insists that Siddhartha Construction did a good job for these three years.

Trouble started sometime during April 1990 when the contract labourers working under Rishi Samantray changed loyalties overnight to different Janata Dal politicians like Pravat Samantray, Umesh Chandra Swain, Panchanan Kanungo and Sudhakar Mantri. Each of these formed splinter unions, promising attractive terms to the labourers.

Around July 1990, chief minister Biju Patnaik himself intervened and virtually recommended that the bagging contract should go to Swain. The management argued that the bagging contract is not a supply contract but a service contract and co-operatives like the one headed by Swain cannot be effective in handling it. It conveyed to the chief minister that the decision to award the bagging contract to Orissa Stevedores Pvt Ltd "was purely a commercial decision and is irrevocable".

Swain resorted to the hunger strike first, and then presented a memorandum to Devi Lal. He is now threatening to sit again in *dharna* before the corporate office of PPL here demanding cancellation of the bagging contract awarded to Orissa Stevedores. But the management is unmoved, saying that it cannot dance to the tune of local Janata Dal politicians.

Apart from Swain, other Janata Dal leaders of the state who have interest in the labour unions at PPL includes Panchanan Kanungo, who heads a union consisting mostly contract labourers in the bagging plant of the company, and state ministers like Damodar Rout, Prafulla Chandra Ghadei and Nalinikanta Mohanty.



Arunachalam: unfazed by threats

Keeping up with all these unions and union leaders and their various demands has been quite a task for PPL and its management. The strain is showing in the form of the company's declining fortunes. A disgusted Arunachalam says, "If this type of union bullying and political pressures continues, the government of India may decide to simply close down this plant, not because of the government of Nauru."

Laments a senior executive of PPL, "Had this plant been set up anywhere else other than Paradeep, we would have posted excellent performance results." It is difficult to disagree

■ NAGESH RAO

An exhaustive list of all the heat transfer and waste heat recovery system manufacturers with leading German technology.

It's a short list, with only one name, Balcke-Dürr Kaveri. A joint venture between Balcke-Dürr AG and Kaveri Engineering Industries Ltd. The only company that brings world leading German heat transfer and waste heat recovery technology to the Indian industry. Technology that's proved itself in the world's most demanding industrial environments. And has remained state-of-the-art for almost a hundred years. Far longer than any other technology available in India has existed.

A wide range of systems

Apart from offering Indian industry the hottest heat transfer technology, Balcke-Dürr Kaveri brings you the widest range of systems. For applications ranging from petrochemical, chemical, metallurgical, cement, captive power plants and incinerators.

All supported by a team of highly responsive and qualified experts.

Prestigious projects

In just two years Balcke-Dürr Kaveri has already won several prestigious projects – some over the two leading names in heat transfer systems. They include Nagarjuna Fertilizers, Deepak Fertilizers, Vikram Ispat, VBC Industries, IPCL and FACOR among others.

But this is only the beginning. Balcke-Dürr Kaveri's leading German technology, wider range and more responsive service is set to blaze new trails in heat transfer and waste heat recovery systems.

KMFL-HL FICOM MERGER

Marriage of convenience

Mergers and acquisitions are common among manufacturing units these days. Last fortnight, even the financial industry witnessed one such alliance when Kotak Mahindra Finance Ltd (KMFL) — a private financial company known for its aggressive stand in bill discounting — absorbed into its fold (as a division) another finance company H.L. Financial Consultants & Management Services (HL FICOM) — a name very well known, till a few years back, among merchant banking circles. Says Uday Kotak, managing director, KMFL, "With this, we gain the status of being the only company offering the full range of financial services."

For the 28-year-old Rikeen Dalal, director of HL FICOM, the decision to get out made sense because "Merchant banking is a personalised business and devoting time to it was important if one had to retain one's market share and ours has been falling over the last two years". Yet HL FICOM had mobilised Rs.150 crore through public issues and Rs.100 crore through fixed deposits from over 140 companies in 1990.

Established in March 1973, as the maiden business venture of what later on came to be known as the FICOM group, this company had pioneered the concept of issue management. Pradip Harkisondass Dalal, Rikeen's late father who belonged to a leading and well known family of stock brokers was the key figure behind this new venture. Although merchant banking in India was officially kicked off by Grindlays Bank in 1968, Pradip Dalal is treated as the father of merchant banking business in the country.

Proven professionals

Pioneers in merchant banking, HL FICOM, along with CIFCO, JM and DSP are regarded as the "four sisters" of private merchant banking. And it was only natural that Dalal wanted it to be in good hands. He decided to sell HL FICOM to KMFL because "Kotak's association with the Dalal family has been long and his proven professionalism in the field gave him the cutting edge", says Dalal.

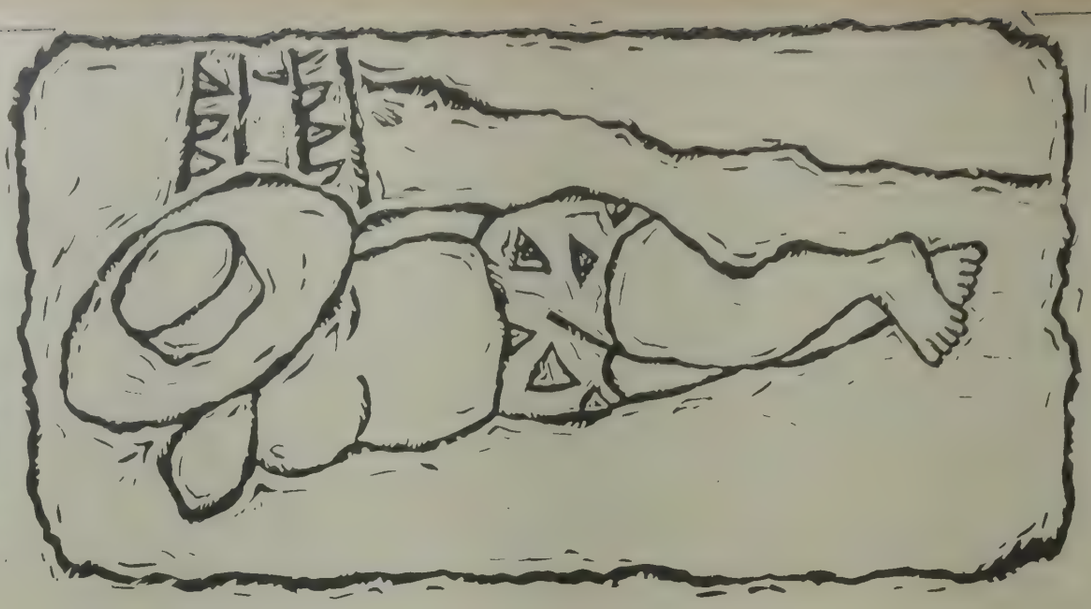
Incidentally, in 1983-84, Pradip Dalal, and Kotak, together with Coronbay of the UK had floated a company called FICOM Coronbay Kotak to venture into international finance and other related activities. This venture, however, fell through as the overseas partner backed out.

Till end 1978, HL FICOM had managed over 100 issues which doubled by 1980. Says a competitor, "Between 1973 and 1980, HL FICOM was the undisputed leader in issue management among the private sector".

From 1 April 1991, HL FICOM will operate as a division of KMFL and will manage fixed deposits and public issues for it. Dalal will continue to be associated with the company in his capacity as advisor and will chalk out marketing strategies for it. The decision to finally merge the two will be taken once KMFL's presence in these areas gains credence.

KMFL's track record is commendable. It started in 1986 with a capital of Rs.30 lakh and its net worth increased within a span of 5 years to Rs.14.50 crore. Its profits after tax jumped from Rs.25 lakh in 1986 to around Rs.9 crore for 1991. The profits till last year had come mainly from the bill discounting activity. Says Kotak, "From a predominantly bills financing company, we consciously were moving towards broad-based financial servicing". Its leasing division showed marked improvement in performance and increased business from Rs.3 crore in 1986 to Rs.37 crore in 1991. Last year it also activated its hire purchase-cum-consumer finance division which is today second only to Citibank's in terms of incremental business in Bombay, having done Rs.8 crore worth of business in the last six months. Early this year, it moved towards starting portfolio management which will begin operation formally by May. Additionally Kotak also operates in the stockmarket through a card he holds in his name.

Comprehensive range



The only significant areas left out were fixed deposit and issue management. "This alliance with HL FICOM will now help KMFL offer a comprehensive range of financial services," says Kotak. Both Kotak and Dalal are a little reticent about revealing the details of the deal. Kotak prefers to call it "taking over of FICOM's assets" and not the company. In other words, HL FICOM now will function as a division of KMFL. Also, KMFL gets HL FICOM's premises located near the Bombay Stock Exchange Tower. Apart from gaining the services of professionals (out of 40 odd HL FICOM employees, KMFL has retained 10) the HL FICOM goodwill also comes to KMFL now.

The most significant advantages of the merger are two-fold. First, it will strengthen KMFL's infrastructure by adding to its four branches, a retail network of over 2,000 outlets countrywide, especially in semi-urban and rural areas. This is significant as HL FICOM is the first merchant banker to offer equity to the rural markets. Secondly, by adding this readymade network, KMFL has bought over time and time is money in today's business environment HL FICOM, on the other hand, will save itself from the troughs and peaks it has been

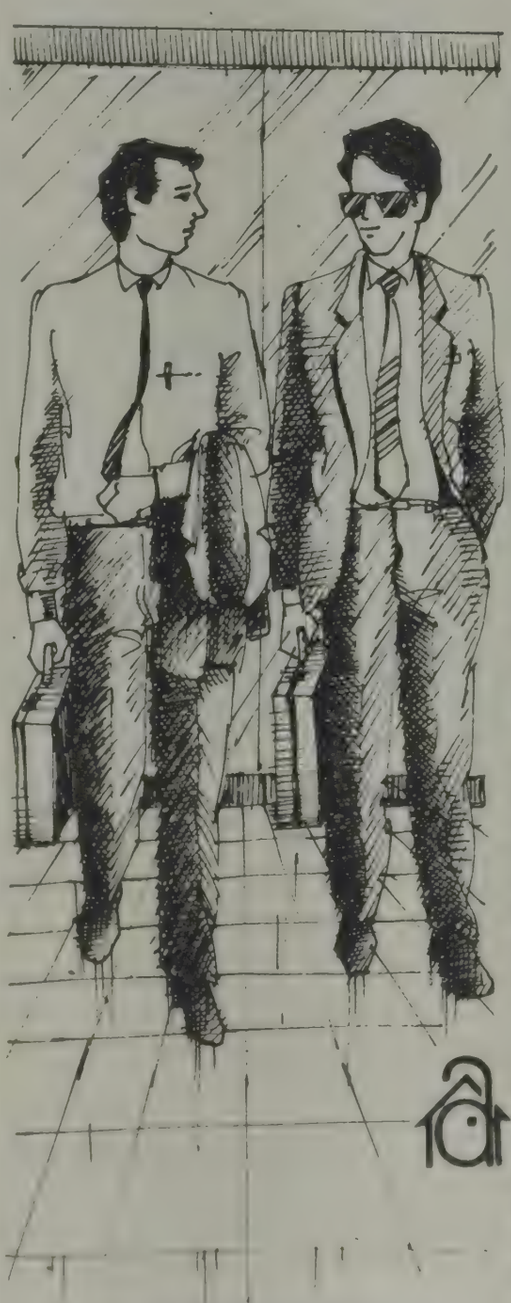
going through for KMFL will take care of its business.

In 1979, the FICOM group also floated its first industrial manufacturing venture. The outfit, FICOM Organics, is engaged in manufacturing malathion technical dodecyl phenol and nonyl phenol. "As my father gave more time to it, the manufacturing venture took off in 1980 and HL FICOM soon lost its number one position", explains Rikeen Dalal. To add to this, in 1982, family squables began which continued till 1984. Other players took advantage of the situation and the company lost its major clientele base to its competitors.

In 1985, Rikeen Dalal joined HL FICOM. By December 1987, he was appointed on the board of the company. His father then decided to concentrate on manufacturing, leaving the challenge of merchant banking to the young Dalal, then only 24 years old. "The challenge was to first get back the clientele lost and then to rebuild the company to its original position," explains R. Dalal.

By October 1988, R. Dalal had not only regained the business of the corporate groups lost earlier but had also got on to other industrial houses with which the company was not traditionally involved. "This was like building HL FICOM afresh a second time", he recalls. In fact, in 1989-90, by handling six issues as managers and advisors, it already became the number two merchant banker controlling over 47 per cent of the total amount of issues handled, valued at Rs.1,303.05 crore.



Unfortunately for the group, Pradip Dalal died in the Ahmedabad airplane crash on 19 October 1988. A week later, Rikeen Dalal had to take over his father's manufacturing activities as well. Still FICOM Organics is considered to be a blue chip in the stockmarket today. And it has consolidated itself by diversifying into a wide range of chemicals. Still keen on becoming a full-fledged industrialist, Dalal has naturally relegated merchant banking to the background.

For Dalal and Kotak, the deal is a marriage of convenience. Though both are silent on the payment involved, market sources place it between Rs.50 lakh to Rs.1 crore excluding the cost of premises. Anyway, both parties have benefited from the deal. While Dalal can now single mindedly concentrate on manufacturing, Kotak gets a broad-based financial services company to go places.

LANCELOT JOSEPH

Company executives, businessmen and frequent visitors to Delhi.

You can now enjoy the privilege of owning an executive residence in the Capital city.

Ashiana's

STUDIO IX

Executive Club

A new concept in living for those visiting Delhi frequently on business. A home away from home, not a hotel but you still enjoy all the luxuries and comforts without paying through your nose.

Each room is tastefuly decorated and furnished with piped music, channel video, air-conditioning, telephone, refrigerator beside facilities like STD/ISD, fax. telex, and secretarial services.

The club is conviniently located in a posh colony of south Delhi. A five minute drive from Nehru Place.

The club membership is available in multiples of a week (can be used staggered/flexible) each for Rs. 25,000/- which you pay only once in a life-time. And that's not all, you also get a money back guarantee.

The project is beeing developed and promoted by Ashiana group of builders and real estate promoters. The group has the experience of executing more than 14,00,000 sq. ft. of commercial, industrial and residential projects. Plans are afoot to build more such clubs in other industrial cities and metro centres in India.

Now, you can own a prestigious executive address in Delhi. For further details contact:

PUNJAB NATIONAL BANK

Onto a competitive tack

Foreign banks have always been at the forefront of marketing by packaging — and sometimes repackaging — schemes and focusing them on specific target groups. On the other hand, comfortably ensconced in their monopoly position as bankers to the masses, nationalised banks have never been overly bothered about either marketing or their image. But this seems to be changing with Punjab National Bank's (PNB) offering a specialised service for the first time and marketing it strongly, also for the first time.

The Bombay region of the Punjab National Bank launched APTS — Automatic Payment of Telephone Bills Service — in December 1990. Any telephone subscriber of MTNL who has an account with any of PNB's designated branches in Bombay can pay his telephone bills through this scheme.

Until now the customer could pay his bills by issuing standing instructions to his bank. Under standing instructions, the customer deposits his bills in the bank which pays them off from his regular account, and the customer pays a nominal charge for this service.

A PNB counter: a new found customer friendliness

Under APTS, PNB collects the bill directly from MTNL, and transfers the amount from the customer's account to the telephone company's. The customer receives the paid bill from MTNL with the remark, 'Paid Under APTS'. No fee is charged for this service. All the customer has to do is keep enough money in the account for the bill to be paid. Says Arjun Chawla, regional manager of PNB, "It's a customer-friendly service with no strings attached."

For a city like Bombay, where many households have working couples who find it difficult to find time to pay bills themselves, APTS comes as a boon. The response to the service is proof enough of this. Says Chawla, "Besides individuals, 100 companies — and some of them big ones — have subscribed. And most of these are new accounts."

The question then is, how does PNB benefit from APTS? According to a senior banker from another nationalised bank, "It will certainly attract new customers, just like credit cards did some years ago." Chawla also is confident that "although APTS can be operated through a separate account, most people will probably shift their regular accounts to us as they prefer to operate a single account."

Big float funds

But more than anything else, PNB will have access to sizable float funds. Even a small company today has telephone bills running into thousands. With 100 companies in the bag, PNB could easily boast of float funds totalling a few crores. That will definitely help boost its profits.

While PNB is the first to offer a telephone bill payment service, close on its heels came Standard Chartered Bank's new Platinum Club scheme. But, this scheme, targeted at people above the age of 50, offers more than just direct payment of bills. Its other services include charge free banking, telephone banking, investment counselling, cheque guarantee cards, medical discounts, etc. To join the club, the customer has to open a fixed deposit account of Rs.50,000 with any of Standard Chartered's branches. Even with ten customers, Standard Chartered would easily have a float fund of Rs.5 lakh, since bills will be paid from the savings account which would have to be separate from the fixed deposit. And the response, according to Ujwal Thakar, manager of the personal banking division of the bank, has been very good.

Thakar, however, is sceptical about the national banks' ability to sustain schemes like APTS. He says, "Nationalised banks cannot retain focus for a long period." Adds an observer, "Such schemes require consistent quality service. Retaining customers is as important as attracting them."

PNB of course is confident that it can provide quality service under APTS. "It's basically a clearing process and we have guarded against inefficiency," says Chawla. Problems such as excess billing or insufficient balance in the customer's account have been taken care of. To guard against excess billing, PNB takes an authorisation from the customer to pay upto a certain limit. If the bill exceeds that amount, the bank returns it to the customer through MTNL with the remark, 'Exceeds ceiling'. If also, for some reason, sufficient balance is not maintained, again the bill is returned with a 'Refer to subscriber' remark. In both cases, the customer then pays the bill through normal procedures.

While there have been protests by some sections of the PNB staff against the additional work involved, most feel quite enthusiastic about such initiatives. About 30 of them have, in fact, volunteered to market APTS after office hours. Another branch in the region functions seven days a week.

Nevertheless, as an observer comments, "It is the inefficient image which the banks will have to shed first." Whether it is APTS or Platinum Club, PNB or Standard Chartered, what the customer wants is a wide range of services, that meets his diverse needs. With the kind of reach they have, PNB and other nationalised banks have a winning combination on hand if they get their efficiency factor under control and come up with more competitive schemes like APTS.

FARM LOAN WAIVERS

Bankers left adrift

Ignoring the constant opposition voiced by R.N. Malhotra, the then governor of the Reserve Bank of India, the National Front government, in its maiden budget in 1990, went ahead and wrote off farm loans of up to Rs.10,000 each. While Malhotra had no choice but to implement the scheme on behalf of the government, he was well aware of the tough task that confronted the RBI — that of re-educating borrowers on the credit culture, which India's banking system had built with great effort over the last 25 years.

Following this populist move of the government, the commercial banks did expect a fall in recovery rates and sagging balance sheets for the current financial year. But what finally emerged was much worse. "It seems as if the entire rural banking system has been pushed back by at least 10 years in one sweep," laments a senior official at the National Bank for Agricultural and Rural Development (NABARD).

Large cross-section

The original waiver scheme covered loans to weak and poor farmers whose total outstandings stood at Rs. 10,000. It was later altered several times to involve a larger cross-section of both rural and non-rural farmers, artisans, weavers and workers in agricultural and allied sectors like poultry and fisheries. Also, gold and jewellery loans taken for agriculture by farmers who had suffered two consecutive bad crops were made eligible for pardon.

What the National Front government had promised in the budget was formalised through the Agricultural and Rural Debt Relief Scheme, effective from 15 May 1990. Under this scheme, whatever the outstanding amount, loans up to Rs.10,000, taken between October 1986 and October 1989, would be waived by all public sector banks, regional rural banks and co-operative banks. The amount would both include short term loans and instalments of long term loans as well as overdue interest. Says a senior banker, "Currently, NABARD is working on bringing the non-rural, non-agricultural sectors into the ambit of the scheme. Moreover, in cases where the amount exceeds Rs.10,000, some co-operative banks have provided an additional relief of Rs.1,000."

As per the RBI guidelines, all banks were to file their consolidated claims for the amount waived, with the RBI. This amount was to be reimbursed by the Union government to the RBI which, in turn, would compensate the individual banks. For co-operative banks, NABARD was to be the intermediary, as the relief burden was to be borne equally by the state and Central governments.

Although the scheme provided for injecting a part of the claim amount in advance to the banks, the entire claim of the banking system was to be reimbursed by 31 March 1991. This, according to the scheme, was necessary to "maintain the liquidity of public sector banks". Exact figures are unavailable, but it is estimated that, following this assurance, banks have already written off loans totalling somewhere between Rs.7,000 and Rs.10,000 crore. Of this, the co-operative banks' share is Rs.5,000 crore.

Against this, the amount forwarded by the government so far is only Rs.1,000 crore in the 1990 budget and Rs.500 crore in the interim budget submitted this year. "While the government has achieved its own ends, the banks are left to fend for themselves," complains another senior NABARD official. Given the present size of budgetary deficits, nobody is clear about how the government proposes to meet the gap. The banks, meanwhile, are facing severe liquidity constraints.

Farmers expect relief measures repeated

Being an overly politicised issue, bankers are reluctant to voice their complaints. No bank is willing to go on record stating the extent of financial constraints that it faces. But a quick analysis shows that the Bank of India, among the large banks, has written off Rs.130 crore, while the smaller Dena Bank has pardoned Rs.49 crore. These two banks have received only Rs.33 and 20 crore, respectively, from the government. Given their respective net profits of Rs.22.08 crore and Rs.5.73 crore in the past year, there is no doubt that the deficit on farm loan account does eat into their networth. The leading State Bank of India (SBI) has suffered too, having signed off nearly Rs. 700 crore and got only Rs.100 crore in return.

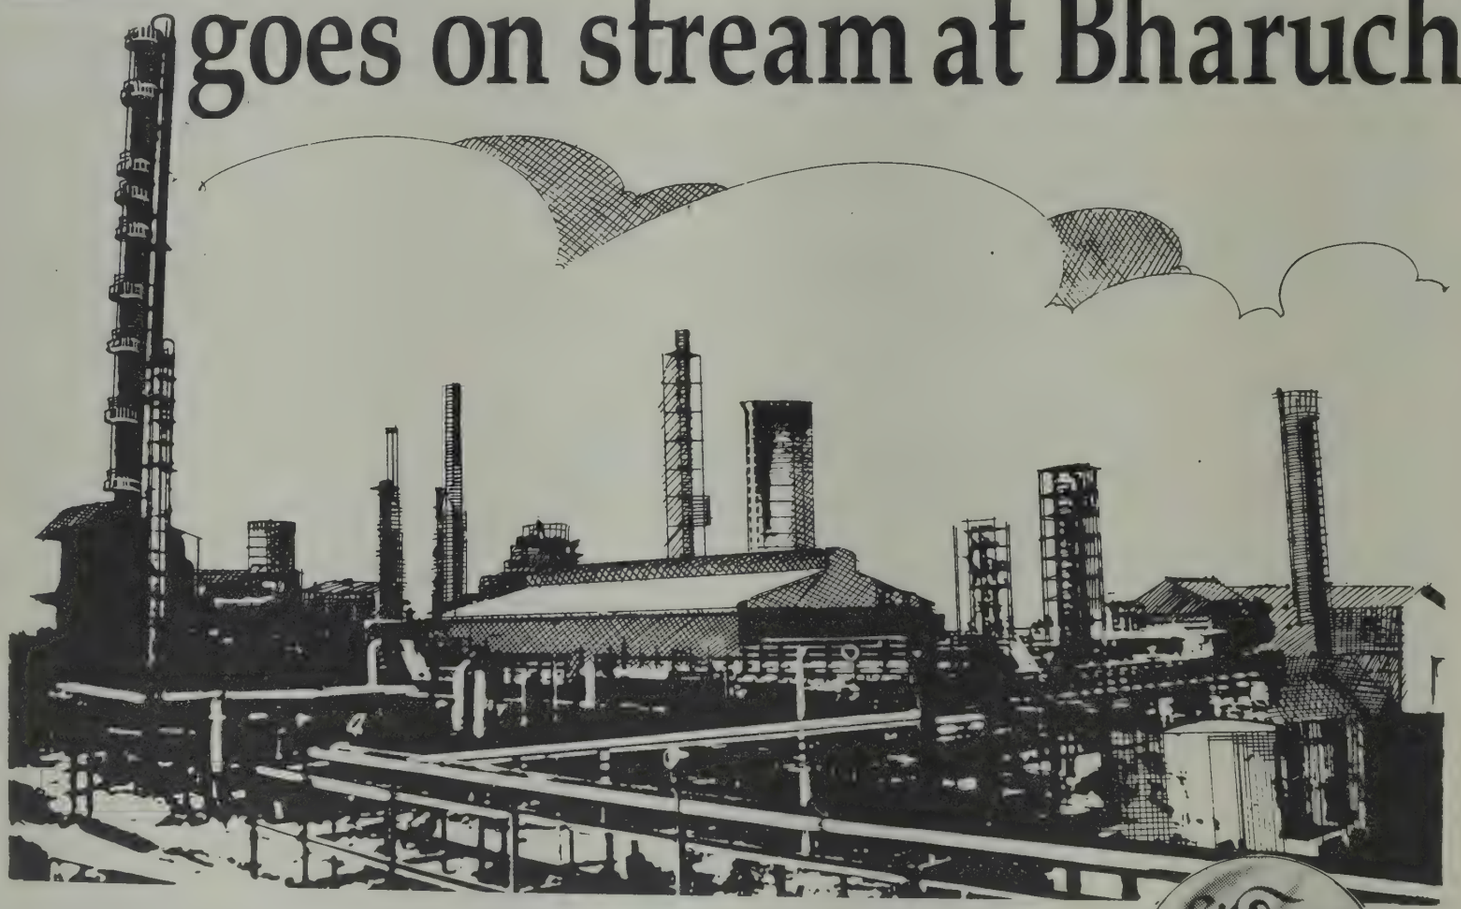
If this is the case of the larger banks, which have enough financial security, the plight of co-operative banks, for which the state government does not have enough budgetary support, can be well imagined. This will surely affect the lending activities of these banks, which provide only agricultural credit.

As these banks write off loans, their advances to agriculture will automatically show a decline. If the delay in reimbursements continues, the banks' lending activities will soon show severe downtrends.

To make things worse, farmers have begun to expect that similar relief measures will be repeated. So they prefer to sit tight and nof pay back loans. This expectancy factor has been pulling down the recovery rates of the banks from the earlier 49 to 50 per cent to 42 or 45 per cent.

Widely advertised

This is hardly surprising, considering that many state governments have willingly put in much effort to advertise this scheme. The government of Madhya Pradesh had announced 22 measures for farmers and has already waived Rs.400 crore. Likewise, the Orissa government has decided to write off loans of up to Rs.12,000 to small and marginal farmers, as against the Central government's limit of Rs.10,000. And the Gujarat government has waived nearly Rs.100 crore.



The prudence of such a scheme is being increasingly questioned. It was not a very well received scheme and proved to be a contentious issue between bankers and politicians. Even international organisations like the IMF and the World Bank had indicated their reservations on this issue. "They find this scheme totally against the grain of banking," says a senior banker. And thus, Indian bankers not only have to contend with sagging bottomlines but also with re-teaching their agricultural and rural debtors one tenet — if you borrow, you repay

A moment to celebrate as ...

India's largest methanol plant goes on stream at Bharuch

FEDO alters GUJARAT's skyline – again, proving its credentials in its Silver Jubilee Year.

The 100,000 tpa Methanol plant at Bharuch, built by FEDO for the Gujarat Narmada Valley Fertiliser Company Ltd., has been successfully commissioned.

Methanol is a vital industrial intermediate and holds promising potential as an additive to motor fuel. The plant, based on ICI's Low pressure Methanol Synthesis Process, utilises natural gas as its feedstock.

The basic engineering package was supplied by Toyo Engineering Corporation of Japan. FEDO's role included:

- Systems design • Detailed engineering
- Procurement assistance • Construction supervision • Commissioning assistance
- Over all project management

Coming in the wake of numerous other ammonia and hydrogen projects, this achievement further endorses FEDO's capabilities in the field of hydrocarbon processing.

THE BoP PROBLEM

How services export can help

The role of service industries in terms of their key contribution to the economy is not appreciated enough in India. This is especially ironic when one considers that this segment of the economy also holds the key to addressing India's balance of payments problem in a significant manner. In contrast with marginal increases of a few millions or a few hundreds of millions of dollars in exports of traditional items such as cashewnuts or gems or granite, the service segment offers the potential for billion dollar increases in our exports. Yet the realisation of this potential requires conducive economic policies rather than the current ones which are largely based on fifty-year-old preferences to use tangible manufacturing activities as indicators of economic progress.

Measure of maturity

It needs to be appreciated that the growth of service industries is closely tied to the industrial and economic maturity of a country. This sector facilitates the productive use of capital assets through activities such as product-design to keep factories busy; through installation and commissioning of plant and equipment; through user education to enable correct and optimal use of equipment; through maintenance and enhancement of capital equipment; through capacity utilisation and enhancement consulting to further improve productivity; and through other such "soft" or intangible additions to industrial activity.

As a result, in developed countries, the expenditure on such services over the lifetime of capital assets is as high as 100 per cent to 400 per cent of the initial cost of the equipment. Examples at the high end include computers, aircraft, and, in general, most high-technology capital equipment.

Conversely, neglect of this sector results in poor capacity utilisation (eg the power and transportation sectors), breakdown of critical equipment and infrastructural facilities and unutilised capital equipment. Indeed, after the larger problem of neglect of opportunity cost of delays, one of the key reasons for India's high capital/output ratio (ICOR) is the neglect of the service sector.

The service sector is the fastest growing part of the economy in the developed world. Fortunately for India, which is still quite backward in this area, this segment is also employment intensive. Moreover, it generates employment for the educated, a particularly intractable part of the Indian economy's problems at employment generation. Unfortunately, it is intangible and so tends to be easily overlooked and neglected by businessmen and economic planners.

Many developed countries already earn billions of dollars from the export of services. Not only does India have the direct opportunity to do so as well, but this export activity may well be a saviour in a developing scenario where our manufactured goods are becoming increasingly uncompetitive. Few industrial materials in India are competitive at international prices. It is said that without the international price reimbursement scheme for steel, aluminium and non-ferrous metals, India's engineering exports would come to a virtual standstill. Agriculture neither generates enough surpluses nor is it internationally price-competitive.

Need for integration

Worse still, as the developed world automates production processes, it also integrates them into the design effort to simultaneously minimise labour and improve quality. As a result, even when an older labour-intensive method is available as an option, the production process often dictates the preferred method of production for no other reason than to ensure quality and compatibility with other component parts and activities.

Given this situation, where are significant increases in exports to come from? The answer: from services. Because, as technological and market change moves the area of maximum value-addition towards the intangible components of the product package, materials and production value-added decreases to a fraction of total product-price — to something like 10 to 25 per cent. The rest comes from intangibles such as design (aesthetic and functional), marketing, personalisation of the product (resulting in the increase in "lean manufacturing" methods) service associated with the product and financing packages.

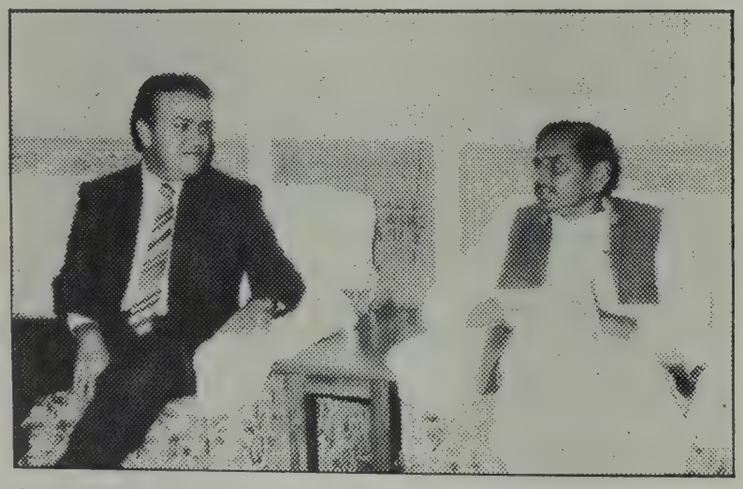
Moreover, as electronic and micro processor technology is incorporated into more and more products such as household appliances, automobiles, industrial equipment, defence equipment and so on, the software for these is actually a significant "intangible" element of value addition in the final product's price.

Value addition

The growing costs of providing these services through local nationals in the developed world and India's large pool of educated and trainable manpower (not, one must emphasize, already trained and usable) provide the means for a significant role for India in this developing situation of intangible value addition through services. An illustrative list of Indian services that are already being exported in either a modest way or in an unorganised fashion is given here:

- Computer consultancy (eg software, training, consultancy).
- Engineering design (eg chemical, civil, electrical).
- Hospital and medical facilities management.
- Hotel, travel and tourism management.
- Maintenance and repair of heavy machinery, ships, aircraft, etc.
- Financial services (eg merchant banking, mutual funds).
- Advertising and audio visual presentation.
- Product design (eg industrial products, textiles).

The promotion of India's services exports needs two key inputs: at the enterprise level an understanding of the growing importance of marketing and the increasingly capital-intensive nature of even the services business, and at the national level, suitable economic policies. More on these factors in the sequel to this article.



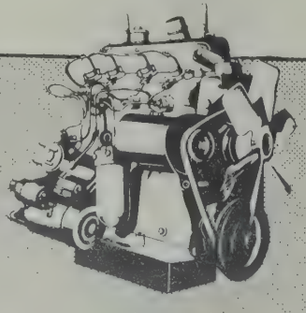
PRAKASH HEBALKAR

The author is an international business consultant based in Bombay. He was earlier senior vice-president with a major information technology company

Together We Corporate Fo

The emergence of a Corporate Force does not just happen, but is the result of a deliberate planned and well concerted move by an organisation that has set its sights securely on the rapidly changing industrial horizon.

Sri. Mulayam Singh Yadav (C.M., U.P.State) and Mr. R.K.Sipani, M.D., Sipani Automobiles Limited, on the eve of signing the M.O.U - 11th Feb '91.



So it was with Sipani Automobiles Limited, Bangalore, in their recent takeover of "Auto Tractors Limited", a U.P. Government enterprise manufacturing Tractors and Automotive Diesel Engines, with technical collaboration of 'British Leyland' U.K.

By the signing of a Memorandum of Understanding, ATL will now be a joint venture Company under the management of Sipani Automobiles Limited, who have acquired 74% of the equity from the U.P.Government.

Set up in 1979 ATL is located at Pratapgarh, on 125 acres of land with modern plant and sophisticated machinery with its township providing facilities like a School, Community Centre, Hospital, Bank etc.

The takeover of ATL has opened new horizons for Sipani Automobiles Limited, with necessary infrastructure, facilities, backed by sophisticated plant and machinery, to manufacture not only the Tractor and Autoland Diesel engine but also major sub-assemblies required by SAL for their MONTANA and to be launched SIPANI D-1 cars, such as gear box, rear axle and front suspensions.

With the joint venture the product categories of SIPANI - ATL would range from passenger cars to Tractors and Automotive Diesel engines.

make a New rce.

PRATAP TRACTOR

- British Leyland designed
- Powerful, Reliable and economical.
- Excellent Manoeuverability and fuel economy.
- Ideally suited for complex agricultural conditions.

AUTOLAND 4000 Diesel Engine

- Highly efficient & naturally aspirated automotive diesel engine.
- Robustly constructed for withstanding the most arduous duties.
- Reduced routine attention and maintenance
- RICARDO COMET MK V Swirl Chamber combustion system.
- Forged alloy steel three bearing crank shaft.

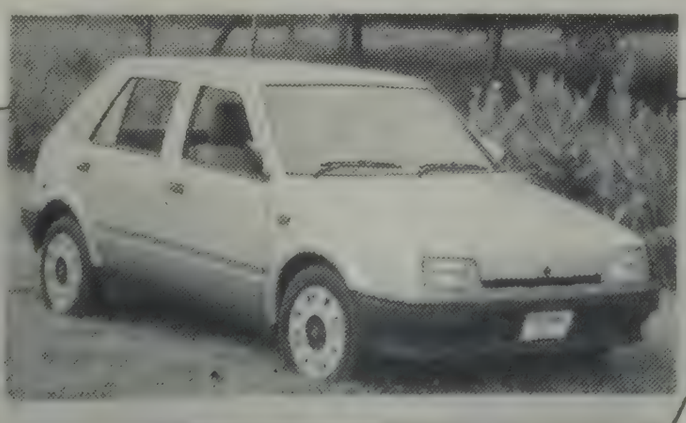
THE MONTANA

- Highly impact resistant Fibre glass body.
- 900 cc diesel engine.
- Unmatched fuel economy.

THE SIPANI D-1

- Sleek aerodynamic design.
- Powered by the Autoland 4000 engine.
- Four door with hatch back.
- Plush upholstery.

* Wrap around bumpers.
* Ample leg room and luggage space.
* Manufactured under British technology.



With this takeover the group is confident of attaining a turnover of over Rs.500 crores within the next five years, which would also provide adequate revenue to the U.P. State Government and also the opportunity to develop ancillary industries.

Yes, SIPANI-ATL a new Corporate force in the making.

LEASING

Misplaced fear

At the second annual general meeting (held a few months ago) of the association of leasing, finance, and housing development companies, the focus was on the relationship between these companies and the financial system. This relationship, at the best of times, is an uneasy one. The uneasiness stems not from any fundamental differences, but rather from misconceptions. Viewed in the correct perspective, though, these misconceptions can evaporate, leaving behind only a healthy appreciation of each other's roles.

Perhaps the most important misconception concerns the strategic threat posed by the rather aggressive financial intermediation practised by leasing companies. Contrast the growth of the leasing industry — 40-50 per cent per annum — with the performance of the commercial banking system. The latter has seen a decline in both aggregate deposits and advances, as is clear from the latest figures released by the Reserve Bank of India. Thus, at first glance the conception of a strategic threat appears to be well-founded. However, a connected issue that needs to be examined is the nature of the correlation between the growth of the leasing industry and the banking system. The correlation is percieved to be negative and forms the basis of the supposed threat posed by the leasing industry.

Positive correlation

Actually, the relationship is not one of negative correlation but one with a potential for positive correlative effects. Those holding the negative view would, in effect, lobby for a curtailment of bank lending to leasing companies. The positive correlationists (this writer included) would present a case for raising the level of bank lending. The true relationship between leasing companies and banks is that of a positive correlation — the growth of one supports the growth of the other.

Looking first from the perspective of the negative correlationists, does a loan facility to a leasing company enable it to pose a strategic threat to the bank's own leasing subsidiary? That it does is a mistaken perception. In the words of Farouk Irani (who was the chairman of the AGM), "If the leasing market was restricted, financial assistance to a leasing company may have represented a threat to the banking subsidiary. However, the leasing industry operates a Rs.1,000-crore business with an annual growth rate in the region of 40-50 per cent".

Implicit in that statement is a key argument of the positive correlationists: the leasing industry is on the cutting edge in expanding the Indian capital market. And leasing companies and banks, as players, are both in the same boat, rowing in the same direction. If one rows faster, the other is not left behind, but rather, reaches the destination so much more easily. Banks need to strongly desist from taking a myopic view but understand that they, along with leasing companies and others, constitute the pillars of our financial system. Weakening a pillar destroys the whole structure, with the attendant risk of the roof falling over your head.

Increasing the level of lending to leasing companies can only lead to a strengthening of the financial intermediation role of commercial banks

The positive correlation between the leasing industry and commercial banks is sharply focused when viewed from a broader perspective. Indeed, the banking sector will reap rich benefits from a strategy which increases lending to the leasing industry — two benefits really, which will make their presence felt on both sides of the balance sheet. And notwithstanding what the accountants have to say, debit will not cancel credit in this case.

Biggest strength

Looking first at the asset side of the balance sheet, from a 'SWOT' angle (strengths, weaknesses, opportunities, threats), the banking sector's biggest strength is undoubtedly its huge deposit collection network, which reflects itself in the deposit mobilisation skills of banks. Thus, when a bank strategically separates the two components of financial intermediation, deposit collection and deployment of funds, a number of positive effects find their way into the profit and loss account of the bank. Fund deployment (or advances) is an area requiring increasingly specialist financial analysis skills (available in plenty in the leasing industry, which thrives on its professional skills).

Viewed in this sense — i.e., separating the basic components of financial intermediation — lending to a leasing company can result in lower charges for illiquids, and correspondingly, a higher level of financial income. This effect will be magnified many times over when the financing involves sophisticated financial analysis or project financing on a large scale. Given this scenario, the banking sector's shrewdest bet is to rope in the leasing industry.

Looking at the liability side of the balance sheet, once again, strategic benefits lie in wait for the perspicacious banker. Pre-empting the leasing industry's demand for funds (ultimately, household savings) within the overall gearing of 10 would suggest a strategy for exhausting its deposit acceptance capacity, with the implicit assumption that household savings will then, once again, start to find their way into savings accounts with commercial banks. Indeed, increasing the level of lending to leasing companies that in turn creates opportunities for inflow of household savings can only lead to one state: a strengthening of the financial intermediation role of commercial banks.

Co-operate to survive

Leasing companies and banks need to assess their role as allocators of financial resources, each performing a distinct and efficient operation. Cooperation will ensure the healthy survival of both. Confrontation could perhaps lead to a pyrrhic victory for banks. Ultimately, society needs to choose between social objectives of a short term nature and ones building long term healthy institutions. It is the existence, for too long, of the former that explains the behaviour of banks in showing scant respect for healthy practices. In a competitive environment, the weak can be expected to act defensively, while the foresighted exploit their strengths. Indian banks need to take a broader view of their role and concentrate on exploiting their strengths for their own sake and for the sake of the financial system.

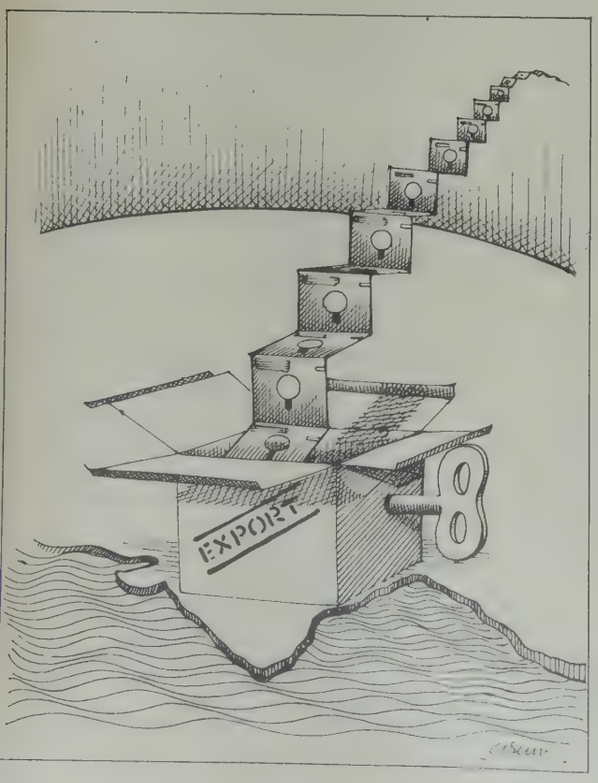
SOFTWARE EXPORTS

Innovation is the key

In the early days of the American telephone industry, telephone switchboards were operated entirely by women. An internal study warned that, by the end of the seventies, every woman in America would have to be recruited as a telephone operator, in order to cope with the projected growth in telephone calls. The actual growth in demand outstripped even that projection, but, as we know, the women of America are not exclusively sitting at switchboards today.

Some of the same kind of thinking underlies the belief that the world's computer industry is going to beat a path to India's door in search of skilled programmers.



While it is indisputable that the world's advanced nations suffer an acute shortage of skilled computer manpower, or that India has an abundance of it, it can be argued that it does not follow that India is going to dominate the world's software market. Computer software is simply not that kind of product and not that kind of market. In any case, mere abundance of a given factor of production is not sufficient for, or even very important in determining, sustainable competitive advantage in any industry.

Computer software, with some minor exceptions, is not a commodity to be shipped, even over a satellite link. In the market for large business systems, computer software is part of an ongoing service which requires daily interaction with the customer and a deep, intimate, knowledge of his business. Trying to do this over a satellite link from India is a little bit like trying to sustain a marriage by telephone — even if the telephone lines are very good, it is not quite the real thing!

Even stationing hordes of programmers abroad is not the answer — how can we develop and credibly market Indian software solutions to the business problems of advanced manufacturing corporations or truly global banks, when we have no such companies in India to develop the experience on?

Even in the world of PC software, success depends on being able to think like the most sophisticated of 'power users', which again requires a deep and ongoing involvement with the user community. The fact is, computer software is not a people-intensive business as such — it is a knowledge and experience-intensive business.

Despite the conventional wisdom of input/output models of the economy, we observe that sustainable competitive advantage does not come from having a large supply of a given resource, however critical. Indeed, to some extent, the opposite is true: Japanese automakers, faced with the challenge of a severe labour shortage, responded by putting robots on the production line, which turned out to give them the quality edge they needed.

In the telephone company example, Bell Telephones solved the problem by inventing automatic switchboards. The manpower problem in computer software will be solved in the long run by automated CASE tools and user-developed software. There is no way of knowing how this can happen. Neither can it fail to happen — it has happened in every other industry in the world.

What does confer competitive advantage in world markets is a dynamic process of continuous innovation, not merely in technology, but also in management practices, business methods and people development. Such innovation is always forced by a demanding home market and by intense competition with other firms trying to get at the same market. The development of the Japanese camera industry and the Italian ceramics industry are classic examples. The Italian ceramics industry, for instance, was driven by a strong, discriminating demand at home, and in spite of the absence, initially, of many critical inputs, including technology and equipment.

In the Indian software industry, none of the conditions for innovation exists. Far from providing a sophisticated and demanding market, Indian industry values software at the cost of the diskette, and views computerisation with suspicion because it might displace people (which it does).

In the market for large business systems, computer software is part of an ongoing service which requires daily interaction with the customer and a deep, intimate, knowledge of his business

As for the much-trumpeted government 'thrust' into software, it has been about as effective as government thrusts generally are. This is no indictment of the Indian government as such. Even the Japanese government, with unfailing regularity, picked the wrong targets for the country to focus on steel, pharmaceuticals, supercomputers, and did its best to discourage the very industries which Japan dominates today — automobiles, motorcycles, consumer electronics and photographic equipment.

In the last analysis, competitive advantage in global markets is determined in a fairly subtle way by the innate nature of the domestic market, not by government policy and not by accidents of nature. ■

ASHOK KORWAR

The author is on the faculty of IIM, Ahmedabad. He was, until recently, with a subsidiary of General Motors in the US, in charge of international business development in Asia.

My boss threw me out of his office!

I guess it was difficult not to spill over each others' offices.

Every time I had a few guests, we'd find ourselves in my boss' office (or the area demarcated as his office).

Every time he had a few visitors, he'd assume it to be his privilege to pinch a few chairs from my table.

Everything's settled down thankfully, now that Seccolor partitions are in the picture.

That's right. That's my new office cabin you see up there. With Seccolor partitions and door. Now everyone's happier – with their own neat little office. Seccolor Office Systems helped my boss throw me out of his office – into my own!

In case you're wondering why I am making such a song and dance about Seccolor, let me tell you that they are worth it.

Designed in Italy and made of imported, pre-painted galvanised steel that never rusts, Seccolor Office Systems are the best choice today for most offices. With Seccolor partitions and doors, restructuring your office space – even time and again – is no problem at all.

Get Seccolor Office Systems and you get: no noise, no dust, no ageing. No warping. No maintenance. No installation problems.

Nothing but advantages, advantages.

Including the one everyone is always looking for: economy! So, if you think your office needs a demolition squad, may be what you really need is a great-looking, great-performing office system.

Try Seccolor and see!

Seccolor Partitions and Doors.
The latest in corporate make-overs.

Write to us or contact any of our authorised fabricators. They'll be only too happy to show you the difference that is Seccolor!

Elgi helps bring resistors in line

When it comes to compressed air, the electronics industry depends on Elgi.

As do the mechanical, the mining, the automobile, the aeronautical and a host of other industries.

Including some leading names like Tata, Raymonds, Voltas, H.A.L. and L & T.

Elgi's reputation for quality, flexibility and an ability to tailor customised solutions is probably the reason for this popularity.

But you know the best way to find out for yourself.

When you need compressed air, what you need is Elgi.

Laying it on thick

Calorie counting, weight-watching, cholesterol-control, are the much-chanted *mantras* of the health conscious. Now food manufacturers seem to have taken up this chorus too. Conscious efforts are being made by them to cater to the peculiar needs of the fitness-conscious. For example, the low cholesterol content of the Saffola and Sunflower brands, was mainly responsible for the popularity of these cooking oils.

The latest branded addition to fatless foods is margarine, the low-cholesterol substitute for butter. A Calcutta-based company, Bharat Margarine Limited (BML), owned by Subir Biswas, launched the Spredit brand of table margarine in February this year. In the past, few companies have been successful in branding and marketing table margarine. Lipton's Blue Band table margarine, for example, which was launched a couple of years ago was soon withdrawn from shop shelves.

Undeterred by Blue Band's failure Spredit is laying it on thick to consumers in Calcutta. Its makers say they have a good reason to be confident. In margarine, a homogeneous mass of emulsified fats, oil and water, emulsification is a crucial process in production. And one of the best emulsification technologies, claim BML officials, has been acquired from Netherlands-based Royal Brinkers, the world's oldest and most famous manufacturer of both table and cooking margarine.

A spreading low-cholesterol threat to butter?

Advantage margarine

Currently, Spredit is only being sold in Calcutta, with the advertising and marketing strategy aimed at the health-conscious consumers. The central copy line of the ads says — the taste of butter without the guilt.

"We aren't trying to project margarine as tastier than butter. Instead we are emphasising the health advantages that Spredit has over butter," explains Pinaki Pan, BML's vice-president, marketing. To drive home this point, a chart has been attached to each box of Spredit, listing these inherent advantages. The chart is extracted from *Documenta Geigy Scientific Tables*, compiled by the Switzerland-based Ciba Geigy Ltd. According to it, the cholesterol content in Spredit is zero compared to 2,800 gm in cheese and 1,200 gm in butter. Likewise, the Vitamin A and D content in margarine is 7,000 gm and 400 gm respectively, compared to 5,000 gm and 40 gm respectively in butter and 1,800 gm and zero gm respectively in cheese.

For fighting its fatty rival, Spredit also has another weapon: price. A 200 gm box of Spredit costs Rs.12 compared to Rs.15 for 200 gms of Amul butter. For those on tight shopping budgets, that saving of Rs.3 to 4 could be a relief.

Due to all these factors and the intensive advertising blitz, the initial response to Spredit in Calcutta has exceeded expectations. "Our target was to capture 15 per cent of Amul's market, the most widely consumed butter over here. But we have achieved nearly 200 per cent more than that," says Pan. Ashok Kumar Paul, proprietor of the Aparna group, the biggest distributor of consumer products and pharmaceuticals, which is distributing Spredit to more than 1,500 shopkeepers in southern and central Calcutta, is also pleased with the margarine's performance. "So far, we have been servicing most of the Spredit-stocking shops twice a week, which is normally not done," he says.

No threat

The good initial reception from consumers has not sent the competitors into a tizzy. N. Huq, the Gujarat Co-operative Milk Marketing Federation's sales manager in Calcutta, says: "Yes, we know that a table margarine is available in the market, but that has made no difference to us." As such, his confidence is justified. Because, in West Bengal alone, the sale of Amul butter works out to more than 20,000 tonnes per year. Apparently Huq wants to watch the market closely for some months before he starts considering table margarine a threat to Amul butter.

Similarly, Paul also feels it is too early to conclusively judge Spredit's performance. "Whether Spredit has already got a stable market share or not, can only be determined over the next five to six months," he says. Paul in fact points out that because of the prevailing market conditions for bread-spread in Calcutta, the early signs of success must be viewed cautiously."Currently, Amul is in short supply and that might have created a slot for Spredit. Only when Amul's supplies normalize, will we be able to assess whether margarine has a stable slot," says Paul. The anti-margarine lobby however claims that the repeat sale of Spredit has already slipped by at least 50 per cent.

The task of consolidating Spredit's market share, however, can only be tackled once the legal threat confronting the company is sorted out. The Union government is suing BML for using flavour and colour in Spredit. Under the Prevention of Food Adulteration Act, no colour or flavour can be added to margarine. BML, on its part, argues that annatto, the colouring they have used in Spredit, is nothing but carrotene. And carrot being a natural product, the colour derived from it cannot be synthetic.

Vital decision

A decision in Spredit's favour is also considered vital for its future success. In this context many market observers have pointed out that Lipton's Blue Band table margarine flopped because Indian consumers did not accept a flavourless, colourless substitute for butter. Consequently, Spredit must retain its present flavour and colour if it is to succeed.

Once it overcomes the legal problems, BML plans to introduce Spredit in other metros — Bombay, Delhi and Madras. It's only when Spredit enters the national arena and battles the heavyweights, that it will be able to conclusively prove whether margarine is better or butter.

■ KAVERI MITTRA

RETIRED CHAIRMEN

Life in the slow lane

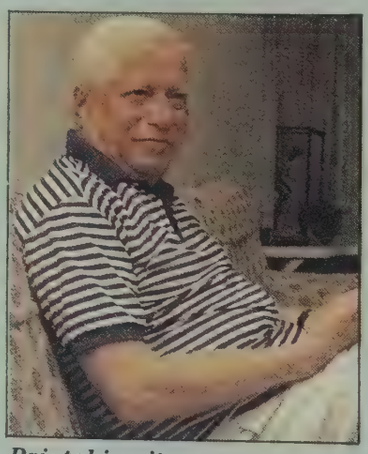
Though the pace is not as hectic as before, there is life after retirement for these ex-CEOs. Some continue working, some crusade, others just take it easy — but all with the same intensity and involvement they showed in their prime

Like death, retirement is inevitable. Professional managers know that one day, perhaps sooner than they might like, they have to come to terms with the career curtain call. For chief executives there are a host of complex issues associated with making a graceful exit: having a suitable successor to hand over the controls, planning for life after retirement and, most important, simply learning to let go.

From being monarchs of all they survey to being masters of none takes some getting used to. Former president of France, Valery Giscard d 'Estaing was once asked by a journalist what it felt like to be out of power. "How does it feel? About the same way you feel when you write a story that doesn't get into the paper," confessed the ex-president candidly. For those for whom the company was the centrepiece of their work existence, relinquishing leadership leads to a sudden loss of identity. Devoid of power and the perks of office, retired life seems like a "little death". Therefore, chief executives tend to keep on crusading in their own way even when out of office.

Prem Pandhi who was chairman of Cadbury India Ltd from 1975 to 1982 says he has never really retired. And, in fact, Pandhi still continues to pack in a full 10-hour working day. "The day you stop being busy you really begin to vegetate," he says of life outside the corporate sector. "I will never give up working until I die," he vows. Not for him the routine of his old college mates who live in his neighbourhood. The lives of these former civil servants and railway board members seem to be limited to reading the newspapers and morning and evening walks.

What really matters



For Pandhi, a life devoted exclusively to leisure is taboo. The last 10 years have been spent in nurturing the Delhi-based International Management Institute that imparts management education to working executives. It offers both full time and part time courses in international management. "To bring up this institute has been one of the proudest achievements of my life. For, at the end, what matters is not whether you have been a chief executive but what have you really created." Today the IMI is financially self-sustaining and has built up a corpus fund of Rs.1.30 crore.

Apart from this activity, Pandhi sits on the board of six companies that include Jay Engineering, Macneill and Magor and Hongkong Bank. He is also full time chairman of a transport company. As past president of the PHD Chamber of Commerce and Industry and vice chairman of ASSOCHAM, he is still on several advisory committees of these chambers that meet once every two to six weeks. He also is on the selection committee of the ministry of agriculture that selects chief executives of several agriculture cooperatives and public sector fertiliser companies. "Selecting a chief executive takes away at least a whole day," he says. Now, also being on the governing board of the Indian Institute of Foreign Trade, Pandhi will help in designing a perspective plan and building up the institute's faculty.

Autumn sonata

Most bankers end up being consultants to companies when they retire. For N.N. Pai who was chairman of Corporation Bank in the late seventies and of the IDBI in the early eighties, and V.N. Nadkarni, chairman of State Bank of India during 1984-85, company directorships have been the hallmark of retired life.

Pai, being a heart patient, takes it a little easy: he has about 15 company directorships! "This is enough to keep in touch with what's happening around and to put one's ability to use," he says. Nadkarni, on the other hand, is quite fit and is on the board of more than 20 companies. This, he says, keeps him almost as busy as he was in the SBI days. "I must probably be earning much more than what I earned as SBI chairman," he says.

Pai: taking it easy

Why are retired bankers such prized commodities? As a banker one constantly appraises credit proposals and so is in touch with the industry. For any company therefore, a banker is the right person to advise on financial restructuring, credit management or as Nadkarni puts it, "making the credit proposals more bankable. By doing this we can help industry in obtaining finance from banks or financial institutions". Adds Pai, "As bankers we are aware of the company's responsibilities in legal terms. By being on the board, we can steer the company in the right direction." But sick companies are those that would beneift the most. Who else but a banker would know of the concessions available to sick companies?

Useful to society. No doubt, the excitement that the bank job provided is absent now. And so are the tensions. Yet, there is the satisfaction of spending time in a manner useful to society, but at an altogether slower pace.

Pai, in fact, represents the typical banker of the pre-nationalisation days when banking was really a private business and the chief executive could contribute to the growth of his company. As chairman of Corporation Bank, a small private bank based in Mangalore, Pai played a crucial role, "I was instrumental in basing the chief executive of a southern bank in Bombay and appointing an executive director for a private bank." In terms of business too, the bank grew from Rs.200 crore in deposits to Rs.500 crore in the two years of his stewardship.

Simultaneously, he groomed his successor, J.B. Kamath, who took charge when Pai quit in 1980. Ironically, for Pai there was a prize waiting at the end of it all — he was appointed chairman of IDBI — whereas the bank was subsequently nationalised. Later,

Pandhi: only death will stop me working

As for his corporate career, Pandhi feels his main contribution was in pioneering cocoa cultivation in India. Until 1975, cocoa was entirely imported, with cultivation possibilities existing only around the equator. Pandhi was instrumental in setting up experimental farms and promoting cooperative cultivation; and within a few years, with Malaysian help, India has turned into a cocoa exporter.

Playing games

But Pandhi has a playful side too. He plays five sets of lawn tennis thrice a week with former national champion Narendra Nath. Pandhi himself played competitive tennis on the international circuit from

Pai resigned from the chairmanship of IDBI in protest rather than "use his vote in favour of a particular party". But he has no regrets, as he can now spend more time with his family and also work part-time to satisfy his intellectual need.

Nadkarni's chief regret is that he did not cultivate any hobbies while overworking in office. The rewards for work were of course there. At 42, he was the managing director of a State Bank subsidiary — State Bank of Indore. Says he, "I was extraordinarily lucky as it was always I who superseded others and not the other way round". Now that the government control over banks has increased and the chairman is usually an outsider, Nadkarni feels that he got out at the right time, that too "unscathed" — an 'achievement' not many bank chairmen can boast of in recent times.

Consider B.V. Sonalker, for instance. After a brilliant career in Bank of India, he was appointed chairman and managing director of Central Bank of India in 1980. After his first term expired in 1983, he was given another three-year term in January 1984. Just about a year later, when the Sethia scandal broke out in February 1985, he was summarily asked to leave. Says Sonalker, "The Sethia affair surfaced in 1983 as a result of an internal audit done by bank's audit team. My term was renewed after that. So, to say that the Sethia affair was the reason for my dismissal is inexplicable." The government never gave a reason for this unceremonious treatment even in the court, as he was, "a contract employee and not entitled to a reason".

Loss of years. Naturally, under the circumstances Sonalker had not planned for retirement. So, he worked with a major cable company in Pune for three years on a full time basis and is now on its board. He also occasionally gives lectures at the National Insurance Academy and writes on banking. His only regret is, "I lost out on what could have been the four most rewarding years of my service."

B. Ratnakar, the wonder-kid of the banking world too voices a similar concern. With an active body and mind, one can contribute to the society a great deal, he feels. As chairman and managing director of Canara Bank for six years — 1982 to 1988 — Ratnakar beefed up the bank's reserves from Rs.15 crore to Rs.300 crore. Its gross profits also went up by 4.5 times. Ratnakar gives credit for this performance to the motivation and competition within the system. Says Ratnakar, "The targets set were often irrational, compared to the figures in the past. Nevertheless, one tried hard to achieve them and in the bargain overshot the normal trend. The point I made clear to my staff was that hierarchy is for administration only while for contribution there is equality."

It is this very zeal to "contribute to society according to one's capacity" and a strong belief in the fact that no one should head an organisation for more than five years that made Ratnakar eventually give up his position in 1988. The struggle he underwent thereafter is well known. Yet, he regrets nothing today. Even after two

Nadkarni: fit and active

years of being "out of the system", when he finally decided to set up his own financial services company — Fairgrowth Financial Services Ltd — Ratnakar effortlessly raised more than Rs.5 crore worth of equity from his circle of friends and acquaintances.

From Pai to Ratnakar, the times may have changed. But the fact that banking attracts the country's best talent is as true today as it was years ago. Naturally, therefore, to give back something to the industry which they served all their life is not only justified but also welcome. Why can't the government utilise this pool of talent, wonders one wise man, in the numerous committees it sets up?

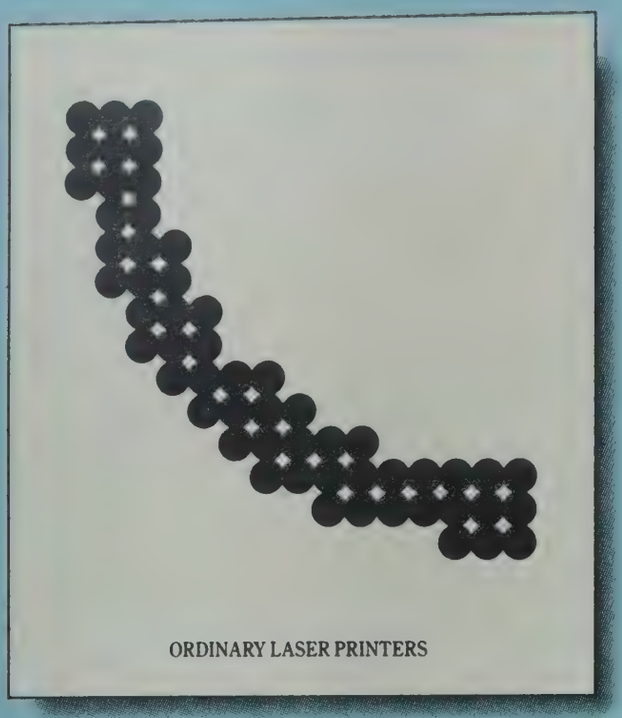
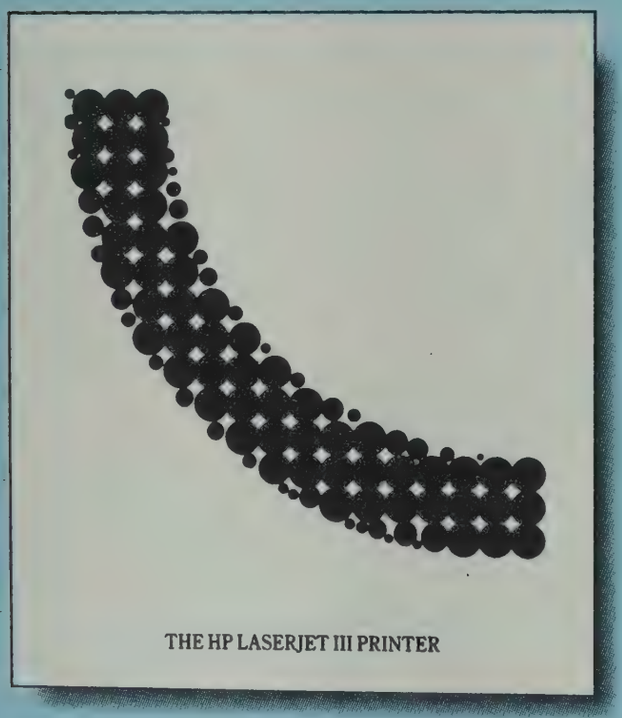
THE DIFFERENCE BETWEEN BORROWING TECHNOLOGY, AND DEVELOPING IT...

...OR HOW CROMPTON GREAVES DEVELOPED THE WORLD'S FIRST FOIL WOUND TRANSFORMER FOR LOCOMOTIVES.



For years, locomotive transformers were strait-jacketed in copper wire. An expensive import that only added to the total weight. Rather than only borrowing an alternate technology, Crompton Greaves further researched and developed it. And very soon, we had perfected the world's first aluminium foil wound transformer for locomotives. This is why we have emerged as leaders in everything we do. The ability to manage tomorrow's technologies today. To develop more firsts than most others. You could attribute this success to our vast experience. Our dedicated team of 2000 engineers and 8000 personnel. A highly participative work environment. State-of-the-art testing laboratories. And more. Last century, we brought electricity to India. Before the turn of this one, we will be a Rs. 2000 crore company. As we continue to bridge the gap between emerging needs and changing technologies. In electrical engineering, electronics, telecommunications, industrial automation and computers.



Crompton Greaves LIMITED

WE WERE THE FIRST.
WE ARE THE FUTURE.

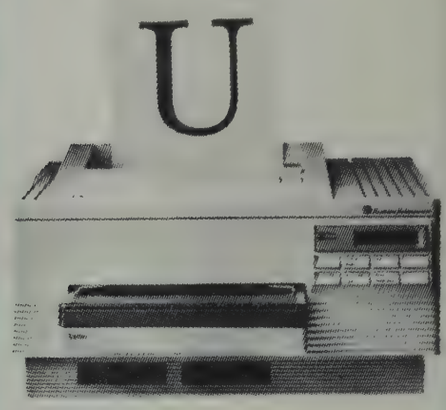
ORDINARY LASER PRINTERS



THE HP LASERJET III PRINTER

HP's gone clean round the bend.
(Much to our rivals' dismay)

There's no point in wasting your time with false modesty.

Yet again we've set the standards the industry has to follow.

The HP LaserJet III and IIID with Resolution Enhancement Technology (RET) gives you the ultimate in sharper printing.

How?

Simple, dots, dots and more dots. Look at the illustration, it shows how we knock the spots off our competitors.

But we didn't rest on our laurels.

We went on to create what we think is the ultimate LaserJet printer, giving you expanded graphics capability together with the flexibility of more typefaces, scalable fonts, rotation of fonts, and every type of shading. All these on the latest version of our industry-standard printer command language, PCL5.

And even more remarkably we've given you the option to use all these on one page.

Not surprisingly we've sold over three million LaserJet printers worldwide. (That's more than all other Laser printers combined).

Obviously there's not enough space to go into all the details here, but if we've whetted your appetite, get in touch with any leading computer manufacturer or their authorised dealers.

You can also call Nitin at

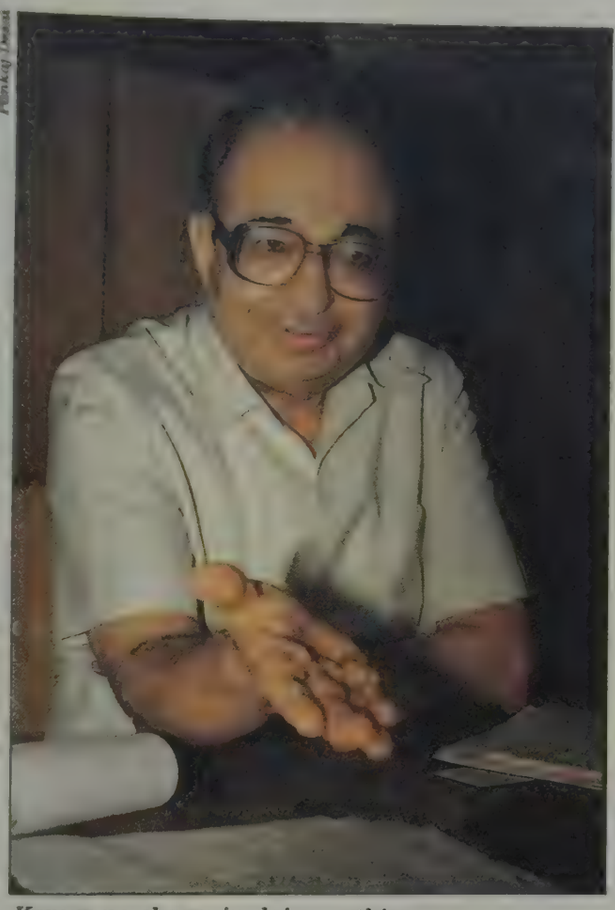
A better way.

MAA COMMUNICATIONS-DEL

1938 to 1950 — at Wimbledon, the French Open and the Davis Cup. In September, as president of the International Lawn Tennis Club of India, he will lead a seniors' team to play a tournament in Canada.



D.V. Kapur, founding chairman of the National Thermal Power Corporation, secretary, industry, government of India, secretary, chemicals and petrochemicals, government of India, admits that he too had problems adjusting to a life without cares. And that is not surprising, considering his hectic and high pressured career in the public sector. Before NTPC he did a brief stint in the Indian Railways and then joined BHEL in 1961. He set up the Jhansi facility which was commissioned four years ahead of schedule. When Kapur was picked to set up the NTPC, he was only 47. In 1981 he became secretary, industry, and in 1985 took over as secretary, chemicals and petrochemicals, before retiring in 1987.

Setting up the NTPC brought him recognition from the World Bank which described him as a model manager. "Good management is management of detail. This is singularly lacking in the public sector," he says. "The rest is hard work, sincerity and devotion. It has little to do with individual genius."

He has practised what he now preaches. Kapur used to subject himself to a punishing work schedule: 12 hours a day for six and a half days a week. But the

Samuel: "master of my own time now"

Kapur: no charm in doing nothing

nose-to-grindstone approach paid off in terms of real, measurable achievements. When Kapur took over the department of heavy industry, it was making losses of Rs.50 crore. Within four years he had turned it around, and by 1985, it made a profit of Rs. 50 crore. What he misses the most after retiring are the brain storming sessions that he used to have in the government.

Kapur says he had every intention of enjoying a totally laid back existence. Within a couple of weeks the charms of doing nothing began to pale. Since he was a part time chairman of the National Productivity Council he began taking that up very seriously. Kapur is now honorary chairman of the Indian Institute of Technology, Bombay as well as an advisor to the DCM group on systems management and HRD.

Choosing a successor

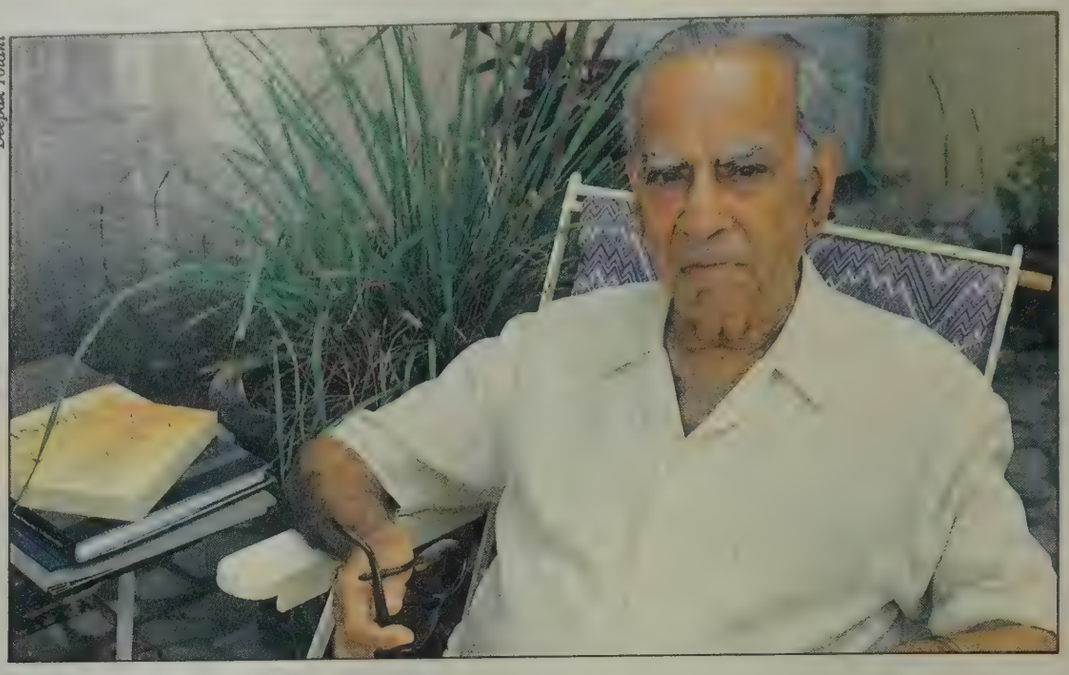
Unlike in the public sector where the succession issue is the prerogative of government, a private sector chief has to assume in large part the onus of identifying and grooming a suitable heir. One company which has devised a perfect system for doing this is the multinational Unilever group. C.S. Samuel, former president and chief executive of Brooke Bond had a successor well in place one year before his retirement. A lot of effort was put into preparing J.S. Sabharwal, the current chief for the top job at Brooke Bond. Samuel says his objective was "to hand over charge to someone potentially superior so that future business challenges could be met." At the same time, he feels that the legacy should be both qualitatively and quantitatively superior to what it was initially.

In this respect, Samuel acquitted himself admirably. Just before he left in 1989, Brooke Bond's turnover stood at Rs.540 crore and profits at Rs.49 crore. During his tenure the company also shifted its corporate base from Calcutta to Bangalore. Samuel is quintessentially a Levers man, having started out as a trainee at Hindustan Levers at the age of 24. His basic training was in finance and he put in a rewarding five-year stint as chief accountant. In 1971 he switched from Levers to Brooke Bond as director, finance, and within seven years was in the top slot.

Since his retirement, Samuel has been an honorary faculty member teaching business policy at the Indian Institute of Management, Bangalore. Samuel is also pesident of the Anga Karunya Kendra, a society for polio victims. He retains his links with the corporate world through his directorships at Consolidated Coffee Ltd, and Times Financial Guaranty. Time was a precious resource in pre-retirement life. "Now I am master of my own time," says Samuel. He has the time to devote to his son's company, Famco Investments, and enough left over to tend his five-acre farm situated close to his old corporate office at Brookefields.

Active retirement

Another active retiree is M.K. Kumar, erstwhile chief of Best and Crompton. He continues to be chairman of Gestetner India Limited and Peirce Leslie India Ltd. He spends 30 per cent of his time with Peirce Leslie (where he has been helping to restructure the company) and 30 per cent with Gestetner working on a revival strategy for this duplicator manufacturer. He is also a member of the Master Share Mutual Fund division of UTI, a director both at Chemplast and Fairgrowth Investments Ltd



A chartered accountant who started his career with the Kerala-based Peirce Leslie, Kumar shifted to Shaw Wallace and rose to become director, finance. In 1979 he switched over to Best & Crompton, Madras, as executive chairman. Two years later he was given the additional title of managing director. B&C till that time was predominantly an electrical contracting company. Kumar is credited with revamping the company and diversifying its manufacturing base.

In the five-year period between 1981 and 1986, he transformed B&C from a Rs.20 crore company to a Rs.120 crore conglomerate. But the crash came in 1986 when Malaysia and Saudi Arabia, where B&C had major contracts going, defaulted on payments. This resulted in a major cash crunch which eventually led to the company being taken over by the UB group. Kumar chose to retire in 1988, despite a request from the financial institutions to stay on.

Kumar is now closely connected with various public institutions. He is president of Lady Willingdon Nursing Home in Madras. "This nursing home has not had any expansion plans for the last 30 years. But now we have launched a Rs.6 crore expansion. This is rewarding work," he says. He is also a trustee of the ESI Social and Labour Research Foundation, Bombay. An achievement he would like to single out is his association with the Indian Society for Training and Development between 1972 and 1974. The permanent secretariat was formed for the first time and significant work was initiated.

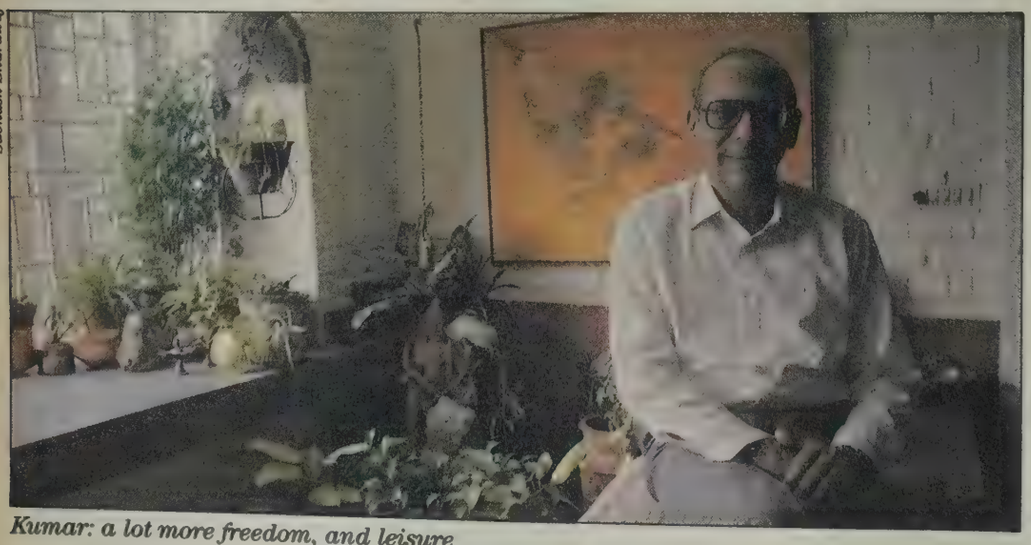
In Kumar's view, the ability to keep a certain distance from the job is necessary for a manager aiming for the top job. "One has to learn that one cannot succeed all the time," he says. A good chief executive should show aggressive leadership. In a professionally run setup with substantial institutional shareholding, it is necessary to build up rapport with the finance institutions and banks and maintain open communications.

Deepak Tolani

Tandon: writing books, lecturing ...

Leisurely pace of life

Clearly, for Kumar, retirement clearly means a lot more freedom and a more leisurely pace of life. There is much more time to be with the family. "My wife never liked travelling with me, as she was always left alone in hotel rooms. But last summer we took a cruise together. And I find myself actually watching TV," he says lightly.



What makes P.L. Tandon's career unique is that he has had the experience of working on both sides of the fence. After seven years as the first Indian chairman of the multinational Hindustan Lever Limited, Tandon opted to cross over to the public sector — taking the chairmanship of undertakings like State Trading Corporation and the Punjab National Bank. On retiring from PNB, he decided to devote himself to education.

Now 80, he divides his time between writing books and travelling all over the country to deliver lectures at conferences and seminars. As a result, Tandon is well tuned to the developments around. Says he, "The strength of a country lies in its institutions — be they banks or universities. Unfortunately, barring women's organisations, institutions in India are weakening." Whilst giving lectures at the management institutes he has an opportunity to see today's youth at close quarters and is assured that "we can be the world's best bankers and managers. That is, only if we internationalise ourselves." With his children well-settled and his wife assisting him in his secretarial work, Tandon presents a picture of a man who has come to terms with the altogether different ground rules of retirement.

As Irving Shapiro, the retired chief of Du Pont, once remarked, "Every chief executive officer should remember that the position exists not for his benefit, but for the corporation's. It is his job to know when it is time to step down." These corporate heroes of yesteryears continue to make their contribution. Hopefully Indian industry should be wiser for it. ■

The World Paper

INSIDE: SIX POINTS FOR PEACE

AMMAN—There is a desperate need for new thinking by world leaders and decision makers within the region in addressing the current crisis in the Middle East.

Just as efforts are being made to ensure a positive outcome to the end of the Cold War in Europe, a positive outcome should be promoted in the Middle East.

The question is not whether dictators and regional bullies should be appeased or wiped out. The underlying core issues that have led to the emergence of Mossadeq in the 1950s, Nasser in the 1960s, Khomeini in the 1970s and the continuing crisis of the 1980s have to be seriously addressed by world leaders.

A more broadly defined regional security system that goes beyond ensuring the safe flow of oil to the industrial nations has to be considered. *Continued on next page*

BY CROWN PRINCE HASSAN OF JORDAN

AFTER WAR WHAT?

■ DISPATCHES FROM AMMAN, NAIROBI, ANKARA, ISLAMABAD AND RIO DE JANEIRO ■

After war, what?

Continued from previous page

If the current crisis is resolved by military means and the same regional security paradigm is maintained, it is anybody's guess what sort of nightmares will emerge after the dust settles in the 1990s and at the turn of the century.

The G7 and other major members of the Organization for Economic Cooperation and Development (OECD) are understandably preoccupied with next month's supply of oil and the stability of their stock markets next week. However, it is useful to ponder the extent to which OECD policies contributed to the almost dialectic and seemingly ineluctable successive emergence of Mossadeq, Nasser, Khomeini and the current crisis.

What are the prerequisites for considering a new regional security system that safeguards the vital interests of the leading industrial nations and simultaneously addresses the causes of radicalism in the Middle East?

The starting point is a fuller recognition of those core issues that have been relegated to positions of secondary and tertiary importance. These issues are symbolized by the matrix of the "haves and have-nots" at the national, regional and interregional levels.

The US$180 billion external debt of the Arab countries has to be examined against the reported $500 billion of external Arab assets. The additional $60 to $70 billion external debt of the non-Arab nations (Turkey, Iran and Israel) has also to be considered. Even in the case of a perceived stable and reliable ally of the West such as Israel, its decision makers have their backs to the wall in the face of an external debt of $25 billion, double-digit inflation and double-digit unemployment. The democratic process in the state of Israel is, according to many Israeli analysts, in jeopardy due to mounting domestic economic crises.

The portfolio managers of Arab assets in the OECD markets are understandably wary about any sudden actions that can disrupt existing patterns. However, imaginative regional financial packages can be developed (without disrupting world financial markets) to replace the bilateral donor-recipient philanthropy that has led the region into a cul-de-sac.

A Conference on Security and Cooperation in the Middle East can help create an increased awareness of the desperate need for all parties (both within and outside the region) to reassess their interests and "conventional wisdom." Iran, Turkey and Israel, as well as the Arab nations, should be part of the process.

High on the agenda of any such conference or process would be the debt crises faced by the Arab countries as well as Turkey and Israel. It is not a matter of sacrificing principle or forgiving existing debts, but it is a matter of restoring legitimacy and adhering to civilized rules of the game without plunging the region into another four decades of misery and waste.

The economic causes of radicalism at the national level are being mirrored at the regional level. Just as national radicalism has to be dealt with imaginatively, regional radicalism has to be addressed by considering an alternative regional security structure.

Inspired by the Helsinki Process, the Conference on Security and Cooperation in Europe (CSCE), some European nations have launched an initiative to develop a Conference on Security and Cooperation in the Mediterranean (CSCM). The ministers of foreign affairs of Algeria, Spain, France, Italy, Libya, Morocco, Mauritania, Portugal, Tunisia and Malta met on the 10th of October, 1990 in Rome.

The organizers of the CSCM concept issued a note that is of special relevance. The following preamble is particularly meaningful within the Middle East context:

"After the invasion of Kuwait, the urgency of devising a new type of relations between the countries of the area has become evident. Various proposals to such effect have been put forward by several countries. We feel, however, that our idea of a CSCM is not just another proposal for the solution of a specific crisis through an ad hoc international conference.

"It wants instead to be a comprehensive, progressive and global approach to the problems of the region by adopting a set of generally accepted rules and principles to be followed after the solution of the crisis and by dealing at the same time with the aspects of security and disarmament, those of economic cooperation and those relating to the human dimension."♦

An agenda for peace

The burning issues that can't be delayed

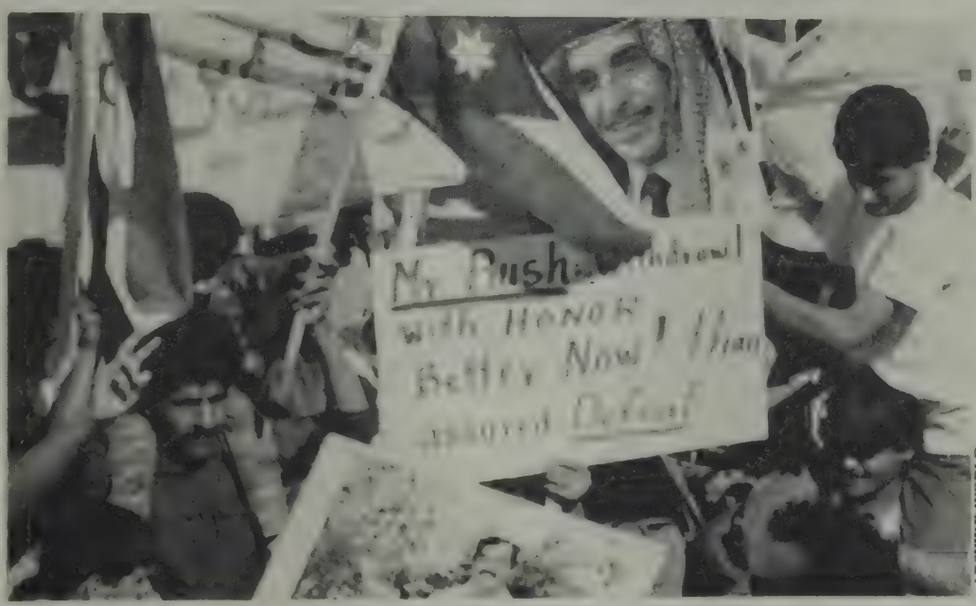
CROWN PRINCE HASSAN'S vision of an evolving Conference on Security and Cooperation in the Middle East would address the most intractable problems that have bedeviled the region in recent decades. Specifically:

- Palestinians—Recognition that this question permeates many aspects of a regional settlement, and that the relationship between individual rights, economic opportunity and demographic factors is central without prejudicing the legitimate rights of the Palestinian people in any postwar agreement.
- Regional Development Fund—10 to 15 percent of the annual oil revenues of all Arab countries would be earmarked for funds to assure greater balance in social conditions between the wealthy and underpopulated "have" countries of the region and the poor and overpopulated "have nots."
- Oil Price Indexing—Oil prices would be indexed and stabilized through a new association of OPEC oil-producing and major oil-consuming countries, including the US, USSR, India and China.
- Human Rights—Adoption of existing UN human rights standards or the development of a regional one to safeguard the rights of all peoples in the Middle East.
- Control of Weapons—The oversupply of arms would be controlled through existing bans on the development of nuclear, chemical and biological weapons and by conventional arms negotiations between supplying and recipient countries.
- Confidence Building—Measures to reduce tensions in the region would include limiting the types of military equipment deployed to border areas and improving mechanisms for interstate communications (hot lines).

When the bombing began

Dispatches of first thoughts on war

Jordan: Mother of all battles?



It was about 3:30 in the morning when a friend called to tell me that the war had begun: "Baghdad is under heavy bombardment."

A few hours before that, I had a feeling that the so-called allied forces would strike Iraq that night. Still, I was stunned to hear the news. We had been psychologically prepared for war for more than five months, but the fact that at that very moment an Arab capital was under attack could not pass without a flood of conflicting emotions overwhelming me. This was not going to be a war for the liberation of Kuwait, but a crusade against Arabs.

A few minutes later we saw the press conference of the US secretary of defense and the military chief of staff. The initial reports, according to them, were satisfactory. Most of Iraq's military potential had been neutralized, they claimed. At that bleak moment my heart sunk in despair. The last thing I, as an Arab, wanted was to see Iraq's military and economic capacities destroyed.

Our feelings and hopes for Iraq transcend the Gulf crisis. To us in Jordan, the issue is no longer Kuwait's occupation, but America's subjugation of the Arabs. During the tense five months of the Gulf crisis, Saddam Hussein became a symbol of our rejection of such subjugation. He has rekindled the dying flames of nationalism, self-pride and final emancipation from the ugly inheritance of colonialism.

Before bombs fell on Baghdad, The WorldPaper's *contributors were asked to put into writing their thoughts on the outbreak of war. The following articles were written during the war's first 48 hours.*

AP/WIDE WORLD

Still, it was a real war. Just listening to radio reports about the number of allied sorties, the kinds of aircraft, the tonnage of bombs, the range of cruise missiles and their devastating effects brought bleak pictures to our minds. By night we discovered that many of the early morning reports were, in fact, incorrect.

Away from the raucous living room I sat alone in one dark corner of my study. I still had to digest the fact that war was indeed alight in the Gulf.

What frightened me was not the possibility of Iraq's defeat anymore, but the fact that this conflict was soon going to transform into a holy war, not only in the religious sense, but in the human and individual sense also. No matter what President Bush was saying, the Arab people were rallying behind President Saddam. Reason: Western historical miscalculations and misadventures in our region for the last century. The conflicts of this region were indeed linked, if not on the surface, then in the roots.

That night I had a feeling that something was going to happen which would widen the dimensions of the war. That night Iraq launched its much-dreaded missiles against Tel Aviv and strategic sites inside Israel. One missile is said to have hit Dimona, Israel's own nuclear reactor. President Saddam Hussein has made the linkage stick this time. I became certain that this was going to be a long and devastating war, and it was just the beginning.

—By Osama El-Sherif, associate editor for the Middle East

Kenya: Mixed feelings

I didn't learn about the outbreak of the war until the following morning, several hours after US and allied bombers had started their air raids against Iraq in the dead of night. The first strike did not come as a surprise to me. Mr. Saddam Hussein had painted himself into a corner and could not pull out of Kuwait without what to him appeared to be an unacceptable loss of face.

Mr. George Bush wanted an opportunity to get rid of Saddam Hussein and to destroy his war machine once and for all. Peace was the last thing on Bush's mind though it formed much of his pre-war rhetoric.

Out here in Kenya, the public has been curious. Would Saddam Hussein get away with tweaking the nose of a superpower—America? There was some admiration for a Third World leader who dared thumb his nose at the rest of the world, but there was also the fear or sneaking suspicion that his bravado would lead to the unnecessary loss of innocent lives on both sides.

There is a sizable Muslim community in Kenya which is divided over the war, with some supporting Iraq against what they consider to be non-Muslim infidels, and others supporting Saudi Arabia. In both cases the determining factor is not knowledge of the issues at hand, but who in the past has provided financial support for local Muslim community projects.

Most Kenyans worry more about the impact of the war on the economy, especially on the price and availability of crude oil which the country imports from the Gulf area. Tourism has been hit very hard, with some hotels and resorts reporting more than 50 percent cancellations during this peak tourist season. And like most other African governments, the Kenyan government hopes and prays that the war is short-lived.

Kenya is one of the many countries which condemned Saddam Hussein's annexation of Kuwait and voted for UN sanctions against Iraq. The government would rather have seen the UN sanctions proven ineffectual before recourse to war was taken, though no statement to that effect was issued.

My own stand is pretty close to that of the Kenyan and other African governments. Iraq had no business invading Kuwait and should have withdrawn unconditionally before the UN January 15 deadline. In this day and age the world cannot tolerate bullies who want to impose their will on smaller and weaker neighbors the way Iraq has done.

But, having said that, I do not think one can avoid the linkage with the Palestinian question that developments in the Gulf area suggest. Without a permanent solution to the Palestinian problem, other Saddam Husseins will spring up in the Middle East and no amount of firepower from the US or its allies is going to contain the situation permanently.

Beyond the war, I have other worries. In a unipolar world in which the Soviet Union can no longer stay the hand of what we used to refer to in the past as Western imperialism, are we entering an age in which the remaining superpower, the US, imposes its will on the world community by dint of its military might rather than through diplomacy?

To my mind, the Gulf crisis is a case where military solutions were preferred to diplomacy. It would be catastrophic for the sovereignty and integrity of small nations, particularly those in Africa, if the end of the Cold War and the war in the Gulf were to usher in American hegemony on a global scale.

—By Hilary Ng'weno, associate editor for Africa

'Without a solution to the Palestinian problem, other Saddam Husseins will spring up.'

AP/WIDE WORLD

Turkey: Too close for comfort

The Turkish people have been expecting a war in the Gulf from the moment Kuwait was invaded by Iraq and American troops were stationed in Saudi Arabia. Most expected a sudden blow by the modern-equipped American army and were generally amazed, though of course appreciative, of diplomatic efforts which continued up until the bitter end.

(I should mention that to the Turkish man on the street the allied forces and the American military are one and the same.)

Nonetheless, when Perez de Cuellar's mission to Baghdad failed, people in eastern and mid-Anatolia, which includes the capital of Ankara, rushed to buy groceries. Store owners saw a run on food staples like rice, sugar, flour, spaghetti and butter; long lines formed in front of banks as some rushed to withdraw their money. Alert to the financial hazards of war, people either hid money under pillows or bought foreign currency—US dollars or German marks. With the panic, the Turkish lira was rapidly losing value against the dollar and other foreign currencies until the central bank slowed depreciation by releasing dollars into the system.

There are no shortages of food and the government assures that grain stocks will last through summer of 1991. So, after a few days of panic shopping, daily life is back to normal. The only upheaval to report is that a large number of people are still moving from east (where the country borders Iraq) to west.

Both the Turkish people and their politicians seem to be in accord: The attack against Iraq is necessary. Even the two opposition parties in parliament agree the attack was called for. The opposition agrees the American attack is just, but did warn the Turkish government not to get involved because of the country's sensitive location.

But when, on the second day of the Gulf War, the government decided to let American aircraft use Turkey's Incirlik air base, Turkey's involvement became a critical issue in the press and spurred a harsh debate in parliament. The opposition fears that Turkey has become a target for Saddam because of Incirlik

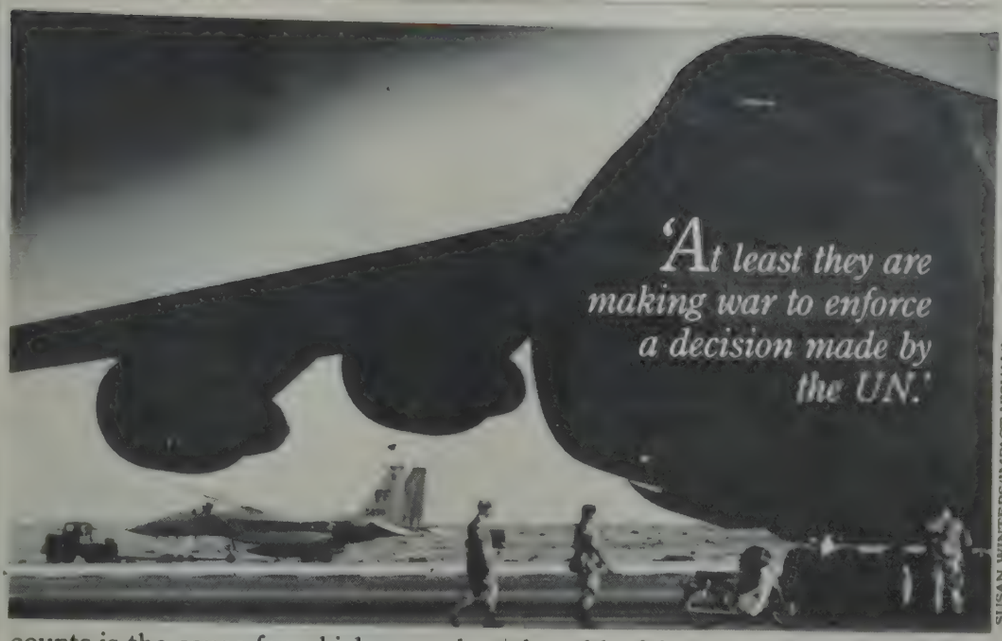
and they are concerned that we are in range of Iraq's missiles, which could lead to Turkey's participation in the Gulf War.

According to Kamar, a research institute, 89.2 percent of the Turkish people are opposed to their country's involvement in the war, but nearly 60 percent believe that the allied attack is justified.

One thing is certain: the Turks see Hussein as a future threat. Most unanimously blame him and see the war as punishment for his stubbornness. Most also believe that Hussein must be disarmed, otherwise he could attack Turkey sometime in the future. And even the most religious people do not believe in his religious fervor; they see through his showmanship. The streets are empty at night, because homes are safe havens as well as good places to watch CNN.

—By Haldun Armagan, freelance journalist based in Ankara

Canada: The price of security



I'm old enough to remember the start of World War II, in Britain.

The reward for victory was to be a better world, including a United Nations to keep the peace. Yes, we had tried collective security before and it hadn't worked, but the UN would be different. Soon we discovered, despite Korea, that it was not different enough; it still lacked the political will and the forces to deal with war makers.

There was progress. The UN played a key role in ending the Suez War in 1956 and, on a Canadian initiative, began to use troops to keep the peace in the Middle East, Africa and elsewhere—not to make peace but to help keep the combatants apart when the fighting had been stopped by negotiation.

It is that old ideal of collective security that shaped my attitude to the Gulf crisis. The alliance to drive Iraqi invaders out of Kuwait was, of course, largely a US invention, but at least the US sought UN authority to make war. If the UN failed now, it seemed to me, it might never recover. If it succeeded in authorizing war to defeat a war maker, it would be a step, possibly a giant stride, toward true collective security.

So, when I watched on TV the start of the Gulf war, my feelings were mixed. I'm not a war activist, but neither am I naive enough to believe with the peace activists that war can readily be abolished as a way of settling disputes—nor hypocritical enough to deny that the drama of war has a certain appeal. What

SUSAN WINTERS/IMPACT VISUALS

counts is the cause for which we make war. I'd prefer it if the allied forces in the Gulf were wearing blue berets and fighting under UN command (and if the price of oil were not at stake). But at least they are making war to enforce a decision made by the UN, and that is reason to hope for a more secure future.

—By Anthony Westell, associate editor for North America

Pakistan: Passion in the streets

I first learned that the war in the Persian Gulf had begun through an announcement via CNN. It was, I think, around five minutes past 5 a.m. local time that the White House spokesman announced tersely that "the operation to liberate Kuwait has begun."

From a historic, cultural and religious perspective, Baghdad has held a special place among the Muslims of the South Asian subcontinent. After Mecca and Medina, Islam's holiest shrines for both Sunnis and Shias are located in Iraq; Pakistanis are saddened and angered that American military power has been directed against a fellow Muslim country.

The Gulf War has evoked an emotive resonance among Pakistanis. Such a reaction to foreign policy has not been seen since 1956 when the Suez War brought Pakistanis out into the streets organizing demonstrations in support of Nasser's Egypt against the aggression unleashed by France, Britain and Israel.

This time around, as well, while the official stand of the government of Pakistan supports the multinational forces in which it has made a token contribution of 11,000 troops stationed "in a defensive position" in Saudi Arabia, the popular pulse reads otherwise. Mass rallies spanning the length and breadth of the country in support of Iraq against the US reflect the mood and posters of Saddam Hussein offering prayers in his khaki uniform are selling like hotcakes.

The reason for this popular sentiment in Pakistan in support of Saddam and against the US can be analyzed on three counts. First, through popular perception the issue is seen as that of Iraq, a small Muslim country, defying the military might of a superpower; a Muslim David facing a Christian Goliath.

Second, Pakistanis tend to see double standards in the attitude of the American-led coalition, which is prepared to go to war to vacate Iraq's occupation of Kuwait while not batting an eyelid over similar brutal, long-standing occupations in the region—including Israel's occupation of Palestine and India's presence in Kashmir. This double standard is attributed to oil needs and the self-interest of a superpower that impels it to act selectively.

Finally, the issue here is perceived as that of Saddam becoming the first Arab and Muslim leader to launch a direct attack on Israel in the last 42 years. This initiative more than any other, which has symbolic significance, has helped to transform Saddam into a hero among Muslim masses.

In any case, America's actual agenda, in the mind-set of most Pakistanis, is seen not as the liberation of Kuwait or the defense of Saudi Arabia but the destruction of the military power of another Muslim country and the construction of a "new world order" around the sustenance of a status quo favoring the state of Israel.

Building English for the University and the Business World

The University of San Francisco
INTENSIVE ENGLISH PROGRAM

The program offers intensive English to prepare students for academic studies in th United States and the business world. USF, a Jesuit university established in 1855, is located in the heart of one of the most exciting cities in the world.

PROGRAM HIGHLIGHTS

- **INTENSIVE** for international students and professionals, year-round programs, fifteen to twenty-five hours per week.
- **SEMI-INTENSIVE** in Spring and Fall semesters for USF matriculating students.
- **TOEFL** preparation courses and special programs for specific purposes
- EXTRA-curricular activities and physical education facilities.
- On-campus housing including meals available year-round.
- I-20 form issued for accepted students.
- Qualified teachers with M.A. degrees and overseas experience.
- Students from over thirty countries in personalized classes of fifteen or fewer students.

Brazil: Distant thunder

The lights in the poor houses of Morro do Fogueteiro, a *favela* (shantytown) near downtown Rio, were on late into the night of January 16th. The *favela* was still silent around 9:30 p.m. when a domestic servant, Sonia Pereira, suddenly stopped mending her son's trousers and began to watch the first reports on television. Seconds later, Sonia shook her sleepy husband and shouted: "It began!"

By 11:00 p.m., dozens of Fogueteiro dwellers gathered at the only open *boteco* (a shantytown pub) to quarrel about the war the same way they do daily on subjects like soccer, carnival and women.

Almost four kilometers from the *favela*, in the middle class neighborhood of Botafogo, 25 intellectuals gathered at the Brazilian Institute for Social and Economic Analysis (IBASE) to exchange opinions on the consequences that a possible Gulf War might have on Brazil. One economist was in the middle of making a statement about the inevitable increase in gasoline prices when someone entered the room and announced: "The madness has started." After a moment of silence, the same economist, clearly embarrassed, commented: "At least now we don't need to speculate anymore."

For a few brief moments, shantytown dwellers and middle class intellectuals shared a common worry. None of them could understand why the planet was again sinking into a war nobody wanted; a war being made dramatically near via live TV. The Brazilian networks had sophisticated schemes to cover the war, but when the bombing of Baghdad began, none of them had any live broadcasts to show for their planning. On all channels, anguished anchors were desperately trying to contact correspondents by phone.

When General Colin Powell issued a statement that the war would last longer than was at first expected, Brazilians began to worry about the only things that excite them about the summer—the beach and carnival. One radio listener inquired about the possibility that the South Atlantic ocean might be affected by the oil spilled in the Gulf.

"Only the final apocalypse could force us to suspend our parade" joked the president of the association of samba groups in Rio.

The only significant change in the carnival will be a single name change—the traditional and world-famous ball "A night in Baghdad" (known for its nude women) will this year be called simply "The Rio Ball."

Satan against Hitler?

BY DANIEL PASSENT

PATSY LYNCH/IMPACT VISUALS

AP/WIDE WORLD

TWO POWERFUL armies stood facing one another, showing their teeth and as willing to fight as two mad wolves which the world could no longer leash. The president of Iraq compared the American president to a Satan and George Bush in turn called Saddam Hussein a Hitler. It is the psychology of these two Napoleons that adds another dimension to the Gulf War.

As if in a western movie, the two faced off, the whole town scared, everybody watching. Both crossed the point of no return and could not step back without a loss, which does not mean that both are right or tarred with the same brush. I happen to sympathize with the coalition, though not with the war. But each of the two feels right in his own way and each is stumbling into his own trap.

For both it is a war that was not unavoidable. It is an unnecessary and unwanted war of principles rather than a war about safety, of ambition rather than politics, personal rather than national, and for each of them it is a war of survival—political in the case of George Bush and almost physical for Saddam Hussein. It is a war of "to be or not to be" for both leaders, but not for their countries and allies.

Kuwait—the pretext for the war—has long since been forgotten. Who believes that Iraq, which could not bite Iran earlier, now can't do without Kuwait? And who believes that the US, which was unable to crush Vietnam, had no scruples in Panama and was openly involved in overthrowing various regimes in Latin America, could not bear the injustice done to Kuwait? The Evil One, the Hitler that pushed Hussein resides within the Iraqi leader himself. It is not oil, Islam or the taunts of a greedy Kuwait that pushed Hussein, but rather, the ambition to become the second Nasser, the tempting vacancy on the throne of the legendary Arab leader, the chance to secure a place in Arab history as a leader who conducted the holy war against the infidels, the heirs to colonialism, against the West, Zionism and the eternal enemies of the Muslim and Arab world.

The Arabs still wait for a savior. Mubarak of Egypt, Fahd of Saudi Arabia, Hussein of Jordan, Assad of Syria, Qaddafi of Libya or Arafat of Palestine —none of whom meet the requirements—all of whom have become fat and happy and are unwilling or in no position to change the status quo. But Saddam was neither happy nor safe and he had to change something. The bills for the failed war with Iran were still pending, his economy failing and the rivalry with Syria lost. A dictator can feel safe and strong only through a new conquest.

Thus Hussein was not bluffing. He could not withdraw, nor could he show signs of weakness. Had he stepped back he would have been finished as a leader and—knowing Iraqi political habits—executed. Consider the first military president, Kassem, who was shot like a dog under his desk in his own office by his rivals. The assassination was shown to the world on television.

It looked like Bush had just been waiting for an opportunity to embark on something monumental, something that would in turn give him the dimensions of a Washington, Wilson or Roosevelt. He was so quick to deploy a massive force in the Gulf as if to make it impossible to turn the war machine back. From the outset he demanded more of Hussein than he could peacefully achieve. This was a surprise because at the beginning of his term George Bush was cautious and even criticized for being too passive. It seemed the Panamanian adventure had already served its design to change this image of a weak presidency.

But George Bush also miscalculated. By sending almost half a million troops to Saudi Arabia and by mustering the coalition, he fell into his own trap. He lost freedom of movement, lost the time necessary for the sanctions to work and ran the risk that patience at home and the morale of the troops would dwindle. His coalition abroad and at home was halfhearted. Secretary Baker was like a teacher who could not leave the classroom for a moment without the children running away, and George Bush was like a headmaster forced to deliver stern warnings at each morning meeting. He could not keep the troops at the ready forever, he could not rotate them and he could not withdraw.

Thus, like his enemy, he had no choice but war. Like his enemy, he did not want to blink first. And just as Hussein sees himself as the Arab David facing Goliath—George Bush sees himself as the savior of Western civilization against the deadly attack of an Iraqi Ghengis Khan. Both believe that they exhausted all possible means and did not want war, but were forced to wage it. How often do we hear from politicians that they didn't want to do it, but had to?

I come from Poland. Ten years ago General Jaruzelski said that he did not want to impose martial law, but had to. Last year Lech Walesa said that he did not want to run for the presidency, but had to. Will we ever be safe from politicians who do what they don't want to?♦

How does it feel to be India's biggest name in computers?

Depressing.

Computer users in India pay as much as their counterparts in the West. Are they getting as much in return?

They face more system failures than users in the West. And have to wait a lot longer to have their systems restored.

How much, then, has India's computer industry really achieved? Not quite enough. Not fast enough.

Someone has to speed up the rate at which the industry is changing. And since we've sold more computers than anyone else in India, we feel it's up to us.

Hewlett Packard: HCL's accelerator. For seven years in a row, a single company has been voted the US number one for reliability and customer support. And it's not IBM or DEC.

Customer support at Hewlett Packard, is a technology in itself. And they're sharing all they know with HCL.

We're learning, for instance, that customer support doesn't just mean rushing to a breakdown site. It means not letting the breakdown happen in the first place.

This starts at Hewlett Packard's drawing board itself. They've refined the art of designing hardware less likely to break down. And a lot easier to repair.

All these values will find their way into HCL's systems. It won't happen overnight, but the changes have started.

By the end of '91, we hope you'll think of HCL as the people with world class systems. And customer support to match.

After all, it's what you've always been paying for.

HCL
LIMITED

New India as protector.

Promoting stability with the guarantee of personal security.

In a developing society, a better way of life can never be achieved. Without a secure and stable life at the family level.

New India fully realises this. And meets its social obligations with, on the one hand, a range of personal health insurance covers. Such as Mediclaim, Cancer, Birthright and Personal Accident. And, on the other, with covers that protect personal property. Such as Householder's Comprehensive Policy.

These are likely contingencies that could otherwise wipe out a lifetime's savings. Providing for them costs you affordable amounts as policy premium. Yet, they assure you of protection when you need it most. By paying a reasonable amount for medical expenses incurred, and intrinsic value of property lost or damaged.

New India's efforts to reach out to the common man are backed by a 22,000 – strong work force. Manning 1150 offices across India and in 27 countries worldwide.

It's a protective role that makes New India feel justifiably proud of. After all, it is helping make personal and family life happier, more fulfilling.

DEBT STRATEGY

A new agenda for growth

This is the abridged version of an essay which was declared one of the top 100 entries for the 1990 American Express (AMEX) Bank Review Awards. This global essay competition in international economies and financial markets is held in the memory of Robert Marjolin, former advisor to the review and one of the architects of the European Community.

Moving down memory lane, I remember a World Bank seminar organised in Bombay around the early eighties on growth strategies for development. During discussion sessions, I asked a few naive questions: Should we attempt growth strategies which could create islands of prosperity in a sea of poverty? Are we not planting the seeds of social turmoil for future generations? Will this poverty, in the years to come, not react against citadels of prosperity? Being a young economist at that time, I wondered if my naivete would be appreciated by this gathering of senior international economists, bankers and social scientists. But I was touched by the spontaneous appreciation extended to me by the august gathering.

Agenda of actions

Today, as I think about debt strategy, other questions come to my mind. Can the global community shrug its shoulders and avoid action on the debt as a problem only of developing countries?

In a similar context, that of restructuring Eastern Europe, Norbert Walter, chief economist of the Deutsche Bank AG, says, "It's time for commercial bankers to forget their lingering doubts about eastern Europe and the mistakes of the past. It's now time to return to eastern Europe, not as lenders, but as catalysts and agents of economic and financial development. The major German, French and other European banks that lent heavily to eastern Europe during the seventies are ready, willing and able to make substantial write-offs of some eastern European debt. We prefer to act on the debt rather than see Poland flounder under its debt burden. Most European banks have set aside big reserves against Polish debt and are in a position to offer a substantial writing down."

While Walter may not have come out with the specifics of his agenda for Polish debt, he hopes that sovereign lenders can overcome their hesitation and grant Poland debt relief. According to him, "If there is going to be a promising new start, this is it." (Since then, George Bush has anounced a waiver of 70 per cent of Poland's American debt.)

Whenever one speaks of debt, I am reminded of the system of bonded labour that existed in rural India. The poor labourer, unable to return the money he borrowed the village moneylender to pay for his daughter's wedding, would find himself indentured to the lender — often for life. The system has now been eradicated by law and the government has declared full write-offs of all such debts.

A new beginning

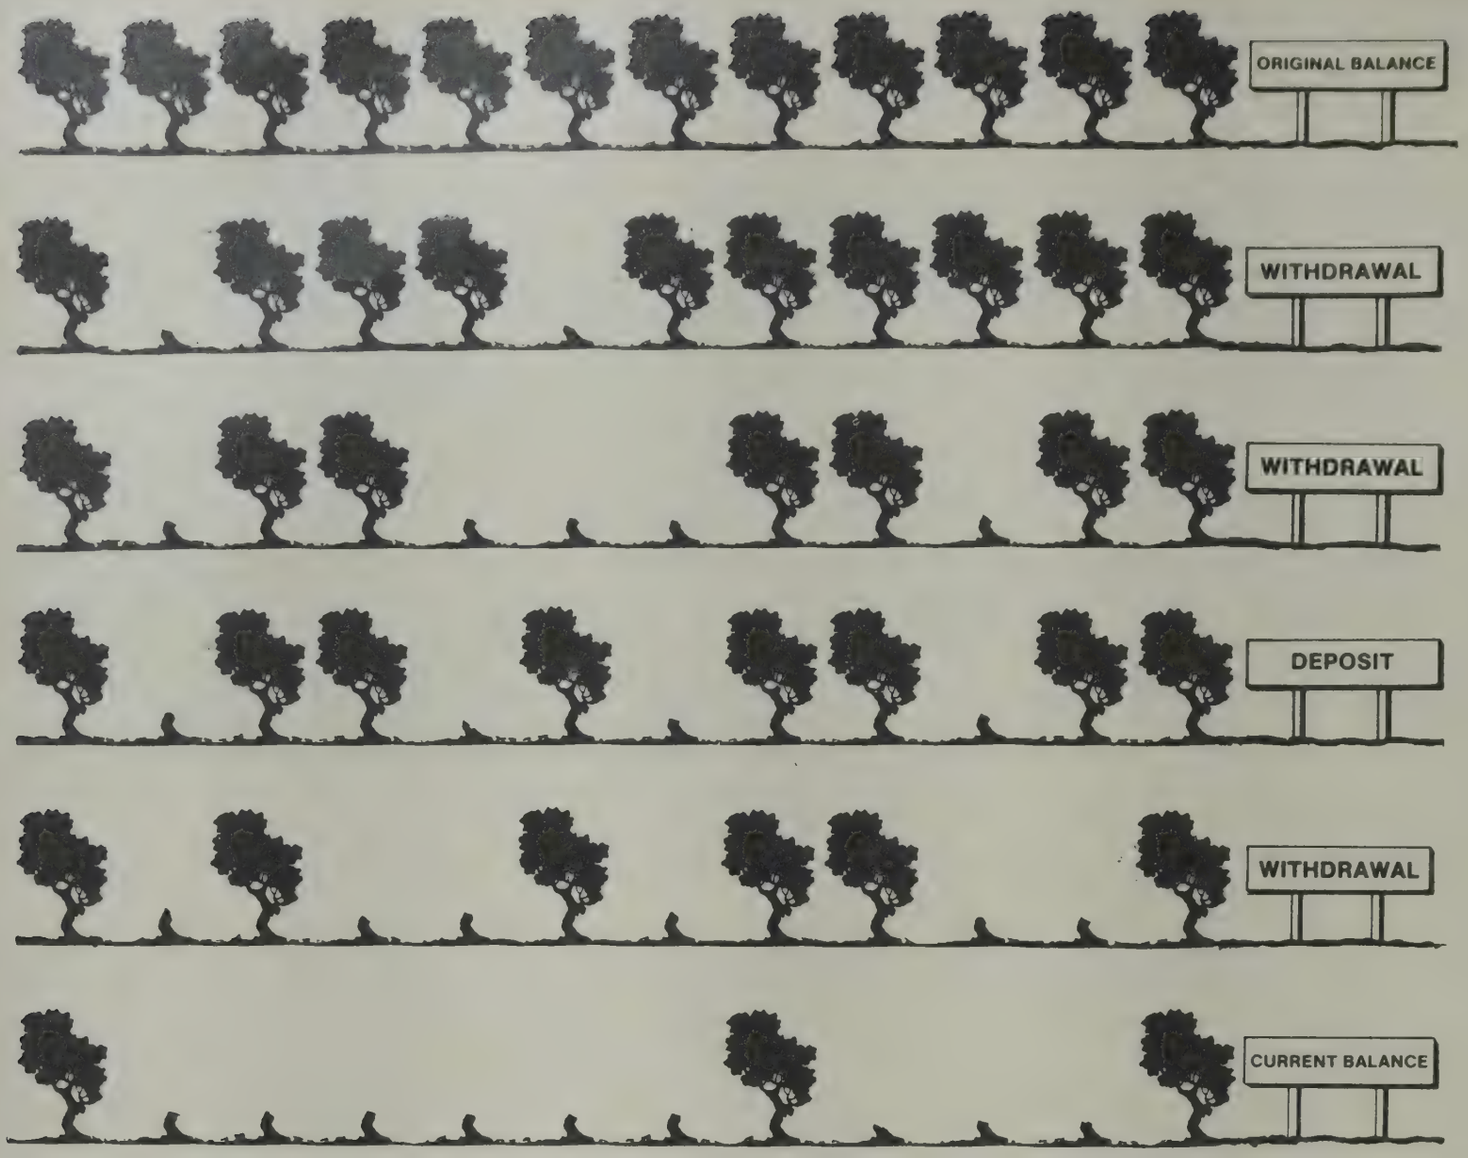
The reason for bringing this up is this: Are we witnessing today a kind of "bonded labour" in the debt problem facing developing countries? Is the situation such that a debt once taken cannot be repaid, despite the best and sincere efforts of the borrower? In such a scenario, the promising new start suggested by Walter has increased relevance. With this approach, we could hope for a new beginning, just as the bonded labourers in India have made a new beginning.

Another interesting parallel with the bonded labour system and the debt crisis is the role played by the government in India in the former's eradication. It realised that the long-exploited bonded labourers not only needed laws to free them but also social programmes that would aid their absorption into the country's mainstream. Thus, the government has attempted to provide them with vocational training so that they can "add value" to their earning capabilities.

Although such an approach is naive as a solution for the debt problem, grooming native talent is a subtle and critical need for a genuine solution to the debt crisis. Here too, Walter of Duetsche Bank says in the eastern European context, "Setting up big commercial and business banks similar to Deutsche Bank, Dresdner and Commerzbank — will be difficult since there is no native banking talent in this field. To gain time, they may want to import talent from the West. They may also want to form partnerships with Western banks. But, Hungary, which has made the most progress towards developing a financial system, wants its private banks to have partnerships with credible (foreign) financial organisations in order to make its banks work more efficiently."

New vocations

The next step adopted by the Indian government to aid bonded labourers could provide another pointer while drafting a viable solution to the debt crisis. The government used the existing banking channels to introduce new lending programmes to help community members take up new vocations or set up small businesses. Since this was not a commercial lending proposition, it was looked upon as social lending. Also, the rate of interest on such loans was significantly lower than commercial rates. The loans had built-in moratorium periods for interest and principal repayment which could assist the units to become viable and break even.



An attempt of this nature by the World Bank is already in place in India. It realised that, to assist India in meeting its balance of payment (BoP) crisis, it must catalyse a change in the native talents' on the domestic market to a broader perspective of the global markets. For this purpose, the World Bank introduced an innovative style of lending to India called the Export Marketing Fund.

Under this programme, Indian exporters were to be supported in their marketing efforts to penetrate select developed country markets. This facility was extended initially to a select range of products in which the World Bank felt India had a competitive advantage. The World Bank selected the Export Import Bank of India (Exim Bank) as the executing agency for implementing this innovative concept.

Full support needed

The fourth step is critical and needs full support from the global community. For developing my concept, I draw upon a talk delivered by Sidney Dell, Senior Fellow in the United Nations Institute of Training and Research (UNITAR), during the Exim Bank Commencement Day Annual Lecture, at Bombay in March 1990:

"The World Bank and International Monetary Fund have not received a mandate to work out the implications (for the debtor countries) of resuming the growth process. The north and south both agree (that this growth) is an indispensable

objective for growing out of the debt crisis. This in turn means that the capital requirements for adjustment with growth in the debtor countries have not been studied by the Bretton Woods institutions, let alone agreed upon by the international community. The rate of growth of the debtor countries emerges as a residual, a by-product of the 'feasible' rate of borrowing. No effort is made to determine capital requirements as a function of an adequate rate of growth."

The use of figures for capital requirements that have, in effect, been negotiated with the exporters of capital is a serious shortcoming in the work of the World Bank. The Bank, as well as the Fund, should have sufficient confidence and stature to let the chips fall where they may when it comes to their objective analytical work, such as their work on capital requirements. The capital exporters obviously have the right to take their own positions on capital to be provided both overall and to individual countries. But they should at least be in possession of independently determined facts and analyses.

One of the main objectives of the Baker Plan was to ensure that adjustment should be programmed in such a way so as to be consistent with growth. Unfortunately, no objective estimate was made of the aggregate capital requirements that would be generated by adjustment with growth. And the capital that was in fact made available fell far short of needs, therefore the Baker Plan floundered.

Fishlow's scenario

In 1987, profesor Albert Fishlow made some estimates of the capital requirements of developing countries in 1995. His central scenario, based on the assumption of an average growth rate of 5.5 per cent per annum from 1990 to 1995 for developing countries, generated capital reqirements of $148 billion (at 1985 exchange rates). One may well ask how the Bank will fit into such a growth scenario for 1995. In 1989, the net disbursements of the World Bank totalled $2.6 billion and of the International Development Agency (IDA), $3.3 billion. The net transfer of funds from IDA, allowing for interest receipts, was $3 billion but the World Bank actually took in $3.7 billion more than it paid out in 1989.

So it really does not matter whether the capital requirements for growth in 1995 are $148 billion, $100 billion or even $50 billion. If the Bank's performance remains at its present level, its financial contribution to development goals of the international community will be pathetically small.

Sidney Dell is simply appealing to the global community that the Bretton Woods institutions must be provided with the requisite financial resources to discharge their responsibilities towards the debtor countries to grow out of their debt crisis. This is the fourth step in my agenda.

Choice of nations

The last step in the agenda is another crucial one: the choice of countries for support in development. For this purpose, we have a choice of the existing models. Unfortunately, the Latin American choice has created pains for both the debtors and the creditors. As we are aware, the Latin American countries attempted to limit foreign ownership, so most of the development was funded by external borrowings, with known results. According to Walter, there is the choice of the Japanese model, where investing takes precedence over lending. Then there is the model exhibited by the Four Tigers of south east Asia — the Newly Industrialised Country (NIC) model, where in some countries, foreign equity has played a significant role. There is always a policy dilemma regarding foreign investment and is best summed up by Walter again:

"The East faces a dilemma in setting a policy on foreign investment. They can choose to open their doors wide for foreign investment and suffer some losses in sovereignty over the banks and other companies. Otherwise, they can limit foreign ownership, slow down the process of development and see investment flow faster to other east Europen nations that are open. There's a trade-off. It's their choice. They are democratic states. Their politicians have to explain the issues to the public and let them decide."

For the last menu on my agenda, I would like to leave the choice of the development model to the wisdom and genius of the electorate of each nation. These five steps may open up a new vision, a new dream, and new challenges for the global community. This is my agenda for designing a new debt strategy.

Sintex Mixing Vessels

Consistent performance round the year. For years

An ideal substitute for the wooden, lined and fabricated plastic vats, Sintex Mixing Vessels become indispensable for dyestuffs, paints, pharmaceuticals, food processing, chemicals, oil and other industries.

Extremely durable, leakproof and available in sizes upto 20,000 litres capacity, Sintex Mixing Vessels can be used round the year without any maintenance. Besides, they work out to be far more economical than others made of conventional materials.

Sintex Mixing Vessels are readily available with the option of flat bottom or tapered bottom assuring 100% discharge.

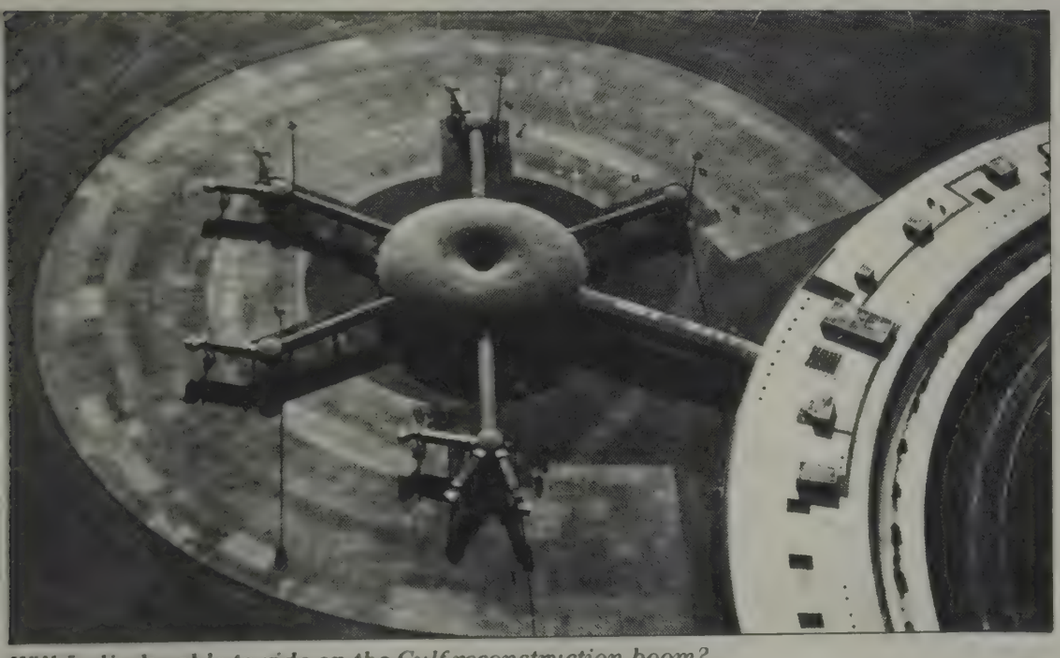
CONSTRUCTION



The Iraq-Kuwait syndrome

With the war over, the reconstruction of the battered countries of Kuwait and Iraq has given construction companies some hope to build on.

Indian construction companies, whose exports to the Gulf region dropped to Rs.88 crore in 1989-90 from a healthy Rs.354 crore in 1985, have also been trying to get a piece of the cake. The first step was taken by reviving a consortium of private construction companies — mooted last year but put in cold storage — ostensibly to execute World Bank and Asian Development Bank-aided projects in south Asian countries.

At the instance of the union commerce ministry, 13 construction companies in India had formed a consortium mainly to take up joint venture projects in South Asian countries. "We were given broad hints by the government that the consortium would be treated like a public sector unit. And now, with the end of the war, the attention has shifted to the Middle East," complains one consortium member. Says Ajit Gulabchand, managing director, Hindustan Construction Company, "Geographically, from Bahrain to Bali, Indonesia, there exists a natural market for us. And to exploit it, we need to form smaller joint ventures like they do abroad. Only then can we compete globally."

Says Harshvardhan Shah, chairman of Shah Constructions Ltd and also of the consortium, "Unlike projects in West Asian countries, those in South-East Asian countries like Malaysia and Indonesia are being funded by international agencies like the ADB and the World Bank. They are thus relatively free as far as security of payments is concerned."

Will India be able to ride on the Gulf reconstruction boom?

Payment squeeze

Shah has good reason to be afraid. In the latter half of the Iran-Iraq war, Indian construction companies which controlled 60 per cent of the total construction business in Iraq, had already started feeling the payment squeeze. Today, Iraq owes them nearly $1 billion, which includes cash contracts, cost of unused material lying in Iraq and loans taken by them for immediate working capital requirements. By 1990, the situation had deteriorated so much that the government of India entered into a deferred payment agreement (DPA) with Iraq for gradual clearance of Indian contractors' dues.

According to the Overseas Construction Council of India (OCCI), the outstanding amount under DPA is over $500 million. "And almost the same amount is accruing against capital assets and plant and equipment lying idle at the project sites in the region since the Kuwait invasion," says an OCCI spokesperson.

Twenty two Indian private firms and four public sector undertakings have been affected by the war. And most of the projects under them are based in and around Baghdad and Basra, the two worst hit cities in the war.

The New Delhi-based Continental Construction Ltd has outstandings estimated at $330 million. Only one-third of this amount has been recovered by DPA. Jaiprakash Associates has outstandings of $128 million due to them. Even the public sector IRCON has to recover $87 million for its operational and management work on high speed Iraqi railway lines.

One of the most worrying factors for contractors has been the absence of any foolproof insurance system for expensive and high risk assignments. While it may be argued that in the event of war, financial losses are inevitable, what irks the contractors is the laxity of the government and the failure of the Export Credit Guarantee Corporation (ECGC) to secure compensation for the construction firms long before the war began. ECGC, in turn, has categorically stated its inability to pay as the total export outstandings exceed $1,200 million. In fact, matters have reached such an impasse that OCCI has threatened to sue ECGC for breach of the latter's contract of taking on the entire financial responsibility in case the Iraqi government were to default.

Boost for construction

This was perhaps one of the main reasons why the commerce ministry had mooted the consortium concept. Says Gulabchand, "After our experience with Iraq from where Rs.11 crore is still due to us, I'll be extremely hesitant to go there again. The suppliers' credit for deferred payment is crippling the project exporters today. Instead, if the government encourages joint venture consortiums by giving tax reliefs, it will help boost the Indian construction industry."

Meanwhile, the reconstruction of Kuwait is about to start, and is expected to be one of the biggest and fastest construction projects in history, with American companies bagging 70 per cent of the contracts. Initial reports about Kuwait's reluctance to invite Indian companies on account of the government's pro-Iraq stance has not deterred them from expecting some part (about $5 billion) of the reconstruction bonanza: estimated in the region of $100 to $200 billion.

Industry sources, however, aver that the boom this time will not be as lucrative to Indian companies as it was in the early eighties.

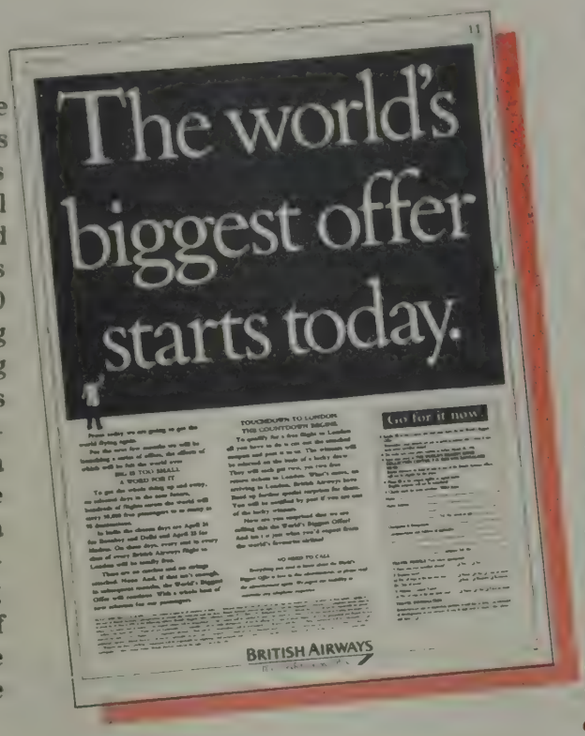
PRESSMAN

BRITISH AIRWAYS

Jumbo offer

In a well- orchestrated global move, the world's biggest marketing campaign was kicked off last fortnight. British Airways announced that all its flights on 23 April (all classes including Concorde) into and out of London would be free for winners of a lucky draw. That amounts to 50,000 seats — the equivalent of 120 Boeing 747s — and will cost the airline sterling 50 million (about Rs.180 crore). BA calls it the world's biggest offer. In a weak-kneed reaction, Air India has kicked up a fuss about BA's freebie. It says that the draw is against IATA regulations and is a predatory move against the national carrier. However, BA's chairman Lord King says the campaign will get "the wheels of international commerce turning once again and encourage the world to take the leisure break it now deserves".



It's all too obvious that BA is also looking desperately for a break. The airline has been going through an awful patch in recent months. The Gulf war set business back quite far: a 25 per cent reduction in bookings in Europe and the US, and 40 per cent less occupancy in premium cabins.

Unhappy landings

Quite unexpectedly, the airline was dealt a double blow on its home ground. In January, Britain's Civil Aviation Authority directed BA to surrender its landing slots at Tokyo's Narita Airport to Virgin Atlantic — a smaller, though highly profitable, competitor. Shortly thereafter, the CAA indicated that it was in favour of dismantling the fortress-like structure of London's Heathrow airport, the world's busiest international air terminal.

Heathrow's air traffic distribution rules (which permit entry only to those airlines which were operating there before 1977) have now been recast by Britain's transport secretary, Malcolm Rifkind. As a result, two major American airlines will be moving into Heathrow and both pose a serious competitive threat to BA. American Airlines, whose fleet (559 aircraft) is almost twice the size of BA's (235), has bought TWA's Heathrow routes for $445 million. United Airlines has picked up those of the ailing Pan Am for $400 million. Both United and American have vast domestic networks which can feed their long-haul Atlantic routes.

Pitched against such formidable foes,

The BA ad: time for action

BA is expected to respond by buying up an airline, possibly the loss making US AIR, for access into the American hinterland. This BA can do thanks to a recent decision by US transportation secretary Samuel Skinner to relax the 25 per cent limit on foreign investment in airline companies.

As BA comes to terms with these new equations it is simultaneously grappling with the worldwide business downturn. As chairman Lord King says, 'This is not a time for wringing hands; it is a time for action. The mega-gimmick is expected to give a kick start to the business." And perhaps give BA a headstart over competitors.

■ NAAZNEEN KARMALI

CITIBANK

No frills, less thrills

In recessionary times, even the mighty aren't invincible. Some time last year, the cracks began to show at Citicorp. The US banking behemoth found itself badly in need of cash. The crunch at Citi was caused partly by a deteriorating loan portfolio (particularly in the real estate segment) and a low capital base. Since then the bank has taken a series of un-Citi like decisions.

A dividend cut was announced in December, as was a staff cutback of 8,000. Part of Citi's convertible preferred stock was hawked off to Al-Waleed Bin-Talal, the Saudi prince, for $590 million. The bank has also declared its intention of selling a small piece of its highly profitable credit card business to raise an estimated $750 million. Citi is not alone in its condition, for the entire US banking industry is in dire straits (*see page 132*).

After shocks in India?

An obvious question is whether the tremors in New York will be felt in India, where Citi is considered a pioneering market mover amongst foreign banks. "Not directly. But, yes, there is bound to be an indirect impact," is the diplomatic answer from Jerry Rao, Citibank's country head. Buccaneering days are certainly over. The bank has announced a six month freeze on salary increments and the message down the line is: cut out those frills. (A competitor chuckles gleefully that five star hotels in Bombay are already complaining about a drop in business!)

At the organisational level a restructuring is inevitable. Last December it was decided to merge the investment and institutional banking divisions. Currently in India, the former is headed by A.S. Thiagarajan and the latter is in the charge of Aditya Puri. When contacted, Puri insisted that so far it's business as usual. Thiagarajan declined to comment. But bankers reckon that the reporting structure is bound to change.

At the operational level, Citibank is on the move. It has decided to relocate all its remote, backroom activities from space-starved Bombay to Madras. The card division is already headquartered in the southern city. This month the operations arm of the thriving non-resident Indian banking division (deposits: Rs.2,000 crore) is shifting there too.

Rumours that the bank is looking for a buyer for its card division in India are completely unfounded, says Rao. Citi spent a pretty packet acquiring the Diners franchise and has recently launched Visa and Mastercard too. The credit card business gives the bank a valuable retail profile. "We'll keep on concentrating on our customers. Where the rubber hits the ground things will be the same," promises Rao

US BANKING

Victim of over-regulation

On 6 January, US banking regulators seized the Bank of New England, the 35th largest bank in the US with assets exceeding $23 billion. The bank was the latest in a series of failures that have necessitated some 900 bank rescues in the US during the last five years. This case will not be the last and its collapse illustrates why the banking system in the US is at its most fragile since the Great Depression.

Ten years ago Citicorp was, in terms of assets, the largest bank holding company in the world. Today, Citicorp, still America's largest bank, has dropped to ninth place worldwide, behind six Japanese and two French banking companies. A key reason for the declining importance of American banks is legal strait-jackets that are more than 50 years old — anachronisms in today's financial environment.

Through much of the eighties, bankers saw their bread-and-butter corporate lending business migrate to the capital markets, where raising money was becoming cheaper. The Glass-Steagall Act, enacted in 1933 to separate commercial and investment banking, prevented banks from following their long-standing clients into the capital markets. In addition the McFadden Act, which restricts interstate banking, prevented banks from creating a geographically diversified loan portfolio.

Risky loans

At the same time, federal banking law prevented banks from entering businesses such as insurance and mutual funds, even though investment banks were permitted to conduct these non-traditional business activities. Bankers reacted to these limitations by plunging into riskier lending businesses — loans to less developed countries, commercial real estate and LBOs. The result, with the writing-off of billions of dollars of real estate and LDC debt, is a rapidly shrinking capital base and a very fragile banking system.

Much of the debate surrounding banking reform focuses on four major issues: capital adequacy, deposit insurance, supervision and legislative changes. The issue of capital adequacy is relatively simple. Banking is the backbone of any financial system and its financial health is paramount. US banks need more capital and should be forced to enhance their capital position. Of course, the ability to do so in these trying times is another debate altogether.

The deposit insurance fund, which guarantees a depositor's first $100,000, will almost certainly be bankrupt this year. Banks will be forced to pay higher premiums to keep the fund in the black, despite the threat of more bank bailouts. It is unlikely that US taxpayers will quietly agree to fund a commercial bank bailout close on the heels of the $500 billion savings and loan bailout. While supervision of institutions as important as banks is clearly warranted, excessive interference by US regulators has led to the current credit crunch in the US.

Excessive and outmoded regulation can create economic instability. The Indian banking system also operates in an outdated legislative environment... forced to channel funds to sectors of the economy that do not make commercial sense

Industry managers and regulators are unanimous in their conviction that legislative change is needed urgently. However, the form of such change remains an issue of much debate. It is now abundantly clear that the McFadden Act should be repealed. This will accomplish two things. First, it will help accelerate consolidation in an industry that currently has some 13,000 banks with 45,000 locations. (In contrast, Japan has 100 banks and an economy half the size of the USA's.) Second, it will help banks create a geographically diversified loan portfolio.

Unsurprising collapse

In the case of BNE, with a majority of its loans concentrated in moribund Massachusetts, its collapse was not surprising. The repeal of Glass-Steagall, which would allow banks to underwrite stocks and bonds (although some money centre banks can already do so), would benefit few banks in the short run, given the large and expensive distribution network needed to generate profits.

A tougher question to answer is whether traditional lines separating banking and commerce should be redrawn altogether. For example, should banks own industrial companies and vice versa? Ford Motor Company already owns the third largest savings and loan operation (an institution larger than most banks in the US) and General Electric controls an array of bank-like businesses. Allowing industrial companies to buy banks will steer much needed capital into a beleaguered industry. To put this into perspective, Ford's equity base of $24 billion supports an asset base of $171 billion, while Citibank's $10 billion equity supports an asset base of $228 billion.

Unfortunately even this may not be enough. Indeed, the very definition of banking needs a radical rethink. The industry needs to be divided into two types of firms. One type, a "core bank", would accept only government-insured deposits and limit its activities to low-risk businesses such as investing in treasury securities, making consumer loans to individuals and lending to small and mid-sized businesses. The second, a wholesale or commercial finance bank financed by investors, could undertake the more risky businesses of lending to real estate developers, LDCs and the like. Such a system would protect depositors while letting investors bear the risk.

It has become abundantly clear that excessive and outmoded regulation can create economic instability — witness the financial services-led recession in the US. The Indian banking system also operates in an outdated legislative environment. Indian banks are forced to channel funds to sectors of the economy that do not make commercial sense.

Banks are in the business of making money and should be free to pursue that goal. Doing anything else will only undermine the soundness of the banking system. Lending to priority sectors, a perfectly honourable intention, should be conducted by institutions created specifically for that purpose. Mixing banking and socialism only leads to diminishing profits and capital erosion, the malady confronting Indian banking today. ■

KIRLOSKAR CUMMINS

Full steam ahead

Over the last four years, the exports of Kirloskar Cummins Ltd (KCL) have grown by a whopping 1,858 per cent. And the feat has not gone unacknowledged. The Pune-based company has been winning export awards from the Engineering Export Promotion Council (EEPC) for the last three years. KCL's engines are used as original equipment by international giants like Komatsu, Dresser and Terex. A total of 10,000 KCL engines are operating satisfactorily round the globe. Then why is Arun Kirloskar, chairman of KCL, not making any big noises? "We have only taken a small step in the right direction by concentrating on exports," insists the modest Kirloskar. "We still have a long way to go."

KCL exports diesel and gas engines and their components (like connecting rods, crank shafts, engine blocks and engine heads) to advanced countries like the US, the UK, Canada, France, Germany and Japan. Most of these products find applications in buses, earthmoving equipment like dumpers and bulldozers, compressors and generator sets. At Rs.47 crore, this year's exports will contribute 18 per cent towards the total turnover of Rs.261 crore.

It has been a remarkable performance from a business activity which had never been thought of in the first place. "We got our first export order in 1969 by accident," recalls Kirloskar. "The ship carrying marine engines made by the Cummins factory in Scotland sank on its way to Egypt and Cummins, USA asked us to replace the lost engines." This order, worth Rs.33 lakh, led to exports of an additional Rs.2.5 crore in that very year.

Major growth avenue

Between 1969 and 1985 KCL exported engines mainly in the lower horsepower (HP) range of 90 to 250 HP, to markets in Egypt, the UK and Africa. Since these engines were at the lower end of the market, the value of exports never exceeded 5 per cent of the total turnover. But in the eighties, KCL started exporting gas engines of higher HP range to the US market. "We initially exported the lower HP range of engines because they were the only ones which were fully indigenised. And we began to progressively export the higher HP range as the indigenous content in them went up," says Kirloskar.

Encouraged by the intitial response that its products received, KCL soon identified exports as a major growth avenue. The decision was also prompted by the fact that one cannot always depend on the domestic market for diesel engines. KCL, for example, was selling nearly 60 per cent of its domestic production to government buyers. The budgets of government departments, which fluctuate from year to year, created problems. To add to the trouble, strong competitors like Ruston & Hornsby and Komatsu entered the fray.

Sudip Moulik

V-28 engine: KCL is the sole source

So, in 1986, Kirloskar mooted a proposal to his company's American principals: make KCL the sole source of worldwide supply for one particular model of the Cummins engine. The Cummins Engine Company (CEC) identified the V-28 vertical 12-cylinder engine as the model to be manufactured solely at Pune. These were high HP (900 HP), of large value and incorporated the latest state-of-the-art technology.

The entire V-28 production line was shifted from Columbus, USA and set up at Pune at a cost of Rs.5 crore. Today KCL is exporting more than 1,000 such engines a year totally valued at Rs.33 crore. "This decision of Cummins, USA, to make KCL the sole source for its V-28 product line was the turning point in our export growth," says Tom Dewing, managing director, KCL.

Another big hit

But the V-28 has not been KCL's only success in the exports field. The KTA-19R diesel engine, developed through in-house R&D efforts, is a big hit in Australia. KCL has also developed gas versions of the Cummins 4-cylinder and 6-cylinder engines for the US market and has so far exported 2,500 of them. "One tremendous advantage that we have is the all important support of the Cummins marketing and service network around the globe," admits Kirloskar.

According to Dewing, the future growth of exports depends on the decision Cummins takes to make KCL the sole source for some other models too. "KCL's own R&D strength could also enable it to develop new products for the world market," he adds. While it has already developed gas engines, tests are on to develop a dual fuel (diesel and gas) engine as well. "In fact," reveals Kirloskar, "we are already talking with CEC for transferring production lines of more engine models to Pune."

Another attractive possibility is to increase the exports of engine components. According to Kirloskar, CEC, which has a turnover of Rs.7,000 crore worldwide, buys 60 per cent of its components from other companies. If KCL were to supply even 10 per cent of these components, it would generate exports worth Rs.420 crore for the Indian company. "That is only as far as CEC is concerned. If we were to supply components to other major diesel engine manufacturers like Caterpillar, General Motors, Rolls Royce, Mercedes Benz, etc, there is a billion dollar market waiting to be tapped," Kirloskar says. Indeed, the markets have always existed. It's the effort to tap them which will count.

■ ROOP KARNANI

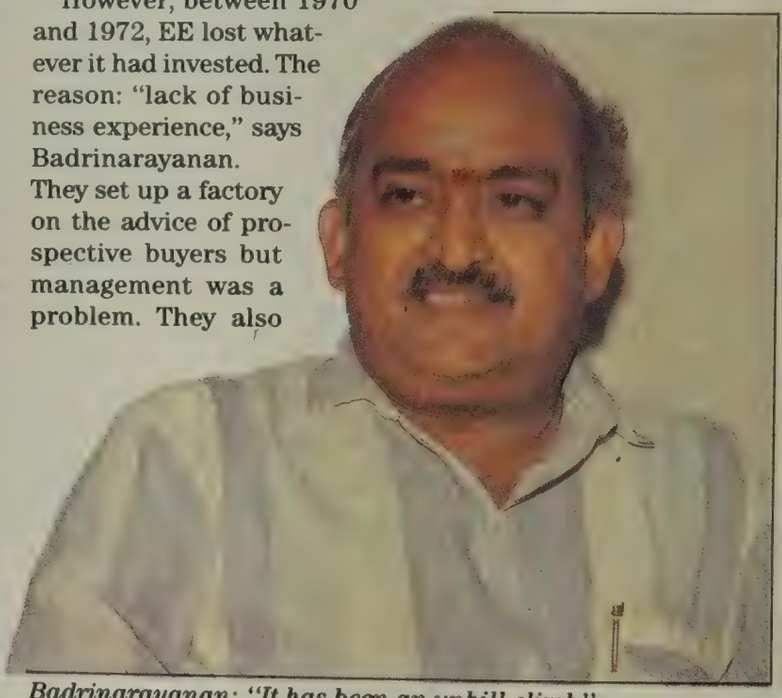
ENTERPRISING ENTERPRISES

Monumental growth

This family-managed firm dealing in granite has got over its teething troubles and is going places

To emerge as the country's second largest exporter of granite is no mean feat. And K. Badrinarayanan, managing director of the Madras-based Enterprising Enterprises (EE) group has achieved just that. "The granite industry is strewn with more failures than success stories. It has been a tough, uphill climb for us," he explains. The group touched a turnover of almost Rs.18 crore during 1989-90, with exports contributing to about 95 per cent of this figure.

Badrinarayanan had more than a passing familiarity with the stone industry. His father was in the business of leasing quarries around the Madras region — in Meenambakkam, Pallavaram and Chinglepet — for blue metal (broken rough granite chips used in construction). After finishing school in the late sixties, Badrinarayanan helped his father with this business. The idea of exporting granite struck him quite by chance, suggested by a friend while visiting a quarry. It seemed a ridiculous proposition then since there was little awareness of the export potential of stones as rough blocks or polished granite. "I laughed at the idea, but nevertheless decided to give it a try," he recalls.



Encouraging response

So, in 1971, Badrinarayanan, then in his late twenties, started out with a few names of buyers in Japan. "I decided on the name Enterprising Enterprises because everyone called me an enterprising young man," he explains. The idea clicked and two Japanese companies — the Nisho-Iwai Corporation and Ruywa Boake Kaisha — showed interest. This fired the entrepreneur's enthusiasm. The response also prompted his younger brother Vallabhai to join him. Six months later, a third brother, Natarajan, was in the picture too.

The trio did not know where to start. Badrinarayanan began by visiting Kuppam in Andhra Pradesh — a granite centre — to learn the nuances of the business. Granite exports from India had started in a small way in the late thirties. But until 1976, its potential as an earner of foreign exchange was not fully realised, though some foreign buyers were aware of the granite sources in India. In such a scenario, "We had little guidance, and had to learn by trial and error," explains Badrinarayanan. (Today, exports of Indian granite is big business. In 1989-90, exports of raw blocks amounted to Rs.125 crore while that of polished granite fetched Rs.22 crore).

The initial investment of Rs.2.5 lakh came from the family, with which 1.1 hectares of land was bought at Chembarambakkam, on the Bangalore-Madras road. The group has since increased its land holding in the area over the years, and currently holds about 18 hectares.

However, between 1970 and 1972, EE lost whatever it had invested. The reason: "lack of business experience," says Badrinarayanan. They set up a factory on the advice of prospective buyers but management was a problem. They also paid too high a wage for labour brought in from places like Kuppam.

Badrinarayanan: "It has been an uphill climb"

There were other problems as well. Chembarambakkam had its spells of water shortage and this hampered production, since power and water are essential for the cutting and polishing of granite. "The company simply did not have the requisite volumes," says a competitor. The result was that by 1972, the group was left with just its fixed assets - land, buildings and machinery — but no liquidity. Fortunately for EE, Bank of Baroda agreed to take a risk and provided the three brothers with working capital and a term loan for machinery.

EE's first shipment of granite was despatched in October 1972 — to F.W. Bull & Co in the UK. Soon shipments became frequent and regular — every month. The brothers handled the entire operation of shipping out the cargo. "It was a learning experience," says Badrinarayanan. The turnover touched Rs.4 lakh in 1972-73. By this time, EE had leased three quarries in the south Arcot district of Tamil Nadu.

Gravestones and plaques

From the outset, EE concentrated on the export of monuments (memorial stones like gravestones, commemorative plaques, etc), to firms like F.W. Bull & Co and J. Braithwaite & Sons, UK. This was in addition to exporting rough blocks. Several reasons prompted this choice. Most of the quarries leased by the group contained good deposits of black granite; besides, it is a more stable market than the building segment which consists of tiles and slabs. "Entry into this segment was possibly the best move the firm could make at its inception, since the level of workmanship required was not very complex," maintains the competitor quoted earlier.

Today, the EE group is one of the biggest exporters of monuments from India, exporting 15 containers of granite every month valued between Rs.50 to Rs.75 lakh. Currently, a fourth of the group's turnover comes from the export of monuments, 25 per cent from tiles and building slabs and the rest from the export of rough blocks.

However, EE soon realised that the monument market also had its disadvantages. "The growth of this segment can never be expected to be dramatic, since the market for gravestones is a steady one," explains Badrinarayanan. Further, Indian monument exporters are hampered by the lack of proximity to the main markets in Europe, the US, Japan and Australia.

Until 1975, EE adopted a crude

method of cutting and polishing, including manual grinding of the stones, to bring them down to the required width. So, in 1976, Badrinarayanan despatched his youngest brother, K. Balaji, who had also joined the business by then, to acquire the technology for cutting and polishing from Japan (export of rough blocks to this country began in 1974-75). "Addition to the machinery at the plant has been a continuous process thereafter," says Badrinarayanan. Today, Rs.20 crore worth of such machinery has been installed at the EE factory.

Finance not easy

Despite its early entry into the monuments market, the group did not make profits in the initial years. "The granite industry is beset with its own peculiar problems. The government's policy on granting leases changes continuously. Besides, institutional finance was not easy to get in the early days and we were learning the business," says Badrinaryanan. The result was that losses kept piling up, which were wiped out only in 1986-87.

In 1982, Magam Incorporated (MI) was set up to sell granite in the domestic market. The group ran an advertising campaign in leading newspapers and magazines, "to create an awareness regarding the uses of granite". Almost simultaneously, a display centre was set up in Madras. Several buildings, including the offices of Standard Chartered Bank, Philips, and SBI's head office in Madras have used granite supplied by EE. Despite these efforts, turnover from MI is in the region of only Rs.40 lakh a year, mainly through sale of coloured granite slabs to architects. But now, the prospects for this segment seem to be looking up. "By 1992-93, MI will touch a turnover of Rs. 3 crore," predicts Badrinarayanan.

Two more companies — Pooshya Exports Private Limited (PEPL) and Enterprising Exports Private Limited (EEPL) were floated in 1985. But it was only in 1988 that a tile plant could be set up by PEPL at an investment of Rs.4 crore. This came in the form of term loans from the State Bank of India and Exim Bank. The foray into the building slab and tile market came late, because it was only in 1988 that the group leased quarries with coloured granite in Andhra Pradesh and Karnataka. EEPL exports rough blocks.

Another momentous decision, taken in 1985, was to convert EE, PEPL and EEPL into 100 per cent export-oriented units, from SSI units, as this would facilitate exports. In 1986, yet another company, Mohenjodaro Exports was set up to undertake the export of monuments.

In March 1990, the group set up Yak Granites at an investment of Rs. 1.2 crore with loans from banks and financial institutions. This unit, located in Tada, Andhra Pradesh also deals with coloured granite and is managed by Badrinarayanan's niece, K. Sabitha. "The granite business is usually family managed the world over, since it needs individual attention. Corporate groups have never succeeded," says Balaji. So the group prefers to keep it in the family. (In India, companies like Larsen & Toubro, Voltas and the Madras-based D.C. Kothari group have plans to enter this area.)

No designations

With the exception of Badrinarayanan, who is designated managing director, none of the other brothers has a designation. Balaji looks after the factory and the quarries; Vallabhai is also involved with the quarries. Natarajan handles the liaison work. The group employs 1,000 workers in its quarries and 400 workers at its factory.

Polishing the stone: technology from Japan

Between them, the brothers have made significant headway in the export market. For three consecutive years since 1987 EE won Capexil's special award for the export of cut and polished granite. Today, their stones find their way to Holland, Germany, New Zealand, Singapore, Indonesia, Australia, Canada, the UK and the US.

Given the government's emphasis on value addition, the group wants to bring down rough block exports to 40 per cent from the present 50 per cent of production. "The aim is to reach a turnover of Rs.100 crore by 1996-97," says Badrinarayanan. Though he sounds ambitious, the entrepreneur is confident of touching this magic figure. Newcomers have entered the arena making it more competitive but Badrinarayan feels that spectacular growth is achievable. As he reasons, "We now know the business inside out and we also have the requisite contacts abroad." And as past performance has revealed, his determination is as firm and invincible as — well — granite.

■ DHARANI K. PANI

Crowning success

Creating dental crowns, part art and part technology, is an unheralded profession. Sai Dantakala Ceramics in Mahim, north Bombay, is India's first dental laboratory. As Ajit Menon, the laboratory's soft spoken, second-generation proprietor says, "We are the behind-the-scenes make-up men." This speciality laboratory that creates "aesthetic and functional teeth restorals" means business.

The laboratory was established in 1951 by Menon's dentist father, M.G.K. Menon, who relinquished his practice to train as a dental technician. His laboratory was the first to replace gold with what was then a revolutionary new alloy, Vitalium. The alloy was strong, biologically acceptable and when fused with plastic, it looked good — all pre-requisites for quality crowns.

Ajit Menon: creating "aesthetic and functional" false teeth

In the fifties and sixties, the dental profession was undergoing many changes. Then dentists were also technicians. To treat their growing number of patients, dentists began to employ novices and train them. These novices eventually broke away from clinics in much the same manner as in-house advertising agencies separated from their clients.

Technological changes

The seventies saw many changes in dental technology. Slower, belt-driven motors that made drilling painful yielded to air-driven ones which were swift and painless. Still, it was a while before crowns replaced removals and prosthodontics — the art and science of restoring missing teeth with artificial substitutes — came into being.

Ajit Menon opened his revamped laboratory in 1983. Today, he employs eight to ten workers who craft fixed replacables or cast partials (partially non-precious metal, in this case nickel chromium — costing Rs.20,000 a kg — and partially porcelain).

The process of creating these dental jewels using "ceramic fused to metal technology" is many tiered. In the first stage, the dentist's blueprint, a plastic cast with teeth dies, is mounted with the opposing cast and the relevant tooth is filled with wax patterns by the technician-sculptors. These are then invested in moulds, into which the metal is cast. The next stage, wherein the porcelain emulsion is painted on, is critical. Here a good technician can skilfully give the ceramic form and colour to approximate a natural tooth. The process, says Menon, is like that of an artisan's, fusing art and technology.

Once painted, the porcelain is fused to the metal in a computerised vacuum furnace at a temperature of 900 to 950 degree celsius. A porcelain build-up and three bakes follow. After final corrections, fusion, and curation in a super heated steam and pressure furnace to "marry the materials", a glaze veneer and sealant is applied. The crown is now ready. The entire process, inclusive of dentists' visits, takes about two weeks.

Expensive affair

It is easy to see why crowns are expensive. The import component of one 0.2 gram crown is a hefty 95 per cent and the process is capital and labour intensive. Sai Dantakala owns porcelain furnaces and casting machines which at current rates would cost about Rs.4 lakh. The built-in costs also include the decades of research that have developed biologically acceptable materials. Also, many people's skills are required to insert that miniscule amount of metal in the mouth.

This is obviously no assembly line product. "The crown is custom crafted and the technique is high precision," says Menon. Thanks to his efforts though, the industry has been exempted from sales tax since 1985. Dental labs, he had argued, do not sell merchandise but create artificial adjuncts to the human body.

In Bombay, there are 30 small, medium and large dental laboratories, dominated by four major ones. These are Dental Aesthetics, Sai Dantakala, Stardent and Dentech. About 600 crowns are produced daily and the trade turnover is about Rs.1.5 crore. "This is just a drop in the ocean, people are just not conscious about oral health," says Menon. Apparently, people still choose to pull out a tooth quickly rather than replace it, which costs 10 times more. Still, a number of dental laboratories have mushroomed over the last few years, indicating a growing awareness of oral care.

Sai Dantakala itself has a turnover of approximately Rs.12 lakh, with an output of about 10 crowns a day. Menon however, is not interested in expansion as it would mean sacrificing quality. As he says, "You cannot afford to go wrong with even one tooth in this business." He might, in the future, try his hand at new technologies. Creating crowns for implants, for instance, is one of his ideas. As the industry is beset by a shortage of technicians, expansion for most labs would pose problems. Few dental colleges offer courses in dental technology and those that do are outdated. Most dental technicians learn on the job. The industry has also lost a lot of its talent to the Middle East.

Menon is presently involved in forming an association of dental technicians. This long overdue development, when it happens, will marginally exert control on costs and supplies.

■ MRIDULA MALUSTE

Making high-value gases out of free air

Making gases that breathe life into industries

Arvin Liquid Gases Limited will shortly be setting up a plant to manufacture liquid and gaseous industrial oxygen and nitrogen with a total production capacity of 400 cubic metres per hour under a Turnkey Contract Agreement with IOL, pioneers in production of industrial gases.

The products find immense application in a wide variety of industries like steel, ship-breaking, chemicals, fabrication, pharmaceuticals and fertilizers where cutting, welding and shielding is involved.

With the continuous demand for gases from existing industries and the anticipated demand from new industries the Company envisages a profitable future.

ISSUE HIGHLIGHTS

- Project promoted by technocrats well established in the line of activity.
- Continuous and diverse requirement of end products.
- Project implementation in full swing. Short gestation period.
- Marketing and distribution already on in two Industrial Centres.
- Backward area concessions, incentives and taxation benefits.
- Eligible for 88A, 80L & 80M and Wealth Tax benefits.
- Assured liquidity listing on Baroda, Bombay and Ahmedabad Stock Exchanges.

Public Issue of 24,00,000 Equity Shares of Rs. 10/- each for cash at par aggregating Rs. 240 lacs.

ISSUE OPENS ON 8TH APRIL, 1991

Note: If the Company does not receive the minimum subscription of 90% of the Issued amount, the entire subscription will be refunded to the applicants within 90 days from the date of closure of this issue. If there is a delay in the refund of such amount by more than 10 days, the company will pay interest @ 15% per annum for the delayed period.

Invest in Paper • Exports • Chemicals

Invest in HMG Industries

You know HMG. A well established Company with diversified activities in paper, exports and speciality chemicals. Diversity that lends us strength and stability and offers us opportunities to grow in more ways than one.

Each of our units — the paper, coated paper and packaging material plant at Taloja near Bombay, the speciality chemicals plant at Tarapur in Maharashtra and our food processing plant at Veraval in Gujarat — manufacture products that enjoy a good reputation in national / international markets. A result of our commitment to quality and a strong and dynamic management team.

We're now seeking new horizons for growth. By investing Rs.383.40 lakhs towards the modernisation and expansion of our paper plant. And setting up an Export Oriented frozen food processing plant at Panvel near Bombay at an outlay of Rs.389.08 lakhs. Projects that will take us to new heights in turnover and profitability.

At HMG, we look to the future with confidence. And invite you to share our growth and prosperity.

Issue of 3,22,650 14% Secured Fully Convertible Debentures of Rs.200 each for cash at par

HIGHLIGHTS

- ★ **Belongs to the well established HMG Group** with proven track record.
- ★ **Existing Company with diversified operations:** Activities in paper, coated papers, packaging material, speciality chemicals and exports of frozen foods.
- ★ Established market for Frozen Foods in Japan, Malaysia, Singapore, Middle East, U.S.A. and Africa.
- ★ **Export House** Recognised by the Government of India.
- ★ **Sound Track Record:** For the year ended 31st March 1990, Turnover : Rs.2267 lacs, Profit after Tax : Rs.108 lacs.
- ★ **Modernisation & Expansion plans** in the Paper division and setting up Export oriented Frozen Food Plant at an aggregate cost of Rs.772.48 lacs.
- ★ **Fully Convertible Debentures — 60% conversion on allotment.**
  - i) Rs.120 per Debenture to be converted into **10 Equity Shares** at a premium of Rs.2 per share **on allotment.**
  - ii) Rs.80 per Debenture to be converted into Equity Shares at a premium to be fixed by CCI, 25 months from the date of allotment.
- ★ 80 L, 80 M and wealth tax benefits.
- ★ Listing at Bombay and Ahmedabad Stock Exchanges.

If the Company does not receive the minimum subscription of 90% of the issued amount the entire subscription will be refunded to the applicants within 90 days from the closure of this issue. If there is a delay in refund of such amount by more than ten days the Company will pay interest at the rate of 15% per annum for the delayed period.

Strength Through Diversity

EXPRESSMAN

CEAT

Lacklustre performance; subsidiary amalgamation pushes up bottom line; margins under pressure; modernisation going on

Ceat, the flagship company of the R.P. Goenka group has announced a lacklustre performance for the year ended June 1990.

During this period, the company reported a higher turnover, but the gross profits showed a sharp fall of 27 per cent. The net profit was marginally higher at Rs.22.43 crore. The company could get a tax write off this year because, with effect from 1 July 1990, Murphy India was amalgamated with the company. This company had accumulated losses of Rs.8.86 crore which were adjusted against Ceat's free reserves. The compensation ratio for the Murphy shareholders included one Ceat share for every 25 Murphy shares. On an equity base of Rs.14.76 crore, the earning per share works out to Rs.15.19 (Rs.14.45), and with the dividend maintained, the average payout works out to 19 per cent (20 per cent).

The main reasons for the sharp fall in the profitability has been the sharp increase in raw material costs. The interest overheads have also ballooned. The company's interest overheads seem to have gone up substantially following its decision to issue partly convertible debentures aggregating Rs.136.06 crore, made last year. Also, due to competition within the domestic tyre market, the company was not in a position to pass its hike in overheads to its customers. This is clearly reflected in the fact that raw material costs as percentage to gross turnover have moved up to 53.21 per cent (50.25 per cent). Prices of natural rubber and tyre cord fabrics showed an increase of 11 per cent and 10 per cent respectively. All this resulted in the company's gross profit margins being placed lower at 6.20 per cent (10.30 per cent) against the current year's industry average of 10 per cent.

The company showed a higher capacity utilisation in its automotive tyre division which stood at 109 per cent (94 per cent). The average realisation for auto tyres was marginally higher by 3 per cent while in the glass fibre division it improved by 13 per cent. The company's new electronic division could report a turnover of Rs.20.27 crore out of which Rs.16.77 crore came from the sale of televisions.

Meanwhile, the company's average debtors collection period has gone up by 20 days to 70 days, indicating slower realisation of dues from customers. At the same time, the company's inventory period has also gone up from 25 days to 31 days in the current accounting period.

But despite the tight working capital conditions, the company has invested a higher amount in units of UTI amounting to Rs.32.67 crore (Rs.13.83 crore). Exports during the year stood at Rs.32.34 crore (Rs.20.76 crore).

The company opened several new Ceat Shoppes for enabling more effective stocking points and marketing outlets. It is also planning to expand its capacities of tyres meant for truck, light commercial vehicles and passenger cars at its Nashik plant. The civil work for this purpose has commenced and the expanded facilities are expected to commence from October 1991 onwards.

The company's glass fibre division is also planning to expand its capacity to 5,000 tpa by third quarter of 1991. The new electronic division is also planning to introduce a new range of audio and TV products and launch new photo copiers with technical assistance from Ricoh, Japan. The work on the company's backward integration project for manufacture of 10,000 tpa nylon tyre cord has started and will be commissioned by early 1992.

After the recent issue of the partly convertible debentures issued last year, in September 1990, the conversion has taken place and the equity capital has increased by Rs.8.50 crore to Rs.23.26 crore. Additionally the company has issued non convertible debentures aggregating to Rs.101.69 crore, which entitles the holder to get two equity shares at a premium not exceeding Rs.65 each, after four years from date of allotment. Another interesting fact which comes to light is that the company has lent Rs.53.66 crore as loans and advances to its subsidiaries largely on interest free terms.

Ceat's first half yearly results for the period ending December 1990 have shown a marked fall in profitability levels. The gross turnover during this period is placed at Rs.277.99 crore (Rs.229.18 crore) but gross profits have fallen to Rs.15.80 crore (Rs.16.94 crore). The net profit is however placed higher at Rs.10.03 crore (Rs.6.39 crore).

The share price which had touched a high of Rs.170 prior to the company coming with a rights convertible issue, has taken a severe beating. It has now stabilised at around Rs.85.

Supreme Industries

Another rights convertible debenture to finance ongoing expansion modernisation and diversification plans; no impact of Gulf crisis on half yearly results; dividend up 15 points.

Supreme Industries, a blue chip company of the Bombay-based Taparia group is engaged in the manufacture of moulded and extruded goods, plastic buckets and toilet seats, lamp shades, PVC pipes and fittings, multilayer sheets and films.

1990 High	500.00		
Low	227.00		

For the year ended 30 June 1990, the injection moulding division worked at full capacity. Moulds for electronic voting machines were developed. The multilayer sheets division also operated at full capacity and the company initiated steps to put up a new plant at Daman. Performance of the multilayer films division was not up to the mark. The margins of the PVC pipes division and of extruded items continued to be under pressure.

During the year, its product range was widened to meet the demands of high tech plastic products. The company has ongoing modernisation and expansion projects. During 1988-89, expansion of its injection moulding, PVC pipes and fittings and multilayer sheet capacities were undertaken. These projects, costing Rs.22.50 crore, were financed by partly convertible debentures on a rights basis aggregating Rs.8 crore.

The company has an extremely liberal distribution policy. Dividend was stepped up from 36 to 45 per cent (despite an 8 per cent fall in profits) during 1988-89. This was further raised by 15 points to 60 per cent during the year under review. EPS rose from Rs.14 to Rs.23 on the small equity base of Rs.2.28 crore. Free reserves as on 30 June 1990 stood at Rs.17.38 crore on conversion of the debentures. During 1991-92, equity capital will increase by Rs.1.14 crore to Rs.3.42 crore and another Rs.10.26 crore will be added to reserves by way of share premium.

The working of Supreme Industries does not seem to be affected by the Gulf crisis. The company reported a 33 per cent increase in its gross profit to Rs.5.12 crore during the six-month period ended 31 December 1990 against Rs.3.84 crore in the corresponding six months last year. Sales is up by 14 per cent to Rs.59.40 crore (Rs.51.97 crore) and the bottomline was lifted by 25 per cent to Rs.2.74 crore (Rs.2.20 crore).

Phillips Carbon Black

Sluggish market; slow recovery from debtors with debts amounting to Rs.80 lakh; lower tax liability reduces impact of higher royalty and interest costs; modernisation and technical upgradation to be implemented; disposes off its investment in India Polyfibres

Phillips Carbon Black, an R.P. Goenka group company manufactures carbon black, an important ingredient in tyre manufacture. In the sluggish carbon black market, the company's performance for the year ended 30 September 1990 could be considered satisfactory.

During the year, production increased marginally by 2 per cent on an annualised basis to 37,006 tonnes against 54,559 tonnes in the previous 18-month period ended 30 September 1989. Sales volume at 36,375 tonnes (53,824 tonnes) recorded a marginal growth of 1.4 per cent. Average sales realisation improved by 5 per cent which partially took care of the escalation in input costs.

The company has a high asset turnover ratio of about 11 times as its plants are old and depreciated. Plans are on to modernise and upgrade technology with the help of its American collaborators, Columbian Chemical Co. Finance will come from internal accruals and external borrowings.

During the year under review, interest charges shot up by 53 per cent on an annualised basis to Rs.7.26 crore (Rs.7.10 crore). The increase was compensated by a similar increase in interest income (on loans and advances) at Rs.2.07 crore (Rs.2.02 crore). To check further rise in interest costs, the company disposed of 5 million shares of India Polyfibres (a group company) for Rs.5 crore.

Recovery from debtors slowed down from 14 to 31 days. The company has also written off bad debts amounting to Rs.80 lakh (Nil). Profitability during the year was also affected by a 47 per cent rise in royalty charges at Rs.1.35 crore (Rs.1.38 crore). Royalty per tonne of carbon black worked out higher at Rs.371 (Rs.254). Tight control over manufacturing and selling expenses resulted in a 13 per cent increase in operating profits. Gross profit declined by 36 per cent due to a steep rise in interest costs.

Substantial reduction in tax liability (by 59 per cent) has seen the bottomline register a growth of 17.4 per cent. As the dividends are being paid with a high payout ratio of over 80 per cent, a very small amount is ploughed back for future plans.

The Gulf crisis has indirectly hit the carbon black industry by slowing down the growth of the transport industry. In the absence of any diversification plans, the company's prospects look unexciting.

TRENDS

20th Century Finance

The Bombay-based 20th Century Finance is one of the largest leasing companies in the private sector. It periodically holds "loan melas" where finance for purchasing automobiles is provided on the spot. The company's gross disbursements during the nine-month period were Rs.54.73 crore (Rs.53.6 crore for the year ended March 1990). The directors have recommended a dividend of 18 per cent on a capital base of Rs.8.87 crore.

For the nine months ended December 1990, the company's gross income from its leasing and hire purchase activities shows an increase of 24 per cent (on an annualised basis) over the figure of the previous year ended March 1990. The growth in total income seems to be in tune with the company's annual growth

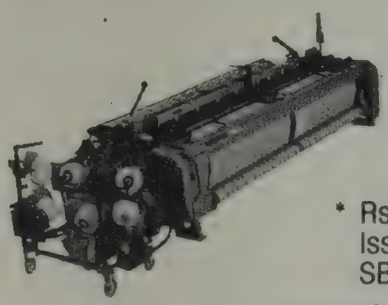
Fully integrated for manufacture of polyester viscose, blended yarns, wool/polyester worsted yarn, synthetic blended suitings, shirtings & dress materials and fabric processing.

Rights-cum-Public Issue of 14% Secured Fully Convertible Debentures of Rs. 200/- each aggregating Rs. 27 crores.



ISSUE HIGHLIGHTS

payer; 25% dividend in 1988-89.

* Now implementing Rs. 63 crore diversified expansion-cum-modernisation scheme comprising:
  New ring spinning unit of 25000 spindles to manufacture electronically cleared, knotless, spliced, cotton, polyester cotton and polyester viscose yarn;
  Doubling of worsted spinning capacity to 12000 spindles;

  Setting up of Woolcombing Unit with capacity of 7,14,000 Kgs per annum;
  Installation of 24 additional Sulzer weaving machines — already implemented.
* All projects entitled to government incentives/concessions.
* Flagship company of highly successful Arihant Group.

* Rs. 225 lakhs from Public Issue reserved for UTI and SBI Mutual Fund.
* **Excellent Conversion Terms —full conversion in two stages: 6 months and 12 months from date of allotment at a premium of Rs. 10/- per share.**
* 80L, 80M and Wealth Tax benefits.
* Listing at Ahmedabad, Bombay, Calcutta, Delhi and Ludhiana Stock Exchanges.
* Maximum permissible interest (14%) being paid until conversion.

If the company does not receive the minimum subscription of 90% of the issue amount, the entire subscription will be refunded to the applicants within 90 days from the day of closure of this issue. If there is a delay in refund of such amount by more than 10 days, the Company will pay interest at the rate of 15% p.a. for the delayed period.

rate. The net profit at Rs.3.92 crore reflects a 29 per cent growth on an annualised basis.

Gross profit margins have dropped by three points to 54.4 per cent. Meanwhile, the company has diversified its range of financial activities through joint ventures and has also entered the field of venture capital.

Advani Oerlikon

Advani Oerlikon, engaged in the manufacture of welding consumables and equipments, has done well. This is attributed to higher sales volume, upgradation of technology and control over costs.

Advani Oerlikon *(Rs crore)*

Period	Apr-Sept '90	Apr-Sept '89	Apr '89-Mar '90
Net sales	60.94	49.60	107.11
Other income	0.23	0.53	1.28

OP/Net sales (%)	7.35	7.42	7.19
RM/Net sales (%)	44.14	42.80	43.90

As per the six months results, the company has reported a 23 per cent increase in its turnover. Its gross profit is up by 22 per cent as compared to the corresponding period last year. However, the net profit has increased more than proportionally by 29 per cent despite higher provision for depreciation and tax. As the company's cost of raw material to sales ratio has increased, its profitability margins have fallen.

Sterlite Industries

Sterlite Industries, engaged in the manufacture of power and jelly filled telephone cables besides conductors, went public in February 1988. It has been performing consistently after that. The company had imported a second hand plant, spending only Rs.8 crore as against its competitors' cost of Rs.20 to Rs.25 crore. This gave the company a clear edge from day one.

Sterlite Industries *(Rs crore)*

Period	Jul-Dec '90	Jul-Dec '89	Jul '89-Jun '90

OP/Net sales (%)	18.19	18.34	16.71
RM/Net sales (%)	58.16	58.45	56.15

For the six months ended December 1990, the company's sales is up 25 per cent while its other income has seen a over ten fold increase. The other income has increased on account of trading activity in non-ferrous rods. Although at gross level, margins have slipped slightly, net level margins are up. However, the company has not provided for taxation as it plans to account for it at the end of the year.

Meanwhile, the company's continuous cast copper rods (CCCR) plant at Lonavla, with a capacity of 12,000 tpa has gone on stream. The company is also setting up a Rs.50-crore project for the manufacture of aluminium alloy rolling sheets and foils.

Currently, the EPS on annualised basis is Rs.24 on the increased equity base of Rs.4.36 crore. Considering that the CCCR plant's working would reflect on the second half, the company could end the current year even better.

RESULTS ANNOUNCED

Hindustan Lever

Hindustan Lever has announced improved results for the year ended December 1990 as well as a liberal bonus of 1:2. The company has also proposed a higher dividend of 42 per cent (1989 — 35 per cent) which will be payable on the existing equity capital of Rs.93 crore.

Net sales at Rs.1,201 crore has shown an increase of 19 per cent. As compared to the corresponding period last year the company has registered higher sales of 3 per cent for the six months ended December 1990. This has been attributed to a good monsoon and a reinforced thrust on both rural and export sales. Exports have gone up to Rs.162 crore from Rs.130 crore.

Other income has doubled from Rs.3 to Rs.6 crore. Alongwith the rise in income, expenditure on salaries and wages too have increased by 25 per cent while interest costs are 4.5 per cent higher.

Gross profit has increased by 21.8 per cent to Rs.127.99 crore while net profit registered a rise of 19.79 per cent to Rs.65.85 crore.

Two new manufacturing units, one for toilet soap at Orai in UP and the other a biopolymer unit at Pondicherry, which went on stream last year are expected to start production soon.

Tea Estates

Tea Estates proposes to pay a final dividend of 40 per cent. This, together with the earlier interim payment works out to 60 per cent for the year ended December 1990. The dividend is payable on an enhanced equity after the issue of bonus shares in the ratio of 1:2.

For the period under review, the company's sales was up by 25 per cent to Rs.46.13 crore. After providing Rs.10.06 crore (Rs.7.01 crore) for taxation, the net profit zoomed by 56 per cent to Rs.11.75 crore.

Lipton

Lipton India, a Unilever group company deals in tea, edible fats, dairy products and animal feed. Its new foods division makes fruit juice sold under the brand name 'Tree Top'.

The results announced for the year ended December 1990 has been lacklustre. It shows a sharp drop of 44 per cent in net profit from Rs.10.43 crore to Rs.5.83 crore despite an increase of 22.5 per cent in gross turnover from Rs.459.04 crore to Rs.562.21 crore. The main reason for the fall in profits is the poor performance of the foods division, 'Tree Top' having fared badly in the market. The higher bulk tea prices further eroded the company's profits.

Provision for taxes this year has increased from Rs.5.55 crore to Rs.6.22 crore. Tax incidence was much higher

Why a successful company providing good customer service, still wants to enhance it.

It is on the foundation of customer service that many solid companies are built. The existence of any business depends on service. Service that earns the customer's respect and confidence.

Which is why, we seize every opportunity to respond to our customers needs and meet them even if we have t go out of our way.

Like supplying Nitric Acid at the customer's doorstep – in our own tankers.

Like stopping our plant and setting up a special run to produce Ammonium Nitrate for an anaesthetic gas manufacturer.

For us at Deepak Nitrite, meeting a customer's specific need is not an intrusion on our routine, but an opportunity for us to demonstrate how much we care for them.

All this finds expression in our belief that a genuine relationship with the customer doesn't end with selling but begins with it. And, this attitude is inherent not just in our marketing team but in every department of the company.

Service to our customers is very much a part of our corporate philosophy. No effort is spared to continuously improve it. Because, ultimately it is this commitment that distinguishes a great company from a good company.

Deepak Nitrite Limited

sh...shakti, B G. Kher Marg, West, Bombay 400 0...

A determined drive for excellence

compared to the previous year because of an increase in surcharge rates and a reduction in tax allowable depreciation. Also, net profits for 1989 included a non-recurring profit of Rs.274 lakh, from sale of property no longer required, for which tax payable was insignificant.

The company's profit margins have declined considerably with gross margins down from 3.77 to 2.45 per cent while at net levels it slid from 2.27 to 1.04 per cent. The EPS has also fallen significantly from Rs.6.6 to 3.7.

The tea and animal feed divisions continued to do well. The pouch pack brand 'Taaza' continued to grow significantly. The company started operations at its new packet and instant tea factory in Etah, UP which contributed to the profits of the tea division. The edible fats business also improved. However, due to abundant availability of milk and milk powder, margins in the milk powder business were under pressure.

Garden Silk

Garden Silk has crossed the Rs.100 crore turnover mark, clocking Rs.109.59 crore for the year ended December 1990 — a 16 per cent increase over last year. While the gross profit is up 50 per cent to Rs.9.12 crore, at net levels the profit showed a nearly threefold increase to Rs.4.23 crore (Rs.1.46 crore).

Meanwhile, there are plans to float a new company to implement its diversification programme. It will be setting up a project to manufacture 15,000 tonnes a year of polyester filament yarn. The project to be located at Valia in Gujarat, involves a cost outlay of Rs.180 crore. The company plans to implement the project in two phases — 5,000 tpa of PFY will be manufactured during the first phase. The company also proposes to collaborate with Lurgi GmbH.

IN BRIEF

DCL Finance is making a rights equity issue in the ratio of 1:1.

Crompton Greaves has bagged a Rs.1.4 crore order for luminaries and lamps from Durgapur Steel Plant.

Tata Honeywell has clinched a Rs.15 crore order for distributing digital control systems.

Do-Max Steel, a Baroda-based company is setting up a Rs.6 crore steel project at Waghodia in Baroda. It envisages the manufacture of steel ingots and alloy steels with a capacity of 30,000 tpa.

Rama Vision has started commercial production of 14-inch B&W television picture tubes.

Tapuriah Steels plans to double its capacity to 12,000 tpa, at a cost of Rs.3.80 crore. It is also installing a special refining system and an induction furnace.

FAG Precision is introducing a rights issue aggregating Rs.14 crore to finance its technology upgradation and modernisation scheme.

Shree Vindhya Paper Mills has stepped up its interim dividend by three points to 15 per cent for March 1991. Last year, the total dividend paid was 25 per cent.

Carborundum Universal has finalised its plans to set up a Rs.12 crore project to manufacture 500 tpa of ceramic colours.

Boehringer-Knoll will henceforth be called Boehringer Mannheim India.

Baroda Rayon plans to tap the capital market with a 12.5 per cent partly convertible debenture issue, on a rights basis, in the ratio of 1:7.

Titanium Equipment has entered into an agreement with Syrinx Research Institute of Australia for import of membrane.

Akhil Ceramics is setting up a project to manufacture 13,000 tpa of ceramic floor and wall tiles at a cost of Rs.13.30 crore.

Gulshan Sugars & Chemicals, engaged in the manufacture of activated and precipitated calcium carbonates at Muzaffarnagar in UP, plans to tap the capital market.

Grauer & Weil has bagged an order worth Rs.3.25 crore to export PCB machinery to the USSR.

Why a successful company that has come a long way, still feels it is just the beginning.

Expansion and diversification are the wings of a company that help it attain new heights. It is this entrepreneurial spirit that continuously explores new fields. Fields that usher in good tidings for everyone.

Which is why, every effort is made to constantly tap and harness new opportunities that come our way.

Like starting out in 1972 with just 2 products and later diversifying into over 30 different products.

Like undertaking a Rs. 42 crore expansion programme to set up a multi-purpose Nitro Aromatics plant. The plant will manufacture para Nitro Chloro Benzene, ortho Nitro Chloro Benzene, para Nitro Toluene, ortho Nitro Toluene, and Nitrated Esters. Biazzi SA, Switzerland will provide the technical know-how.

For us at Deepak Nitrite, diversification is not just a means to enhanced profits, but an integral part of our plans to adopt the latest international technology and produce world-class products.

All this is reflected in our vision to start a number of plants manufacturing various Nitrated products, once the demand for each of these products is created.

Exploring new fields is very much a part of our corporate philosophy.
No effort is spared in our quest for excellence. Because, ultimately it is this commitment that distinguishes a great company from a good company.

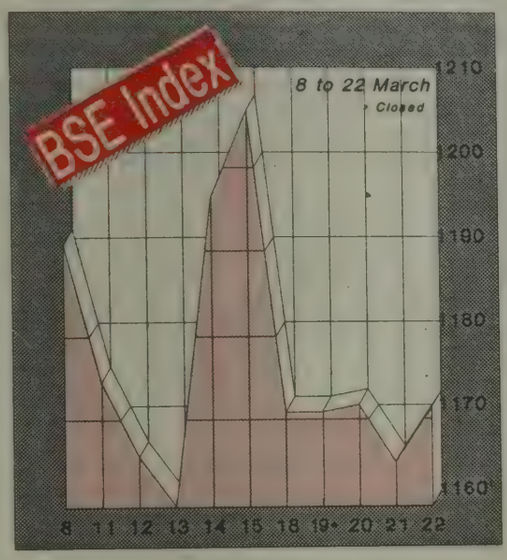
STOCKMARKET REVIEW

Sitting the uncertainty out

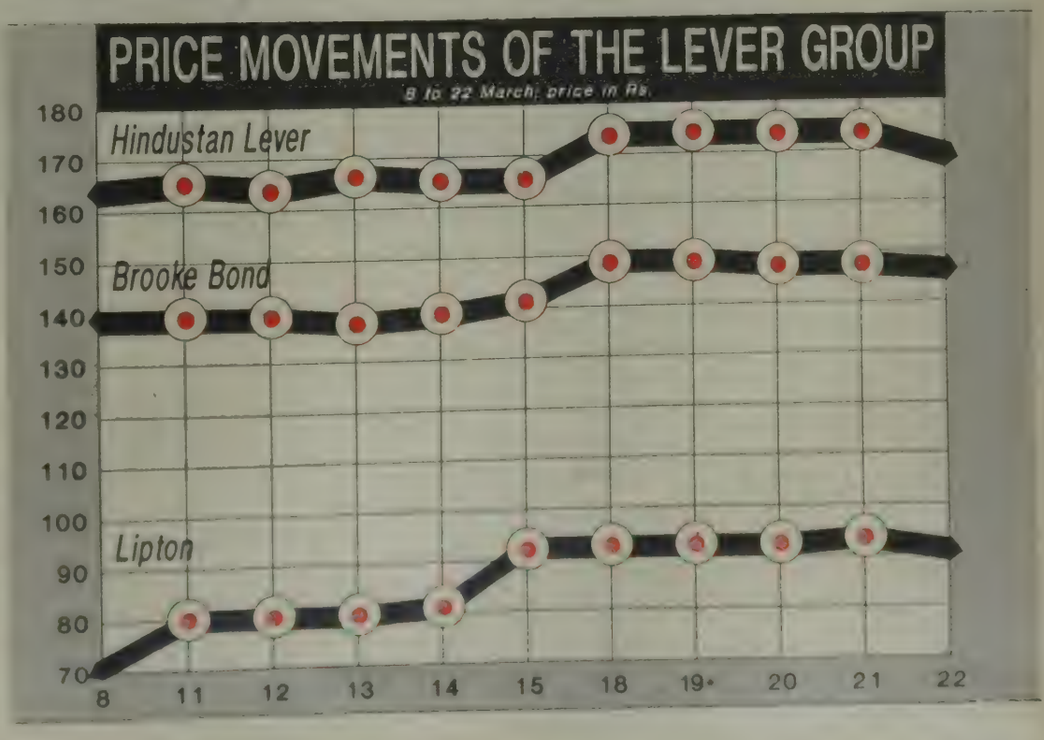


(For the period 11 to 23 March 1991)

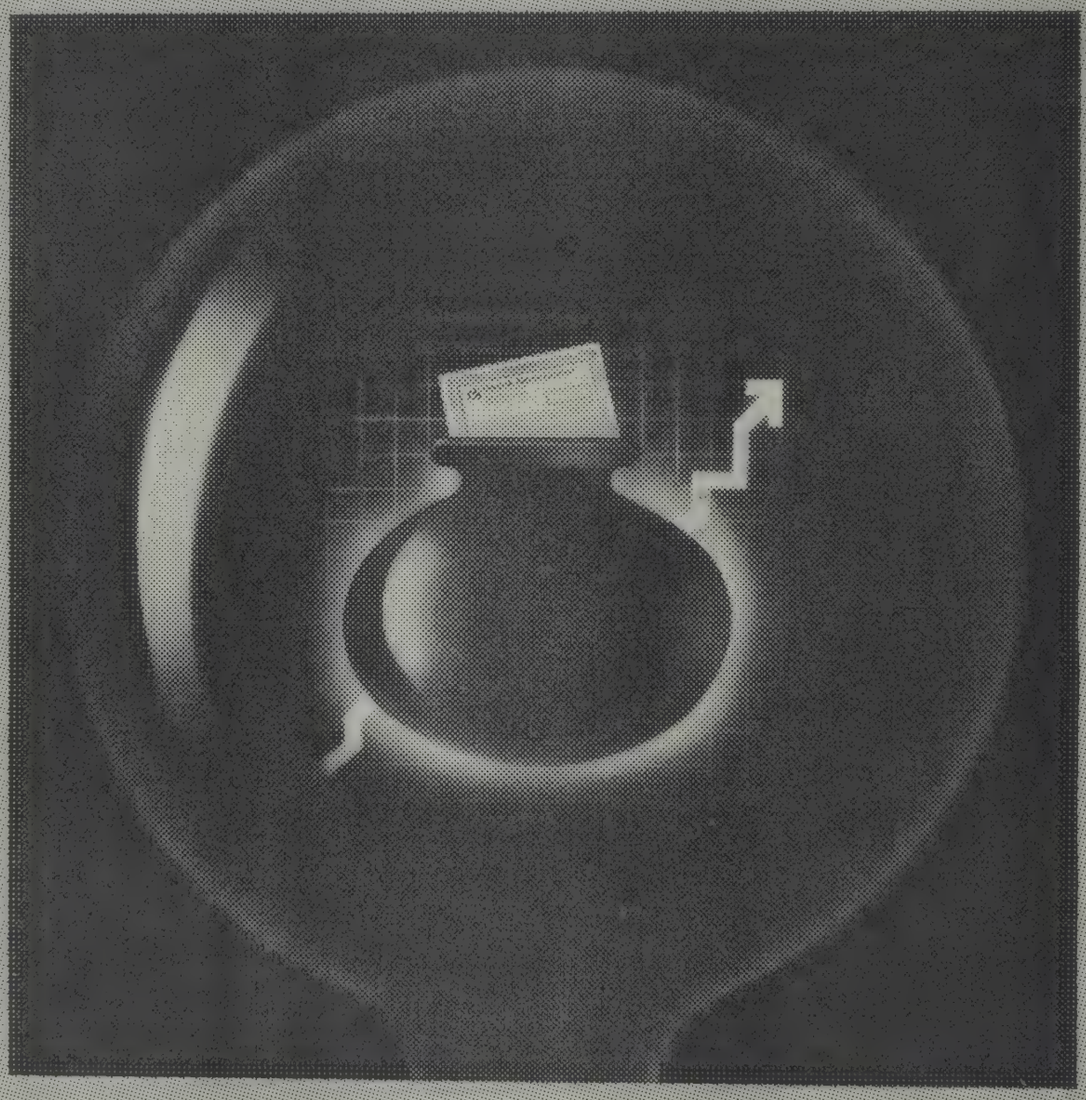
	9 March	23 March	Percentage change over fortnight	year
BSE Sensitive Index	1171.59	1191.05	–1.7	+ 54.6
BSE National Index	591.18	594.07	–0.5	+ 43.5
Vol (Rs.cr) for fortnight ended	91.50	97.59	–6.3	–9.9

The market continued to reel under the impact of political uncertainty over the fortnight. The dissolution of the Lok Sabha on 13 March was an unlucky 13th for bulls who were, in the main, hoping for a Congress government at the Centre. That marked the beginning of what the newspapers called "hectic political activity" which was nothing but an euphemism for the politicians' activity of trading moral values for political gains. The market, aware of the public's likely sharp response to the nonsense that politicians think that they can escape with, was depressed and likely to remain so. If shrewd bargaining does not get the *netas* where they want to be or if the public shows its disgust (as is likely) via low turnouts at rallies, there is a strong likelihood that our *khadi*-clad leaders will incite all sorts of violence. This, then, was further reason for the market to be down.

Unexpected outcome. Given all this, it was perhaps a wonder that the market fell only marginally over the fortnight under review. This unexpected outcome was actually due to the fact that public sector financial institutions, having a very strong reason to keep the market high, bought heavily to ensure this. And this strong reason had nothing to do, as rumoured, with altruistically assisting the government's wealth tax collections by keeping market values artificially high on 31 March, the date that the fiscal year ends. With a lame-duck government in place, such motivated governance is not on these days.



The real reason is that some of the financial institutions, who have their own year-ends on 31 March and who plan to collect a lot of money from the public this year, need to show the best possible results for the fiscal year 1990-91. Since their results will be judged by the market value of their investments on 31 March, they were ready to support the market and did so by buying heavily over the fortnight. They will continue to do so until 27 March, the last trading day of the fiscal year. After that, the market will "seek its own level". Meanwhile, it has provided a grand opportunity for bears. And what about the small investor? Hands up all those who consider him totally irrelevant.



The foreign exchange crisis, apparently known to everyone but the Reserve Bank, also haunted the market. The country, which is consuming foreign exchange at the net rate of $400 million a month was bound to run out of its first tranche of IMF money of $1.7 billion by the end of April. This was known in January itself when the IMF loan had been sanctioned. However, since the budget was deferred due to political developments, the second tranche of an equal sum is probably likely to be delayed as well. This forced the RBI to conserve foreign exchange via drastic measures. The situation, though, is probably not as bad as it is being made out to be because the new measures mean a rise in interest costs and not a ban on imports.

Rumours of poor performance. Since institutions were busy playing the index, cash shares were relatively inactive compared with forward shares (which make up the bulk of market value) over the fortnight. Among forward shares, Reliance was the most actively traded. It was heavily sold by bears as rumours of poor performance continued to proliferate in the market. The scrip closed the fortnight at Rs.122.50, down from Rs.137.50 (-10.9 per cent) on volume of 6.15 million shares over the period. Tata Steel also dropped sharply to Rs.158.75 from Rs.172.50 (-8 per cent) on volume of 3.9 million shares.

The market's steadiness, given the sharp drop of the above two market leaders, arose in part from the expected good performance of companies in the Hindustan Lever group. This was confirmed, as it were, by the announcement on 20 March by both Hindustan Lever and Brooke Bond that they would issue a bonus to shareholders. This caused Hin-

Why a successful company that has given over 6000% returns to its shareholders, still wants to do more for them.

SWAMY BBDO DNL 701

Shareholders are the pillars of strength on which the edifice of success is built. Earning their confidence is the essence of any business relationship. A relationship that spells progress for everyone.

Which is why, we leave no stone unturned to make sure that every shareholder is amply rewarded.

Like consistently declaring dividends for the last 16 years. Total dividends amount to Rs. 9054 on an initial investment of Rs. 1000.

Like giving bonus shares which form nearly 81% of the shareholder's total capital.

Like providing them with yet another attractive investment opportunity to participate in the Rights Issue to finance the new Nitro Aromatics Division.

For us at Deepak Nitrite, the relationship with our shareholders is far from businesslike. We are more like one big happy family.

Care and concern for the shareholder is very much a part of our corporate philosophy. No effort is spared to give these top priority. Because, ultimately it is this commitment that distinguishes a great company from a good company

The Rights Issue

A: PARTLY CONVERTIBLE DEBENTURES

- Issue of 25,51,500 – 12.5% Secured Redeemable Partly Convertible Debentures of the face value of Rs. 80 each for cash at par aggregating Rs. 20,41,20,000.
- Of this, Rs. 50 will be converted into one equity share of Rs. 10 at a premium of Rs. 40 after the expiry of six months from the date of allotment.
- The non-convertible portion of Rs. 30 will be redeemed at par after the expiry of 7 years, but not later than 10 years from the date of allotment.

B: NON-CONVERTIBLE DEBENTURES

- Issue of 24,30,000 – 14% Secured Redeemable Non-convertible Debentures of the face value of Rs. 100 each for cash at par aggregating Rs. 24,30,00,000.
- The Non-convertible Debentures will be redeemed in 3 annual instalments of Rs. 35, Rs. 30 and Rs. 35 at the end of the sixth, seventh and the eighth year respectively from the date of allotment.
- A premium of Rs. 5 per debenture will be paid alongwith the redemption of the second instalment of the principal amount of Rs. 30 (i.e. at the end of the seventh year from the date of allotment).

The Deepak Nitrite share has appreciated substantially in a short span of 20 years, giving investors more value for their money.

Face value of 100 Deepak Nitrite shares in 1971-72		Rs. 1000
Bonus 4:5	1976-77	Rs. 800
Bonus 1:1	1979-80	Rs. 1800
Bonus 1:2	1985-86	Rs. 1800
		Rs. 5400
Market value of Share @ Rs. 110 (as on 13th February, 1991, BSE)		Rs. 59,400
Cumulative Dividend till date		Rs. 9,054
Rs. 1000 invested in 1971-72 has today become		Rs. 68,454

Highlights

- Consistent growth in dividends over the last 16 years.
- Three rewarding bonus issues in a short span of 15 years.
- Diversifying into the profitable Nitro Aromatics field in technical collaboration with Biazzi SA, Switzerland.
- Low gestation period Project to go on stream by end 1991.
- Earnings per share were Rs. 14.33 for the year ended March 31, 1990.

Issue closes on April 20, 1991

Deepak Nitrite Limited

Shivshakti, B.G. Kher Marg, Worli, Bombay 400 018

A determined drive for excellence

dustan Lever to hit the year's high of Rs.180 while Brooke Bond rose to Rs.152.50. Even Lipton, which has done badly in 1990, rose to Rs.98.75 on expectations of a maiden bonus. Another share, much in demand by financfal institutions, was Nestle which rose to Rs.147.50 over the fortnight, up from Rs.141.25.

Hindustan Lever's results, however, were good but not outstanding. Its 20 per cent jump in net profits was below the market's expectations as was the bonus off (*see chart*), followed sympathetically by Brooke Bond and Lipton. However, since these ended higher over the fortnight, they had a beneficial effect on the index.

The market's mood will entirely be determined by the actions of politicians in the months to come. Since the latter are likely to be busy meeting strange bedfellows, the market lacks a reliable view of the outcome of the May elections. It is therefore likely to remain confused.

■ RAFIQ DOSSANI

PENALTY POINTS SYSTEM

A matter of accountability

After 1 May this year, merchant banks will think twice about taking up equity issues of sick or unviable companies. From that date, the system devised by the Securities and Exchange Board of India to award penalty points to merchant bankers violating SEBI guidelines comes into effect.

Over the past six months itself, SEBI has had to issue several notifications to induce some accountability. "The fear of being awarded penalty points will make merchant bankers more disciplined and lousy issues will not enter the market," says R. Sankaran, managing director, IndGlobal Financial Trust.

Indirect credit rating. With the introduction of the penalty points system, merchant bankers will be more cautious and only handle issues of creditworthy companies, where the risk of penalty points is less. If one bank refuses to handle a particular issue other banks will automatically be cautioned and thereby help the emergence of an indirect method of credit rating issues.

Non-compliance with SEBI guidelines has been grouped into four categories: general defaults, minor defaults, major defaults and serious defaults (*see box*). On accumulating eight penalty points, a merchant banker is liable to be de-authorised for a suitable period of time.

De-authorisation may not mean much, as the SEBI Bill has yet to be enacted and SEBI, therefore, cannot enforce de-authorisation. A de-authorised merchant banker can still handle share issues. In reality however, it is unlikely that he would. Says one banker, "De-authorisation is a slap on the face. No banker will defy it and rub SEBI the wrong way."

However, the proposed system has not failed to draw criticism. There are murmurs that there was no dialogue between SEBI and merchant bankers before the circular about the system was released. Says one banker, "When a new culture is being evolved it is not right that we should be kept out." The bankers also have reservations on aspects of the system, which the Association of Merchant Bankers intends taking up with the SEBI.

Says S.M. Parande, executive director, SBI Capital Markets, "One of our objections is that there is an element of subjectivity in assigning penalty points." The most stark example is in the area of serious defaults, where SEBI will engage in evaluation of "unethical practice" and "non-cooperation with SEBI."

No teeth. In the category of minor defaults, it is felt that it would be unfair to blame merchant banks for delays in refunds or allotment of securities. These are post-issue matters handled by other banks and individual companies over whom merchant bankers have no control. Without the requisite powers of enforcement merchant bankers are unable to pull up defaulting banks and companies.

On the whole, though, the new system is likely to bring some degree of accountability into the primary and secondary issue market which should bring considerable cheer to the harassed investor.

■ GEORGE ALBERT

Defaults attracting penalty points

The following defaults will attract penalty points:

General default — one penalty point
a) Non-receipt of draft prospectus/letter of offer from the lead manager by SEBI, before filing with the Registrar of Companies/stock exchanges.
b) Non-receipt of inter-se allocation of responsibilities of lead managers in an issue by SEBI prior to issue opening.
c) Non-receipt of due diligence certificate in the prescribed manner by SEBI before opening of the issue.
d) Failure to ensure submission of certificate of minimum 90 per cent subscription by the issuer.
e) Failure to ensure publicising of dispatch of refund orders, share/debenture certificates, filing of listing application, etc by the issuer.

Minor default — two penalty points
a) Advertisement, circular, brochure, press release and other issue-related materials not being in conformity with contents of the prospectus.
b) Exaggerated information or information extraneous to the prospectus is given by issuer or associated merchant banker in any press conference, investor conference, brokers conference or other such conference/meet prior to the issue for marketing of the issue arranged/participated by the merchant banker.
c) Failure to substantiate matters contained in the highlights to the issue in the prospectus.
d) Violation of the government directive regarding advertisements on new Capital Issues.
e) Failure to exercise due diligence in verifying contents of prospectus/letter of offer.
f) Failure to provide adequate and fair disclosure to investors and objective information about risk factors in the prospectus and other issue literature.
g) Delay in refund/allotment.
h) Non-handling of investor grievances promptly.

Major defaults — three penalty points
a) Mandatory underwriting not taken up by lead manager.
b) Excess number of lead managers than permissible.
c) Association of unauthorised merchant banker in an issue.

Serious defaults — four penalty points
a) Unethical practice and/or violation of code of conduct.
b) Non co-operation with SEBI in furnishing desired information, documents, and evidence as called for.

BPL Sanyo Utilities and Appliances

BPL Sanyo Utilities and Appliances is an existing profit-making company which started its operation in February 1990. For the six months ended September 1990, the company's turnover was Rs.16 crore and profit after tax was Rs.82 lakh. For the full year ending March 1991, it's turnover is expected to go up to Rs.40 crore.

The company is promoted by the Bangalore-based BPL group. The Rs.600 crore group is well known in the consumer electronics segment.

BPL Sanyo Utilities and Appliances is currently manufacturing colour televisions at its existing plant at NOIDA in UP under the BPL brand name. The company is now putting up new plants at NOIDA and Maddur near Bangalore at a total

BPL Sanyo Utilities and Appliances		
Issue opens	:	10 April 1991
Size of the issue	:	a) equity shares: Rs.7.79 crore b) partly convertible debentures: Rs.12 crore
To Indian public	:	a) Equity shares: Rs.57 lakh b) Debentures: Rs.9.21 crore
Instrument	:	a) Equity shares and debentures
Promoter	:	BPL India and other BPL group companies
Project	:	Setting up plants for CTVs and domestic appliances
Plant location	:	NOIDA, Uttar Pradesh and Bangalore
Listing	:	Bangalore, Bombay and Delhi

cost of Rs.34 crore. In the first phase, at both the plants, the company will manufacture colour televisions and domestic appliances like washing machines, vacuum cleaners and dish washers. In the second phase the domestic appliances range will be widened to include microwave ovens and steam type electric irons.

To finance the project the company is making a public issue of Rs.19.79 crore, of which Rs.12 crore is partly convertible. The rest are equity shares. Of each partly convertible debenture of Rs.150, Rs.50 will be converted into five equity shares of Rs.10 each on allotment. The rest will remain non-convertible till redemption. After the part conversion the total equity of the company will be Rs.11.79 crore.

Arvin Liquid Gases

Arvin Liquid Gases is a new company promoted by Arvind Patel who has been distributing and marketing gas in Gujarat for the last 15 years. Patel also has a small unit manufacturing acetylene gas near

Arvin Liquid Gases		
Issue opens	:	8 April 1991
Size of the issue	:	Rs.2.40 crore
To Indian public	:	Rs.2.20 crore
Instrument	:	Equity shares of Rs.10 each for cash at par.
Promoter	:	Arvind Patel
Project	:	To produce 400 cubic metres of oxygen gas per hour.
Plant location	:	Halol near Baroda, Gujarat
Listing	:	Baroda, Bombay and Ahmedabad

Baroda, Gujarat.

The new company is setting up an oxygen gas plant with a capacity of 400 cubic metres per hour, near Baroda at a cost of Rs.8 crore. Industrial grade oxygen finds application in a wide range of industries like steel fabrication, chemicals, fertilisers and ship-breaking. The plant is being set up by the industry leader Indian Oxygen Ltd on a turnkey basis. It will be financed by a Rs.4 crore equity (60 per cent public), lease finance of Rs.1.95 crore and loans.

Yuken India

Yuken India is an existing profit making company manufacturing hydraulic equipments in technical collaboration with Yuken Kogyo of Japan. The company started commercial production at its Bangalore plant in 1978. For the year ended March 1990 its sales were Rs.7.39 crore on which it made a net profit of Rs.26 lakh.

The company is now implementing a modernisation-cum-expansion programme for its hydraulic and foundry divisions.

Yuken India		
Issue opens	:	8 April 1991
Size of the issue	:	Rs.60 lakh
To Indian public	:	Rs.50 lakh
Instrument	:	Equity shares of Rs.10 each for cash at par.
Promoter	:	M. Varadarajan, M. Parthasarathy and C.P. Rangachar
Project	:	Modernisation and expansion of existing plant.
Plant location	:	Bangalore
Listing	:	Bangalore, Bombay and Ahmedabad

This will enable the company to increase its product range. The company hopes its turnover will double to Rs.14 crore in two years.

TPI India

TPI India Ltd (TPI) is an existing profit making company. The company manufactures hessian/paper bags, low density polyethylene (LDPE) liner bags and film, kraft paper reinforced bags (used for packing milk powder) and white cement.

It is now embarking upon a diversification cum expansion programme at an estimated cost of Rs.3.23 crore. TPI has joined hands with Bulk Lift International of USA, for the manufacture of Flexible Intermediate Bulk containers (FIBC) commonly known as Jumbo containers.

FIBC's are used as packaging material for a wide range of products including petrochemicals, chemicals, cement, food-

TPI India		
Issue opens	:	9 April 1991
Size of the issue	:	Rs.2.39 crore
To Indian public	:	Rs.1.38 crore
Instrument	:	Equity shares of Rs.10 each
Promoter	:	Hasmukh C. Parekh and family
Project	:	To manufacture flexible intermediate bulk containers (FIBC) and poly-coated paper
Cost of project	:	Rs.3.23 crore
Plant location	:	Thane in Maharashtra
Listing	:	Bombay, Ahmedabad Calcutta and Delhi

grains, fertilisers, mineral ores, and rubber.

Hasmukh Parekh, the main promoter of the company has been in the packaging industry for the last 25 years. He is confident of his new project, expected to go on stream in September 1991. Parekh projects a turnover of Rs.18 crore, for the year ending March 1992, expected to increase to Rs.27 crore by March 1993. For the eight months ended November 1990 TPI's turnover was Rs.5.01 crore and net profit was Rs.22 lakh.

Arihant Fabrics

A dividend paying company, Arihant Fabrics touched a turnover of Rs.46.23 crore, for the year ended September 1990, with a net profit of Rs.3.54 crore. Dividend too was stepped up by five points to 25 per cent last year. The company has now embarked upon a large expansion cum modernisation programme costing Rs.63 crore.

The project envisages installation of 24 Sulzer projectile weaving machines, doubling the capacity of the worsted spinning facility to 12,000 spindles, alongwith the installation of a wool combing plant with a capacity of 7,14,000 kg per annum and a 25,000-spindle ring spinning plant.

Arihant Fabrics	
Issue opens	: 2 April 1991
Size of the issue	: Rs.13.50 crore
To Indian public	: Rs.7.2 crore
Instrument	: 14 per cent fully convertible debentures of Rs.200 each
Promoters	: K.L. Jain and associates
Project	: Expansion cum modernisation scheme
Cost of project	: Rs.63 crore
Plant locations	: Matewara, Punjab; Sikandrabad, UP, Solan, HP.
Listing	: Ahmedabad, Bombay, Calcutta, Delhi, Ludhiana.

The fully convertible debentures of Rs.200 each offered by the company to the public will be converted in two parts. In the first part Rs.100 will be converted into five equity shares of Rs.10 each, at a premium of Rs.10, six months after the allotment. The second conversion will be 12 months after the date of allotment on the same terms.

After implementation of these projects Arihant's turnover is projected to go up to Rs.200 crore and gross block to Rs.100 crore.

Meanwhile, the company features on SEBI's list of investors' complaints, as it takes six months to a year to effect routine transfers.

Hindustan Electro-Graphites

Hindustan Electro-Graphites Ltd (HEGL), a leading manufacturer of graphite electrodes is a member of the Delhi-based Bhilwara group.

Promoted jointly by the flagship of the Bhilwara group, Rajasthan Spinning & Weaving Mills (turnover: Rs.86.87 crore for March 1990) along with Pechiney of France, the company is now setting up a coal-based sponge iron plant with an installed capacity of 60,000 TPA at MP in technical collaboration with Sponge Iron India. For the year ended March 1990, HEGL earned Rs.8.53 per share and paid out Rs.2.75 per share as dividend. On a sales turnover of Rs.48.03 crore, the company earned a net profit of Rs.4.47 crore for the period April-September 1990. The share is now quoting at Rs.90 in the stockmarket.

Hindustan Electro-Graphites	
Issue opens	: 9 April 1991
Size of the issue	: Rs.7.69 crore
To Indian public	: Rs.3.56 crore
Instrument	: Fully convertible debentures of Rs.200 each.
Promoter	: Rajasthan Spg & Wvg Mills Ltd & Pechiney, France.
Project	: To set up a sponge iron plant
Cost of project	: Rs.45.80 crore
Plant location	: Borai in district Durg, MP.
Listing	: Delhi, Bombay, Calcutta and Bangalore.

The Rs.46 crore sponge iron project is to be financed by a Rs.32.44 crore rupee loan, a Rs.1.50 crore foreign currency loan from financial institutions and internal accruals of Rs.6.86 crore. To part finance the project, the company is issuing debentures to raise Rs.7.69 crore. Each debenture of face value Rs.200 will be converted into six equity shares at a premium of Rs.30 per share, after six months.

The demand for sponge iron, which is an alternative to scrap for ministeel units, is in excess of indigenous supply. As the HEGL plant is in the proximity of 12 ministeel plants besides a number of steel foundry units, the company does not envisage any major market constraints.

HMG Industries

HMG Industries is a Bombay-based company with three operating divisions — paper (at Taloja, Maharashtra), Frozen Food (at Veraval, Gujarat) and Chemicals (at Tarapur, Maharashtra). For the year ended March 1990 the company's turnover was Rs.22 crore on which it made a net profit of Rs.84 lakh.

The company is going in for modernisation cum expansion of its paper and frozen food divisions. This is expected to increase the capacity of the paper unit from 4,800 tpa to 10,800 tpa. In the frozen food division the capacity will be doubled, by setting up an additional facility of 15,000 tpa.

The above expansion programme will cost a total of Rs.7.73 crore. Of this, Rs.1.28 crore will be financed internally, and Rs.6.45 crore will be obtained through convertible debentures. Of the Rs.7.73 crore, Rs.3.83 crore will be utilized for the modernisation of the paper unit and Rs.3.89 crore will go to the frozen food plant.

With the revamp the company's turnover is expected to touch Rs.37 crore by 1991-92 and Rs.52 crore by 1992-93.

HMG Industries	
Issue opens	: 10 April 1991
Size of Issue	: Rs.6.45 crore
To Indian public	: Rs.3.38 crore
Instrument	: 14 per cent fully convertible debentures of Rs.200 each
Promoter	: HMG group
Project	: Expansion cum modernisation.
Listing	: Bombay and Ahmedabad

Note: EPS: This represents the earnings after tax for the full year divided by the number of shares outstanding. EPS half year: after tax earnings per share for six months taking into account announced half yearly profits. PE: ratio of market price to after tax per share. Yield: dividend as a percentage of market price.

Sintex
Material Handling
Containers

Unmatched Durability and Performance

Industrial Material Handling is never easy. The ordinary bins and containers call for frequent replacement resulting in high maintenance cost.

Sintex Material Handling Containers are designed to withstand rigourous and tough working conditions while affording ease,safety and economy. Thats why they have successfully replaced the conventional Cane, Wooden,G. I. and even ordinary plastic containers.

Available in various shapes, sizes and capacities, they can also be changed to match specific situations and applications.

Gamble pays off for 23

As the market was closed on 25 January, we took the previous working day's prices to compute the results for this Investor Contest (IC337). We have 23 winners.

Scrips	Prices as on Friday 25 January 1991 (Rs.)	Prices as on Friday 22 February 1991 (Rs.)	Ranks
Asian Paints	222.50	257.50	5
Brooke Bond	125.00	136.00	6
Excel	222.50	280.00	2
Hindalco	227.50	265.00	4
Reliance	91.25	145.00	1
Tata Tea	275.00	335.00	3

Given below is a new list of six scrips, and their closing prices on 25 March, 1991. Pick the share that you think will rise the most in percentage terms by 22 April, 1991 and rank it number one. Then choose the one that you expect will rise the second most and rank it number two. Then number three, and so on till rank six. It's as simple as that!

So, in this Investor Contest, you don't have to predict the price of shares; you merely have to rank the performance (in percentage terms) on the basis of the prices you expect each to reach on 22 April, 1991. You don't have to tell us either the prices or even the percentage changes you expect — only fill in the ranks from one to six.

Please note that if you assign the same rank to two scrips, then the following one should be ranked the next consecutive number. For example, if you rank two shares at number three, the next will be number four (in which case, of course, your last rank will be five).

Rules:

1. There is no entry fee.

2. The price mentioned last in the official quotation list will be taken as correct for purposes of calculation. If the stock exchange remains closed on the stated last day, the closing price on the prior day will be used.

3. Entries must be on the printed form given below. Any other entries will be disqualified.

4. Only one entry will be permitted per form.

5. Envelopes sent in should be marked Investor Contest. All entries should be sent to: Investor Contest, **Business India**, Wadia Building, 17/19 Dalal Street, Bombay 400 001, by 5 pm, 18 April, 1991.

6. Business India's decision on the winning entries is final and binding, and no correspondence in this regard will be entertained.

7. The contest is open only to residents of India. No employee (or any direct relation of an employee) of the **Business India group of publications** is entitled to enter the contest.

8. The prize of Rs.5,000 will not be carried forward if there is no winner. In the event that there is more than one winner, the prize will be shared equally.

Name of scrip	Prices as on Monday 25 March, 1991 (Rs.)	Rank as on Monday 22 April, 1991 (please fill in number)

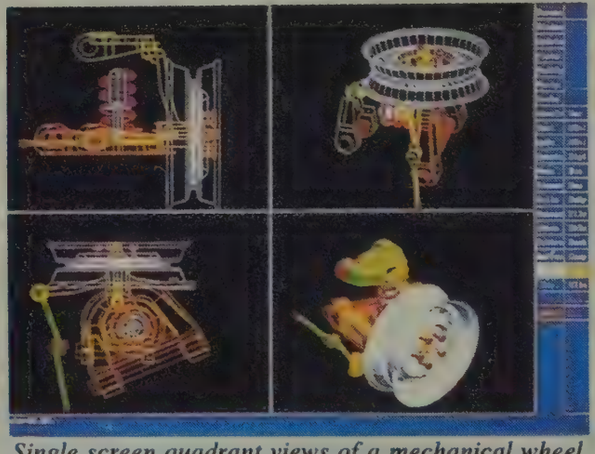
WHEN IT COMES TO POWERFUL YET COST EFFECTIVE CAD/CAM SOLUTIONS WITH A GUARANTEED GROWTH PATH NONE CAN MATCH ROLTASTATION 386/486



Shaded image of a satellite created on RoltaStation.

Condominium project designed on RoltaStation.

Shaded and wireframe 3D image of a flange created on RoltaStation.

Single screen quadrant views of a mechanical wheel on RoltaStation.

Rolta presents RoltaStation 386 and RoltaStation 486 - powerful yet cost effective entry level solutions for CAD/CAM applications.

Systems which stand out because RoltaStation 386/486 offer features unmatched by any other system.

POWERFUL...

Yes, RoltaStation 386/486, together with MicroStation — the world class 2D/3D CADD package from Bentley Systems Inc., an affiliate of Intergraph Corporation, USA — provides the right answers at an affordable price.

A true 3D CADD package, MicroStation gives you the power of more than 500 commands and features including shading and hidden-line removal to help you to enter, manipulate, view and store a variety of designs. With hundreds of 3rd party packages built around MicroStation, RoltaStation 386/486 offer cost effective solutions for Mechanical Engineering, Mapping/GIS, Architectural/ Civil & Structural Engineering and many other areas.

Industry Standard Networking capabilities enable RoltaStation 386/486 to fit easily into a variety of environment. With MicroStation, users can exploit entire range of computing resources within a network of PCs, high end RoltaStations and other workstations or minis/ main frame systems.

That is not all! MicroStation is the only CADD software which enables you to have dual screen option resulting in 8 simultaneous views including Isometric and perspective of a 3D model. This is unique to RoltaStations.

...YET COST EFFECTIVE

RoltaStation 386/486 bundled with MicroStation CADD software is available at an incredibly affordable price. Further you have a choice of configurations which can be tailored to suit your specific requirements in terms of additional memory, disk and other standard peripherals.

SEAMLESS GROWTH PATH NOT ONLY PROTECTS YOUR INVESTMENTS...

Your investments in creating design files and in training professionals are not insignificant and often exceed investments in hardware and software. This is where RoltaStation 386/486 along with powerful CADD software — MicroStation score over all other similar systems.

The design files that you create on the RoltaStation 386/486 in the MicroStation environment are 100% binary compatible with design files on the high performance RoltaStation 6000/7000 workstations.

You, therefore, have a translation free growth path for your design data-bases thus protecting hundreds or thousands of man-hours of work from loss of accuracy otherwise likely while translating design files from one format to another.

Once again, because of the common MicroStation environment in both the entry level and high performance platforms, user interfaces are consistent thereby obviating the need for re-training your most valuable resource-trained professionals.

...BUT ALSO GUARANTEES MIGRATION TO HIGH-END GRAPHICS ENVIRONMENT

And because of the seamless growth from the RoltaStation 386/486 to RoltaStation 6000/7000, you have guaranteed access to the sophisticated world of Intergraph's CAD/CAM solutions in a manner unmatched by any other entry level CADD workstations.

RoltaStation 6000/7000 workstations — the latest workstations from Intergraph — are now manufactured by ROLTA in India in technical collaboration with Intergraph Inc., USA, the world's largest company dedicated to developing and manufacturing interactive computer graphics systems.

OTHERS SELL COMPUTERS — WE PROVIDE SOLUTIONS

Whether you are a first time, or an experienced CAD user, ROLTA has an answer for your specific needs.

ROLTA provides comprehensive support & services and training to back its excellent hardware/software solutions.

An exhaustive collaboration agreement with Intergraph ensures that ROLTA has continued access to the latest developments and innovations resulting from massive R&D efforts of Intergraph — over Rs. 150 crores annually. Combined with this ROLTA's investments of more than Rs. 40 crores in manufacturing, marketing and support facilities with a team of more than 400 highly qualified and skilled people, ensures total comprehensive support to you.

For us sale is not the end but the beginning of a long term partnership.

PRESSMAN

A complex tapestry

THE PAINFUL TRANSITION: BOURGEOIS DEMOCRACY IN INDIA
By Achin Vanaik
Verso, distributed by Strand Book Stall, Bombay, pp 302, Rs.320

Contemporary India observers face the perplexing challenge of analysing the telescopic changes taking place in a subcontinent, marked particularly by the absence of any surgical intervention for change. Despite subaltern searches for micro-revolutionary models and incipient disaffection among religious, linguistic and ethnic minorities, there have been no dominant, sweeping Indian peasant, mercantilist, communist or conservative revolutions or reactions.

In his laconic elucidation of "nature-of-the-state" postulates, Vanaik indicates his work's grounding within the parameters of Marxist analyses and debate. But this also imposes a certain structural binding, for the task of weaving together contradictory and fragmentary evidence bears twin dangers: the threads can be lost in a confusing tapestry, or the highlighted reliefs may produce too simple a pattern.

His critique of inherent weaknesses, in what he describes as India's search for regional hegemony, is made contingent on South Asia's relative independence from the principal theatres of imperialism — such as Central America — and the absence of a post-revolutionary condition in the subcontinent. (The 11-year old Afghan civil war, however, has been overlooked.)

However, it is India's internal transition that constitutes the central arch of Vanaik's book. His command over frontier explorations in theories of nationalism and definitions of what groups make the ruling classes and why, provides for a deft interplay of theory and facts which the cognoscenti are well-placed to appreciate. It is likely that general readers may find themselves stranded more than once among the criss-cross tracks in the author's marshalling yard, a junction necessary for his ambitious enterprise — to synthesise diverse politico-economic elements with accompanying analyses of the roles of bourgeois democractic parties, electoral patterns, communalism and Hindu nationalism, "agencies of change" on the left, Indian non-alignment and even the quest for nuclear power.

Broad canvas

Vanaik says his book "establish(es) a case against defining India as a semi-colonial country, for defining it as a nation state and a bourgeois democracy, and against any notion that it is subordinated to that mythical creature, Soviet Social Imperialism." Though it is difficult to categorically define Vanaik's portrait of the country because of its broad canvas, he seems to point towards an uneasy tripartite ruling alliance between the economically powerful but politically weak industrial bourgeoisie, agrarian interests whose political strength outstrips their economic clout, and a hold-all *nomenklatura*, or the ubiquitous Indian class of *babus*.

According to the author, four important bourgeois democratic strands are emerging from this trinity: the continuation of plebiscitary politics; the growth of Hindu nationalism; growing federalism and decentralisation of power; and, a more 'authoritarian' democracy.

Vanaik can arguably be critqued on two key components of the Indian problematic which appear to have been disregarded. For one, he repeatedly warns against the danger of exaggerating capitalism as an instrument of progressive social change. However, he then succumbs to what the Soviet expert, V.I. Pavlov, called the methodological defect of treating the capitalist sector as a separate, self-developing entity of productive relations, capable of transforming pre-capitalist sectors and, with them, the country's whole socio-economic structure.

In depicting India as a democratic nation-in-the-making, Vanaik could have inquired if retarded 'manufactory' variants of industrialisation and allied political changes are not blocking the path to capitalism, instead of clearing the medieval cobwebs still found in many corners of the country.

Powerful obstacle

Secondly, the absence of a social purge in the Indian countryside and diluted reformist rhetoric spouted by the ruling elite has allowed entrenched agrarian interests to form a powerful obstacle to socio-economic modernisation, affecting millions of landless and marginal sharecroppers who still make up a majority of the Indian population.

In his search for the underpinnings of the bourgeois democratic state, Vanaik has perhaps neglected the startling fact that three-fourths of Indian food production never reaches markets and eight of ten villagers still take credit from moneylenders. Traditional forms of diverting agrarian surplus persist in large parts of the country where productivity has not yet registered any significant increases, and, as analysts have earlier pointed out, Indian agriculture remains what it was in the times of Akbar and Curzon — a gamble on the rains.

Conditions such as the palpable failure of attempts to commercialise agricultural relations, a weakening of landed interests and a prevention of their coalition with the urban bourgeoisie against peasants and workers, militate against sweeping democratic postulates for India.

If Vanaik had turned his critical attention to these structural constraints in the democratic path, his analysis of the expressions of disparate phenomena like the peculiar pursuit of power by the Jat community, the urge to redefine Nehruvian notions of nationalism and secularism by the Bharatiya Janata Party (BJP), and the craving among urban elite groups for market-oriented liberalisation, may have been woven together even tighter in an otherwise meticulous contribution. ■

Telling it like it is

GLOBAL WARMING: THE GREENPEACE REPORT
Edited by Jeremy Leggett
Oxford University Press 1990,
pp.554, Rs.150

The eighties saw five of the 'hottest' years of this century. There were droughts, floods, freak storms and a steady escalation of public concern. The issue of global warming came into focus at Toronto in 1988 at a conference hosted by the Canadian government and a consensus statement then spoke of effects 'second only to global nuclear war'. The UN General Assembly set up a body, Intergovernmental Panel on Climate Change (IPCC), to advise world leaders on the seriousness of global climate change.

Between 1988 and now, most governments delayed their policy decisions on emmission controls until the IPCC report. Now that it has come out, Greenpeace, the famed body of environmentalists, is sorely disappointed at the toning down and equivocation (the report does not even refer to global warming, but merely to 'potential climate change') and the lopsided suggestions. As a redressal, Greenpeace has come out with a 554-page book, which the editor, Jeremy Leggett, describes as a shadow document, and which concentrates on what should be done.

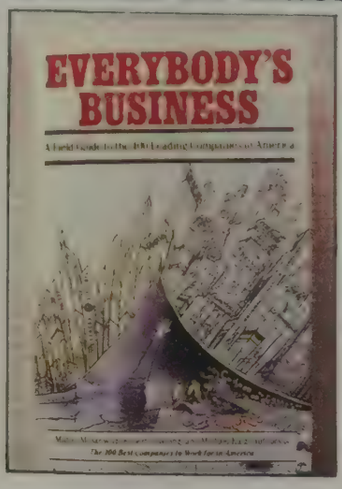
The real picture

The Greenpeace Report is a compilation of chapters written by twenty of the most eminent climate scientists and energy analysts of the world from the US, the UK, Brazil and India. "The book says what IPCC — in order to be consonant with the warnings of its own scientists' working group — should have said about how we must respond to the greenhouse threat."

There are three sections. The first one is on the science of climate change — the why of the upsurge in global warming. The second spells out some of the dreadful consequences of this warming: Holland, the Maldives, and the Bahamas could disappear with rising seas, crop failures and mass starvation become commonplace and, with ozone layer depletion, skin cancer could aggravate.

The third section, forming the bulk of the book, says what we can do about it. There are simple, ameliorating measures such as investment in renewable forms of energy and wholesale energy efficiency. They are, the book warns, unpalatable to the corporate giants who look for profits, or politicians who think only in terms of the five years they would be in office. Here, Greenpeace debunks notions such as unworkable costs of getting away from fossil fuels like coal and oil.

A remarkable chapter details how Sweden will use the options of energy efficiency and expanded role of renewables at a lower cost than in a 'business as usual' scenario. There is a chapter analysing nuclear power, another on recent commercial performance of renewable energy in the US as an index of future prospects. Kilaparti Ramakrishna, an expert in international environmental law, covers policy response in Third World countries.



Improving quality of life

When the worst efforts of the global warming unfold, all of today's decision makers will be dead and gone. Twenty experts' views have been put together in this book in the hope that we do not mortgage the future of our children and so that our planet may not join those that are devoid of life. The contribution of this book is to argue convincingly that responses to this threat "need not involve dramatic cuts in standards of living... (but) improving quality of living for all."

"The uniquely frustrating thing about global warming... is that the solutions are obvious. But there is no denying that enacting them will require paradigm shifts in human behaviour, particularly in the field of cooperation between nation states — which have literally no precedents in human history. That is the challenge for the nineties," concludes this positive book's editor Jeremy Leggett.

■ ARUN BHATIA

Touch of class

EVERYBODY'S BUSINESS
Edited by Milton Moskowitz, Robert Levering, and Michael Katz Doubleday, 1990 Distributed by Book Channel, pp. 732, Rs.416.25

A compilation of facts and figures about the 400 largest companies in America, *Everybody's Business* concentrates on the big ones for their sheer influence on American life. Not only do their products dominate markets, 20 million Americans depend upon them for their pay cheques. A common link perceived in the profiles of these companies is the changes they have undergone over the last decade — changes in ownership, product profiles, company names, salaries of top executives...

The companies have been subdivided under 73 different industry heads. While obvious background information and financial indicators have been meticulously detailed, the companies have also been judged on their workplace practices and labour relations and their track records in the sphere of social responsibility.

Tibits give the book a delightful touch. This does not group it with other corporate jargon-filled statistical treatises. For instance, Leo Burnett gifts 500,000 apples a year — every reception area of the advertising giant all over the world has a bowl of apples free for the taking. The Boeing plant at Everett, Seattle, is the world's largest enclosed space. It is taller than a 11-storey building, is half a mile wide, as long as 40 football fields and supervisors need to use binoculars!

Rarely does one come across a book, packed with entertainment reading, that also serves as a good reference guide. *Everybody's Business* belongs to this rare class.

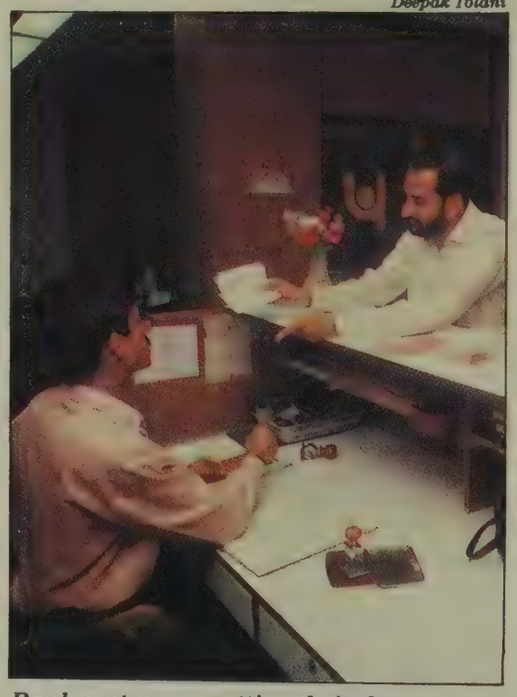
■ RAJU BIST

Ensuring quick relief

Back in 1983, the Bunder branch, Mangalore, of the Indian Overseas Bank impounded a personal amount legitimately belonging to a widow. The bank's justification was that her late husband owed it money. The widow sued and after long litigation, the court ordered the bank to pay her the amount.

The bank refused to pay up on the plea that it proposed to challenge the ruling in the high court. The widow had to obtain a court order for the attachment of bank property to recover the amount. Appropriately enough, the court ordered attachment of the branch manager's chair and typewriter as symbolic of the abuse of authority. Only after the seat got too hot for the branch manager did money come the widow's way!

This case is a classic example of how a consumer is put to inconvenience due to the absence of a special forum for redressal. However, this situation is now changing. This is attributable partly to the setting up of consumer redressal bodies nationwide, under the pathbreaking Consumer Protection Act (COPRA) 1986. Though criticised initially by consumer groups which said that it lacked teeth, the Act has in recent times proved to be surprisingly effective. Says M.R. Pai, of the All-India Bank Depositors Association, "The consumer courts do hand out quicker redressals, and are a good thing."



Far-reaching implications

Two recent judgements with far-reaching implications for the banking industry, have borne this out. In the first case, a locker at the Punjab National Bank's (PNB) Goregaon branch in Bombay, belonging to an account holder, K.B. Shetty, was found to have been emptied of ornaments worth more than Rs.1 lakh. PNB refused to make any compensation for the missing ornaments, claiming that it was not supposed to know the contents of the locker, and as a lessor, it had no responsibility or liability of any kind for the loss sustained by the lessee.

Shetty took up the matter with the Consumer Disputes Redressal Commission set up in Maharashtra under COPRA. And the commission dismissed PNB's claim, ruling that under COPRA, the relation between the bank and the customer is one where the customer is entitled to certain services from the bank. When there was negligence on the part of the bank, the complainant was entitled to compensation. The commission consequently ordered PNB to pay Rs. 1.26 lakh towards the cost of jewellery and 18 per cent interest on the amount for nearly 32 months — the period between the date of the detection of the theft and the compensation order.

The point in Shetty's favour is that the commission is a quasi-judicial body and as such is guided by the principles of natural justice. The commission was convinced of the authenticity of Shetty's claim, which was based on a valuation made for income tax purposes a month before the deposit. Shetty's claim could have been false, but it is the element of subjectivity allowed to the commission that tilted the scales in his favour. Says Arjun Chawla, regional manager, PNB, "With our losing the case, there will be a spate of similar cases now."

Deepak Tolani

Bank customers: getting their due

The objective of COPRA is to provide quick relief to the consumer. This is achieved by making procedures simpler than they are in a normal court of law. In fact, it is not even necessary to have a lawyer to represent him.

Shirish Deshpande of the Mumbai Grahak Panchayat, an active Bombay consumer organisation, cites the example of a consumer who could not even afford to go to the National Consumer Redressal Commission, based in Delhi, for the hearing. The case was decided in his favour on the basis of a written statement accompanied by the relevant documents. Disposal of cases by these redressal bodies is certainly both cheaper and faster than the normal legal channels.

The Act has also invited criticism. One of these is that "deficiency of service", which is one of the grounds for complaint under the Act, is a vague term, as no objective standard for judging service has been set. According to one banker, this sort of ambiguity leaves them vulnerable to unnecessary and possibly coercive litigation.

How much damage?

By the very nature of banking services it is sometimes difficult to quantify the damage caused to the customer by a deficiency in service. This has been elucidated in a case involving the Bank of Baroda (BoB) in West Bengal.

The bank's branches could not provide services to their customers in September and October 1987 due to a strike by some of its employees. In this case, the bank itself could do very little apart from persuading the employees to go back to work.

Subsequently, in a case filed by the Calcutta chapter of the Consumer Unity and Trust Society, a consumer body, against the bank, the compensation claim of Rs.110 crore was rejected by the commission. This was because the consumers could not explain how the compensation figure was arrived at. The commission however ordered that any bank receiving notice of a strike by its employees should make an announcement to that effect in the newspapers. This would benefit its customers, as it would allow them to make contingency plans.

According to Deshpande, "The consumer and the consumer bodies need to be well informed about the laws and procedures. Additionally, they must be well prepared with their cases." For instance, a case that came up before the national commission could not be heard, as the matter was already pending in the criminal court. Again, in another case, the national commission dismissed the complaint as the permissible period for legal action under the law of limitations had lapsed.

But for those who are well prepared, the four-year-old COPRA seems to be working wonders.

■ GEORGE ALBERT and SARAH ABRAHAM

Testing time for executives

Many organisations are actively involved in changing their executive appraisal systems. Interestingly, a good number of these are from the public sector — Indian Oil, BHEL, SBI, NDDB and IFFCO. Unlike the confidential report systems used in the past, the new systems are intended to help executives plan their performance systematically every year and review it either mid-term or at the year end. They are also aimed at making appraisees play an active role in planning their own performance. Thus self-appraisal is considered an essential step before the final review by the appraiser.

In devising this new system, organisations have made several assumptions. One is that performance planning will bring role clarity and that the participative process will increase job-satisfaction. Such appraisal systems are also expected to make promotion decisions more objective and make managers more accountable.

Assumptions uncertain

Most of these assumptions may be valid. But the appraisal systems assume that executives are both capable and motivated to find time to undertake them; that organisations on their part, support such heavy time investments by their executives. Unfortunately, this assumption may not hold good.

Some managers tend to be highly obsessed with promotion policies. They believe that competent people are ignored and conclude that unless biases in the minds of people are removed, appraisal systems will not succeed. They are not convinced that a participative system can reduce such biases.

Some managers don't take appraisals seriously because they believe that they are superstars. In their view, they are planning and reviewing the performance of their subordinates on a daily basis and that the system is merely a formality

Another category is the type that are excellent crisis managers. They create pressure for themselves by doing everything themselves. They are highly insecure and feel powerful in a high work-pressure culture. Since they are busy, they cannot find time for the appraisal of their subordinates. "There is so much to do, where is the time to plan or appraise others?" they ask. These executives blame the organisation for their heavy work loads.

Then there are those managers who have the ability to execute excellent appraisals but are not motivated to do so as they expect little from this exercise. Often, their unwillingness is attributed to their subordinates or their bosses. Their argument runs thus: "My boss has not appraised my performance properly. He has not given time for me so what is the point in my giving time to my subordinates?" Some managers don't take appraisals seriously because they believe that they are superstars. In their view, they are planning and reviewing the performance of their subordinates on a daily basis and the system is merely a formality.

Another group of executives always has its eyes set on top management. They keep saying, "Do you think that the top management is really committed to the system?" Their interest ends at this point. There are only a few executives who are sincere enough to make it a point to spend time with their subordinates and help them develop.

Great fanfare

Organisations that have begun changing appraisal systems have done so with great fanfare. They appoint task forces, orient executives to new systems through painstakingly arranged orientation-workshops where the chief executive makes it a point to personally address each group. Unfortunately, they believe that orientation-workshops alone can do the magic. In these organisations the effort is short lived and dies primarily due to lack of nurturing. The amount of attention needed from the personnel or HRD department is much greater after the appraisal system is put into place than at the time when it is just introduced.

If appraisals have to achieve their objectives, continuous monitoring and renewal is required. It is a good practice to review the implementation process periodically — say, once every three years — and rejuvenate the system. Personnel and HRD managers responsible for monitoring appraisal systems should not be burdened with any other task. It is desirable to have at least one personnel executive in charge of the appraisal and developmental needs of a group of 150 to 200 executives. But that is not usual.

Besides executive time, another bottleneck that prevents appraisals from being effective is the nexus they have with promotions. This link can kill an appraisal system. No matter what an organisation does, promotion policies are controversial. By linking appraisal data to promotions, organisations ensure that promotions influence appraisal data.

If appraisals have to achieve their objectives, continuous monitoring and renewal is required. It is a good practice to review the implementation process periodically and rejuvenate the system

Some appraisal systems evolved recently are excellent in their intent. But the moment the appraisal process is expected to end with numbers, its true worth is never realised. To reduce the entire year's work or performance (or even non-performance) of any employee into a few numbers is difficult and undesirable.

It is difficult because the numbers are not comparable between departments, appraisers and functions. It is undesirable because it may be misleading to a person who is not involved in the process. If good performance is to be rewarded, it is useful to equip every appraiser or reviewing officer with the ability and resources to reward and motivate good performance. Such decisions can be taken also on qualitative data which respect the individual and his contributions rather than reduce him to a number on a ratings scale.

The author is professor of organisational behaviour at the Indian Institute of Management, Ahmedabad

Senior executive positions

A compilation of executive jobs advertised in **Business India** and other major publications between 11 and 24 March 1991.

THE FOUR BEST JOBS

- CHIEF EXECUTIVE (Plastic & Rubber Products) * Calcutta * *Sal* Rs.3 lakh gross * *Age/Qlfn* NS * NS * *Reqd* Experience of turnaround situation in V-belt industry * *Cont* CEC/BPA/3060, B.P. Agrawal, Chairman, ABC Consultants P Ltd, 43/3 Hazra Road, Calcutta 700019 (ToI - 11.3)
- FINANCIAL CONTROLLER * Nigeria * *Sal* Saving Rs.3-4 lakh * 35-40 years * *Age/Qlfn* CA/ICWA * *Reqd* 10-15 years experience in industry including 5 years at a senior level * *Cont* SM/F-4160, Datamatics Staffing Services, P.B. No.106, GPO, Bombay 400001 (BI - 18.3)
- MANAGING DIRECTOR * Bombay * *Sal* Attractive * *Age/Qlfn* 42-48 years * Preferably a chemical engineer/agriculture science graduate * *Reqd* Proven track record of handling profit centre responsibilities in the agrochemical/fertiliser industry * *Cont* MPAC/BPA/3070, B.P. Agrawal, Chairman, ABC Consultants P Ltd, 43/3 Hazra Road, Calcutta 700019 (S - 17.3)
- CHIEF EXECUTIVE * Orissa * *Sal* Attractive * *Age/Qlfn* NS * Sugar technologist * *Reqd* Minimum 25 years experience * *Cont* The Managing Director, Khoday Distilleries Ltd, Brewery House, 7th Mile, Kanakapura Road, Bangalore 560062 (BI - 18.3)

NATIONAL

- VICE-PRESIDENT (Construction Division) * NS * *Sal* NS * *Age/Qlfn* Around 35 years * Civil engineer * *Reqd* 12 years relevant experience including 5 years at senior position * *Cont* Shree Management Services, 32 K. Dubash Marg, Above Tradewings, Kala Ghoda, Fort, Bombay 400023 (ToI - 11.3)
- GENERAL MANAGER (Sales) * NS * *Sal* Attractive salary + car + perks * *Age/Qlfn* 40-45 years * Science degree * *Reqd* 10 years experience in sales and marketing nationally * *Cont* Box J 554-S, Times of India, Bombay 400001 (ToI - 18.3)
- ASSISTANT GENERAL MANAGER (Quality Control) * NS * *Sal* NS * *Age/Qlfn* * Graduate or post-graduate metallurgy engineer * *Reqd* 15 years experience in the steel processing industry * *Cont* CMP/A/2058, Datamatics Staffing Services, Post Box No.106, GPO, Bombay 400001 (ToI - 18.3)

WEST

- ASSISTANT VICE-PRESIDENT (Manufacturing) * Western India * *Sal* NS * *Age/Qlfn* Less than 45 years * Chemical engineer * *Reqd* Experience in making detergents, soaps, cosmetics, fine chemicals * *Cont* Pratibha Sheth, Executive Director, Shilputsi Consultants, P B No.9386, Bombay 400026 (ToI - 11.3)
- GENERAL MANAGER (Materials) * Pune * *Sal* Best in industry with perks * *Age/Qlfn* Around 35 years * Engineers preferably PG in material management * *Reqd* 10-12 years experience in material management function in hi-tech electronic industry * *Cont* J.M. Rao, Vice-President (HRD), International Computers India Manufacture Ltd, Nagar Road, Pune 411014
- GENERAL MANAGER (Sales and Operations) * Mulund, Bombay * *Sal* Attractive with perks * *Age/Qlfn* 35-40 years * NS * *Reqd* Manufacturing and marketing experience * *Cont* Managing Director, Schrader-Scovill Duncan Ltd, Mulund Bombay 400080 (ToI - 11.3)

NORTH

- MARKETING DIRECTOR * Delhi * *Sal* Attractive * *Age/Qlfn* Around 45 years * MBAs from a premier institute * *Reqd* 15 years relevant experience, including 5 years at all-India level * *Cont* MS/4982, A F Ferguson Associates, Hansalaya Barakhamba Road, New Delhi 110001 (ToI - 11.3)
- GENERAL MANAGER (Sales) * New Delhi * *Sal* Rs.2 lakh * *Age/Qlfn* NS * MBA * *Reqd* 7 years senior managerial experience in selling consumer durables/light engineering goods in competitive market * *Cont* Shanti Consultants P Ltd, 3/12 Asafali Road, New Delhi 110002 (HT - 11.3)
- VICE-PRESIDENT (Finance & Company Secretary) * New Delhi * *Sal* NS * *Age/Qlfn* 40 years * CA & CS * *Reqd* 15 years experience of which 5 years in a senior managerial position in finance and secretarial department * *Cont* VP/DEL/1182, ABC Consultants P Ltd, 209, Meghdoot, 94 Nehru Place, New Delhi 110019 (HT - 17.3)
- GENERAL MANAGER (Exports) * Delhi * *Sal* Rs.3 lakh * *Age/Qlfn* 35-45 years * NS * *Reqd* NS * *Cont* MEH/BPA/3063, B.P. Agrawal, Chairman, ABC Consultants P Ltd, 43/3, Hazra Road, Calcutta 700019 (BI - 18.3)

SOUTH

- SENIOR MANAGER (Funds) * Madras * *Sal* NS * *Age/Qlfn* NS * Chartered Accountants or MBA (Finance) * *Reqd* 10-12 years experience in project formulation, managing public issues etc. * *Cont* The General Manager (HRD), EID Parry I Ltd, 234 NSC Bose Road, Madras 600001 (ToI - 11.3)
- GENERAL MANAGER (Finance & CS) * Madras * *Sal* Attractive * *Age/Qlfn* 40-45 years * CA * *Reqd* 10-15 years experience at senior levels in a manufacturing organisation * *Cont* MS/4395, A.F. Ferguson Associates, P.B. No.1261, Madras 600034 (BI - 18.3)
- FINANCE DIRECTOR * Hyderabad * *Sal* NS * *Age/Qlfn* 40 years * NS * *Reqd* 10-12 years experience at a senior level * *Cont* The Managing Director, SIRIS Ltd, L.B. Nagar, Hyderabad 500963 (H - 23.3)

OVERSEAS

- VICE-PRESIDENT (Technical) * Bangkok * *Sal* Excellent terms * *Age/Qlfn* NS * Chemical engineers * *Reqd* 12-15 years experience in identifying and implementing large projects relating to ethylene oxide/glycol pentaerythritol and other chemical projects * *Cont* A.F. Ferguson & Co, P.O. Box 1786, Bombay 400001 (ToI - 17.3)
- FINANCIAL CONTROLLER * Middle East * *Sal* NS * *Age/Qlfn* NS * Professional qualifications * *Reqd* 15 years relevant work experience especially in an EDP environment * *Cont* J.P. Kapur & Uberoi, 806 Meghdoot, 94 Nehru Place, New Delhi 110019 (ToI - 17.3)

Executive positions

TOI — Times of India; *IE* — Indian Express; *H* — The Hindu; *S* — Statesman; *HT* — Hindustan Times; *ET* — Economic Times; *Econ* — Economist; *BI* —Business India

NATIONAL

- AREA MANAGER * North India * *Sal* NS * *Age/Qlfn* 28-32 years * Graduate * *Reqd* Minimum experience of five years in marketing, preferably in consumer durables * *Cont* The HRD Manager, Indian Sewing Machine Co. Ltd, 3 Devika Tower, 6 Nehru Place, New Delhi 110019 (HT - 11.3)
- PRODUCTION EXECUTIVE MANAGER * Hyderabad * *Sal* NS * *Age/Qlfn* 25-30 years * Graduates, preferably with MBA * *Reqd* 3-5 years sales/marketing experience in consumer durables * *Cont* The Corporate Personnel Managers, Bakelite Hylam Ltd, Surya Tower, 3rd Floor, 104 Sardar Patel Road, Secunderabad 500003 (HT - 14.3)

OVERSEAS

- FACTORY MANAGER * Cameroon * *Sal* Saving US$ 12,000 pa + * *Age/Qlfn* NS * Graduate electronics/electrical engineers * *Reqd* 10-15 years of maintenance production experience ideally in paper/plastic units * *Cont* Datamatics Staffing Services, P.B. No.106, GPO, Bombay 400001 (ToI - 17.3)
- PLANT MANAGER * Saudi Arabia * *Sal* NS * *Age/Qlfn* NS * Degree in chemical engineering * *Reqd* 10 years experience in production and maintenance of chemical plants * *Cont* Jerry Varghese Consultants, 313, Dalamal Tower, Nariman Point, Bombay 400021 (ToI - 17.3)
- PRODUCTION MANAGER * Mauritius * *Sal* NS * *Age/Qlfn* * Mechanical/industrial engineers * *Reqd* 10-15 years production management experience * *Cont* RJC/F-4178, Datamatics Staffing Services, Eucharistic Congress Building III, 5 Convent St, Colaba, Bombay 400039 (ToI - 24.3)
- QUALITY CONTROL CHIEF * Uttar Pradesh * *Sal* No constraint * *Age/Qlfn* NS * Metallurgical engineer * *Reqd* 10 years relevant experience * *Cont* HQC/DEL/1183, Col. V.P. Gulati, ABC Consultants P Ltd, 209 Meghdoot, 94 Nehru Place, New Delhi 110019 (ToI - 11.3)

Reliance Industries Limited

Reliance Group – a phenomenon of the Indian Corporate World invites correspondence from:

TOP-MANUFACTURING-PROFESSIONALS

of large Petrochemicals/Fertilizers/Allied Industries to take charge of a challenging and exciting assignment as

PRESIDENT

(RELIANCE PATALGANGA OPERATIONS)

THE SITE: Located in Dist. Raigad, about 60 kms.from Bombay, the site houses most modern manufacturing complexes of Integrated Petrochemicals, Polyesters and Detergent Intermediate plants with investments over Rs. 2000 Crores. Spread over 200 acres, it includes 85,000 tpa Paraxylene (UOP technology), 100,000 tpa PTA (ICI technology), 60,000 tpa LAB (UOP technology), 50,000 tpa PSF (Dupont technology), 50,000 tpa POY (Dupont technology) besides a mammoth operating infrastructure & utilities, generating a turnover of over Rs. 1800 Crores. The company has embarked upon a HRD plan for its employees (over 3000 in strength) and enjoys healthy industrial relations.

THE JOB: The incumbent reporting to the Executive Director, will assume overall independent charge of the complete site and be responsible for entire gamut of activities that comprise Manufacturing Site Management. He will personally lead a team of manufacturing and non-tech VPs and functional GMs in areas of Petrochemical Manufacturing, Fiber Manufacturing, Technical services, Engineering & Maintenance, P&A, Works Accounts, MIS and Corporate Relations – to achieve profitable, efficient and state-of-the-art manufacturing operations.

Emphasis in the near future will be on substantial capacity expansion and sound organisation building by installing Institutionalised manufacturing systems in all functional areas including non-technical, providing personal leadership and technical guidance.

THE MAN: The President will be in his early mid-50's and will have a proven record of efficiently running a large manufacturing site – perferably capital intensive like fertilizers, refineries plants. Though a technical professional will be preferred, a non-technical leader with sufficient engineering appreciation can also be considered.

THE FUTURE: After a challenging stint, successful incumbent can look forward to more exciting opportunities in the renowned Reliance Group in Group Manufacturing/Projects/Corporate Planning etc.

THE COMPENSATION: We are looking for a person to join the Management "Family" of the Group and not a 'job'. The compensation and rewards will therefore be the best the Indian industry can offer. Besides housing commensurate to status and cars, the company of course has usual benefits like PF, Bonus, LTA, Medical, Superannuation, Gratuity, etc.

Applications clearly stating qualifications, age, contact telephone numbers, name/size/nature of companies worked for, etc.should be sent in 10 days in envelope marked "Confidential – Code 145" to:

Mr. Mukesh D. Ambani
Executive Director
Reliance Industries Ltd.
Maker Chambers IV, 222 Nariman Point, Bombay 400 021.

Where growth is a way of life

Mudra: B: RIL: 899

Our client is an established **MANUFACTURING AND INTERNATIONAL TRADING COMPANY** with a number of **OFFICES OVERSEAS** and **EXPORT OPERATIONS** in over Forty Countries involving **EXPORT** of **ENGINEERING, TEXTILES, LEATHER, CHEMICALS AND PHARMACEUTICAL PRODUCTS.** The Company is poised for expansion and seeks the following dynamic and result oriented Senior Personnel to be based at **NEW DELHI.**

VICE PRESIDENT-EXPORT
(AGRO COMMODITIES)

The job would involve Management of Procurement and Export of Agricultural Produce; and in particular Indentification of Products and Sourcing in India and Development of Business in existing as well as new Export Markets. A formal qualification in Agricultural Sciences together with a Degree in Business Management or Foreign Trade is essential. Atleast 15-20 years proven experience in Sourcing and Marketing of Agro Products such as De-Oiled Cakes, Tea, Coffee, Tobacco, Spices and Canned Vegetables and Foods etc. would be preferred. Leadership Skills, a Dynamic and Result oriented approach and proven track record are important attributes for the job.

IDEAL AGE : 40-45 YEARS.

VICE PRESIDENT-EXPORT
(ENGINEERING PRODUCTS)

The job would involve heading the International Marketing acitivity of an immensely successful operation involving Export of Engineering,Transportation and Construction Equipment; and Industrial Raw Materials, Chemicals, Pharmaceuticals etc.. An aggressive Personality, Leadership Qualities, Sound Experience in managing the organisation are essential attributes for the job. An Engineering qualification together with a Degree/ Diploma in Business Management or Foreign Trade would be preferred.

IDEAL AGE : 40-45 YEARS.

DY. GENERAL MANAGER-EXPORT
(TEXTILES)

The job would involve indentification of Exportable Yarns and Fabrics, their Sourcing, as well as development of existing and New Export Markets. Proven experience with a sound knowledge of the Textile Industry, Quality Parameters and procurement as well as a successful record in Export Marketing with leading Textile Mills of Export Houses would be essential attributes for the job. A qualification in Textiles Technology/Engineering together with a Degree/Diploma in Business Management or Foreign Trade would be preferred.

IDEAL AGE : 35-40 YEARS.

THE REMUNERATIONS WOULD NOT BE A CONSTRAINT FOR THE RIGHT CANDIDATES.

Please apply within ten days to :

RESOURCES MANAGEMENT ASSOCIATES
GF-12A, Meghdoot, 94, Nehru Place, New Delhi-110 019.
Phones : 6410255, 6441795, 6429165, 6429193, 6420773

VICE PRESIDENT
HUMAN RESOURCES DEVELOPMENT

Bombay

Attractive remuneration package + Housing & Car with Driver

MAFATLAL INDUSTRIES LIMITED is a conglomerate with wide-ranging interests in a variety of manufacturing industries and services. Along with its associate companies, Mafatlal Industries intends to develop and expand its current enterprises. The Group is also entering into new activities which offer considerable potential for growth.

This requires a coordinated approach to the acquisition and development of human resources with a wide variety of skills and attributes. The Group is therefore looking for a senior HRD specialist to head this function at the Corporate level.

The incumbent will be required to formulate a strategy for organisational development, bearing in mind the characteristics and identities of the individual enterprises and establish and monitor appropriate policies and systems for all man-power planning, recruitment, training and development activities for the Group. He will report directly to Mr. H.A. Mafatlal.

Candidates should have senior level HRD experience preferably in a multi-unit/multi-division situation. An appropriate specialist academic qualification will be an advantage.

Preferred age: around 45 years.

Applications in strict confidence should be sent within a fortnight to:

DR. R. BANERJEE

CONSINDIA

PRIVATE LIMITED

"Anand Ashram", 2nd Floor, 22, Pandita Ramabai Road,
Gamdevi, Bombay 400 007.

Reliance Industries Limited

Reliance Group – a phenomenon of the Indian Industry, invites correspondence for appointment as:

VICE PRESIDENT

(Non Tech)

at its

PATALGANGA MFG. SITE

to head

COMMERCIAL – F&A – EXCISE & CUSTOMS – P&A – LEGAL – MIS – HRD – SECURITY, ETC.

THE SITE: Located in Dist. Raigad, 60 kms. from Bombay, Reliance Patalganga site houses the most modern Industrial Complexes, integrating latest technologies in Petrochemical & Polyester plants, in technical collaborations with World Leaders like Dupont, UOP, ICI etc.; having an investment of over Rs. 2,000 Crores & turnover of over Rs. 1,800 Crores per annum.

Spread over 200 acres, it employs over 3000 motivated, relatively young employees directly, besides approx. 1000 odd employees of Contractors on assignments.

Support infrastructure to manufacturing includes – large warehouses for solids, tank farms for liquids, bonded ware house (CWC), 5 canteens and a posh guesthouse, a fleet of over 30 contract run buses on about 15 routes, about 100 cars, housing colonies with over 1000 houses, state of the art Super Mini Computers network in an "online environment" with over 100 Terminals, large security force, etc.

THE JOB: Reporting to the President, the incumbent will assume overall charge of all non Technical functions to render effective support to his counterpart i/c of mfg. ops. He'll lead and guide a group of Senior functional managers in areas of Works Accounts, Personnel-IR-Admn. Services, Commercial including Warehousing Despatch with related Excise matters, MIS, Security, Corporate and Local relations, Legal, etc.

Emphasis in near future will be on implementation of Institutionalised Operating Systems in all above areas and Organisation Building for long term stability and succession.

THE MAN: In late 40's – early 50's, applicants should have very strong Commercial & Administrative acumen with demonstrated leadership qualities. The person we are looking for will be a Generalist, ideally with a Finance background. A strong Personnel professional with experience of controlling finance/accounts at large mfg. sites, will also be considered.

THE FUTURE: After proven success on the job, he can look forward to either heading the whole site OR move to Corporate responsibilities in non Tech areas for the entire Reliance Group of Companies.

THE COMPENSATION: Besides usual perks like House, chauffeur driven cars, etc. monetary compensation and rewards will probably be the best in the Industry and will serve as an adequate incentive to even well settled Sr. Professionals. The Co. has usual benefits like PF, SA, gratuity, medical, LTA, etc.

Applications clearly stating experiences, relating to the above areas of proposed responsibilities besides age, qualifications, name/size/nature of Cos. worked for etc. should be sent in 10 days clearly marking the envelope with code 146 to:

Group Sr. Vice President (MSD)
Reliance Group of Companies
Maker Chambers IV, Nariman Point, Bombay 400 021

Business India, 59 Regal Building,
Connaught Circus, New Delhi 110 001.

TO OUR POTENTIAL DIRECTOR AND FACULTY WE OFFER A MOST UNUSUAL PERK.

THE CHALLENGE TO BUILD AN INSTITUTION.

Rarely, very rarely in academic climes comes a chance to not merely teach a course, but to chart a new one.

A rare challenge to build a premier institute. Brick by brick. Course by course. Student by student.

Such a challenge is MICA - Mudra Institute of Communications, Ahmedabad.

MICA

Sponsored by the Mudra Foundation for Communications Research and Education, MICA is the result of a concerted effort by the communications and advertising industry to address its growing and complex needs.

Amongst its foremost objectives is to provide a nurturing ground for talented youngsters who wish to join the profession.

And with our faculty would rest the challenging task of tailoring and conducting courses tuned to their special needs.

Initially, MICA would offer courses in Copywriting, Visualisation, Client Servicing and Media Planning. Seen, till now, as vital inputs in urban brand advertising, MICA would attempt to give these skills a broader perspective. One which includes the largely uncharted but important fields of social and rural communications.

To this end, MICA would also offer specialised courses in Social Marketing and Communications, and Rural Marketing and Communications.

Unique, as the above courses are, they would call for equally unique methods of learning.

At MICA, students would learn in a simulated typical agency atmosphere. On real briefs for real products from real clients. The approach would be inter-disciplinary. And a significant part of the one – year and short-term programmes would be devoted to providing hands-on experience. In video, film, marketing, research, planning, rural and social communications, etc.

But all this, we believe would just be the beginning. And building up the institute would depend largely on our faculty's skill and commitment. For which MICA will provide them the all-important tools.

Like a free hand to experiment, innovate and improve.

The chance to conduct short-term workshops, seminars and collaborate with industry professionals.

An opportunity to seek and perfect new methods of instruction and learning.

And an atmosphere congenial to individual growth and the spirit of enterprise.

In coming years we see MICA as a truly complete institute of communications. With courses embracing all its varied disciplines.

This then, is our dream. And we are looking for people who'll shape it into reality.

DIRECTOR

A visionary, our director would steer MICA to the pre-eminent position of the best communications institute in Asia. As executive head he would provide overall direction to the institute, and would have the ability to draw and nurture talent. Ideally, he should have a good post graduate degree and a rich, varied experience in marketing and/or advertising industry, or teaching or academic research in communication/marketing related areas.

FACULTY

The institute requires core faculty as professors/associate professors/ assistant professors in the areas of marketing, advertising, research, media, graphic arts, copywriting, and social and rural communications. Basic post-graduate/doctoral qualification and a significant industry experience and/or teaching experience would be essential.

MICA
MUDRA INSTITUTE OF COMMUNICATIONS AHMEDABAD

ople interested in the above posts may please write to or contact : **R.C. Chib,** Project Co-ordinator, CA 'Mudra House', Sheth C. G. Road, Ellisbridge, Ahmedabad-380 006.

The Institute of Management Consultants of India (IMCI)

needs an

EXECUTIVE DIRECTOR

IMCI is the apex body of management consultants in India and the first Institute from Asia to be affiliated to the International Council of Management Consulting Institutes – ICMCI, London. IMCI is a successor to the Management Consultants' Association of India, founded in 1963.

The Executive Director of the Institute, who will be based in Bombay will be administrative head of the Institute and will be required to implement its policies and activities as set out by the Executive Council, the highest executive body of the Institute, to whom he will report.

The activities of the Institute include organising programmes, seminars and other means of creating general awareness of the role of management consultants and of training and development of management consultants, widening its membership base and enforcing its code of ethics.

A candidate should be a person who has held senior executive positions in Government or in industry, preferably who has worked in the area of consulting for at least 3 years, or a senior management consultant who would now like to devote time and effort to the development of the profession. There is no age barrier. No accommodation can be provided.

So, if you have a management background, the health, energy and enthusiasm to make a significant contribution to a young but rapidly growing profession, write in strict confidence (within 10 days) to:

The President
Institute of Management Consultants of India
Centre 1, Unit 2, 11th Floor, World Trade Center
Cuffe Parade, Bombay 400 005.

Four of, perhaps, the most challenging positions in the software industry.

MASTEK are among the top 10 software houses in India, and one of the fastest-growing.

We employ over 300 professionals in 7 offices in India, one in Singapore and project offices in Australia and the US. These professionals have helped make us a force to reckon with in custom software, packaged software, RDBMS and offshore software development.

We anticipate an accelerated rate of growth over the next few years, and are in the process of restructuring the company to manage this. The restructuring calls for the creation of new positions to take over areas of responsibility and authority that have, until now, been handled by top management.

These positions are important to the company's continued growth. The persons filling them will be expected to operate with a high degree of independence, while enhancing our existing reputation for world-class products and service.

Regional Software Development Managers, at Bombay/ Bangalore/Madras/Delhi

As Regional Software Development Manager, you would be expected to take charge of development implementation of turnkey projects and offer RDBMS based solutions to large clients. You would deal with high-value application software. You should have 5-7 years' experience in Software Development in areas like Manufacturing Management, Finance,and Banking. Additionally, if you are an MBA from any IIM, XLRI, then so much the better.

Regional Sales Managers, at Bombay/Bangalore/ Madras

The incumbents would be expected to handle sales and support services, of one line of business independently, for the full Region. Our lines of business include Ready-made Packages, Topview, Customised Software, Ingres, etc. He should have 5-7 years' experience in Marketing, perferably in the Computer Industry.

Manager - PR & Communications, at Bombay

The person would be responsible for developing a PR strategy targetted at the computer industry, customers, potential employees and press. He would also be in charge of communication through house journals, ads, etc. He should have similar experience in Industry/PR firms or be a journalist looking for new avenues.

Consultant - Manufacturing, at Bombay

The incumbent will be expected to offer high level consulting to organisations for improving the efficiency of manufacturing operations through implementation of our higher end software products developed around Relational Databases covering various aspects of manufacturing operations.

In order to operate successfully, the candidate must have a minimum of 5 years' experience at a senior level in manufacturing operations of a large industry, and should have been associated with computerisation activities in the manufacturing area.

Remuneration will be comparable to the best in industry. Please send a detailed resume, marking the name of the post applied for on the envelope, to R. Sundar, Director-HRD, MASTEK Pvt. Ltd., 411 Unique, Veer Savarkar Marg, Prabhadevi, Bombay 400 025, within 15 days.

Kale Consultants Pvt. Ltd. (KCPL) is a leading software house in the country. Recognised as the No. 1 company in the areas of IT solutions for Health-Care, Banking, Hotels and UNIX-based on-line systems - KCPL is looking forward to a quantum jump in growth.

KCPL has a rich heritage in undertaking turnkey software contracts for the service segments. It has been witnessing a steady growth in the export market in its specialised segments. KCPL solutions have also acclaimed recognition in countries like Germany, U.S.A., Switzerland and Malaysia.

KCPL invites professionals in the software and marketing areas to transform its vision into reality and in return offers you the opportunity to be part of the action!

Regional Managers

(Bombay, Delhi, Bangalore, Calcutta)

They would head a team of professionals and would oversee marketing and successful management of the projects in the region. The candidate would be B. Tech./M.B.A./CA/Post Graduate with more than a decade of experience in Software Development/Consultancy/Marketing & Client Interaction. He should have a minimum of five years experience in a senior managerial position in the Information Technology industry.

Project Managers

(Bombay, Delhi, Bangalore, Calcutta, Pune)

We are in the process of installing integrated, on-line software solutions for banks, hotels and hospitals. These turnkey projects offer challenges for single point project management responsibility from start-to-finish. Excellent analytical and communication skills, meticulous planning and coordination ability are essential pre-requisites. Experience in the area of applications - hotels, hospitals, banking - would be an added advantage. We need B. Tech./M.B.A./CA/Post Graduates with 5-10 years experience in software development or management. He should have a minimum of two years experience in handling project responsibilities.

Systems Analysts

(Bombay, Delhi, Bangalore, Pune)

Would lead a team of programmers/assisting system professionals, to undertake System Development/Design and installation of various software solutions. Candidates should have a minimum of 5 years experience in software development of on-line systems in UNIX, C & RDBMS environments.

These jobs involve travelling, a total commitment to project success and a result oriented work culture. The salary and benefits would be in-line with the best in the industry.

A. F. Ferguson Associates
Post Box No. 1786
Bombay 400 001

giving full particulars of age, qualifications, experience and salaries drawn. All applications and envelopes should be marked "Ref: MS/5659".

"What the hell am I doing with an MBA?"

If you're an MBA with two to three years' work experience, you know the feeling.

You spent two of the best years of your life mastering complex management concepts and techniques. And then got into industry, only to find that entry-level people can't practise most of what they've learnt.

And, when you do get to practise anything, it's always a tiny part of somebody else's project. (Do you really get your kicks out of boosting sales 17% in North Arcot district? Or out of cutting washer inventory by 6%? Or out of devising a brand new petty cash payment system?)

Things are different at MASTEK. If you think you're ready to take on a lot more challenges than you have right now, perhaps you should come and talk to us.

"But who are MASTEK?"

MASTEK are one of the top 10 software houses in India, and, possibly, the fastest-growing.

We were started 10 years ago by three people from IIM-A and one from IIM-C. All with one or two years' work experience, all working in companies that made them wonder why they'd bothered with an MBA.

We have, today, over 300 young professionals, scattered around 7 full-scale offices in India, one in Singapore and project offices in Australia and the US.

MASTEK is recognized as a solid force in packaged software, RDBMS and custom software. And we're gaining respect as an offshore software developer.

The projects we work on are, often, pathbreaking. One is to help a client develop a paperless company. Another is to develop a standard product – an MRP II package – that can replicate the work flow in an entire factory, for better production control. A third is to create a standard product that gives a senior manager an on-line satellite's-eye-view of his entire company.

These, and other products, are world-beaters, by any standard. (We should know. We do a lot of work overseas, remember.)

"So what do you need an MBA for?"

Actually, we need 20 MBAs.

A large software company is structured like most other large companies, with clear and important roles for every management discipline.

If you're a young MBA, we need you – even if you've never faced a keyboard before in your life.

We can teach you about computers and software. What we can't teach you, and what we'll be looking for in you, is a drive to put your personal stamp on something that is big, that is important, that is satisfying.

We'll give you assignments that don't involve North Arcot district, washer inventories or petty cash systems. Assignments that can inspire a missionary zeal – and that will bring everything you've learnt, and then some, into play.

Best of all, you'll find that there's no ceiling on growth in the software industry. It's a business that lives on rapid change and development. Which means that you can, if you wish, spend an entire career span in it.

If you're interested, write to R. Sundar, Director-HRD, MASTEK Pvt. Ltd., 411 Unique, Veer Savarkar Marg, Prabhadevi, Bombay 400 025. Soon.

Proving his worth

Vellayan, *38, is president, Tube Investments of India Ltd*

president of the flagship company of e Madras-based Rs.300-crore Muru-ppa group, Vellayan has a point to ove. That he is where he is because of s talent and calibre, and not because he the son of M.V. Arunachalam, managing rector of Tube Investments of India Ltd. Vellayan's academic career was care-lly charted out, "by my father and my ncle", he recalls. After schooling in adras, and Doon School, Dehradun, he ined Shriram College of Commerce, w Delhi in 1968, for his degree. Next me a stint abroad — work with the oup's collaborators, Diamond Chain K, a diploma in industrial administra-on from Aston University, UK and a asters degree in business studies from e Warwick Business School, UK.

ange in conditions. Vellayan was in-cted into the Murugappa group in 76, as marketing services manager, be Products of India Limited. In the llers' market that prevailed at that ne, Vellayan's role was two-pronged — maintain customer contact and to con-y customer needs to the management. here was an urgent need for customer entation," he says.

His next job as general manager, im-rts division of TI & M Ltd (the sales ency division of the group), initiated layan into the intricacies of overseas rketing. "At this point, my job involved ling the services of our company to for-n principals," he explains. Several well known names — Daihatsu, VAW, Reform and Matrix Churchill, UK — came into the TI & M fold while he was handling this portfolio.

In 1986, Vellayan took charge of TI & M as managing director. During his tenure, he added a profitable line to the group's business — that of furnishing fabrics and carpets, a Delhi-based operation which commenced in 1987. "We now manufacture a wide range of floor coverings," he comments. He zoomed in on the US and tied up with importers and departmental stores for the export of floor coverings. Currently, exports from this division is valued at Rs.7.5 crore. "It was a tremendous experience," he enthuses.

Vellayan's attempt at setting up a surgical gloves plant failed to take off. "But the exit was made in time, to cut losses," he says. "Attempts at setting up new ventures are always encouraged by the family."

From exports, Vellayan shifted to the running of TI Diamond Chain Ltd as its managing director, in 1987. This gave him insight into the functioning of a manufacturing organisation. Vellayan's entry coincided with the introduction of the upgraded diamond chains into the market with the result that the company soon notched up a 50 per cent market share for this product. "I then felt that I should go international, especially since TI now makes its diamond chains 7 per cent cheaper than Taiwan," says Vellayan. It is now actively exploring markets in the US and Europe.

Meanwhile, in December 1989, Vellayan assumed charge as president of Tube Investments of India Ltd. He wants TIIL "to emerge as the market leader in cycles, chains, metal sections and tubes and to become the leading regional brand in strips". And his eye is trained on the export market for cycles, chains and metal sections. Exports of cycles and chains doubled to Rs.10 crore during 1990-91.

Vellayan is actively associated with the Federation of Indian Export Organisations (FIEO), and has served as its regional chairman since 1981. Married and with two sons, Vellayan's pastime still includes tennis, yoga and swimming.

■ DHARANI K. PANI

FRONTRUNNERS

As senior manager at Karnataka Antibiotics & Pharmaceuticals Ltd, **A. Dronachala Setty**, 36, manages the finances of the small but highly successful public-sector company in Bangalore. A commerce graduate from Sagar in Karnataka, Setty became a qualified chartered accountant and company secretary before joining a small firm called Chamundi Machine Tools in Bangalore.

His first big move was when he joined the multinational pharmaceutical firm Astra-IDL, where he worked for nine years in capacities ranging from management accountant to company secretary.

In February 1989 Setty moved to KAPL. "The time spent in Astra-IDL was long. I wanted to shift," he says. "KAPL works almost like a private-sector company. It is professionally managed and growing fast. I want to grow with it," says Setty.

— D.P.

At 34, **Ashish Guha**, is vice-president of Credit Capital Finance Corporation Ltd. An economics graduate from Calcutta University, Guha began as a trainee with a small management consultancy firm in Calcutta. Later, he started his own foreign exchange brokerage house.

In 1982, he shifted to Bombay, and for three years was an active foreign exchange dealer for DSP Financial Consultants Ltd. In 1985, he joined Credit Capital Finance as manager, foreign exchange division, and within three years, rose to his present position. Apart from supervising foreign exchange dealings, he now handles portfolio management also.

With a tight 12-hour working schedule, Guha has little spare time to pursue his hobbies. But he says, "I love figures. I enjoy my work."

— M H

GOLF

A pursuit for the rich

A robust soccer player disdainful of golf was persuaded recently to try his hand at the game. It seemed an easy enough task, hitting a stationary ball with a stick, and the soccer player was confident of success. "We showed him how to hold the club," recalls Raman Sidhu, manager, business development, Barclays Bank, "but when he swung it, he not only missed the ball, he even went round in a circle!" The soccer player's forceful hand sent him spinning twice before he actually hit the ball — only to send it way out of bounds.

Unlike Sidhu's soccer-playing friend, many executives are addicted to the game, spending patient hours on the 100-odd golf courses all over the country to hone their skills, exercise their bodies, improve concentration powers — and strengthen business ties with fellow golfers. S.P. Gaekwad, the blue-blooded chairman and managing director of Baroda Rayon, has been playing for seven years; Keshub Mahindra and Russi Mody are known to be good golfers. Ashda Lalvani, director of Advani Oerlikon in Bangalore, took to it as a form of exercise — and got addicted. Bunty Peerbhoy, director of MAA Communications, Bangalore, got dragged into golf by friends, and today finds the game has therapeutic value. William Scrivens, managing director of Birla 3M, carried golf clubs as a 12-year-old to earn pocket money. He has been playing for 34 years. Pune-based S.L. Kirloskar, in his eighties, still swings a club.

Old man's game?

While most golfers maintain that the game can be played by anyone from six to 90 years of age, traditionally, golf has been known as an old man's game. For one thing, hitting an unmoving ball on a gentle rolling green does not seem strenuous enough to attract the young. For another, as Bombay-based architect Prakash Mankar explains, young professionals are too busy building their careers to be able to spare time for a four-hour game. But by the time they've turned 40 — the age at which he took up golf — they've attained a certain success in their careers. More important, they are by then in a position to afford what is still a rich man's game in India. Says Gulab Kalani, director, Gemini Global Lighting: "I took up golf in my 40s, but I wish I'd started earlier!"

It was the British who popularised the game here; they built the Royal Calcutta Golf Club Course — the second oldest in the world outside England — in 1829. These days, while golf is attaining popularity in India, a scarcity of public courses makes it accessible only to those who can afford club membership. The United Services Club in Bombay, for instance, charges Rs.7,500 for golf membership per year and admits only 250 civilian members. In Bangalore, three of five courses belong to the defence services. The two open to the public — Bangalore Golf Club and Karnataka Golf Association — charge Rs.10,000 as admission fee and Rs.50 per month. Corporate memberships here cost Rs.1 lakh, and associate members pay Rs.20,000. Says Commander B.S. Hothi who gave up athletics, sailing and shooting for golf: "The cheapest golf game in the world may be had in India."

Imported equipment

In addition to club membership costs, golfers must buy imported equipment for nothing is manufactured here. A good set can put the player back by about US$500, not counting customs duty. (As N.K. Pudumjee, golf captain of the Poona Club says, golf sets are too bulky to smuggle in!) New balls cost Rs.25 to Rs.55 each. In addition to caddies, most people employ *aagewallas* for a small fee to locate the precious balls — a practice considered unnecessary abroad. Often, the low-paid *aagewallas* and caddies are tempted to hide a ball after a wild shot and sell them later, for Rs.10 to Rs.15 — a service that many golfers are forced to appreciate.

"The government's attitude is peculiar," observes Gaekwad. "Normally whatever cannot be manufactured in India can be brought in on nominal duty, but golf gets no such concessions. Other country's airlines also give weight concessions on golf sets," he says. The complaint is vociferously echoed by golfers all over the country, many of whom opt for second-hand equipment. Even these are priced at Rs.3,000 for a 10-year-old set, according to Suresh Khilnani, a hotel owner in Pune.

There are less than

Scrivens: mixing pleasure and exercise

,000 golfers in India, estimates Pudum-, compared to approximately four mil-n golfers in America. Adds Gaekwad: here are not enough golfers here for anufacturing facilities to be worth-nile." If cheaper, indigenous equipment as available, perhaps more Indians ould take to the game? "How many?" eries Gaekwad. "There are no public urses and club memberships are not sy to obtain."

With the Delhi Development Author-'s new course, a beginning seems to ve been made towards introducing blic courses. Gaekwad feels the govern-ent should subsidise the setting up of lf courses as they are environment-endly and would attract foreign tour-ts. He himself plans to start a sports ntre near Bombay complete with hous-g facilities. "When the husband plays lf there," he says, "the wife and children ould also be involved in some sport."

Meanwhile, as Japanese golfers head wards Delhi because golf is cheaper for em here than in their own country, me fortunate Indians go abroad on lfing holidays. Almost every year, dumjee gets together with three ends ("not wives, they'd be bored iff"), and sets off to play. "There are 60 lf courses in and around Bangkok one," says the 70-year-old, his eyes hting up, as he pulls out a copy of the ok *Golf Thailand*. "We hire an air-nditioned mini-van, and go around, aying for 10 days. The caddies, by the y, are women!"

When visitors from abroad come to dia on business, executives usually find useful to take them to a golf game. As dhu says, there are few leisure options Bombay. More important, however, is e fact that golf has a tremendous capac-to break barriers. Hoshang Eduljee, ne branch manager of Mahindra and ahindra Ltd, explains: "So many prob-ms can be overcome merely by knowing 're talking to another golfer. The game one part of it, but the fellowship is like unwritten society." Cdr Hothi puts it nother way: "Status does not matter nen you know you have golf in common."

siness on the course

re business deals actually conducted the golf course? Opinions vary. "Busi-ss deals can be conducted on the rse," feels Richard Sowter, technical visor, Tata-BP Solar in Bangalore. "One n discuss broader issues on the course d clinch deals in the office." Anil Bhan-dary, a prominent coffee planter and former chairman, Karnataka Planters' Association, says: "I know people who played golf together and signed the agreement the next day. Scrivens, however, feels that while barriers can be broken, business deals cannot be conducted.

Meanwhile, companies are finding it worth their while to promote the game. At one level, they encourage their own staff to play, as Mahindra and TISCO do. At another level, corporate sponsorship of tournaments is gaining ground — so many tournaments take place, according to Sidhu, that he is forced to participate only so he can have access to the course! Herbertsons, for example, recently sponsored the Royal Treasure Open in Bombay. "We're trying to promote white rum, which is an upmarket drink," explains Mukesh Khetarpal, general marketing manager, Herbertsons Limited. "Golf is an upmarket game, but is still affordable enough to sponsor. If you were trying to promote a more popular game like cricket, you could spend upto Rs.50 lakh. We spent Rs.2.5 lakh on the tournament." The UB group has also held an annual in-house golfing event for the last four years.

What actually happens on the golf course? Consider expert Ratan Dayal's point of view, reproduced from *Golfingly Yours*, the official journal of the Indian Golf Union. "For a start, he (the golfer) arrives looking like a cross between a circus clown and a gorilla. This may well be in the fitness of things since he expects to perform in both capacities, but it is a trifle disturbing. No sooner has one got used to the sight when, without so much as a warning, he starts reaching for his toes, arching his back, and flexing his muscles in a manner which makes one painfully aware of our anthropological connections...

"Then hell breaks loose. Suddenly, with a speed and daring matched in the annals of history by the Charge of the Light Brigade, our friend has turned upon the unsuspecting ball. Hereabouts, the picture becomes a bit blurred. Its main ingredients are a swish, clods of earth, hewn grass and all that one associates with a mild earthquake. When the dust has settled, it becomes evident that only the ball has managed to retain its composure..."

■ MENKA SHIVDASANI in Bombay with DEVAPRASAD PUROKAYASTHA in Bangalore

Golfing glossary

When golfers have a 'handicap', they are not referring to physical or mental ones. Here is a sample of some of their colourful terminology, and what it means.

Par: This refers to the number of shots ideally required to get the ball into the hole. Par three, for example, means three shots are allowed over a specified distance.

Bogey: To the English and Indians, this is a synonym for 'Par'. Americans use 'Bogey' to mean 'one-over'.

One-over: The player uses one shot more than par to get his ball in the hole.

Birdie: This is good news; he uses one shot less than par.

Eagle: This is better, being two shots less than par.

Albatross: The Ancient Mariner saw the albatross as a disaster, but for a golfer, this is wonderful. It means he or she has used three shots less than required for success.

Hole-in-one: As the name suggests, the ball gets into the hole with one brilliant shot.

Handicap: This refers to the number of extra shots the player is allowed over the course par. It is decided on the number of shots the player generally needs over and above par. It is the handicapping system which makes it possible for six-year-olds to pit their skills against 60-year-olds.

Rub of the grin

Golfingly Yours

"It's OK... that's just a little ritual when he birdies..."

HYDERABAD

Bangles burning bright

The chaotic stream of traffic takes one past the two large gates that open into the old city of Hyderabad, past the pearl markets and the towering minarets of the Charminar. Along the narrow streets are crammed tiny shops. They have modest interiors — no marble chrome, granite or tinted glass. They don't need to: the goods they sell glint and sparkle in a thousand hues. The shop walls are lined with shelves full of them — thousands upon thousands of bangles.

This is Laad Bazaar or Chudi Bazaar, an absolute 'must-see' for any tourist to this medieval city. Like so many other Hyderabadi landmarks, the name itself has romantic associations. A tunnel runs below Laad Bazaar, connecting the Charminar area to the Golconda fort. Quli Qutub Shah, the founder of Hyderabad, used the tunnel to rendezvous with his lover. Hence the name *Laad* or love.

Sea of humanity

The bazaar is a sea of humanity. Burkha-clad women peer anxiously from behind their veils as the sellers slip bangle after bangle onto their wrists. Beside them, groups of foreigners exclaim at the riot of colours and designs, and most of all at the extraordinarily low prices for a handicraft. Photographs are taken and Mansoor Ahmed of Mujeeb Bangles and Jewellery poses with unmistakable pride for an American tourist. Bargaining is inevitable. "Fifty rupees," says the bangle seller. Fifteen minutes' hard haggling later, the customer walks off with a pair, for ten rupees.

The bangles sold here are made of various ingredients — lac, stone, glass and pearls. The glass bangles come from Ferozabad in Uttar Pradesh. But it is the *goot* or lac bangles for which Hyderabad is traditionally known. On the lac are embedded garnets, blue onyx, golden topaz or Indian stones like *rajvarti*. Some bangles have designs embossed on them. The creamy white pearl bangles are made from riceseed pearls and generally form part of a set of necklace and earrings. Another popular bangle is a broad lac with twinkling white stones. Depending on the quality of the stone, a pair can cost up to Rs.1,000. The bangles have royal names like *Hayaz Begum ki kangan*, named after one of the Qutub Shahi begums. Some other fascinating names are *Got Got Ka Jawab* and *Chamki Ka Jawab*.

Special varieties

These *chudis* have remained an integral part of Hyderabadi life for generations. There are, for example, special bangles to be purchased from Laad Bazaar for weddings called *Balpathi Ka Joda*. It is a set of 30 bangles for the Muslim bride. The price begins at Rs.35 and if the girl wants an expensive pair, the shopowner takes a special order: the bangles can be delivered in two days. Hindu customers favour a specially made variety — set with red and white stones and rather inaptly called *dharmveer*. Those with green and white stones are meant for the Muslim bride.

Each bangle is the painstaking handiwork of craftsmen who work in the most dismal part of the old city. Often, a group of 10 artisans are crammed into a verandah, hunched over their work tables. Piercing through the gloom are the twinkling stones, scattered all around the men amid pots of glue. Ahmed, a second generation *Karigar* (craftsman), demonstrates how he fixes the stones on a bangle while gripping a pot of glue between his knees. Typically, a craftsman makes four sets of bangles a day, for which he is paid about Rs.30.

Unlike other dying crafts, the bangle industry — originally patronised by the royal family — has stood the test of time and become a flourishing trade. Mansoor Ahmed explains that the craftsmen have now formed the Janata Bangle Industries Co-operative Society, the first co-operative. They export their bangles to the Middle East, chiefly Dubai and Saudi Arabia. Ahmed explains that craftsmen like him teach others their art through workshops organised by the government.

Late in the evening, the colours of Laad Bazaar come alive. The poetry of the bard of Hyderabad, Sarojini Naidu, captures the essence of the place:

"Bangle sellers are we who bear
our shining load to the temple fair
Who will buy these delicate bright,
rainbow tinted circles of light,
Lustrous tokens of radiant lives
for happy daughters and wives".

■ MEERA SHENOY

Exceptional. Sensational. So National.

Videocon Air Conditioners. Manufactured under D & D supply agreement with Matsushita Electric Company, Japan, the owners of brand name National .

Japanese state-of-the-art

In technology or in artistic pursuits... the Japanese are born inventors, innovators.

Videocon brings you Japanese expertise. Air Conditioners with the world's most advanced technology.

High Performance Rotary Compressor

First Time in India,
The only one of it's kind. Compact...cooling efficiency at par with International Standards. Yet, tough enough to withstand Indian tropical conditions. Designed for longer life and trouble free performance.

Super Quiet Operation,
Made possible by the ultra thin heat exchanger, specially designed sirocco fan, propellor fan, fan motor and rotary compressor mounted on a vibration absorbing rubber base – all housed in heavy insulation.

High Energy Efficiency Design
Savings on electricity bills, due to specially designed louver fins, grooved copper tubing and rotary compressor.

4-Way Air Deflection System

At the touch of a switch, control air direction from side to side – for uniform cooling across the room.

One Touch Air Filter

Slide in slide out filter– easy maintenance. You can do it yourself.

Dust Protected Fan Motor

The only Air Conditioner with double ball bearings and a dust protected fan motor to give a quiet, smooth performance and longer life to the Air Conditioner.

Super Service

Prompt after sales service with factory trained technicians.

1.5 ton Air Conditioners in Wood Grain and Ivory White finish.
1 year warranty.

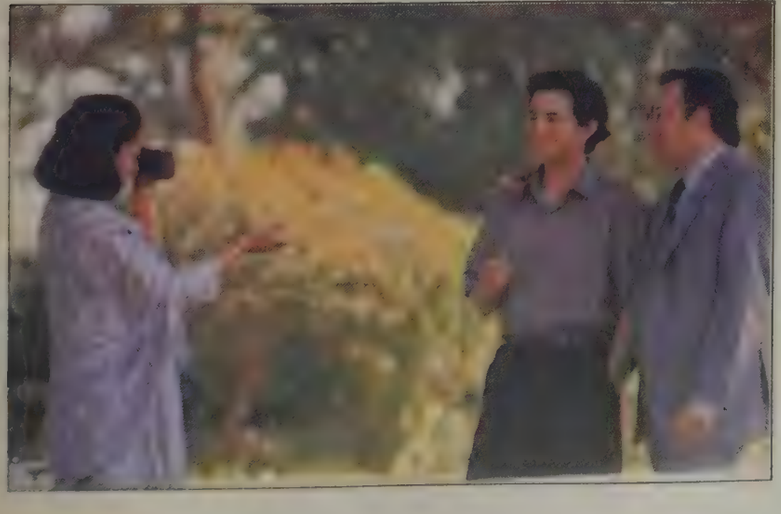
It's been a "pleasurable effort" and it has given him a "terrific sense of achievement." It is a detective story, written in a racy style. And he is **Ahmed Bunglowala**, public relations manager at Thermax. A long-time admirer of Dashiell Hammett and Raymond Chandler, Bunglowala's first book "Midnight Blue" is in the tradition of these masters.

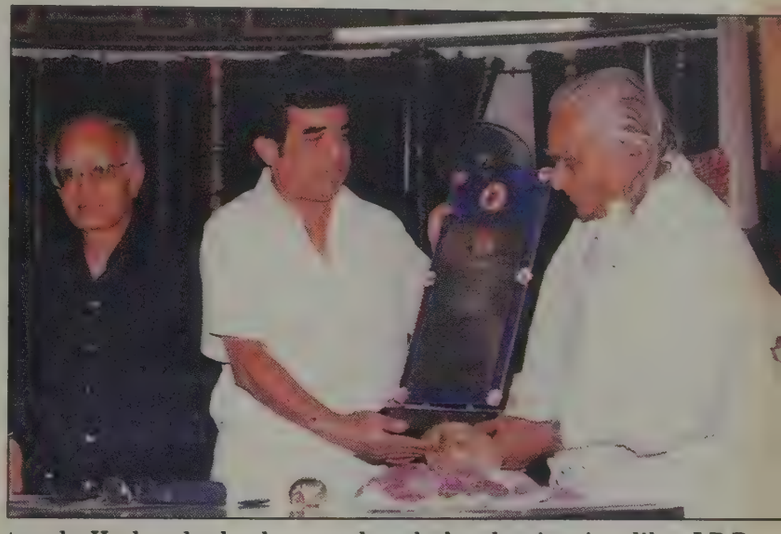
And for Bunglowala, this, is only the beginning. The Pune-based corporate manager has now set his sights on erotica.



"Most of the literature available on erotica is nothing but porn," he says. "But I plan to write a good literary work on the subject, something akin to what Anais Nim, the high priestess of erotica has produced."

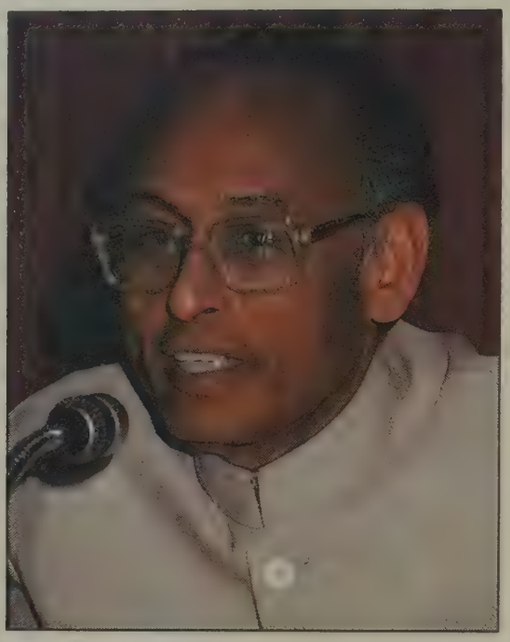
Saba, Soha and Saif may not be the most easily recognised names in Indian advertising. But the campaign in which they have starred along with their celebrity parents definitely ranks high in recall. The ad, of course, is the much touted five-year-old series for Gwalior Suitings. According to advertising sources, the family is being paid Rs.5 lakh per year for their efforts.

Tiger and Sharmila Pataudi, chosen because the client and the agency wanted to project a classy image, did not disappoint. Sales shot up significantly. Last year, in order to keep the interest alive, daughters Saba and Soha were roped into the ads and last fortnight, the son. Twenty-year-old Saif, who has already set many a young heart aflutter, is expected to attract the younger segment of the market.



The problem: **James Fredrick**, chairman, Coromandel Indag, wants to join a club in Madras, and finds the waiting list too long. The solution: he sets up a company, Coromandel Clubs Private Limited, to run a chain of speciality clubs at various locations. The first of these, 'The Coromandel Club', is to be a country retreat at Sriperumbudur on the outskirts of Madras. Involving an investment of Rs.5.5 crore, it will emphasise recreational facilities.

The next project will be a business club in the heart of the city, followed by a beach resort. Individual members will have to shell out a c-o-o-o-l Rs.40,000 while corporate membership for Madras-based firms is fixed at Rs.60,000. Fredrick has put together a board of governors which includes industrialists Vijay Mallya, M.A.M. Ramaswamy and Obul Reddy, cricketer K. Srikanth and G. Ramaswamy, the attorney general of India.



Neelkanth Kalyani, the brain behind some of the most modern companies around (Bharat Forge, Kalyani Steels, etc), hasn't lost the ethnic touch. He has had a long and close association with B.K.S. Iyengar, the internationally acclaimed yoga guru. Recently, when Iyengar was felicitated by the mayor of Pune, Kalyani a keen yoga practitioner himself, was in the forefront of the citizenry which paid glowing tributes to the guru for his role in propagating yoga throughout the world. Perhaps yoga is the reason why Kalyani is physically fit and agile and works very long hours.

Lakshmi Venkatesan, the UK-based daughter of the Indian President is making headlines. She was recently in New Delhi to float the Bharatiya Yuva Shakti Trust (BYST), in the process, attempting to duplicate in India what Prince Charles has already done in England — helping underprivileged yet enterprising men and women to set up their businesses. The board of trustees includes luminaries like J.R.D. Tata, H.P. Nanda, Russi Modi, J.N. Sapru and Rajan Pillai. BYST will provide the seed capital (up to Rs.50,000) at a nominal interest rate of 4 per cent. "We are not out to solve India's unemployment problem," says Venkatesan. "We are only establishing a role model for promoting enterprise in a section of the people who have not been fortunate enough."

A passage to Britain

The appointment of **L.M. Singhvi** *as India's High Commissioner to Britain comes soon after the controversial departure of his predecessor, veteran journalist Kuldip Nayar. The Cambridge and Harvard-educated jurist and academician turned diplomat, Singhvi is also chairman of the steering committee of the Indo-British Forum of Judges and Lawyers, life trustee of the India International Centre and in 1990, was president of the World Congress on Human Rights. Singhvi is going at a time when both countries are passing through troubled times. India is besieged by political and economic uncertainty, while Britain is in a recessionary phase. He spoke to Indira Khanna of* Business India *before leaving for London to assume charge*

What priorities have you set for yourself once you take charge?
Three areas will receive particular attention. One is to create durable mechanisms at the political level to project India and its strengths. This will be done through conventional diplomatic channels as well as through people-to-people and business-to-business interaction. India and Britain should also get to know each other better and work together on international issues.

On the cultural front, I want to see that the Nehru Centre, set up some time ago, gets going. This will lead to a closer interface with the Indians living in Britain, that is, the Indogenic population there.

Finally, I want to increase British investment in India and promote more joint ventures as well as equity and technical tie-ups. Britain is no longer the largest foreign collaborator in India as it historically was. Currently, British investment in India is also only a small percentage of what it could be and should be.

India's image abroad is deteriorating rapidly. How do you plan to rectify this?
The image cannot be improved until the reality improves. I cannot build an image by falsifying the reality. But there is much to be said about the intrinsic strengths of the country which must be projected positively, like its large pool of skilled manpower resources. I would not undertake the promotion of a lost cause.

Which industries offer the best potential for joint ventures and collaborations?
That will be determined after gathering information on different businesses and industries. I want to see that task forces are constituted to identify opportunities for exporters and businessmen. These task forces must have strong databases and must arrive at informed conclusions.

The high commissions are to be faulted as they are unable to fulfil the information and other needs of businessmen. So businessmen must also create and update market information systems on their own and not depend too heavily on the embassies and high commissions. If businessmen are unable to proceed through these channels, they must find a way out on their own. They must not accept the government's alibis and lose their initiative.

There are many problems that need to be sorted out. But I do not want to raise hopes which cannot be fulfilled. Though I have a cabinet rank, I am only a representative of India in Britain. I cannot change the system.

How can Britain help India once trade barriers collapse in 1992?
I believe that India has to help itself. We have the potential to do so and should be prepared. It is no use expecting others to come to our help. Our export effort must be intensified, and our goods must become internationally competitive in terms of quality and price.

What steps are being taken to redress India's unfavourable trade balance with Britain?
Currently we are in a spot, but in the long run we will be able to rectify the imbalance. To do that our economic policies will have to be pragmatic, clear, and goal-oriented. The mid-term elections should prove to be a watershed event for the country.

Is it realistic to assume that bilateral trade between the two countries will improve soon, as Britain is facing a recession?
Peter Lilley, Britain's secretary of state for trade and industry, really believes that India is Britain's best bet for investments. I do not doubt his word.

However, we also cannot take Britain or any other country for that matter for granted. Money has its own inexorable logic and it moves to wherever the best options are available. Time is of the essence and we must keep pace with new developments in the world.

A joint chamber of commerce is the normal forum for commercial interaction between businessmen from two countries. But there is no Indo-British Chamber of Commerce. Is this not a hindrance?
It is. But then, we need to upgrade all bilateral relationships. We must infuse them with a new dynamism.

Scotland is emerging as a major commercial centre, particularly in the areas of banking and hi-tech industries. What steps will be taken to develop better contacts with the Scottish business community?
We will be taking an interest in all parts of Britain, even Wales. We will see that we are not too London-centred.

It is felt that dual citizenship will help the Indians in Britain to maintain closer ties with India. What do you think of this proposal?
It is a good suggestion. But it cannot be implemented all that easily. Certain amendments will have to be made in the Constitution before expatriate Indians can be granted dual citizenship.

Beyond business

The vision which sustains the Bajaj Group transcends the realm of commerce and industry. It is reflected in the Group's endeavour to fulfil wider social obligations through charitable activities and by supporting public causes. A mission in which hundreds of millions of rupees have already been invested.

The first of the Group's trusts, the Jamnalal Bajaj Seva Trust, was established soon after his passing away. His entire share in the family wealth formed the initial corpus.

The Trust's Memorandum and Articles of Association were drafted by Mahatma Gandhi, who also signed as one of the witnesses. Amongst its activities, the Trust preserves the historic site of Bajaj Wadi at Wardha where many key decisions of the Indian National Congress were taken during India's freedom struggle.

It also made possible the prestigious Jamnalal Bajaj Institute of Management Studies, for the University of Bombay. The Trust is developing an international Sarvodaya centre, Vishvaneedam, at Bangalore, inspired by Acharya Vinoba Bhave.

Jamnalal Bajaj established the Shiksha Mandal educational society in 1912. The Bajaj Group is closely connected with the society which conducts commerce colleges in Wardha, Nagpur and Jabalpur, a science college, a rural institute and a rural engineering polytechnic at Wardha. Separately, there is the Kamalnayan Bajaj School at Akurdi, Pune.

The Kamalnayan Bajaj Charitable Trust constructed Gitai Mandir at Wardha, a unique monument circled by stanzas from the Gitai chiselled on 732 granite slabs.

The Jamnalal Bajaj Foundation, amongst its various activities, presents four awards annually of Rs. 100,000 each. For outstanding contributions in social work; the application of science and technology to rural development; and to women for significant work in the advancement and welfare of women and children. The fourth is an international award for individuals other than Indian citizens, for promoting Gandhian values abroad.

The Foundation recently assisted the University of Bombay in instituting the subject of "Ethics in Business" for post-graduate study at the Jamnalal Bajaj Institute.

The industrial companies in the Bajaj Group are active in promoting rural development in their environs; in Uttar Pradesh, Rajasthan and Maharashtra. In arranging inputs for improving agricultural productivity. Helping in lift irrigation and dairy development. Planting saplings in partnership with schools and villagers. Increasing water supplies.

For the centenary year of Jamnalal Bajaj, the Group has promoted many new centres. The Institute of Gandhian Studies at Wardha. The Mahatma Gandhi Centre for Science and Human Values at Bangalore. to explore how spiritual pursuits can be synthesised with scientific and technological research. The Department of Tropical Diseases at Sevagram Medical Hospital.

While business must certainly make profit, it must also contribute to a better quality of life for the millions who make the profit possible.

SOMETIMES YOU HAVE TO PAY A HEAVY PRICE FOR TAKING A WRONG BUSINESS DECISION. A FEW RUPEES. MAYBE.

The cost of sending a package or document can, at times, be minimal. But if it's lost or not delivered on time, the price you have to pay, is far greater. ➤ Which is why, it is advisable to spend some time over the decision. Alternatively, you can just select Blue Dart Express. Ours is a fully computerised operation. Complete with a global satellite hook-up and superior systems like COSMAT, COSMOS, PROFS, all of which facilitate security and speed. For added efficiency we have technology that includes Hand-Held Terminals at our international hub. And most importantly, we have sophisticated hub and spoke operations over land and air for international and domestic consignments. ➤ All of this has made ours India's only integrated door-to-door service. One that is directly represented all over the country. This superior technology is ably complemented by a team of 1300 professionals. People who are dedicated enough to win and retain your trust. People with whom it pays to do business.

International Service Partner of FEDERAL EXPRESS The world's largest full service, all cargo airline. Serving more than 125 countries.

Tracking packages and documents with sophisticated Hand-Held Terminals – the only ones of their kind in India.

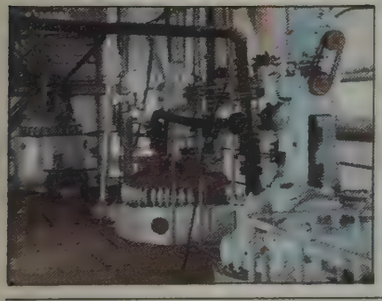
COVER FEATURE

46 A BUSINESS INDIA FORECAST
Corporate results for 1991
How 120 large companies will fare in 1990-91 and beyond

CORPORATE REPORTS



62 VYSYA BANK
Committed to excellence
This private-sector bank has performed well against odds, and is growing and diversifying fast under the chairman's able stewardship

68 OMC COMPUTERS
Struggle for existence
In spite of its technological excellence and exclusive products, this company is not in the best of health with its sales weakened by competition

72 RALLIS INDIA
Changing course
The company has decided to sell off its loss-making fan division and two engineering subsidiaries at an undisclosed price to a Calcutta-based group

74 TRANSPEK INDUSTRIES
Challenging days ahead
Though sales have doubled in the last four years, the company still has obstacles to cross, but the bottomline is being improved through innovations in technology and aggressive marketing

INDUSTRY REPORT

76 ALUMINIUM
Problems of plenty
The boom the industry started experiencing in 1989-90 still continues, though on a smaller scale, and the primary producers are making merry despite downstream units' problems

10 EDITORIALS
Education remains the key

Economic issues at the polls

Rep licences — confusion confounded

17 FOLLOW-UP
Esab India's modernisation programme promises to multiply its turnover sixfold next year

The reinstatement of 800 workers worsens the financial haemorrhage of Mafatlal Engineering

29 BUSINESS NOTES
The Tamil Nadu government has ambitious plans for a Rs.31,000-crore private-sector power plant

The introduction of maximum retail prices for pharmaceuticals is at best a mixed blessing

Air cargo rates have soared sky-high, worsening the already bad export situation

Cheap tent and motel holidays offered by the Maharashtra Tourism Development Corporation have become very popular

Reactions are predictably mixed as two companies gear themselves to reintroduce gold coins into the market

104 TOURISM
The much-talked-about Visit India Year-1991 is being sabotaged by circumstances despite aggressive marketing

121 INTERNATIONAL
John Kapoor does not strike you as a man who walked away with $100 million by selling his stake in a US pharmaceutical company

126 ENTERPRISE
After years of hard luck, the persevering entrepreneur behind Gopi Appliances has made his mark on the Indian scene and is trying his hand at exports

200 INTERVIEW
Hemendra M. Kothari, president of the Bombay Stock Exchange, stresses the major role of Bombay in mobilising savings

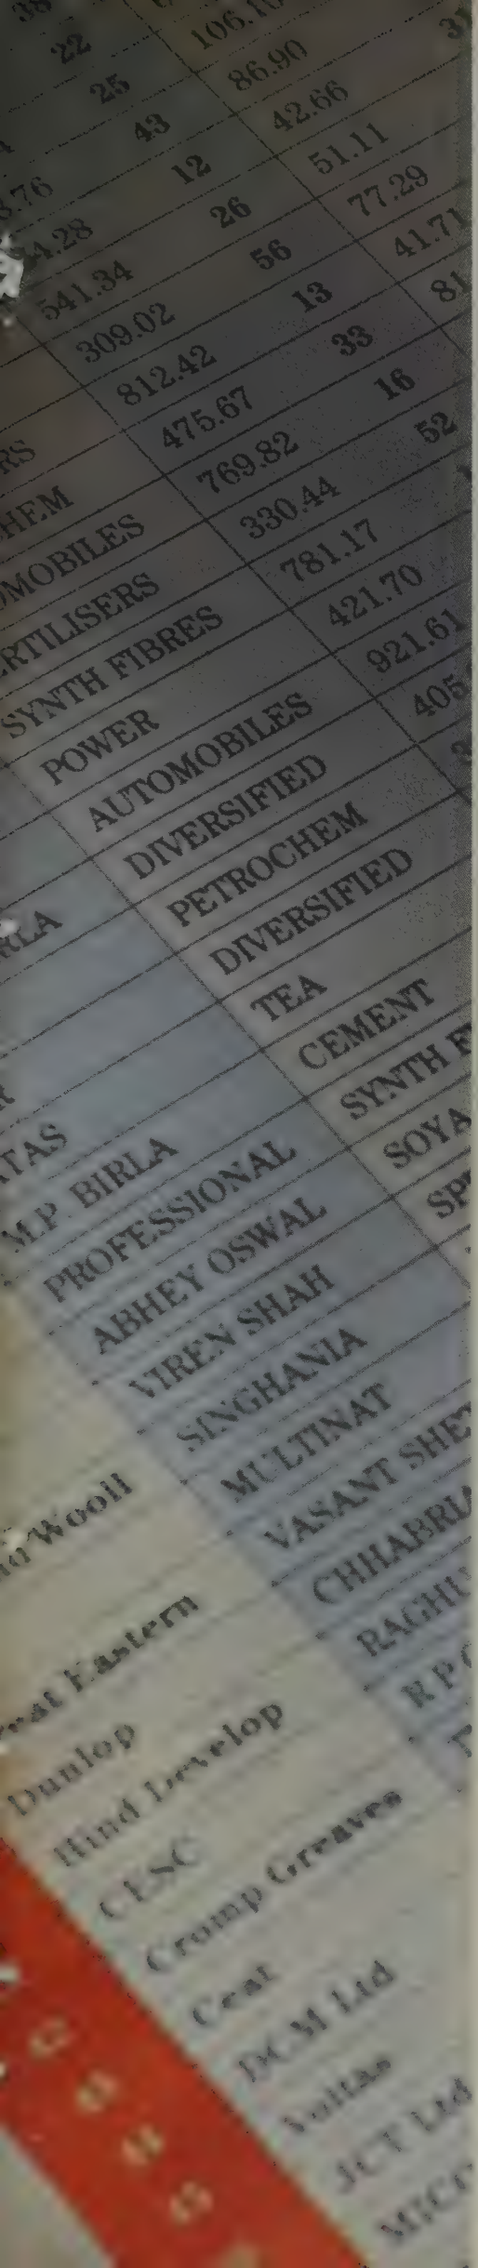
LETTER FROM THE PUBLISHER

As our financial markets have become more scientific and sophisticated, the financial community has come to track corporate performance more closely. The stockmarkets, as a condition of listing, have required companies to report their earnings at half-yearly intervals.

In all this, the press, in particular the business press, has played an important role. Initially, companies were reluctant to speak about themselves and give details of their performance. On several occasions, we had reason to point out that the private sector was excessively secretive, and that even the largest of public limited companies believed in being as 'private' as possible. The secrecy was justified on the grounds that they were in the 'private sector', oblivious of the fact that thousands of shareholders, depositors and financial institutions had a legitimate interest in information about them. We also pointed out that the private sector ought to realise that greater flow of information and greater public awareness only help to promote healthy business practices and strengthen the private sector in the long run. We also pointed out that while the private sector rightly compared business conditions in India with the conditions in the West, they ought to also apply the same standards of disclosure as were applicable in the West.

As a result of the greater flow of information, it is now possible for individual investors and not just insiders to form rational investment judgements and decisions. In this time's cover story, *Business India* has once again taken the lead in trying to forecast the results for the top 120 companies in the country. We put a team of our reporters on the job, analysed half-yearly results and then started conducting a series of wide-ranging interviews. We contacted all the companies concerned, many of which were somewhat reluctant to part with their results for the period ending 31 March 1991. Many argued it was still too early to give exact results. Others said they would rather wait for their accounts and audit to be completed. Of course, not surprisingly, some companies with strong management information systems had a pretty good idea of their profits. We then talked to brokers and bankers, and studied industry trends. Thereafter, our in-house research team tried to get the best guesstimate of the results. It is important to emphasise that the figures we have given are merely best judgement estimates.



Such forecasting, while new in India, is very common in the West, and it will be interesting to judge our own performance when the actual results become available.

While the members of our team were gathering information, they also asked about how companies might perform in the coming year. After all, the Gulf War and the foreign exchange crunch came only late in the last financial year. Perhaps an indication of the shape of things to come is that some companies reported almost no profits in the second half of the year. The companies we talked to accounted for approximately 55 per cent of market capitalisation. Therefore, what happens to them will also indicate to some extent how the markets and the economy will fare in the coming year.

We are confident that our readers will enjoy going over the numbers as much as we did in putting them together.

Ashok H. Advani

THERE'S SOMETHING ON TOP
OF ALL THESE TOP 50 COMPANIES.
OUR ROOFING SYSTEMS.

EVEREST
FIBRE CEMENT PRODUCTS

Take a look at the top 50 companies listed in a recent study by Business India and you'll discover a remarkable similarity in their thinking.

Every single one of these companies has been using Everest fibre cement roofing systems across a diverse range of applications. And these are just a few in the list of our satisfied customers. Which continues to grow with every passing year.

Because Eternit Everest has consistently met exacting standards. With roofing products and accessories proven over 50 years. Backed by technical support and service. With a sophisticated R&D facility to provide innovative, custom-made solutions. And access to the international expertise of the Belgian Eternit Group, the world's largest manufacturer of fibre cement products.

So, for a roofing system that's in all the high places, call Eternit Everest.

Eternit Everest Ltd.

MEMBER OF THE BELGIAN ETERNIT GROUP

EXCELLENCE. PROVEN WORLDWIDE.

Corporate Office: Eternit Everest Ltd., Ashok Bhawan, 93, Nehru Place, New Delhi 110 019. Tel: 643 2568, 643 5416. Telex: 031-71002. Fax: 011-646 4006.

Tasmania. Where the world's most selectively bred sheep graze in salubrious surroundings.

Microlite.Luxurious, sensuous and available only in limited editions. To be worn by those who settle for nothing but the best. Will you be one of them?

LETTERS TO THE EDITOR

• A question of survival

It is not surprising that tyre barons like MRF have decided not to cut back on production in order to comply with cartel regulations (Focus, 18 March). With the number of contenders growing, one should always be on guard to see that the title for the top slot is not divested!

When the question of "survival of the fittest" comes up, it is the organisation's sustenance that matters and not the cartel's existence!

JOSEPH SAM
Kollam

• Separate R&D

The article on R&D was disappointing (Comment, 18 March). We have consistently maintained total separation between planners and thinkers on the one hand and doers on the other hand. They have no truck with each other. Typically, R&D is invested in from the profits of production. Unfortunately, it is also managed by production-oriented people. R&D centres are organised in the midst of production centres and naturally acquire the same ethos and style. We also suffer from the effects of a joint-family culture which believes that the father is responsible for taking decisions and providing for the welfare of those below, and any failures are ascribed to him.

If R&D is to be effective in this country, it has to be managed by persons who can generate products and develop an environment in which people can develop those products unconstrained by time limits and balance sheets. R&D results from the efforts of people and not just from an infrastructure of buildings and equipment. We have to find a way of motivating R&D people.

• Incorrect observation

Your editorial, 'Banking on Capital Issues' (18 February) shows lack of in-depth research and analysis on the subject, particularly about American banks and their captive financial intermediaries.

Under the Glass Steagall Act of the American banking regulations, banks in America are not allowed to engage in stock-market activities, and their merchant banking subsidiaries are independent and will function as a separate entity to the parent firm.

Drexel Burnham is a private merchant bank in America. The collapse of Drexel as well as savings and loans (S&L) institutions in America has absolutely no relation at all — not even a coincident factor. Drexel collapsed due to its own involvement in junk bonds. The late eighties saw the weakening of the company and these LBO companies started defaulting on interest payments. Coupled with this and the pathetic exit of their junk bond guru — Milken — from the office and the penalties Drexel had to pay to settle out of court, under US government authorities, triggered the downfall of Drexel.

The collapse of S&Ls in America is a different scenario. They were run in the early eighties with limited controls from government bodies — which resulted in total mismanagement by the top brass of the individual institutions — and their indiscriminate lending policy in giving substantial loans to "real estate and energy related projects" which crashed in the late eighties.

Keeping away Indian banks from capital market activities will not solve the problem. By creating a healthy competitive atmosphere and giving due share of the business to securities houses and other similar financial institutions in the private sector, the maturity of this market can be enhanced to international levels on a longer term perspective.

G. GOPAKUMAR
Cochin

Rafiq Dossani replies: The Glass Steagall Act — now repealed — does not allow an American bank to have a merchant banking subsidiary. It was enacted in 1930 precisely because of the misuse described in the editorial. Drexel collapsed for a similar reason. Its success in marketing junk bonds arose because of its cosy link with S&Ls and insurance companies like Southmark and First Executive. As long as the pyramid lasted (while the US economy boomed), the scheme worked. Hence, its failure was due to its relation with other financial institutions.

• Return the money

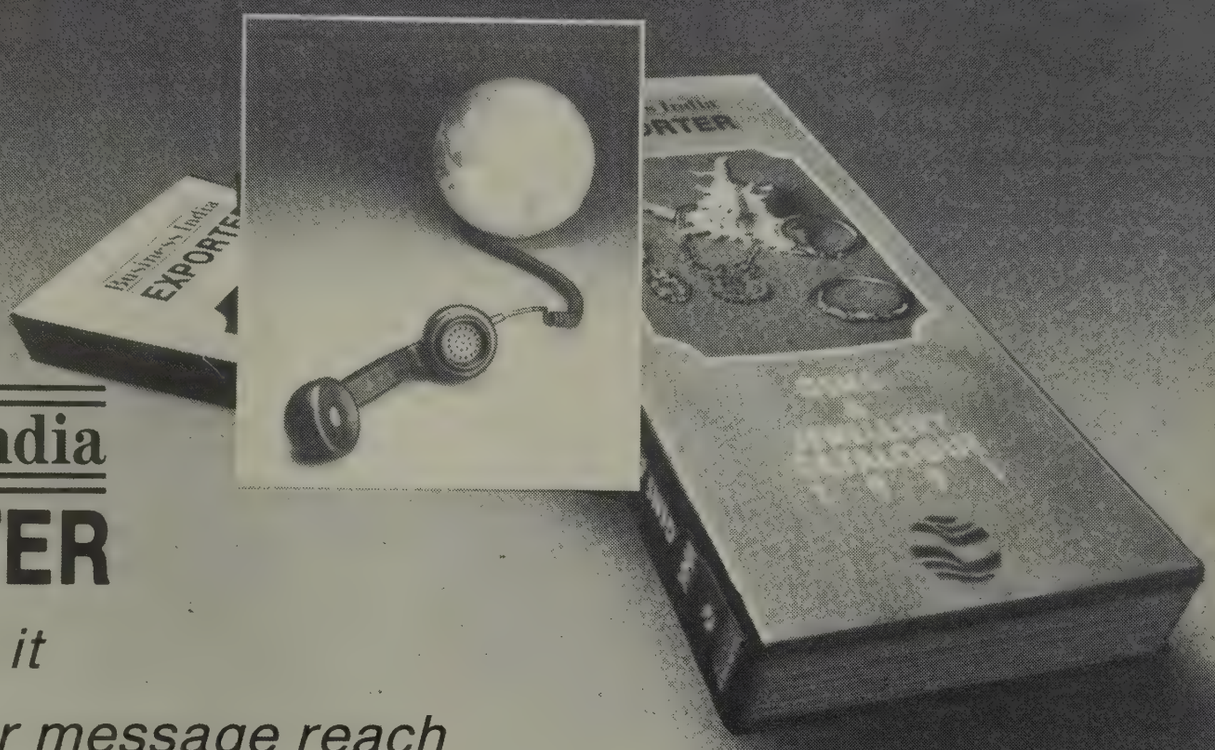
It is surprising that no one (including your magazine) has considered the losses being incurred by the small-time investors putting their hard-earned money in the mega issue of L&T (Editorial, 4 March). Half the debenture money had already been collected months ago, and the fate of the issue is still unknown.

I don't think it is wrong for magazines to raise the issue (after a thorough analysis) and suggest remedies to help the gullible who had invested. Maybe, L&T should return the money to those investors with interest for the period for which the money has been blocked.

S.S. MURTHY
Pune

• Refine the system

This refers to the article on 'Performance Appraisal' by T. Viswanath (Column, 4 March). The "input-output analysis" concept recommended by him will be suitable only for a unit-banking system where a bank will have just one branch, like in the US. In a branch banking system as practised in India, deposits mobilised by one branch are lent to borrowers by another branch. Hence a branch having "unadvanced deposits", meaning a branch with more deposits than advances, is not necessarily inefficient for it is actually mobilising resources for another branch which can lend it profitably.



Viewed in this light, the "transfer-pricing" mechanism, practised by most banks in India for calculating the profits of their branches, cannot be faulted. Under this mechanism, all deposits of a branch are lent to its head office, which in turn lends it back to its branches for advancing to customers. The resultant spread between the interest paid and received by a branch constitutes its income.

No corporate office of a bank will encourage window-dressing by its branches through passing of debit and credit vouchers, though some branch managers do indulge in such tactics owing to the pressure to perform. This can be overcome by some refinements in the existing system itself:

- For the purpose of performance appraisal of a branch manager, the average level of business (both deposits and advances) should be considered instead of the level of deposits and advances on a given day.
- Continuous negative growth spread over a period of, say, six months or so is to be viewed adversely.
- Distinction should be made between achievements in an easy field and a more difficult area. For example, mobilising deposits from the personal segment is much more difficult than from the commercial segment.
- Aim for improvement in profit per employee, which will make the branch manager more profit-oriented and also curtail the tendency of some managers to plead for more personnel than they actually need.

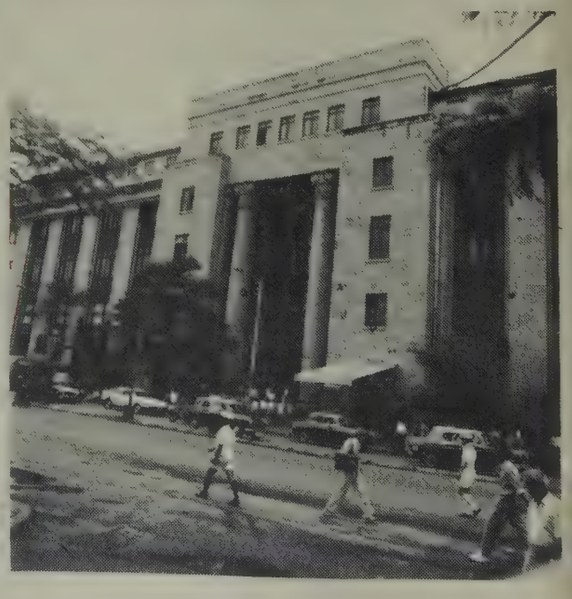
Economic issues at polls

The general election of 1991 will be different from earlier ones because of a shortage of compelling social issues. The signs are clear in the public's lukewarm response to current slogan-based campaigns. That is why V.P. Singh has switched his campaign tack from the social rights of minorities and backward classes to their economic rights via job reservations. The BJP has similarly thought it unfit to try and win by *Ram* alone and has added *roti* as well.

The two main economic issues facing the public must be prices and jobs — a situation unchanged since the seventies. And there are other important issues that remain unaddressed by politicians — housing and transportation, for instance. Yet, the government has rarely been penalised at the ballot box for its inability to control inflation or unemployment.

Why is this so? Despite their importance for a poor country, economic issues have invariably been swamped by social ones, such as stability and corruption in past political campaigns in India.

It is not that overwhelming social issues have led politicians to neglect economics. The point is that the discussions on economic issues have almost invariably been vague and slogan-oriented, for example, Indira Gandhi's *garibi hatao*, campaign. In fact, apart from the National Front's campaign promise on loan write-offs in 1989, no central economic issue has affected voting patterns in the last 20 years.



Is it because the country's economic problems are widely considered insoluble? Perhaps the public thinks so. However, governments worldwide have been held responsible for their failure to control inflation. Even in India, Indira Gandhi made economic development an issue when she nationalised banks. Now that socialist solutions have failed everywhere, perhaps politicians could capture the public's imagination with talk of denationalisation, for example.

The public should demand that politicians on the stump debate such issues. Should expenditure on agriculture and social services be curtailed in order to curb inflation? Especially when the spending per capita on items like education is among the lowest in the world. A socialist may argue that some amount of inflation in order to maintain social services is justified, while a right winger may argue that the economy must consolidate and grow first in order to afford social services. What they don't realise is that there is room for debate and ways to increase both growth and social spending without causing inflation.

A similar debate on job creation is also required. In urban areas, restrictive trade union law has led to highly capital-intensive industrialisation. In agriculture, meanwhile, lavish fertiliser subsidies and the IRDP have failed to take agriculture out of its 2 per cent growth bind. The result has been that total employment has hardly moved with growth (*see chart*). The public is entitled to know the politician's stand on these issues.

That there are economic choices is clear, difficult though they may be, and the solutions may well hurt large constituencies. They are, in that sense, similar to the social solutions favoured by the National Front and the BJP. The difference is that the public is sick of divisive social issues and would rather decide on economic issues. And this can work wonders at the ballot box as well. Our politicians, who feel that a campaign based on economic issues will not sell, should heed the changing times. As Margaret Thatcher demonstrated with trade union law, the removal of moribund economic policies that hurt large constituents can win elections.

Rep licences — confusion

The Reserve Bank of India (RBI) decided last fortnight to reduce March's stiff margins for replenishment importers' letters of credit (rep licence) from 110 per cent to 50 per cent. In so doing, it has reduced the importers' misery but added considerably to their confusion. This is because rep licence users now need a bank certificate that the export proceeds have been fully repatriated. Since the percentage of remittances even six months after export averages 90 per cent, this rule will sharply reduce rep licence availability in the short-term even for exporters who wish to use their own rep licences to continue their operations.

Since the RBI

has tacked the new stipulation even on to existing rep licences, the Rs.2,500-crore rep licence market has been thrown into disarray as it has converted an otherwise negotiable instrument into one tied to being able to contact the original holder of the rep licence and pressuring him into arranging a bank certificate. Not surprisingly, the average premium has fallen by more than half from its 30 per cent rate in January — a loss of Rs.375 crore to the holders.

The RBI could have been smarter. Since its concern is its foreign exchange reserves, new rep licences should be issued in proportion to exchange remitted out of export earnings. The government already follows this method for determining tax-free export earnings, so why not for rep entitlements? Meanwhile, existing rep licences should be exempted from the bank certification requirement entirely. If the country lacks the necessary foreign exchange, the RBI should instead reduce the percentage of entitlement of exchange for existing rep licences.

Education remains the key

The preliminary projections offered by the registrar general and census commissioner of India are far from reassuring. Nothing startlingly new emerges from the highlighted figures. In this sense, it is a damning pointer to the government's continuing failure to concentrate on its most urgent priorities — education and health. In spite of a decade of good economic growth, poor education and health — especially among women — have continued to frustrate attempts to control population growth.

The figures reveal that the decadal drop in the growth rate of the population has been marginal. The population has risen over the eighties by 23.5 per cent against 24.66 per cent during the previous decade. Likewise, the literacy rate has also moved up marginally to 52.11 per cent from 45.36 per cent.

The literacy rate among males has improved from 56.37 per cent in 1981 to 63.86 per cent in 1991. Among women, while it has increased from 29.75 per cent to 39.42 per cent, it is still dismally low and is responsible for the overall low level of literacy. What is especially alarming is that the overall sex ratio between women and men has declined from 934 per thousand to 929. Given that the natural life expectancy of women is higher than that of men, the ratio should favour women. This is the case in all developed countries and in countries with adequate health facilities like Sri Lanka. The Indian ratio is clearly a result of the poorer access to health facilities given to women than to men. This is because, while the typical poor agricultural family tends to have a large number of children in order to add hands to the plough, it is the male children who are the most valuable.

Kerala, the state which bucks the general trend of the census, provides the most interesting counter-example to the national trend. This is the most literate state in India with a literacy rate of 90.59 per cent. It is the only state which has a favourable sex ratio for women against men: 1,040 females per 1,000 men. This shows that women have at least achieved the right to survival — given only grudgingly in other states. Not surprisingly, it has the lowest rate of growth of population among the states — and a declining one, at that.

The figures on female literacy and the sex ratio are directly connected with the failure of the growth rate to decline. An educated woman is an additional wage-earner for the family. With the stability that her additional income provides, it not only makes less sense to disrupt this stability by taking time off to have children, but also makes it less necessary to add children for the sake of the social insurance of creating future wealth. Given the woman's contribution to household income, greater literacy thus invariably leads to the equality of the sexes. In Kerala, it already shows that women have achieved the equality they rightfully deserve. Further, an educated woman is more capable of deciding how many children — a decision which is rightfully mainly the woman's — the family should have.

Converse to the Kerala experience, it is in the four states — Uttar Pradesh, Bihar, Madhya Pradesh and Andhra Pradesh — where the sex ratio and female literacy are shown in their worst light that the population has increased the most.

The relationship of infant mortality to high birth rates has been amply demonstrated in many countries. With the spectre of many of their children dying in their early years, parents are impelled to have more children. It might be a truism, but children provide for most Indians, who lack the economic stability that education would provide, their only form of social security. Kerala again demonstrates this: it is the state with the lowest infant mortality rate. Again, women who are educated are better able to take care of their children.

Without the health care problem being tackled, there is little possibility of birth control progammes working. As long as children are considered a source of wealth or at least support, people will want to have more of them. It is this kind of quandary that the Indian family planning programme finds itself in. The bottomline is that without adequate provision of education and health facilities, there is little hope of it succeeding.

Cycling for power

Kalinga Engineers Ltd (KEL), a small-scale industry, has proved that research and development need not be the forte of large-scale industries alone. KEL's R&D achievement: the human and animal power generator.

KEL discovered that if instead of wooden bullock carts, steel bullock carts of the same weight were used, power could be generated from the motion of the wheels. For this KEL has designed generators to be fitted to the wheels. The power generated can in turn be stored in a battery.

Similarly, KEL has designed a human powered generator which converts muscle power into electricity. The mechanism of the human powered generator consists of a standstill cycle at the input end and a battery to store the power at the output end. Electricity is generated by peddling. The power thus generated can later be used for lighting, communications, etc.

With an installed capacity of 100 watts and operational efficiency under test conditions of 75 per cent, the human generator potential is enormous.

"Trial orders have been placed by TISCO, IIT Kharagpur, OMC department of adult education and the Indian army and commercial production will start soon," says Ajit Mahapatra, managing director of KEL.

Speeding up refunds

*Refund if any to be credited to Account No.*_____

with _____

Bank, Branch _____

MICR code _____

Complaints from investors who have not received a refund after a public issue are often heard. But in most cases it may not be the company's fault, as it takes at least four to six months before an 'unpaid' report is obtained.

If postal mailing is replaced by bank mailing to the applicant's account this problem can be solved. For this, the application form could be redesigned to include a refund mandate box in which the account number, the bank's name and branch, and the MICR code given in his cheque book are included.

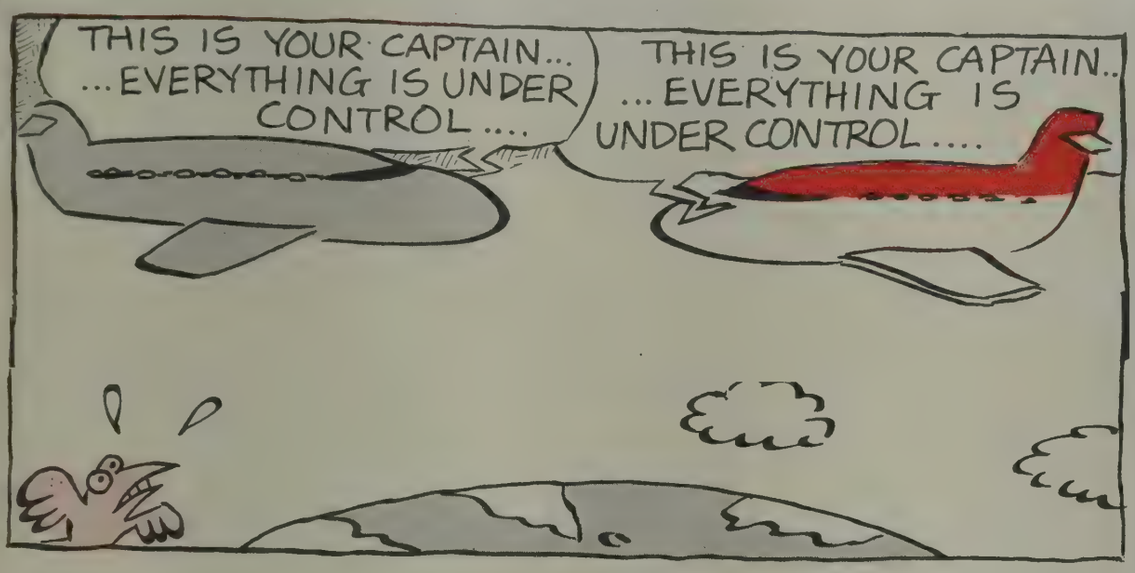
First, applications could be sorted out on a citywise bankwise basis. Copies of the refund mandate could then be made and sent to the respective banks' city headquarters. And from there the money could be transferred to the shareholders' accounts.

With this system in place, refund credit to the investors' accounts could not take more than 15 days and the company could save on postal charges as well.

V.L. GANESH
Thane (Maharashtra)

Places in the sun

Solar energy, a natural resource long since untapped, is finally being exploited by India on a large scale. A joint venture between the Tata group and the global giant, BP Solar, is installing solar-powered systems in remote areas. The first of these installations is coming up at Yadakumari and Srivaighi, two railway stations in the interior of Karnataka.



Solar-powered systems, ideal because of their modularity, are the perfect solution for these two stations, located almost 60 km from the nearest railhead. The systems will supply power at night to 28 railway staff quarters and eight outdoor power connections for colony and yard lighting.

Unlike other power stations that have long gestation periods, the installation of these solar power stations was completed in a record time of 15 days. A similar experiment has also been carried out at J.K. Group's Jeke Gram at Thane in Maharashtra.

Business India invites readers to send original unpublished contributions to this page. The snippets can be humorous, insightful, outrageous or simply informative. Each snippet must carry this coupon.

Rs.50 paid for each published contribution.

Ending mid-air collisions

A recent development in avionics promises to virtually eliminate the threat of the worst inflight scenario imaginable, a mid-air collision. The new system is called TCAS — traffic alert and collision avoidance system. A TCAS equipped aircraft emits a continuous interrogation signal and if another commercial jet is within a radius of 36 kilometres, it will answer with a reply signal.

If the planes are on a collision course, a visual and aural warning will be activated. If the course is still maintained, the computer will tell the crew to perform a vertical avoidance manoeuvre some 30 seconds before projected impact. If both aircraft are equipped with TCAS, the computers will co-ordinate their commands.

Asthmatics arise!

'Conquer the Tower', a programme being organised by the Asthma and Bronchitis Association of India (ABAI), is a challenge not for the healthy but for the sick.

The programme which is scheduled for 21 April from 7 am to 12 noon, is for 300-odd asthmatic patients who will be helped to climb the 32-storey World Trade Centre Building at Cuffe Parade in South Bombay, said to be the tallest building in India.

To encourage the patients, there will be volunteers on each floor. Also 25 doctors and six physicians will be there to attend to emergencies, an ambulance will be available at the site and the basement of the building will be converted into a fully equipped mini-hospital.

Disintegrating cars

Artificial bacteria are being bred to degrade plastic of which the Trabant, a compact two-stroke car that is being abandoned in growing numbers by the roadside in East Germany, is largly made.

Chemists Peter Lietz and Franz Weisenbact, of the East Berlin biotech research centre, have already set the microbes to work on chunks of the Trabant's plastic body in the laboratory.

In three weeks bacteria are said to be able to convert 650 kg of plastic into roughtly 10 kg of ocre — a coloured biomass — thereby eliminating the need to incinerate the scrap and pollute the environment.

Litter that lightens

Environmentalists need not shout themselves hoarse about plastic litter anymore. Waste polystyrene, in the form of discarded plastic cups and packaging materials, can now be reused to lighten concrete building panels and tiles and improve their insulation.

A company in Britain has demonstrated that polystyrene beads can achieve up to 40 per cent weight saving in concrete products, while retaining their strength and increasing their insulation. Manufacturing and distribution costs too can be cut down by 15 per cent. Distribution costs are cut because of fuel saving achieved by carrying lighter products.

Fruitless policy

On the one hand, we talk of our poor balance of payments situation, on the other, we waste valuable natural resources. Every year about 335,000 tonnes of cashew apples are allowed to waste in Orissa. Cashew farmers only collect the nuts and leave the apples to rot. If the juice had been sold to liquor manufacturers in Goa, it could have earned Rs.2.30 crore in excise revenue.

While the Orissa government has decided to bring greater area under cashew cultivation, it has done nothing to encourage the setting up of cashew apple processing units. One such unit has finally been sanctioned but as its capacity for crushing cashew apples is small, it can utilise only a marginal stock.

Have the most fashionable address in town. Hobnob with the best dressed women. Be the first with new styles and trends.

And that's even before the profits come rolling in!

As a franchisee for the exclusive Lakshmi Raaga range of sarees, success now comes to you all wrapped up in five and a half metres of best-selling fashion.

Launched barely a year ago by Lakshmi Mills, the Lakshmi Raaga sarees set new standards in the fashion world.

With unique designs and prints. With fabrics ranging from cotton to polyester-cotton to handloom cotton/silk. With limited creations to maintain exclusivity.

And now with a new introduction. A fashionable range of salwar-kameez!

Exciting fashion ideas as these, naturally led Lakshmi Mills to look for franchisees who are special. Very special.

Franchisees with initiative, drive and business acumen.

And, of course, with shop space in prime locations in select cities.

In return you will gain Lakshmi Mills' invaluable experience of over 80 years in the textile industry.

Complete guidance on the interiors, to maintain a uniform look in each city.

Full support in selecting and training personnel.

All the advertising and promotional support to launch the Lakshmi Raaga outlets.

And, not to mention, a fashionable address, mingling with the city's smartest set, predicting fashions... and, of course, sales figures as attractive as the sarees!

Interested? Write quickly with your proposal to:

Mallya's fire sale?

The cash crunch catches up with everyone sooner or later. That's true even of someone who still boasts of an extremely flamboyant lifestyle — Vijay Mallya. He has put companies like Berger Paints, Unitel, Bush Boake and Allen (in which the UB group has a 24 per cent stake), and Kissan, along with a few other minor companies, on the block. There have been no takers so far, possibly because Mallya's asking prices are too high. Yet Mallya may be forced to settle for less, as his bankers are believed to have begun pushing him hard to complete the sales.

Mallya: the money gets harder to come by

In the meanwhile, Best & Crompton is acquiring Thane Electric Supply Company Ltd. While the latter has lost its distribution licence, it has a small transformer making factory with an installed capacity of 700,000 units a year in Andhra Pradesh which would fit in well with Best & Crompton's activities. The company also has Rs.3.75 crore as free reserves and posted a turnover of Rs7.08 crore in 1989-90.

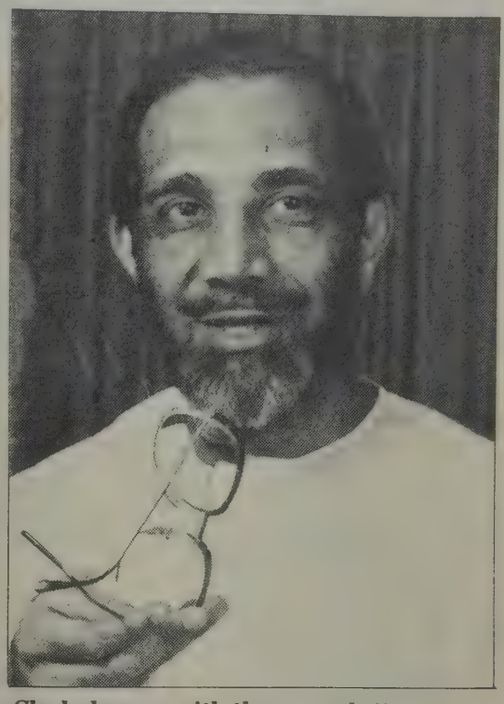
Falcon flies again

EID Parry is likely to take over Falcon Gulf Ceramics Ltd. The latter was set up by two non-resident Indian brothers, A.L. Bhatia and his younger brother, Shyam. The brothers were based in the Middle East and engaged in international trading. They, however, had no industrial experience.

Falcon Gulf was supposed to manufacture 6,600 tonnes of sanitary ware a year at Alwar in Rajasthan. The company had raised almost Rs.4 crore from the market for the Rs.10-crore project in July 1988. But, in the year ended March 1990, the company lost Rs.2.08 crore and a further Rs.88 lakh in the next six months. The Bhatia brothers apparently lost interest and sold out. The deal is believed to have been struck at a price of Rs.7 a share, against the quoted price of Rs.10 on the Bombay Stock Exchange.

Boundless faith

Indians living abroad apparently continue to have faith in their country of origin despite its lowered credibility in the international financial markets. Bankers say NRI deposits are holding up well, even though many were up for renewal and it had been feared that they would not be renewed. Is it only because NRI depositors are overtly patriotic or that they have already discounted the possibility of default? After all, maintaining the deposits may still be attractive, given the interest rates they are offered.



Is MRF-Michelin on?

The government seems to have informally told the tyre giant MRF to go ahead with its plans to allow Michelin of France to pick up 51 per cent of the equity in the new company being set up to manufacture aerotyres in India. Michelin had earlier wanted a stake in MRF itself but the Mammen Mapillai family, which controls the Madras-based company, vetoed the idea. But market sources say that some of MRF's competitors are lobbying the government against the Michelin financial tie-up in the venture, citing a case in South Korea where the French company had some problems with the local collaborators. The formal government permission for MRF-Michelin deal is still awaited.

Comeback time

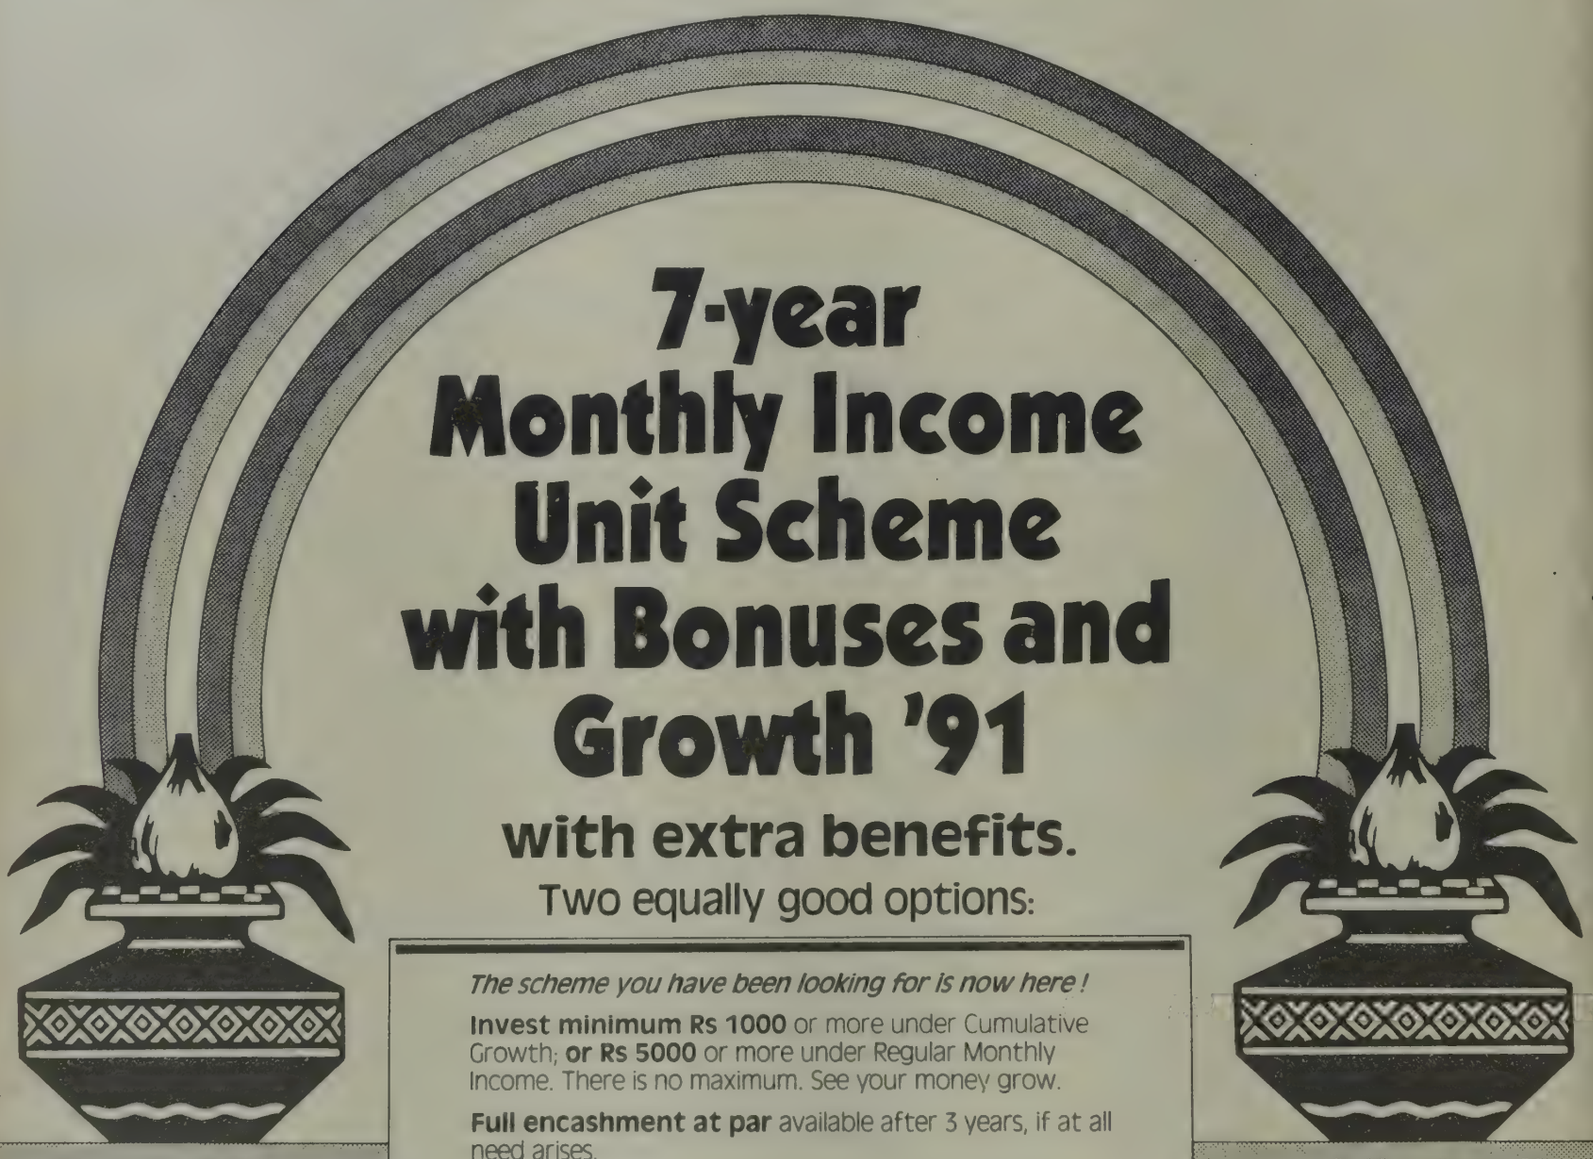
Having been beaten by Essar Gujarat in its effort to set up a million-tonne steel plant in Karnataka, Viren Shah of Bombay-based Mukand Ltd can take consolation in the fact that the West Bengal government has invited him to set up a similar plant at Kharagpur in the state's Midnapore district.

The cost of the plant is estimated at around Rs.2,500 crore. For Shah, this will be his second joint sector project with the

Shah: happy with the consolation prize

West Bengal government in recent times. In early March he set up Keventer Agro jointly with Calcutta businessman M.K. Jalan. The project envisages a Rs.30-crore milk dairy to produce 400,000 litres of milk every day for supply to Calcutta.

A step forward



Mafatlal Industries is promoting a new company, Sunanda Industrial Machinery, to set up a Rs.10-crore project near Ahmedabad for the manufacture of injection blow moulding equipment for the plastics industry. It is expected to be operational by end-1992. Two weeks ago, a technical collaboration agreement was signed with the Japanese company, Nigata.

The Mafatlals already have an engineering company in the group; this company, Padmatex, makes machinery for the textile industry. Soon it is also going to diversify into the manufacture of equipment like plastic processing extruders and extruder systems.

Instead of combining the production of all plastic processing equipment in Padmatex, the Mafatlals decided to set up a new company because nearly 31 per cent of the equity in Padmatex is held by two German companies, while the collaborator for the new company is Japanese.

With this new unit, the Mafatlals will have achieved forward integration in both their prime areas of business — plastics (NOCIL and PIL) as well as textiles.

It's back again!
the most sought-after monthly scheme

7-year Monthly Income Unit Scheme with Bonuses and Growth '91

with extra benefits.

Two equally good options:

The scheme you have been looking for is now here!

Invest minimum Rs 1000 or more under Cumulative Growth; **or Rs 5000** or more under Regular Monthly Income. There is no maximum. See your money grow.

Full encashment at par available after 3 years, if at all need arises.

Tax Exemption: (1) Income up to Rs. 13,000 under Section 80L. (2) Wealth Tax exemption under Section 5. No tax deduction at source for individuals.

Pledging Facility: Loan arrangement with Central Bank of India against your Units.

Dividend: Full Month's Dividend will be paid to those joining before the 15th of the month, and those who join after the 15th will get dividend for the half-month.

UNIT TRUST OF INDIA

Trust of 90 lakh Unitholders.

Regular Monthly Income	Cumulative Growth
13% Dividend paid monthly	Rs. 1000 becomes Rs. 2500
+ 2 Bonus Dividends 3rd & 5th year	+ 2 Bonus Dividends 3rd & 5th year

Scheme Open for 3 months: April 1 to June 30, 1991

ADBOIT-432/91-92

ESAB INDIA

Strategic growth

Can a fledgling three-year-old company, with sales of only Rs.16.88 crore, project a Rs.100-crore turnover for the coming year and still expect to be taken seriously? If the company is Esab India, the welding dark horse, the answer is yes.

Like its parent company, Swedish welding giant Esab AB, Esab India is adopting the merger and acquisition strategy for faster growth. Bengt Eskilson, president of the Esab AB group, has been quoted as telling his competitors in 1983, "We are committed to staying in the welding business all over the world. So if you wish to opt out, please give us a call." The nearly seven-fold jump in Esab India's sales is expected to follow its recent acquisition of the Calcutta-based IOL's welding division (1989-90 sales: Rs.56 crore).

IOL acquisition. Esab India is spending Rs.30.78 crore on the IOL acquisition. Part of the required funds is coming from a proposed Rs.20-crore issue of partly convertible debentures and new equity shares. Internal accruals and an investment of Rs.7 crore from Esab AB will take care of a Rs.5-crore modernisation programme at the IOL unit.

Electrode unit, Kalwe: massive modernisation plan

Takeovers apart, Esab India is adopting a well-chalked-out expansion and modernisation programme to help it strengthen its hold on the promising Indian market. Sixty per cent of the work on the modernisation of the electrode factory at Kalwe has been completed, funded by part of a Rs.11-crore ICICI loan (see *Business India*, 18 September 1989).

Work has also begun on the submerged arc plant, and the flux core project will be commissioned next year. The ambitious plans to manufacture laser cutting machines, robotics and special cross-cutting machines, however, are being shelved for now, on account of the "country's delicate forex position," according to Jim Thorpe, managing director, Esab India.

The strategy for the time being will be to concentrate on market sectors that give higher value. Says V. Ramamrutham, a director on Esab India's board, "The accent will be on welding machines and not electrodes since there are already so many small-scale units operating in the latter segment." Another definite growth area is exports. And it is here that the Esab AB connection will prove to be an invaluable asset. The Swedish parent firm has a presence in 69 countries and controls 33 per cent of the world's welding market. (Esab India's slogan, 'We weld countries' is no empty boast.) The main export thrust will be towards the Pacific rim. IOL's trading contacts in several African countries will be an added advantage.

It is strategic planned growth of this kind which makes Esab India a company to watch out for in the future. It has a clear-cut game plan: acquisition accompanied by reorganisation and rationalisation of brands and production facilities. The expected results can be aptly expressed in the words of its chairman, H.K.Bilpodiwala. Speaking in Bombay at an extraordinary general meeting of the company last month, he said, "The (IOL) acquisition is well timed as our company sees opportunities for significant growth... We hope to achieve sound and improving profits."

■ RAJU BIST

MAFATLAL ENGINEERING

Workers win

For Arvind Mafatlal, the company's chairman, Mafatlal Engineering India Ltd (MEIL) has always been jinxed. Acquired from the Thackerseys in 1980, the company has gone through several strikes and two lock-outs, and has been in financial haemorrhage for so long that there seems to no life left in it (see *Business India*, 10 July 1989).

As if this wasn't enough the Bombay High Court, in a landmark decision, recently restored the jobs of 890 workers who were compulsorily retired from service in May 1986, with full back wages. At a conservative estimate, the MEIL management will have to pay out Rs.13 crore. The company has been locked out since May 1989.

Capital crunch. When MEIL re-opened in 1986 after a 13-month lock-out, it was facing a severe working capital crunch. The financial institutions — ICICI in particular — agreed to pump in Rs.6 crore, if the company got rid of almost 1,000 workers. The management consequently signed an agreement with Gulab Joshi of the Kamgar Utkarsh Sabha (KUS), whereby all workers who had completed 25 years of service on 1 May, 1986 or had attained the age of 58 years were sought to be retired.

The workers were incensed at this arrangement. KUS, they claimed, never enjoyed the majority support of the workforce and had been brought in only to get the workers sacked. The MEI Employees union went to the industrial tribunal, which ordered the reinstatement of the workers. But the company moved the higher courts. The 107-page order given on a writ petition filed by the company against the workers' unions, castigates KUS for deliberately compromising the interests of the workers.

This judgement is being hailed as a landmark on the industrial relations front. Says one labour leader, "This will be a lesson to managements who play similar games of favouring one union against the other and even inviting a rival union to renege on workers' genuine demands."

The Chairman Declares To The Shareholders The Largest Turnover In History

ur young management scholars are future corporate leaders in the making, who will one day chart new courses of endeavour. Create corporate history.

At their institutes, the intellect is sharpened. And the spirit motivated to take on the hurly-burly of the market-place.

Ambassador is involved in the grooming of tomorrow's corporate achievers.

Sure, we make a wide range of executivewear, including accessories for today's on-the-move executive.

But the commitment goes even deeper. We are increasingly sponsoring events in the premier management institutes. Debates. Quizzes. Management games. Seminars. We will institute awards that identify potential.

We will even recognise and reward today's young executive stars.

All this so that the confidence of our young talents can take wing.

And discover new horizons of enterprise.

ECONOMY

Canbank leads race

The equity-linked savings schemes launched by the five mutual funds have mobilised an estimated Rs.525 crore. In the first neck-and-neck competition between Canbank Mutual Fund and UTI, the former has emerged the winner with an estimated collection of Rs.210 crore against UTI's Rs.165 crore.

ADB approves loan

The Asian Development Bank has approved of a $150 million special assistance loan to India, to enable it to tide over the high cost of petroleum imports and ease the impact caused by the Gulf crisis. The loan was cleared by the ADB board at Manila recently.

A redeeming feature of this loan is that its repayment period is spread over 20 years with a grace period of four years. The interest rates, which vary every six months, are believed to be quite attractive at the current level of 6.5 per cent.

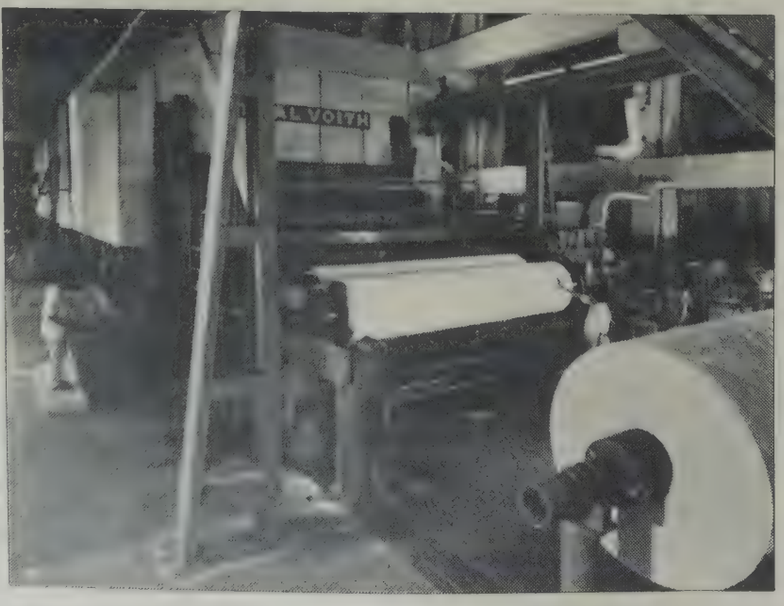
ECGC hikes premium

The Export Credit Guarantee Corporation (ECGC) has planned to withdraw the 50 per cent concession available on exports to the Soviet Union.

The premium on exports that had been fixed lower by ECGC on account of rupee trade, has been increased primarily due to the turmoil in the USSR. ECGC covers two sets of risk for exporters — political and comprehensive (commercial). While the premium for political risks has been retained on the same level, ECGC has been forced to hike the premium for the comprehensive cover.

Sugar exports up

The Union government has decided to export 500,000 tonnes of sugar this year. Exports are to be channelised through the Indian Sugar Industry Export Import Corporation. Shivajirao Patil, president of the National Federation of Cooperative Sugar Factories, has urged the government to allow the export of an additional 500,000 tonnes. At present, contracts have already been received for the export of 225,000 tonnes of sugar.



Imports from the USSR

India is to receive 60,000 tonnes of ammonia from the Soviet Union under the rupee trade agreement. The ammonia will be purchased at $110 per tonne, 11 per cent higher than the price of imports from the Gulf. The ammonia is to be used for manufacture of diammonium phosphate (DAP) in the country. Besides this, 500,000 tonnes of DAP is also to be imported from the US. The import of part of the country's DAP requirement in the form of raw material is to ensure the continued operations of the imports-based indigenous fertiliser units. Along with ammonia, 300,000 tonnes of phosphoric acid for the manufacture of DAP has also been imported from Morocco.

Import of newsprint

The government has released Rs.345 crore in foreign exchange for the import of newsprint. Of this amount, Rs.195 crore is for the general currency areas and Rs.150 crore for rupee currency areas. The amount includes Rs.60 crore released in February to enable the State Trading Corporation (STC) to fix contracts in advance to meet the anticipated requirement of newsprint.

STC already has contracts for the import of 4,200 mt of newsprint. In view of the forthcoming elections, the corporation is additionally importing 60,000 tonnes by this month-end.

Relief to entrepreneurs

The government has decided to release the amount due to entrepreneurs under the now defunct central investment subsidy scheme. The scheme had provided for a cash subsidy of 15 per cent of the project cost.

In view of the acute financial constraints faced by entrepreneurs due to the non-payment of subsidy, the ministry hopes that by releasing the subsidy amount it would be possible to restore their faith. This move would also help attract more entrepreneurs to backward areas.

Premium on REP licences

Market premium on replenishment (REP) and additional import licences has recently shot up from 13 per cent a week ago to 21 per cent. The sudden hike is attributed mainly to some relaxations in the margins on import financing announced by RBI last week.

In fact, the premium rate soared to 25 per cent on 1 April 1991, only to drop by 3 per cent two days later following certain doubts on transferability of REP and additional licences. The uncertainty has stemmed from RBI's latest amendment to its earlier directives on bank margins.

CORPORATE

VMC authorised by SEBI

VMC Project Technologies Ltd, a Baroda-based consultancy company, has been authorised as a category I merchant banker by SEBI. This will be Gujarat's first professional merchant banking house. VMC is now authorised to undertake public issue management and portfolio manage-

ment, and act as lead managers and underwriters for public issues.

Do-Max steel project

Do-Max Steel Ltd is setting up a 30,000-tpa steel project at Waghodia, near Baroda. The plant is to be commissioned in 1991, and will manufacture import-substitute alloy steel and steel ingots for special use. The project, costing Rs.5.95 crore, will be partly financed by a public issue.

Do-Max is also negotiating with West German firms for the supply of knowhow for forward integration and expansion.

Deepak Fertilisers' expansion through

Deepak Fertilisers & Petrochemicals Corporation Ltd's expansion project for the manufacture of industrial chemicals, explosives, and fertilisers like prilled ammonium nitrophosphate is to go on stream in about three months. The project, started in 1989, was to be completed by March 1991. Originally estimated to cost Rs.346 crore, cost overruns have jacked up the total outlay to Rs.416 crore.

Of the six plants scheduled to come up at Taloja, near Bombay, a 33,000-tonne concentrated nitric acid plant is to be commissioned this month. Most of the raw material requirements will be met by the company's existing liquid ammonia unit.

The company has plans for further diversification and has already obtained LoIs for the manufacture of resins, hexamine, and slow-release urea coating agents. The new plans involve a total investment of around Rs.75 crore, and are to be completed in another 18 months.

Bharti Telecom signs MoU

The Delhi-based Bharti Telecom Ltd (BTL) has signed an MoU with an American firm, Premier Telecom Products, a subsidiary of United Telecom/US Sprint, a leading American telecom company, for supply of telephones.

According to Sunil Mittal, BTL's managing director, his company will supply 600,000 telephones within three years. On completion of this order, Premier Telecom is expected to lift 500,000 telephones every year.

Mittal said that this is the first time an American company has shifted its supply source from Taiwan and South Korea to India.

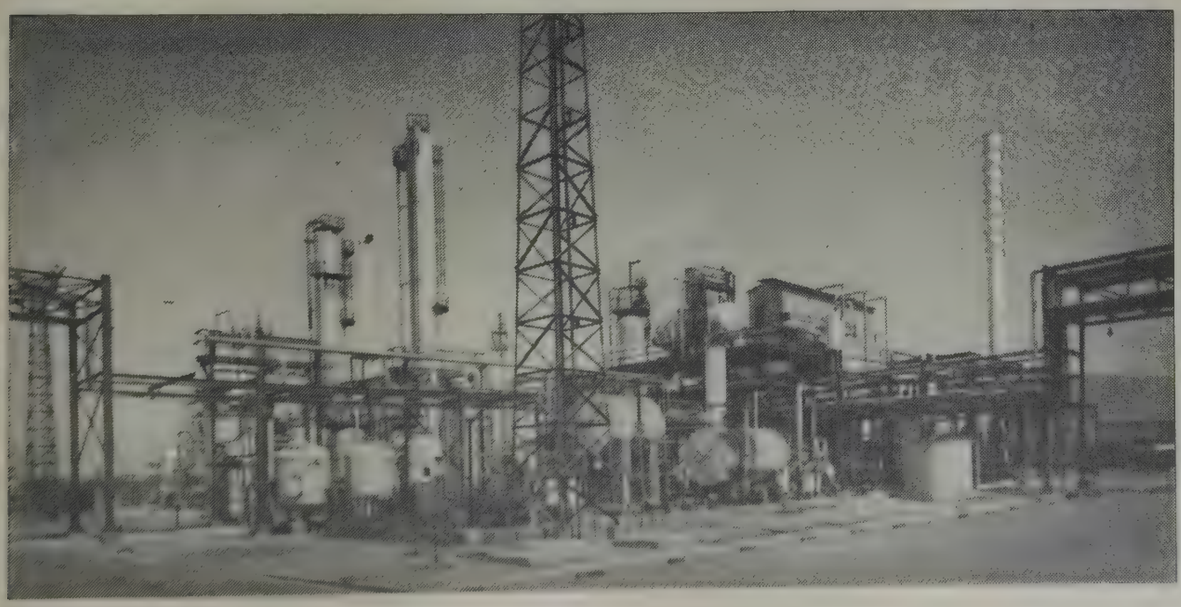
BTL has also signed a joint-venture agreement to manufacture electronic push-button telephones in the Soviet Union.

Elgi takes over Mic Auto

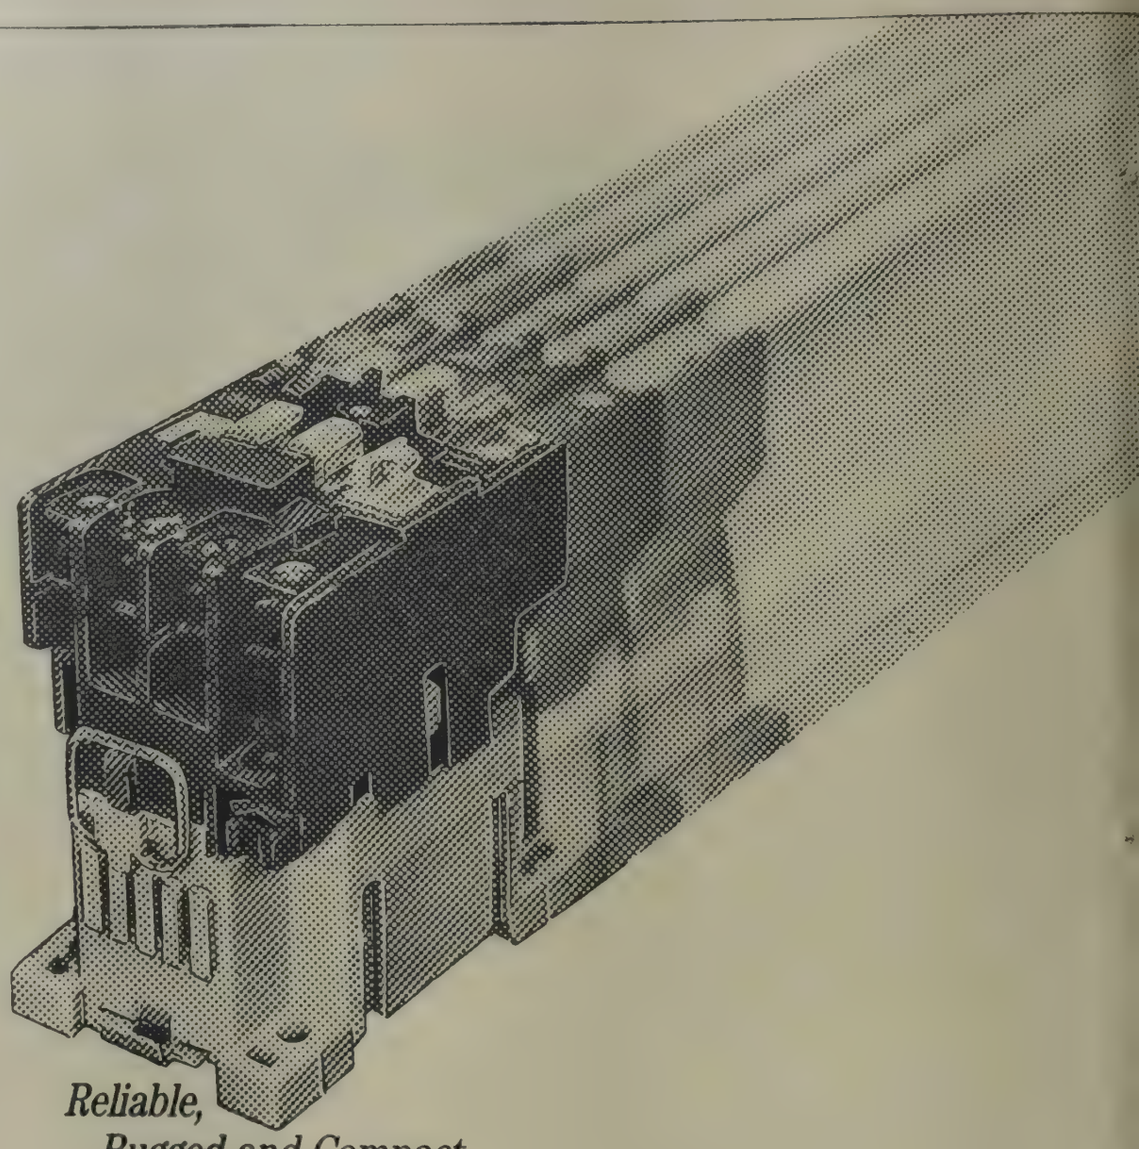
The Coimbatore-based Elgi group of companies has taken over the management of the ailing Mic Auto Ancillaries Ltd of Bangalore. L.G.N. Anand, one of the promoters of the Elgi group, has taken over as chairman of Mic Auto, which is being renamed Elgi Auto Engineering.

The new management plans to expand the manufacturing line of Mic Auto, which had a turnover of Rs.18 lakh in 1989-90, to tap the export market and achieve 100 per cent capacity utilisation for the existing product lines including tie-rod ends, ball joints, drag links and repair kits for four- and six-wheelers.

MJ group's new venture



Jasubhai Shah of the MJ Group of Industries is setting up a joint venture with Tudor of Spain for the manufacture of batteries. The project, to be located at Prantij, a notified backward area in Gujarat, involves a capital outlay of Rs.28.5 crore. The new company, Tudor India Ltd, will manufacture 400,000 batteries a year. The company will concentrate on exports to Europe, and Tudor has already entered into a buy-back arrangement under which it will purchase 40 per cent of the annual output.



HTL for fax machines

Hindustan Teleprinters Ltd is expected to receive government permission to manufacture fax machines soon. The public-sector unit has identified fax machines as a priority product and a substitute for electronic teleprinters. HTL's growth and employment have been hindered by the phasing out of old-technology products. The company has also signed an MoU with the public-sector ET&T for the development of PC pads and PC gist cards.

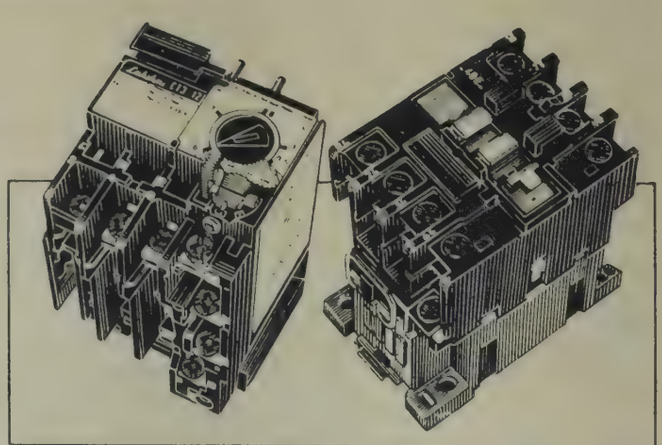
Tripura gas project cleared

Tripura's gas-based methanol project has finally been cleared by the government. The 300-tonne plant had been awaiting clearance for some time. A Rs.184-crore gas-based thermal power plant to be set up in Brajendranagar has also been cleared. The plant is expected to generate 84 MW of power daily.

Reliable,
Rugged and Compact

Discover the three-in-one advantage of contactors from Batliboi

Lakshmi contactors from Batliboi. Their advantages to original equipment manufacturers and actual users, are threefold:



Superior Electrical and Mechanical Properties: High AC3/AC4 ratings. Eliminate contact failure and down-time. Add-on blocks, mechanical latches, mechanical interlocks and surge suppressors, common to all contactors in the range. Common coil for auxiliary and power contactors upto 30A rating.

Higher resistance to damage in transit: The contactors are made from high-grade plastic, not bakelite.

Compact design: Occupy minimum space in the panel. Have higher thermal ratings, to enable mounting contactors in close proximity to each other.

The thermal overload relays have built-in safeguards against single phasing. Auto/manual reset facilities along with two independent trip contacts are available as standard features.

All backed by Batliboi's prompt after-sales service.

SCL to expand

Synthetics and Chemicals Ltd is planning major expansion over the next two years. A Kilachand group company, SCL will invest around Rs.250 crore for its planned projects. Of this, almost Rs.230 crore is earmarked for the expansion of its synthetic rubber plant at Bareilli from the present 40,000 to 120,000 tpa in two phases. The company is also in the process of taking over Sikkim Vanaspati Ltd, a Gangtok-based company. The projects will be funded by a Rs.25-crore issue of non-convertible debentures and term loans from institutions.

also because the state accounts for almost 30 per cent of the total consumption. The plant will employ around 70 people and has received environmental clearance from the Gujarat Pollution Control Board.

Pesticides joint venture

Aimco Pesticides Ltd has proposed a joint venture to manufacture monocrotophos, DDVP and phosphomedon in Vietnam. It has also signed an MoU with Nicotex of Vietnam for a Rs.2.5-crore contract for the supply of technical knowhow to manufacture fenvelerate and cypermethrin. The contract also envisages Aimco helping Nicotex to upgrade its nicotine sulphate plant.

Bayer's new plant

Bayer (India) Ltd has set up an agrochemical formulation plant at Himatnagar in Gujarat. The Rs.4-crore unit will produce folidol dustable powder, an agricultural insecticide. The plant has been set up in Gujarat because of its proximity to the raw material source, ie, the soapstone mines at Dungarpur, and

INDUSTRY

Threat to cut output

The cotton textile industry has threatened to cut production, due to the growing shortage of cotton produced locally. The shortage has been estimated to be around 1.7 million bales by the Indian Cotton Mills Federation (ICMF).

Rohit Mehta, chairman of the ICMF, says that the cotton crop estimate has been periodically revised downwards but the export quota increased progressively, creating a shortage. In the last six months, the Cotton Advisory Board revised downwards crop estimates from 12.4 million bales in August to 12.2 million bales in December last year close, and further to 11.5 million bales last month.

Revisions in crop estimates have led to escalations in domestic prices, as also the government's reluctance to curb exports. However, the government has now decided to freeze exports at 1.34 million bales.

New steel cess

A new steel cess will be levied on the steel industry for its development. The government plans to push through a legislation to this effect, when Parliament is convened next.

Sources in the department of steel point out that there is an urgent need to integrate various components presently levied. Under the new cess, three major components — steel development fund, international price reimbursement scheme, and joint plant committee cess — will be combined. Some new elements will also be included in the cess.

The prime object of this is to mop up funds not only for new steel projects but also to take care of various infrastructural needs that impede development of the steel industry in remote places.

Shipbreaking units face closure

The Reserve Bank of India's imposition of letters of credit for imports, has virtually grounded the shipbreaking industry. According to shipbreakers, if norms are not relaxed, the industry, accounting for production of about 600,000 to 700,000 tonnes of high-grade ferrous scrap annually, will be forced to close by June.

At present, more than 50 per cent of shipbreakers have no vessel on hand for breaking.

Coking coal imports

The integrated steel sector has planned a massive import of prime coking coal during the current financial year. This is because Coal India Ltd (CIL) has failed to raise domestic supply of direct feed coal.

Total import of prime coking coal by the Steel Authority of India, Rashtriya Ispat Nigam and Tisco during 1991-92 may come to 7 million tonnes. According to CIL sources, the organisation would at least be able to maintain its prime coking coal production at last year's target level of 4.2 million tonnes.

Project okayed

The Public Investment Board has okayed the setting up of a bulk distribution cement terminal at Kalamboli, New Bombay, subject to environmental clearance. The project will involve an investment of Rs.83 crore.

A pilot scheme for developing infrastructure for transport of cement in bulk, the project also aims to save on packaging material, eliminate packaging costs, minimise transit/loading losses and develop ready-mix concrete.

Sugar prices hiked

The price of levy sugar has been hiked for the current year by an average of Rs.28 per quintal on an all-India basis. The government upped prices of levy sugar following repeated representations from the industry.

The industry is, however, not satisfied with the hike. It feels that increase in cane price, wages and other cost escalations have not been taken into consideration. Plus, it claims, its demand to take transport and harvesting charges into account have been ignored.

LABOUR

HFC officers resume work

After a gap of nine days, the general manager and departmental heads of Hindustan Fertilizer Corporation (HFC) resumed work in their respective offices, following an order of the Calcutta High Court restraining the company's workers from staging demonstrations, criminal intimidations, *gheraos* and processions.

According to O.N. Kapur, general manager of HFC's Durgapur unit, the immediate reason behind the stoppage of work was the manhandling of four officers by workers belonging to the INTUC union.

Construction workers' allowance hiked

The government has announced that construction workers will receive a special allowance, with

effect from 1 April, following an increase of 73 points in the consumer price index between July and December 1990.

The rates will now range between Rs.4.55 and Rs.7.57 per day, depending upon area and category. The wages for the lowest category of workers will increase from Rs.11.90 to Rs.15.45. The revised wages for semi-skilled and unskilled supervisory staff will range between Rs.19.55 and Rs.27.44 per day according to skill, and area. The skilled and clerical workers will get between Rs.24.81 and Rs.38.69, while highly skilled workers will get wages ranging from Rs.31.67 and Rs.43.81 per day.

BPCL signs wage pact

A new wage settlement was signed between the Bharat Petroleum Corporation Ltd (BPCL) and the workers employed in marketing. According to a BPCL spokesperson, an agreement was signed by 15 trade unions with the management before the labour commissioner, central, Shambhu Dayal. The agreement follows protracted negotiations after the expiry of the 1989 wage settlement.

Airport staff agitation

All the airport, communications and technical assistants at the 22 airports within the Bombay region refused their pay packets, as part of their intensified week-long agitation against the alleged discrimination by the National Airport Authority (NAA) in their pay scales.

According to S.K. Roy, convener of the joint action committee, the 600 employees are wearing black badges as a form of protest. They now plan to stage an indefinite dharna outside the NAA's office. Nagpur, Ahmedabad, Pune, Indore, Jabalpur, Raipur, Surat, Baroda, Rajkot and Bhavnagar are among the 22 airports affected.

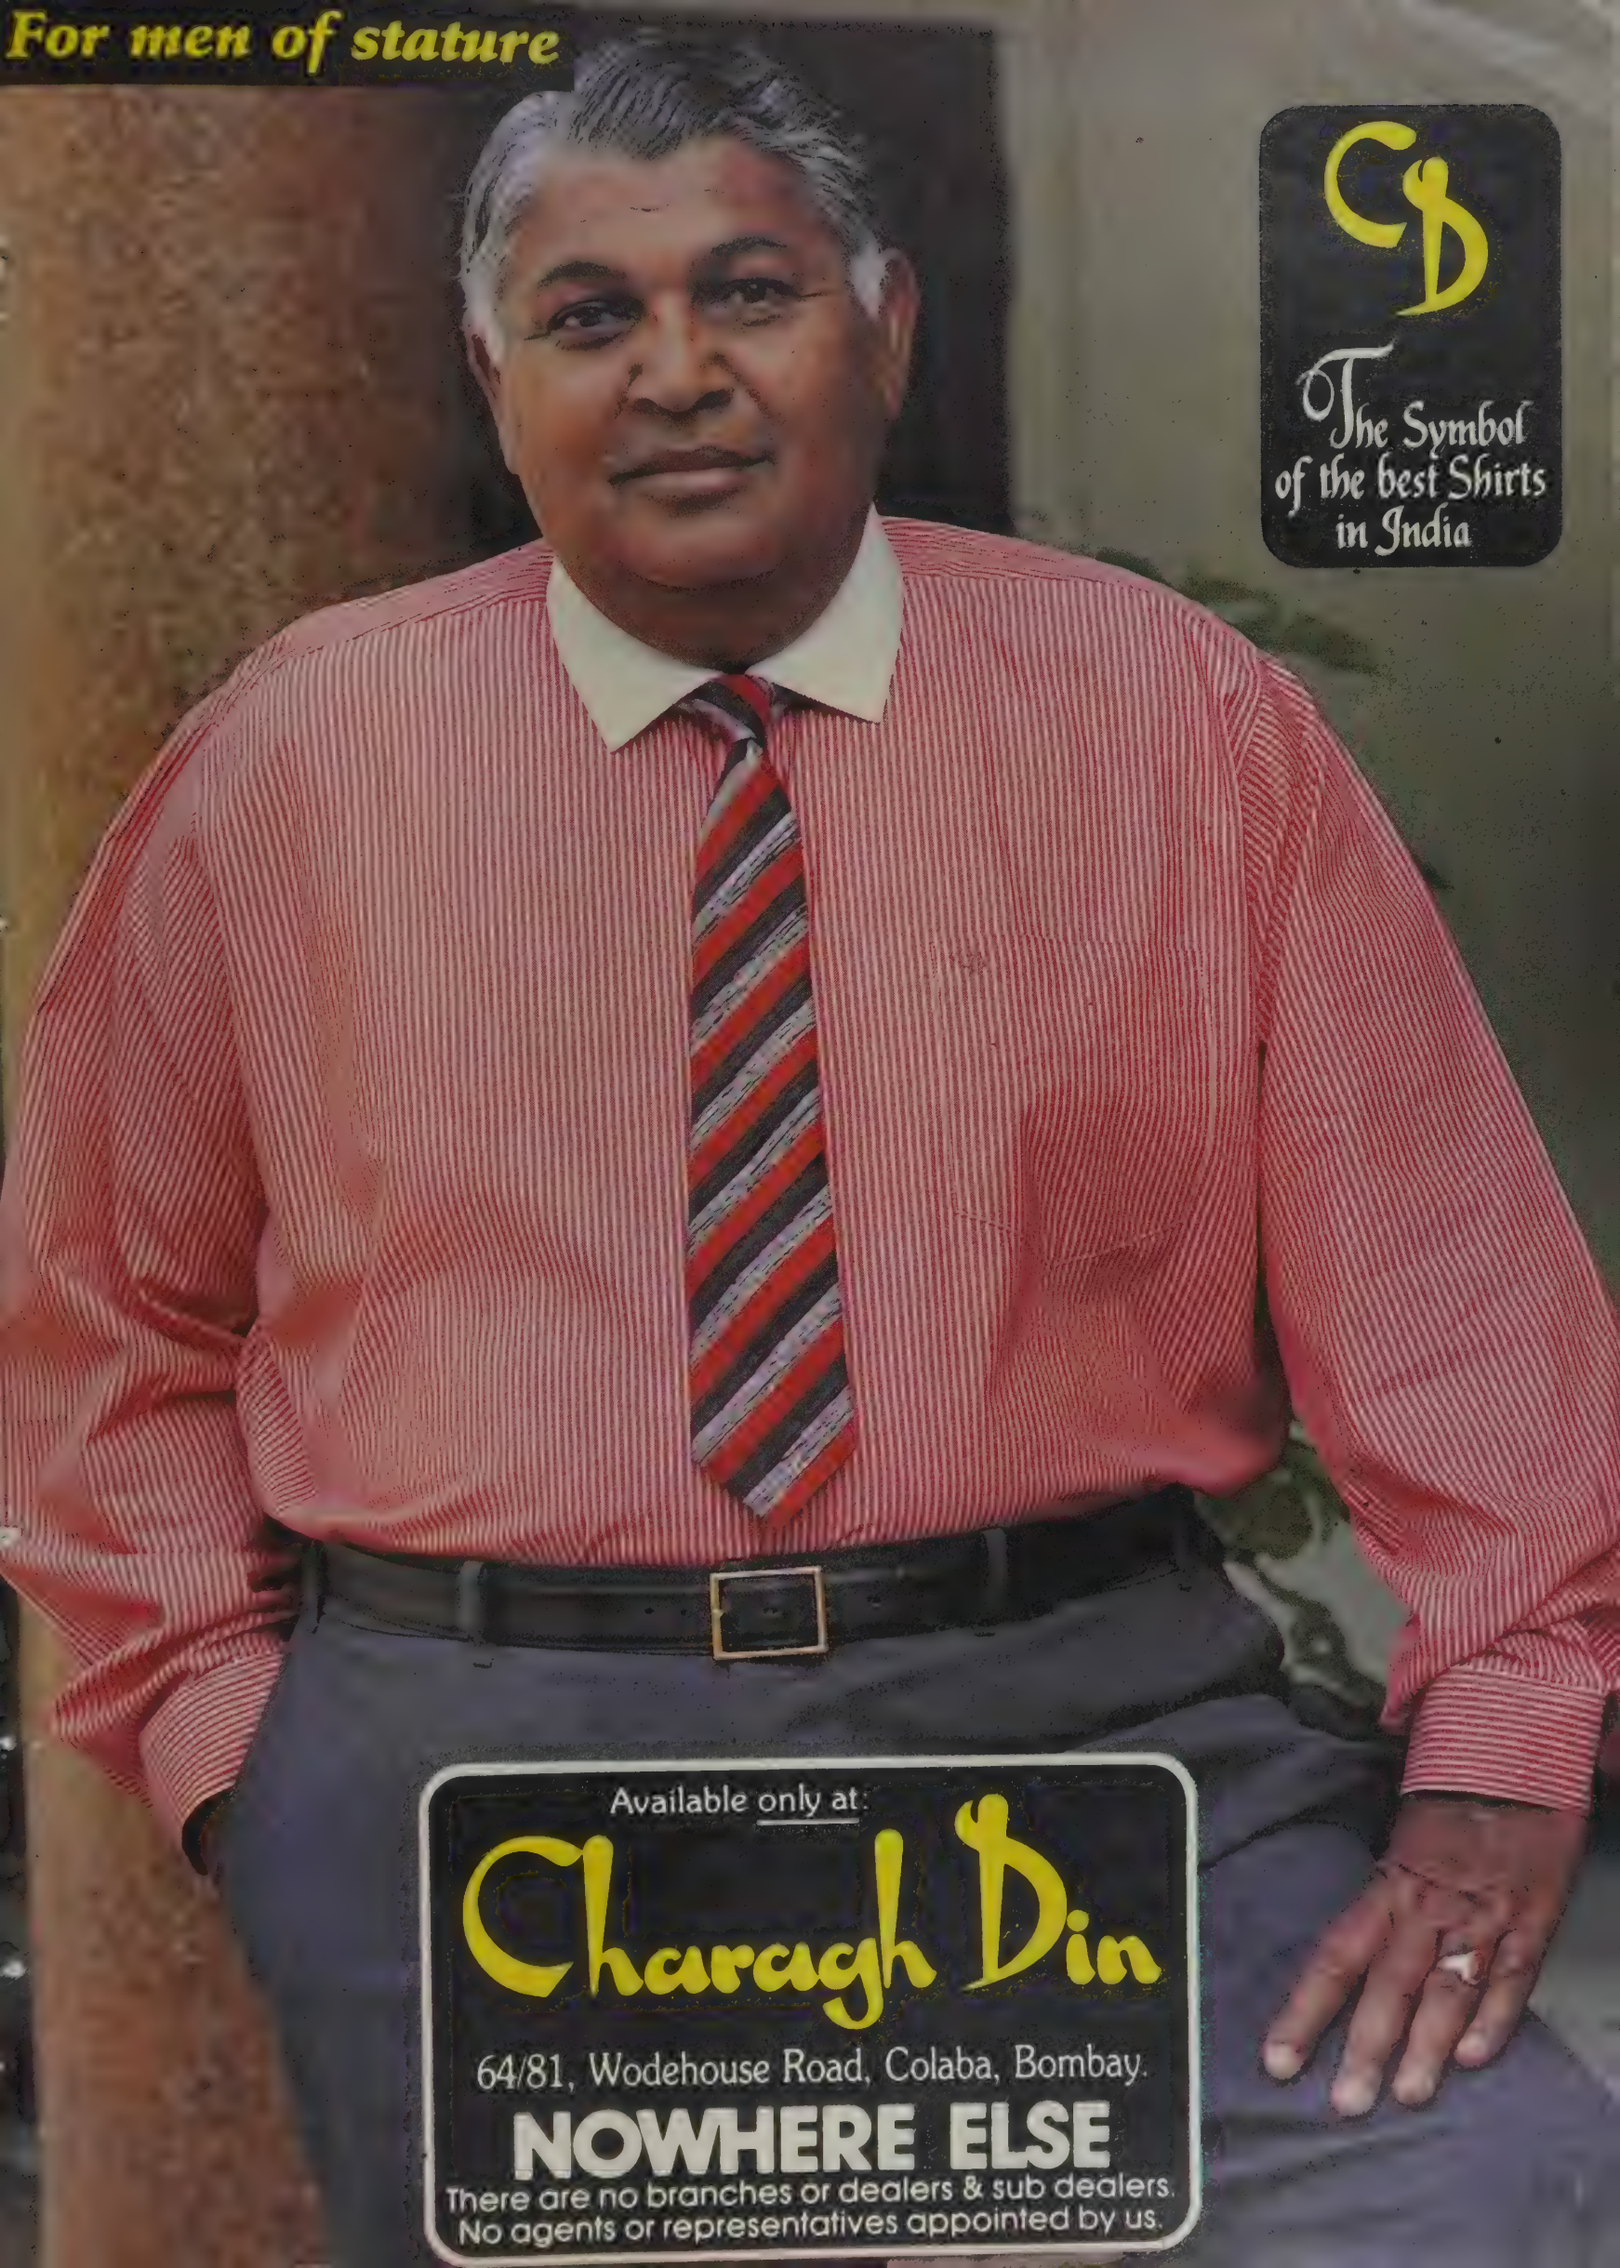
LANDMARKS

Awarded, to M.S. Swaminathan, noted agriculture scientist and one of the authors of India's green revolution, the

1991 Tyler Prize for 'Environmental Achievement'. The Rs.29-lakh prize was presented in Los Angeles last week. Swaminathan is a former director general of the Indian Council of Agriculture Research and the International Rice Research Institute in Manila. He shared the prize with C. Everett Koop, the famous former US surgeon-general who changed the smoking habits of Americans in the eighties.

Awarded, to Dasholi Gram Swarajya Mandal, UP, the Seventh Platinum Endowment Trust Award of the Indian Merchant Chamber for the use of scientific methods in protection and preservation of the environment. The Mandal, which was founded among others by the famed ecologist, Chandiprasad Bhatt, is a voluntary organisation. It received the Rs.1-lakh prize in Bombay from city sheriff and chairman of Tata Electric Companies, Homi Sethna.

Awarded, to Century Mills, Bombay, the prestigious 'International Textile Mill of Year' award by the international textile magazine *Textile Horizon* brought out by the Textile Institute of Manchester. The B.K. Birla-controlled mill is India's largest exporter of cotton textiles, most of which go to Europe. It is the first company in the country to win this award.



Retired, Keki Alpaiwala, 63, senior partner, A.F. Ferguson & Co, Bombay, after 40 years of service. One of the most respected auditors in the country, he joined Ferguson, India's largest audit firm, in the early fifties as an assistant after qualifying in England. Currently he has no plans to work post retirement. He does, however, intend to catch up on his reading, something he has neglected for years.

Appointed, Anand Mahindra, the 33-year-old Harvard- educated president of Mahindra Ugine Steel Com-

pany, as deputy managing director of jeep and tractor manufacturer Mahindra & Mahindra. This lays to rest the controversy over who would succeed the 68-year-old Keshub Mahindra as the head of the Rs.1,000- crore M&M empire. Keshub does not have any male heirs and Anand is a nephew. He was also simultaneously appointed vice-chairman of Mahindra Ugine Steel Company.

Hospitalised, Devidas Murlidhar Amte, the septuagenarian social worker also known as Baba Amte, at Indore's Choithram Hospital for the fitting of a pace-maker. The operation was successful and Amte is reported to be making good progress.

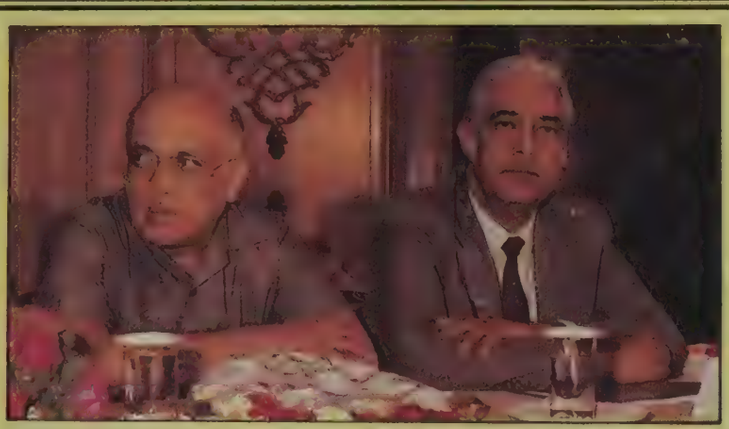
ROHIT C. MEHTA

The recent announcement by the government on the release of 200,000 bales of raw cotton for export has evoked strong reactions from the Indian Cotton Mills Federation (ICMF). According to Rohit C. Mehta, chairman, ICMF, the release of such a large quantity would

result in a shortage of cotton for domestic consumption. ICMF has appealed to the government to cancel the export quota and take measures to curtail the rise in cotton prices. "There is no harm," says Mehta, "in exporting cotton. What is essential, however, is that the government should provide a buffer stock for domestic consumption and then only release a quota for export. Otherwise, the export of higher-value-added products like yarn and processed cloth will suffer."

NARIMAN H. WADIA

Industry colleagues refer to him as an eccentric genius, a compliment which he prefers to laugh off. But Nariman H. Wadia, jeweller turned consultant, perhaps deserves the praise he attracts. He has designed a gold refining machine which offers complete recovery of the metal. Wadia says his creation employs an ingenious push-button mechanism and is user friendly.



Moderately priced, and claimed to eliminate all waste, the invention should be a boon to all jewellers. Wadia thinks the country's performance in gems, jewellery and diamonds, although creditable, represents only the tip of the iceberg. "We have to make an all-out attempt to increase our share in the billion-dollar international export market," he says.

M.V. MURUGAPPAN

Another company to join the booming ceramics bandwagon is Carborundum Universal. It has set up an industrial ceramics plant at Hosur, near Bangalore, at a cost of Rs.12 crore. Says M.V. Murugappan, managing director, "At its full capacity of 500 tonnes per annum, this plant can churn out ceramic products worth Rs.12 crore a year." Murugappan has also managed to rope Coors Ceramica Co, US (which is listed in Fortune magazine), as its technical collaborator. Another product to be indigenously manufactured by Carborundum is insulators for electrostatic precipitators, which are used in pollution control equipment.

M.J. PHERWANI & N.D. PRABHU

It was cause for cheer for the homeless when M. J. Pherwani, chairman, National Housing Bank, inaugurated the Bombay branch of Can Fin Homes Ltd (CFHL). Says N.D. Prabhu, chairman, Canara Bank, "This is a step in Canara Bank's move towards a financial supermarket of mutual funds, credit cards and housing finance. Can Fin Homes is also our expression of a commitment to the homeless." Very few commercial banks have ventured into housing finance.

Adds Pherwani, who has played a major role in convincing RBI to allow CFHL to expand, "Housing finance institutions are viewed as lacklustre by investors. The institutions should create a deposit-investor base and avoid over-dependence on refinance. The Home Loan Account Scheme has not taken off as expected because of lack of marketing."

Can Fin Homes now has a network of 23 branches. With total loan approvals touching Rs.231 crore, it has assisted over 25,000 families to own homes. "Our recovery rate has been near 100 per cent," says Prabhu.

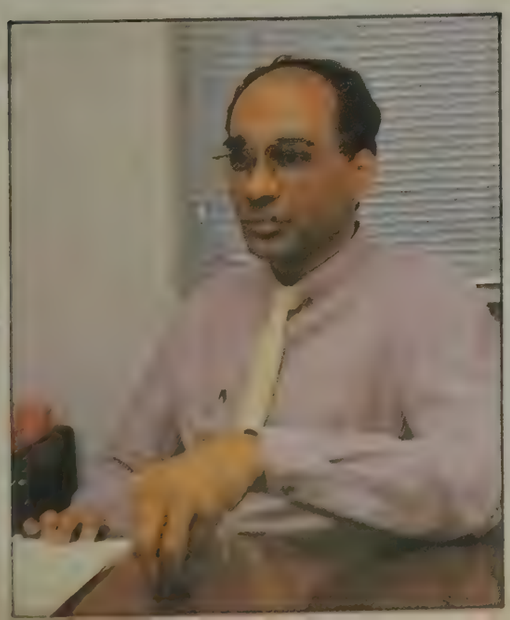
NIMESH KAMPANI

One of the country's leading stock brokers is about to enter the stockmarket as promoter of a listed company. JM Share & Stock Brokers Ltd is set to go public and acquire membership on the stock exchange. Explains Nimesh Kampani, chairman and proposed managing director, "Our objective is to pioneer a whole new concept in stockbroking. We intend to create a strong dealers' network in 30 cities and offer the best possible prices to our clients."

The company also has plans to provide a comprehensive package of financial services and products to the investing public through its affiliate subsidiaries in the major cities.

ASHOK MANDORE

The up-and-coming Pune-based Sesa Seat will soon be launching the second edition of its Western India Trade Directory. Says



Ashok Mandore, general manager of the company, "We will soon launch a South India trade directory, and a few months later, an all-India trade directory to be called 'Indopages'."

At present, the company prints telephone directories in six cities — Pune, Bhopal, Baroda, Surat, Valsad and Kanpur. The two-year-old company has sales totalling about Rs.4 crore. The distribution of the Pune directory has gone up by 60 per cent this year and is likely to double again next year.

S. NARAYAN

First it diversified into economy class hotels with its US collaborator, Days Inn. Now Mahindra Ugine Steel Company (MUSCO) is venturing into construction and property development. Mahindra Ugine Project Limited (MUPL), the subsidiary set up by MUSCO for this purpose, recently performed *bhoomi-pujan* of its first projects in North Bombay. Says S. Narayan, chief executive of MUPL, "Like MUSCO, our accent will also be on exclusivity and high quality, for which there will be a premium."

MUPL will also look closely at scientific project management, which will help it "cut costs and time at every stage, beginning with the drawings". The next step is to get into hi-tech infrastructure development with a foreign collaborator. "We have the technology and manpower necessary for construction in India, what we want from the collaborator is long-term commitment," says Narayan.

LEO STEINKELLNER

Leo Steinkellner, chairman of the Vienna-based AKG Akustische U. Kino Gerate GmbH, was in India last fortnight to finalise the second phase of expansion of AKG Acoustics India Ltd. The Delhi-based joint venture went into production in March 1990. So far AKG India has been producing telephone capsules and microphones and achieved a sales turnover of Rs.5.5 for in 1990-91. According to Steinkellner, the market for telephones in India is increasing. "Moreover," he says, "our products also have a good export potential. We have already received export orders worth 25 per cent of the capacity."

SVEIN STEEN THOMASSEN

Svein Steen Thomassen, group managing director of the 150-year-old Norway-based industrial and trading group Rieber & Sons, has reason to be proud. Over the last three years Thomassen has tripled the turnover of the group from US $200 million to $600 million.

Thomassen was recently on a visit to Hyderabad to release the first batch of quartz-reinforced tiles manufactured by the Rs.14-crore Rikvin Floors Ltd plant, to which Reiber had offered expertise. Says he, "These tiles, produced for the first time in India, rely on the inherent strength, durability and stability of quartz." Reiber, which pioneered flame-retardant and time-tested flooring technology, has lent its technology to ten other countries besides India.

JOHN L. PAYNTER

Efforts by the Canadian government and industrialists of the maple leaf country are going on apace to increase trade and business with India. Says John L. Paynter, the high commissioner for Canada in India, "The Canada-India development agency is working on a system that will be very similar to the rupee trade between the two countries." Paynter, on his maiden visit to India, was meeting with industrialists at the Indian Merchants Chamber to discuss Indo-Canadian trade.

A former journalist, Paynter held various diplomatic posts in southeast Asia before his present assignment in New Delhi.

GEORGIY A. GOLOVKO

The city of joy is soon going to be the venue of another first. Professor Georgiy A. Golovko, head of the department of cryogenic engineering, Leningrad Technological Institute of Refrigeration Industries, visited Calcutta last fortnight to set up the first plant outside the East bloc to manufacture specialised argon gas. This tie-up with the Calcutta-based Industrial Gases Ltd (turnover Rs.5 crore) will be the Soviet Union's first project in the free-market world economy.

Professor Golovko holds the worldwide patent for a revolutionary process that enables the production of super-pure laboratory-quality inert gases like argon in commercial batches at very economical costs. Super-pure argon is used in specialised welding. "The application of super-pure gases is limitless. Till now, however, the drawback has been its non-availability," he says.

Waterproofing Division

Latest from STP...
ThermoLay waterproofing system

Hi-tech protection with comprehensive one-source guarantee on product and application

STP's polymeric torch-on waterproofing system is all weather proof. More, it absorbs high degrees of differential movement, thermal and tensile stress, withstands deformation and cracking for years.

STP manufactures *ThermoLay* in collaboration with Marley Waterproofing Limited, U.K., and provides advice and service through its 35-office network all over India.

For more information please mail the coupon to Mr B Chakravarty, STP Limited
16 NGN Vaidya Marg (Bank Street)
Fort Bombay 400023.

I wish to know more about *ThermoLay*.

PRIVATE SECTOR POWER

Ambitious plans in Tamil Nadu

The state to open power generation most recently to the private sector is Tamil Nadu. Energy needs in the state is increasing annually by 300 MW. With near saturation levels having been reached in hydro-electric power generation and an increasing scarcity of coal, the only available material for generating electricity in the state are the massive deposits of lignite recently discovered in the state.

A Coimbatore-based company, Tamil Nadu Industrial Captive Power Corporation (TICAPCO) has already been set up and is awaiting clearance from the Central government for establishing a private sector lignite-based 210 MW power plant with a capital outlay of Rs.450-crore, in Srimushanam, South Arcot district.

Lignite-based plant. According to G.M. Swamy, managing director, TICAPCO, the project has already clinched a deal with the Neyveli Lignite Corporation (NLC) for an uninterrupted supply of lignite for the next five years. "We have applied for mining rights, for our further needs after the initial five years, in an area near NLC's mine III, also close to the plant," says Swamy.

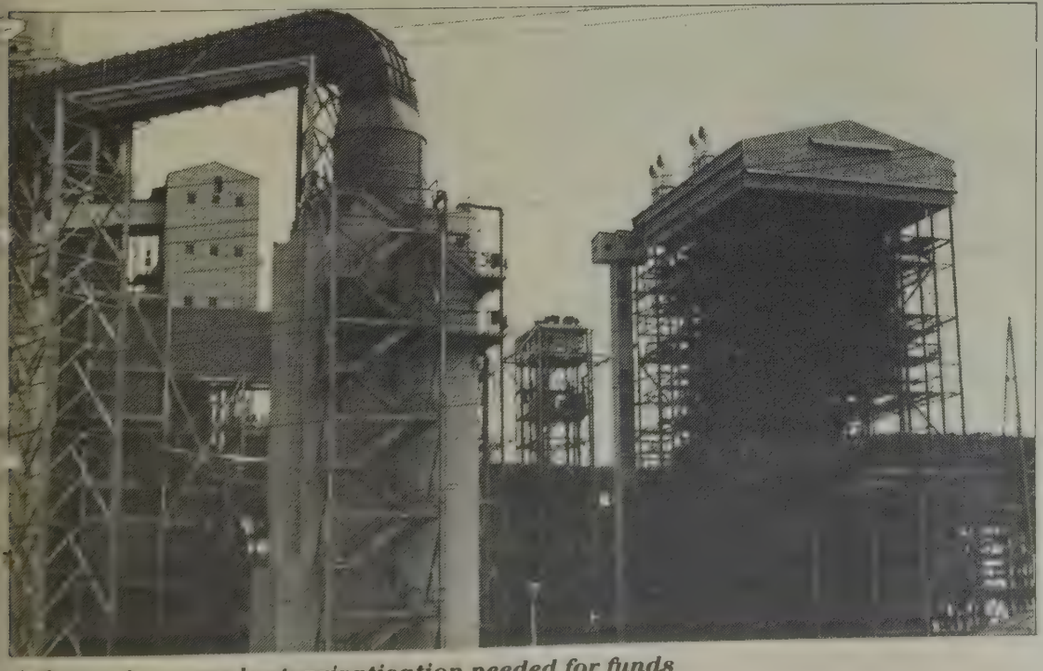
This Rs. 450 crore project was originally cleared in June 1988 for a captive power plant, but was delayed for want of quick processing by the government and for a policy decision regarding fuel supply for this project. However, the entire process was hastened and the project cleared during the brief DMK rule. But, the stalling of certain routine clearances by the Central government is delaying the project further.

The state government has more ambitious plans. It has announced that it plans to attract a huge investment of Rs. 6,000 crore to generate 1,500 MW by exploiting the lignite deposits found in Jayakondacholapuram in Tiruchirapalli district. It has plans to establish two projects — one for mining the other for power generation — at Jayakondacholapuram. They will be assisted by Tamil Nadu Industrial Development Corporation (TIDCO). Says R. Poornalingam, state industries secretary, "We do not want to state any conditions that would hamper the project. We are totally flexible as far as we are concerned, about tackling the presssing energy needs of the state."

The state government estimates that Jayakondacholapuram has lignite deposits of nearly 6,000 million tonnes (mt). Of this, 110 mt will be used for the mining project involving an investment of Rs. 25,000 crore. This does not include the Rs. 6,000 crore investment for the lignite-based thermal plant with an installed capacity of 1,500 MW.

No other option. Costwise hydel projects are the cheapest. It costs about Rs.1 crore to establish a one MW plant, while it is Rs.1.5 crore per MW in the case of coal and nearly Rs.1.7 crore per MW in the case of lignite, "We have exploited all our hydel potentials. The supply of coal has become erratic. Hence, the government opted for lignite-based power generation," says Chikkoba, member, power generation, Tamil Nadu Electricity Board (TNEB). In thermal power generation, the quantum of coal consumption is nearly equal to the quantum of the lignite consumption. The only way to raise the required funds is to privatise the power sector.

While inviting applications from private promoters TIDCO has announced that all ground rules, incentives, and guidelines framed by the Central government will be strictly adhered to.



The guidelines include a debt equity ratio of 4 : 1, assuring a 15 per cent rate of interest against the normal 12 per cent, raising 40 per cent of the funds from Indian financial institutions and the balance from other sources to be arranged by the promoters. "We have already availed of the funds from the World Bank and the Asian Development Bank. The main reason for privatisation is that the private promoters have access to resources which are generally not available for government projects," says Chikkoba.

The new company, to be floated for implementing the projects will have an equity base of 20 per cent of which a minimum 11 per cent will be contributed by the promoters. The power generated will be purchased by TNEB and will be based on a two-part tariff. The first part will ensure recovery of fixed costs and the second will meet variable expenses. The tariff rate will be governed by the guidelines of the Central and state governments.

Few takers. However, there are few takers for the 1,500 MW project. TICAPCO has rejected the government's offer. According to Swamy, there were three reasons to ignore the state government invitation. Says he, "Firstly, TIDCO as co-promoter has to put in about 11 per cent in the mega project. It is common knowledge that TIDCO does not have the resources. Secondly, there is no single big group in the state which can afford such a huge investment. Thirdly, with every state making similar offers, possibilities of non-South companies taking up this capital-intensive project are bleak."

While smaller projects are bound to attract a lot of suitors a Rs.31,000-crore private sector power plant in Tamil Nadu will possibly remain a pipe dream.

A thermal power plant: privatisation needed for funds

DRUG PRICES

MRP: welcome step?

The already complex Drug Price Control Order is bound to become harder to comply with, when its most recent amendment takes effect next month. According to the amendment order issued by the union ministry for chemicals and petrochemicals last fortnight, all drugs outside price control will now have to be sold in packages stamped with the maximum retail price (MRP), inclusive of all taxes.

This brings the drugs in line with other consumer products for which the rule is already applicable from May 1990, (under the Consumer Protection Act, 1986). In fact, it was this modification of the Packaged Commodities rules that made a lot of people sit up and ask that it be extended to medicines as well. With good reason. For far too long consumers have been forced to pay for arbitrary mark-ups in the guise of 'local taxes'.

More work. For the pharmaceutical industry, it means a lot more work — separate sets of labels would have to be printed for each state where the product is marketed, since the local sales tax and octroi vary from one state to another. The sales tax levied in Maharashtra, for instance, is 4 per cent, while that in Haryana is 14 per cent. "Now, if a consignment has been marked for Maharashtra, I will be unable to send it to Haryana even if a sudden spurt in demand develops over there," says Ramesh Bafna of the Bombay-based Lyka Laboratories. The result could well be a temporary shortage of a drug in one part of the country which the manufacturers might be powerless to relieve.

The alternative would be to try and calculate what is known as a 'weighted average' rate of taxes, which is done now in the case of ayurvedic and proprietary drugs. "Even then, the consumers would stand to lose," says Kishore Shah, president of the All India Organisation of Chemists and Druggists (AIOCD), "particularly in states that charge a low tax rate."

The loss to consumers could be even greater if manufacturers decide to follow the example of Himalaya Drugs Ltd, a producer of ayurvedic medicines. This company uniformly recovers the highest rate of sales tax levied in the country — ie, 14 per cent in Haryana. In both situations it is the government that gains the most, although protection of consumers' interest was ostensibly the motive behind the amendment.

Says Chitra Sirur, chairperson of the Consumer Guidance Society of India, "I would agree that if the highest rate is recovered, the consumer does lose out. But the loss is acceptable if a weighted average is taken. We are now demanding a uniform sales tax throughout the country." Some companies, like Parle, have worked out a tiered price structure. "So why can't the drug companies do it?" Sirur wants to know.

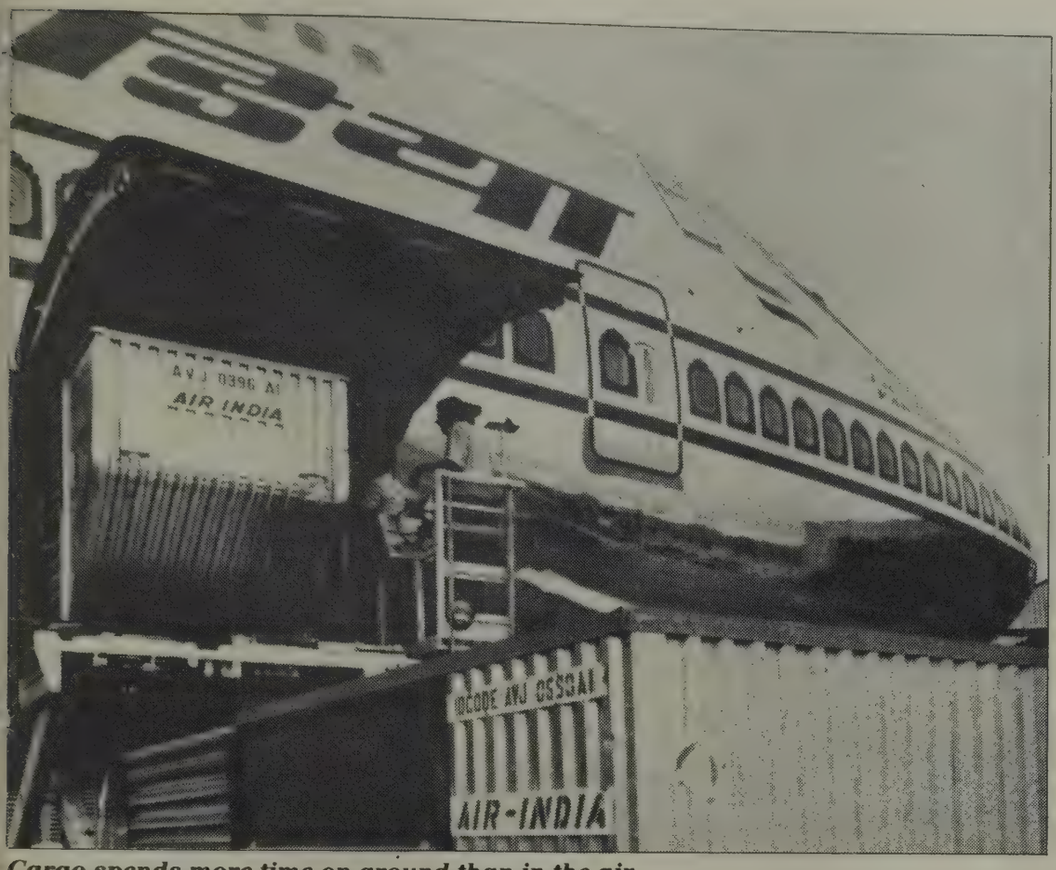
Retailers happy. The retail chemists and druggists, however, welcome the order because it saves them the trouble of calculating the taxes on each and every bottle of cough syrup. Also, the possibility of facing prosecution in case there is a slight error in the computation is no longer there.

Interestingly, the order does not apply to drugs under price control. As an official of the Organisation of Pharmaceutical Producers of India (OPPI) points out, "This automatically excludes 75 per cent of the total sales of medicines in the country." As such, it is unlikely to benefit the consumers significantly.

Some industry experts also doubt whether the government has the administrative machinery to enforce the new rule. Many feel it may die a quiet death like the Drug Price Equalisation Account (DPEA) of a few years ago. If that does indeed happen if would be taxing times once again for the consumer.

■ SUMIT GHOSHAL

MRP excludes 75 per cent of medicine sales



AIR CARGO RATES

Sky-high

In April last year, the government made a decision that had important implications for both the air cargo industry and exporters. The cargo rates determined by IATA were to be treated as the floor rates and the airlines could charge as they saw fit above it. This decision was in keeping with the government's open-sky policy, meant to encourage foreign carriers to operate in India.

The foreign airlines had been complaining that the devaluation of the rupee plus the fact that in-bound cargo traffic is less than outbound, meant that rates would have to be raised in order to make operations viable. The Gulf crisis led to not only an increase in fuel prices, but also a re-routing of the carriers over Moscow or Afghanistan, further increasing costs — all valid reasons for raising rates.

Premia skyrocket. The result of the government's announcement was to send the prevailing unofficial premia on rates skyrocketing. According to one agent, rates have gone up by 55 per cent in the last year and a half. For example, the rate for leather goods to Frankfurt last April was about Rs.31 a kg. Today it is anywhere from Rs.48 to Rs.54.60 per kg. There is no uniformity among the airlines as regards rates. In fact, they now vary depending

Cargo spends more time on ground than in the air

not only on the kind of cargo, but also the exporter, the agent and their relationship with the airline. Agents are reluctant to complain, as this reportedly leads to problems with the airlines.

This being the peak season, airlines are in a position to set terms. Thus, agents claim that there is a preference for low volume cargo as opposed to that which takes up more space at the same weight. According to Harald Lusche, cargo manager, Lufthansa, however, "While we would prefer low volume cargo, we try to maintain a good mix and accommodate voluminous cargo as much as possible."

While a few airlines have ostensibly stuck to the IATA rates, they make up for this by lowering breakpoint rates. This means that a 1,000 kg package, for instance, would be accepted only in five 200 kg packages. And since normally, the heavier the consignment, the lower is the rate per kg, by insisting on smaller packages, that is, a lower breakpoint rate, the discounts are reduced. The airlines are also ignoring the special rates provided for certain kinds of cargo.

The increased freight costs have only worsened an export situation already put in a quandary by increasing government regulations. Says Prakash Mahtani, director of Tejoomals, exporters of leather goods, "Due to the overall situation, we will be cutting our autumn-winter exports to Europe by 50 per cent." Exporters and their agents have begun looking for solutions like sending goods via say Bangkok, thus availing of cheaper rates from there, or a sea-air combination via Dubai.

The extra shipment time taken would just about equal the normal delays at the airports which could be anything from 10 to 20 days. Says Ramu Deora, president of the Federation of Indian Export Organisations, "Our cargo spends more time on the ground than in the air." Agents are also examining other options to reduce their dependence on airlines. Eastern Cargo Carriers for one, has begun chartering carriers, to transport 200 tonnes per month.

Guidelines expected. The general opinion among exporters and agents is that Air India as the national carrier should play a larger role in regulating rates. An increase in both capacity and efficiency, it is felt, would improve things. Counters J. Bhargava, chief public relations manager, Air India, "We are indeed increasing capacity, and our efficiency is comparable to any foreign airline."

The government is also expected to set down guidelines. Says Vinod Seth, chief executive of Eastern Cargo Carriers, "Without government intervention, the smaller players will be squeezed out and there will be no room for new entrants." While premia are expected to go down in the slack season starting May, a spokesman for Air France claims that IATA approval of raised rates is expected later this year. Given this sort of a situation, it would seem that what goes up does not necessarily come down.

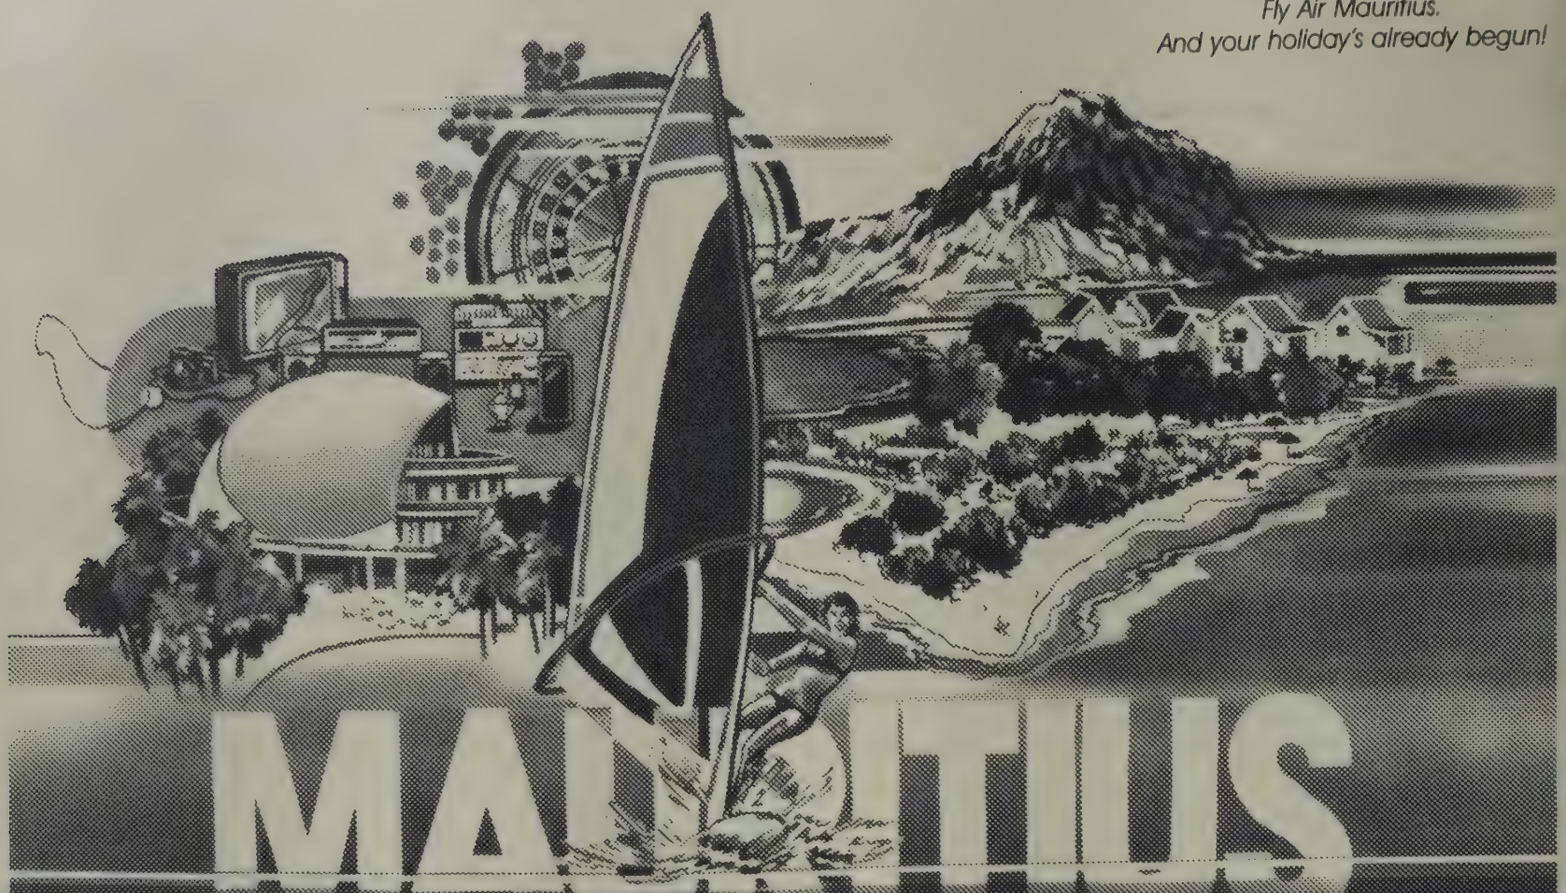
■ SARAH ABRAHAM

MTDC

Upturning virgin soil

The term 'tourism development' implies much more than running tourist bus services or the stray holiday resort. Realising this — rather belatedly, it must be said — the Maharashtra Tourism Development Corporation (MTDC) has recently rewritten its agenda. Deviating from its traditional role of running resorts and bus services for tourists, it has set its sights on the development of virgin land along the Konkan coast. The corporation has identified 32 locations where international standard, upmarket as well as budget hotels are expected to come up within the next decade.

Comments Jayant Kawale, the corporation's joint managing director, on the new line of thought, "Now we don't mind our competitors building hotels. Today, we see this as development, whereas earlier we viewed it as competiton."



Nodal agency. In a change from its earlier policy, MTDC is now planning to withdraw from operational activities and become a nodal agency for the development of tourism by undertaking a different set of activities. Taking care of infrastructural facilities, providing land, offering basic amenities for motorists using national highways, are some of the major plans chalked out by MTDC.

The corporation has a "Perspective Growth Plan", based on which it has asked for the allocation of funds from the Central government in the Eighth Five Year Plan. Its plans involve roping in private developers to build resorts/ hotels and thereby develop the locations as tourist spots. The land is provided by MTDC. "We get the land either through an allotment from the government or we acquire it directly," says Kawale.

MTDC's tent holidays offer the tourist a novel experience and introduce him to a hitherto unknown getaway spot, thereby popularising the location. "The tent

AIR MAURITIUS

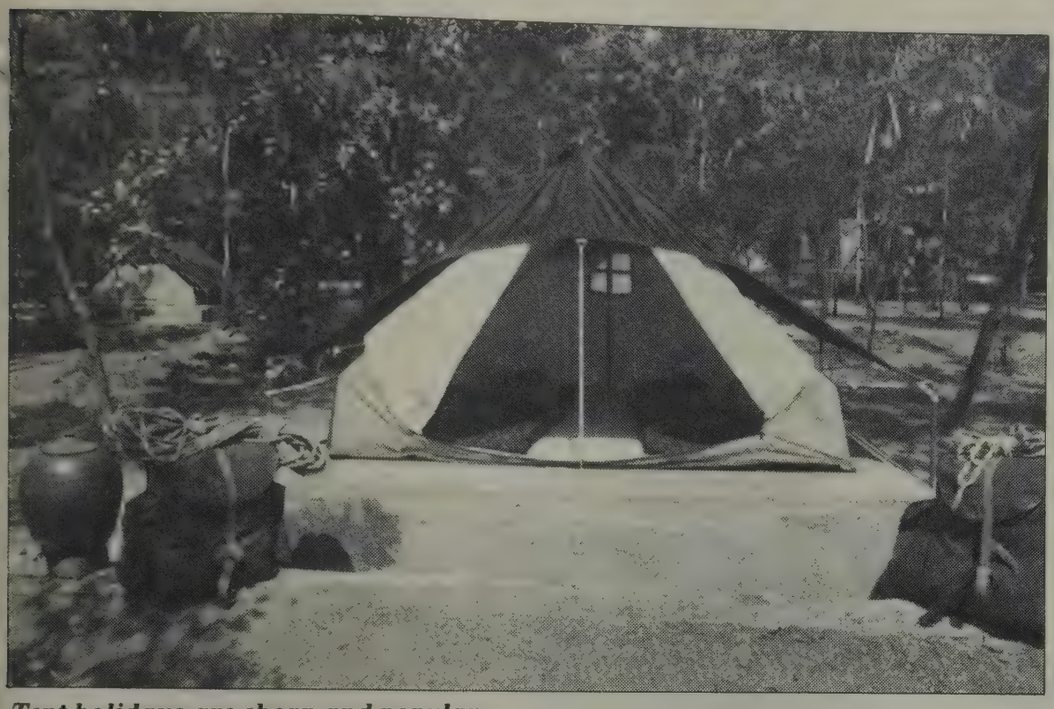
Fly Air Mauritius.
And your holiday's already begun!

MAURITIUS
FOR CONFERENCES CONVENTIONS & INCENTIVES

Why Mauritius?

- Exotic location. So near, yet so far away from it all!
- Excellent conference facilities
- Low cost

Mauritius has everything to make a conference a success. Scenic beauty — 'a tropical island paradise'. The people — a melting pot of races and cultures. The entertainment — water sports, casinos, sega dancing, restaurants. Some of the worlds greatest chains of hotels and resorts are located in Mauritius, with the most modern conference facilities available. And the bottom line is the cost — it's very inexpensive!



The group return air fare per person is only Rs. 6241 Ex Bombay, Rs. 7386 Ex Delhi/Madras and Rs. 8187 Ex Calcutta (A minimum of 4 persons for 6 days in Mauritius). Hotel packages including food, from US $ 220 upwards.

- **No Visas** • **NTS** (Neighbouring Country Travel Scheme) **US $ 250**
- **MCO facility of US $ 150** per person available to groups of over 15 persons, in addition to NTS.

For details contact Air Mauritius or our GSA Air India or your IATA agent.

A' AM 9142

AIR MAURITIUS Air India Building, Ground Floor, Nariman Point, Bombay 400 021.
Tel: 202 8474, 202 6430, 202 4142 Ext. 6673 Telex: 86220 MRU IN.

Tent holidays are cheap and popular

holidays are very popular," says Kawale. One can hire a tent for as little as Rs.50 per night or take a three-day package complete with transport to and from the destination, daily meals, local sightseeing, for Rs.1,200 per couple. The tent has basic facilities like beds, a cupboard, mirror and water filter. The only drawback is the lack of a private toilet.

However, MTDC's offer to private developers has not met with a great deal of enthusiasm. According to Mukhtar Hussain of Suman Motels Ltd which runs five to six motels in Maharashtra (but aren't building any on MTDC land), "Their location is for the promotion of tourism, our location is for business facilities." Another private developer is more explicit when he says, "Basically the plots which MTDC are offering are not developed locations. They are beautiful spots but we are sceptical about the availability of infrastructural facilities." Others complain that not enough publicity has been given to MTDC's plans and procedures. This means that only 'insiders' have an opportunity to participate.

Negative factor. Whilst MTDC plans to team-up with the concerned authorities for the supply of water, electricity and roads, private developers complain that most of the locations have no rail connections, another negative factor. Also, they are not interested in the development of hotels as a majority of them are slated to fall into the two or three star category, aimed at the tourist on a budget. "Such budget hotels have rooms priced as low as Rs.150 which does not ensure a good profit margin for the owner. Also there is no assurance of a minimum level of room occupancy," states a developer.

Ignoring the lukewarm response from private developers, MTDC is merrily drawing up its plans. Providing facilities for motorists on the state's highways is another area under consideration. Plans are on to have a motel every 75-100 km. Along the lines of highway amenities in the US and Europe. The motel would provide the traveller with facilities like toilets, restaurants, petrol, first aid and a general store.

"There are some stretches along the highway which already have such motels and we intend to build the rest. Eventually our plan is to link all those motels to form a chain so that the traveller can have the benefit of the same facilities in every motel that he plans to visit," states Kawale.

On a macro level, promoting and developing existing tourist spots forms part of MTDC's multi-faceted growth plans. The Ajanta and Ellora caves near Aurangabad have been selected as major development targets. The infrastructural development programme for that area includes a Rs.200-crore plan to set up a broad gauge railway line on the Manmad-Aurangabad sector as well as extend the road leading to the caves. The basic plan also includes a secluded area, free of any development for a radius of 4 km around the caves.

MTDC is among the top three state tourism development corporations and is now on the upswing. It posted a turnover of Rs.3 crore last year. Kawale expects the corporation to break even this year and sees a lot of potential for the future. The degree of success the corporation achieves will depend upon the timely implementation of its plans and the willingness of the many sectors, both public and private, to provide their services.

■ MANALI RESHAMWALA

GOLD COINS

Scoring over sentiment

Investors in gold need not restrict themselves to just gold biscuits and jewellery any more. Two companies in the gold trade are gearing themselves to introduce, rather reintroduce, gold coins into the market. The companies, National Refinery Private Ltd (NRPL) and Narrondass Manordass (jewellers) have decided to relaunch coins in view of the fact that British sovereigns continue to be quite popular. The 22 carat sovereign coin, weighing eight grams, sells at Rs.3,050.

The manufacture of gold coins was discontinued in 1963 following the promulgation of the Gold Control Act. The repeal of the act last June by the Janata Dal government has ushered in a new air of freedom in the gold trade and industry. The Act now permits traders to buy and sell large quantities of gold in the open market and allows refineries to refine gold freely.

Value for money. The new coins will be manufactured in the weight range of 1.25 grams to about 500 grams. Says Mukul Sonawala, partner, Narrondass Manordass, "It all depends on the market. If there is a demand for larger coins, we will manufacture these too." The coins will be 99.5 per cent pure and will be certified by the manufacturers themselves, rather than the Reserve Bank of India. Mukul Sonawala plans to launch the coins shortly, under the company's hallmark. He expects to sell about 1 to 2 kg of coins initially, and is confident that the market will develop quickly. "The idea is to provide gold in pure form where the buyer gets value for money".

Although NRPL and the Bombay Bullion Association also possess (along with Narrondass) the Central excise licence to manufacture coins, they have no immediate plans to launch them. Says S.N. Sonawala, president, BBA, "At the moment

4 Critical reasons to go in for UI's machinery breakdown insurance policy

1 THE PRODUCTION REASON
"One important machine down and the whole assembly line comes to a standstill. Production schedules go awry."

2 THE MARKETING REASON
"Availability and flow of products into the market can make or break a company. Failure to keep up to delivery schedules will result in losing faith of distributors and customers. And will allow competitors to get their foot in."

3 THE FINANCE REASON
"Cash flow disruption. Working Capital is unproductively locked up in this investment. All this can make a big difference to profits."

4 THE MAINTENANCE REASON
"Turbines, compressors, pumps, generators, transformers — all costly equipment. I can control routine repairs, but not unforeseen breakdowns or losses."

Any kind of mechanical and electrical machinery— at work; at rest; or being cleaned, inspected, overhauled, removed or re-erected within the insured premises... UI covers them against any unforeseen loss or damage. This policy can also be extended to cover loss of profits following breakdown.

So whether you are the manager of a big factory or a small scale industrialist, make sure sudden loss of machinery and lack of re-financing doesn't bring your operations to a standstill.

Gold coins: new investment opportunity

the demand is low. And with the 15 per cent central excise duty the price of a coin would be very high." J.B. Sonawala, managing director of NRPL, thinks it would be uneconomical to manufacture the coins at this stage. Both NRPL and BBA would prefer to wait till the duties are done away with to float the coins.

According to the Bombay Bullion Association, the total demand for gold is to the tune of 250 to 300 tonnes per annum which works out to about Rs.7,000 crore. About 120 tonnes of gold is smuggled into the country every year. Almost all of it, goes into jewellery. Now with the repeal of the Gold Control Act any jeweller can obtain the Central excise licence to float coins in the market.

The Gold Control Act was introduced in 1963 in the aftermath of India's war with China. The idea then was to curb hoarding and increase the turnover of the metal in the market, as well as to stabilise the price. However, just the opposite happened. Buyers were not at all put off by the stringent regulations, and continued to buy as usual, making the metal all the more expensive. In 1968, the government relaxed the provisions of the act; licences were allowed to those directly connected with the manufacture and sale of gold.

Main advantage. The main advantage of gold coins would be that, unlike jewellery, they are not chained to sentiment, making them important instruments for investment and in transactions.

M. Sonawala plans to market his coins in exchange for gold. Retailers will buy the coins against bulk gold, with Narrondass Manordass paying the excise duty of Rs.175 per kg. If payment for the coins is made by cheque, the company will face the burden of paying 15 per cent excise duty on each coin. The coins will be sold at the market rate of gold plus a five per cent premium on labour charges, thus enabling the buyer to recover his money when the market is bullish. The coins will be marketed through retail jewellers.

Although there is much jubilation about the reintroduction of the coins, many jewellers fear that a large amount of fake coins will also find their way into the market. Others, however, are pleased that now gold will no longer remain just an heirloom, but become an instrument for investment.

Practise austerity

Every passing month brings increasing gloom when the trade figures are announced. The trade figures for the period April to January 1990 show that the deficit is up 40.1 per cent in Rupee terms at Rs.9,654 crore, against Rs.6,890 crore in the corresponding period of the previous year. In Dollar terms, the trade deficit is up 31 per cent to $5,447 million, up from $4,159 million in 1989 (April to January).

In fact, exports during the first 10 months of the current year have increased at 19 per cent, against 33 per cent in the previous year, amounting to Rs.26,236 crore. In Dollar terms, the performance is even worse and exports were up by only 11.2 per cent to $4,802 million.

Imports on the other hand were up 24 per cent during the same period to Rs.35,890 crore ($20,249 million). The chief reason for this rise is obviously the spurt in international crude oil prices. It is now expected that crude oil imports in 1990-91 would amount to Rs.10,500 crore as against Rs.6,300 crore last year.

Generate surpluses

These large trade deficits cannot be sustained indefinitely. Surpluses at some stage in the near future would have to be generated if imports are not to be severely curtailed. It is in this context that the exchange rate policy becomes significant. The Indian currency is pegged to a basket of currencies with the Pound Sterling as the intervention currency. Exchange rates (both spot and forward) of the Deutsche Mark (DM), the Japanese Yen and the US Dollar are based on the latest available rates and trends in the international markets and are announced by the Reserve Bank everyday. Exchange rates for the other currencies are derived from the cross rate of the Pound Sterling and the Indian Rupee.

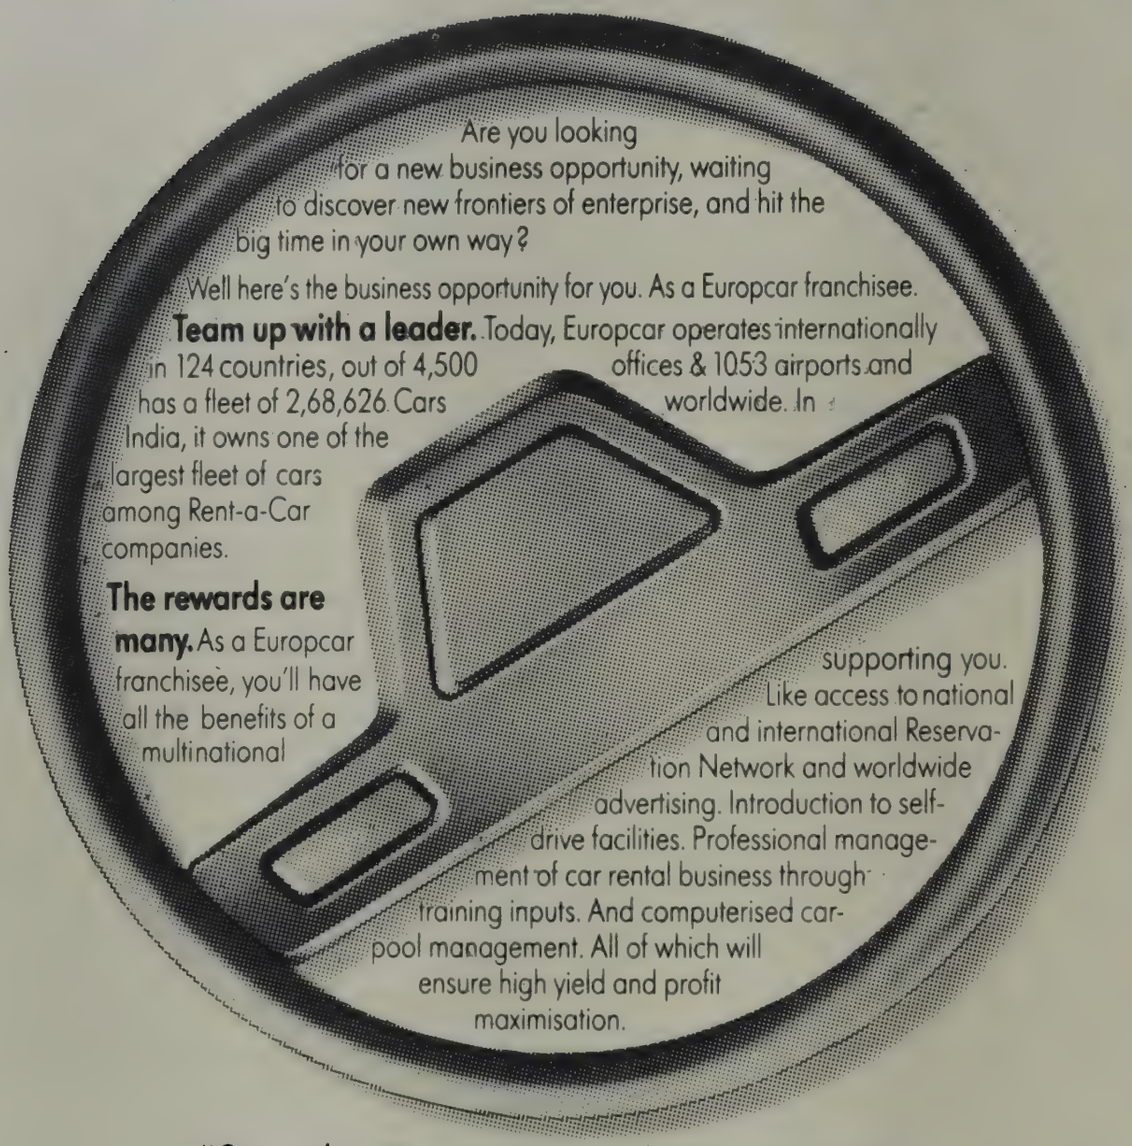
If one looks at the nominal effective exchange rate of the Rupee (NEER) as computed by *The Economic Times*, the Rupee in the year to February 1991 has depreciated by 6.5 per cent. However, if one takes into account the inflation rate in the country and adjusts it against prevailing rates in the US, UK, Japan and Germany, then one could arrive at the real effective exchange note (REER) of the Rupee. The depreciation of the Rupee measured in these terms would be only marginal.

In fact, for the calendar year 1990, there was a modest increase in the REER of the Rupee.

If one looks at the REER over the 10-year period 1980-1990, the Rupee has declined by nearly 30 per cent, or about 3.5 per cent per annum. This by no means can be considered significant. Also, much of the depreciation is in the Yen and the DM and not much in the Dollar, in which incidentally the bulk of India's foreign trade takes place.

This is borne out by the fact that in 1980, the Dollar was worth Rs.7.86. It currently rules at around Rs.19.50, up 141 per cent. In the case of the Pound, Yen and the DM the increases are 91, 300 and 182 per cent respectively.

Gauging by the hue and cry often raised in Parliament on the question of devaluation, one gets the impression that the value of the Rupee is sacrosanct. Indeed, if the Rupee depreciates in value, imports become costlier and there is an element of cost-push inflation. On the other hand, exports become cheaper and therefore more competitive in the international market.



Given the precarious balance of payments position and the falling foreign exchange reserves, which as on 31 March 1991 amounted to only Rs.4,500 crore, the need to boost exports is critical. The logic is that if India is not competitive on the quality front, it should at least be competitive on the price front. In this regard, RBI has to adjust the exchange rate of the Rupee (especially against the Dollar as the bulk of the trade is in that currency) with greater finesse and dexterity. It would have to take into account inflation rates and productivity increases, not only with the US but also other nations like Malaysia, Indonesia, Philippines, South Korea, Taiwan and Thailand with which Indian goods compete abroad.

Granted that devaluation per se may not be a sufficient condition to boost exports, but devaluation coupled with fiscal austerity, monetary restraint and increase in productivity should go a long way in making India a world class exporter.

"How to get into the profitable **Rent-a-Car business?"**

Are you looking for a new business opportunity, waiting to discover new frontiers of enterprise, and hit the big time in your own way?

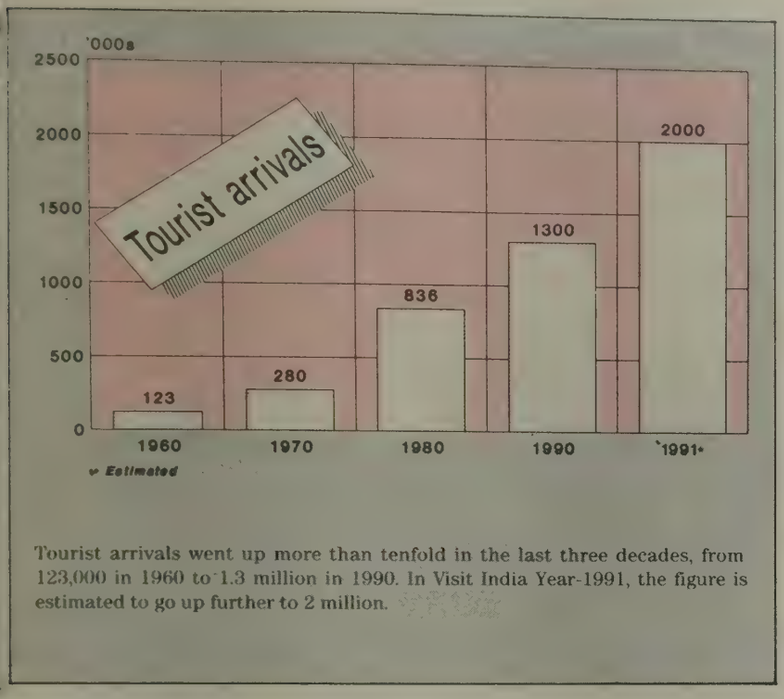
Well here's the business opportunity for you. As a Europcar franchisee.

Team up with a leader. Today, Europcar operates internationally in 124 countries, out of 4,500 offices & 1053 airports and has a fleet of 2,68,626 Cars worldwide. In India, it owns one of the largest fleet of cars among Rent-a-Car companies.

The rewards are many. As a Europcar franchisee, you'll have all the benefits of a multinational supporting you. Like access to national and international Reservation Network and worldwide advertising. Introduction to self-drive facilities. Professional management of car rental business through training inputs. And computerised car-pool management. All of which will ensure high yield and profit maximisation.

"Simple. Team up with Europcar."

If you have the drive and are ready to strike out in newer directions, you are the person we're looking for. Ideally, you should already be running a profitable business of your own and be financially sound.



Interested? Mail in your complete company profile. And ride your way up in business, by getting into the fast lane.

Mudra:D:EC 499

Tourist arrivals went up more than tenfold in the last three decades, from 123,000 in 1960 to 1.3 million in 1990. In Visit India Year-1991, the figure is estimated to go up further to 2 million.

The total number of hotel rooms available in the country has risen only two-and-a-half times from 17,800 in 1977 to 42,400 in 1989. While there was slight dip to 30,000 in 1986 from 30,200 in 1983, figures for 1990 and 1991 are not available.

Wholesale price index: All commodities were marginally up during the month to 16 March 1991. In primary articles, the index for fibres was up 7.5 per cent during the month under review. In manufactured products, the index for basic heavy inorganic chemicals was up 3.0 per cent. However, the price of edible oils was down 2.9 per cent.

(1981-82 = 100)

	16 Mar '91	16 Feb '91	17 Mar '90	% change over month	% change over year
All commodities	190.8	190.3	169.6	0.26	12.5
Primary articles	196.5	196.2	166.2	0.15	18.2
Manufactured products	188.2	187.8	173.7	0.21	8.3

Consumer price index: The consumer price index for industrial workers was up 1.48 per cent over the previous month (January 1991). In the case of urban non-manual workers the increase was 0.60 per cent. On a year on year basis, the increase was 13.8 per cent for industrial workers and 13.0 per cent for urban non-manual workers.

	Jan '91	Dec '90	Jan '90	% change over month	% change over year
Industrial workers (1982 = 100)	202	199	174	1.48	13.8
* Urban non-manual workers (1984-85 = 100)	165	164	146	0.60	13.0

** Figures are for December 1990, November 1990 and December 1989*

Bullion prices and stockmarket index: The price of gold has been relatively stable during the month to 5 April 1991. Silver, on the other hand, declined by Rs.228 (or 3.43 per cent). The Bombay stock exchange index declined by 27.8 points due to the uncertain political situation.

	5 April '91	5 Mar '91	7 April '90	% change over month	% change over year
Gold (Bombay)	3528	3545	3410	-0.48	3.34
Silver (Bombay)	6633	6861	6725	-3.43	1.38
BSE index (1978-79 = 100)	1218.1	1245.9	770.4	-2.28	36.75

(Price of gold is in rupees per 10 gms and silver in rupees per kg)

Industrial production and infrastructure: The index for industrial production was up by a hefty 10.05 per cent in December 1990. This sharp increase was due to significant increases in the production of mining and quarrying (21.1 per cent), electricity (9.2 per cent) and manufacturing (8.5 per cent). Railway freight was up by nearly 7 per cent in December while crude oil production (-4.7 per cent), power generation (-1.27 per cent) and steel production (-10.8 per cent) were down. Coal and cement production, however, were up by 14.12 and 6.38 per cent respectively.

	Month	Previous month	Year ago	% change over month	% change over year
Industrial production index 1980-81 = 100	222.7 (Dec)	201.9	211.9	10.05	4.63
Railway freight (million tonnes)	28.76 (Dec)	26.75	27.25	6.98	5.25
Crude oil production ('000 tonnes)	2575 (Dec)	2697.00	2669.00	-4.73	-3.65
Power generation (million units/day)	770.67 (Jan)	780.46	713.29	-1.27	7.44
Coal production ('00,000 tonnes/day)	8.0 (Feb)	7.01	6.9	14.12	15.9
Steel production ('000 tonnes)	804 (Feb)	891.4	765	-10.87	4.85
Cement production ('000 tonnes)	4122 (Dec)	3859	3963	6.38	3.85

Money and banking: Broad money (M3) was up by 1.5 per cent during the month under review. This was only marginal when compared to the previous month. While bank credit was up by 1.7 per cent, food credit increased by 3.7 per cent.

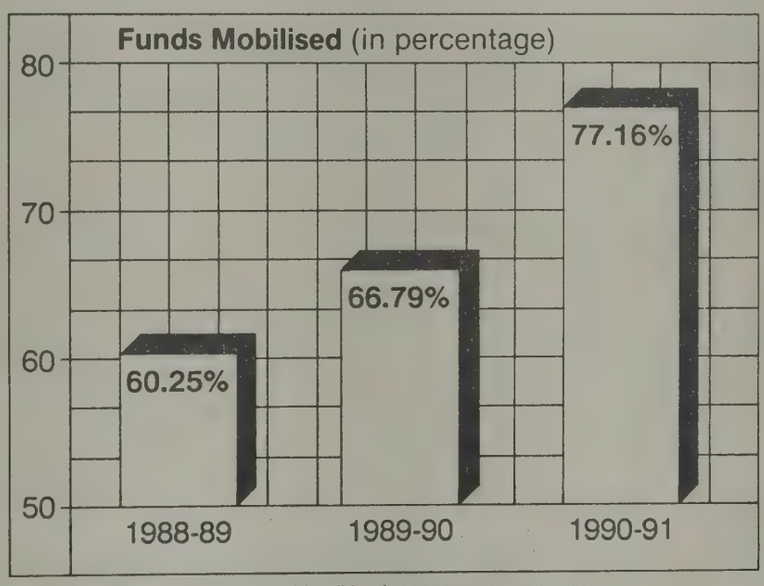
(Rs crore)

	8 Mar '91	11 Feb '91	9 Mar '90	% change over month	% change over year
Broad money (M3)	2,61,884	2,58,020	2,28,203	1.5	14.7
Aggregate deposits	1,89,186	1,86,836	1,64,823	1.3	14.7
Bank credit	1,13,543	1,11,601	99,141	1.7	14.5
Food credit	4,733	4,566	2,060	3.7	129.8
Credit/Deposit ratio	60.02	59.73	60.15		

Soaring to New Heights

SBICAP's leadership in Issue Management.
More than Rs 2611 crores raised from the capital market in 1990-91*, amounting to a record 77% of all funds mobilised.
Also, largest number of issues lead-managed

*For issues that came to market before March 31, 1991.



At SBICAP, we believe every issue needs a strategy, specially tailor-made to suit it. Be it an issue of Rs 60 lakhs, or a mega-issue of Rs 35,000 lakhs.

We carefully study every issue's individual characteristics, always keeping in mind the complexities of the capital market.

And because we have an unrivalled access to a network of branches, brokers and sub-brokers, our power of placement only keeps on increasing.

That's how we work—**with the mind of a professional and the heart of a friend.** That's how we are privileged to be **the Leader among Lead Managers.**

Credit for full issue amount to all lead managers or managers.

India's Premier Merchant Bank

ADROIT-440/91

Repeating a mistake?

It is only a decade and a half since the then prime minister Indira Gandhi's election from the Rae Bareili constituency was set aside on the grounds that a government official (Yashpal Kapoor) was campaigning for her, even before he resigned from his job. Son Rajiv Gandhi, however, does not seem to have benefited from his mother's experience. One finds two senior government officials — a secretary to the government of India and a director level officer in a ministry — merrily electioneering for the Congress party. Their names are an open secret in Delhi. One wonders what would happen if some of the other parties collect tell-tale evidence and present it to the Election Commission.

Rajiv Gandhi: no lesson learned

Taxmen call a halt

Income tax raids have again come to a halt. This is because of the reluctance of taxmen to undertake raids. This reluctance stems from the beating that a raiding party recently got at a bazar in Gwalior from shopkeepers whose premises they had gone to search.

Only last year, members of a raiding party were stripped naked and thrashed squarely in Muzaffarnagar. Following this, taxmen resorted to an all-India strike and reported to duty only when the government assured them adequate protection during a raid. Obviously this was only an empty promise as the recent incidents show.

Guide book to win elections

The Lok Sabha polls are here. Are you planning to run for the elections and want to win? If the answer is in the affirmative, please consult Jag Parvesh Chandra, the former chief executive councillor of Delhi. Chandra has never stood for Parliamentary elections, but he has recently written a book: *How to win elections*, which is now being hawked at Rs.50. The book must be the only one of its kind in India and if Chandra's claims have to be believed, then, by pursuing the campaign strategy outlined in the book, a candidate can maximise his chances of getting elected. However, before one takes an interest in reading the book, we would like to make it clear that there is no chapter on booth-capturing in this book.

Not by sympathy alone

Only Chandra Shekhar could do it. This must be the first time that a prime minister has written to a secretary of a state government sympathising with him for being superseded. The officer in question is Ashok Chatterjee, the higher education secretary of West Bengal. Chatterjee, along with half a dozen other IAS officers of the state cadre were superseded last month by a relatively junior officer who was installed as chief secretary of the eastern state by the Marxist government there.

Chandra Shekhar: strange sympathy

Obviously, all the officers went mad with rage over the move but it was only Chatterjee who wrote to the PM complaining. But Chatterjee's feelings have obviously not been assuaged by the PM's sympathy, for he is now boycotting all meetings chaired by the newly-appointed chief secretary.

Planning, but for whom?

Gone are the days when the Planning Commission was a stable organisation with its members enjoying a long tenure. Nowadays, with unstable governments around, the tenancy period that members enjoy at Yojana Bhavan has also correspondingly declined.

So, when are the present Planning Commission members going to resign? If the grapevine is to believed, Mohan Dharia and company are planning to quit after they have prepared the final draft of the Eighth Plan. That would be in early June, around the time the next government comes to office, But considering that the new government will bring along its own perspectives, there will obviously be a total recast in the plan, which means that the present Planning Commission could do well to resign right now.

A smart idea

Indian farmers could soon be sprinkling East German fertilisers on their fields. Apparently the new German government has decided to keep a lot of land in what was formerly East Germany, fallow for the next few years. This is to restore the land to its original strength.

But this means that fertiliser plants in East Germany would lie idle for the next few years, leading to further unemployment. To get over the problem, the Germans have a bright idea. Why not make an offer to India to buy fertiliser produced in these factories? Perhaps, soon our peasants will use foreign fertilisers on their fields.

ICFAI's New Course

Finance for Non-Financial Executives

ICFAI

The Institute of Chartered Financial Analysts of India has over 14,000 candidates on its rolls for the CFA Programme, which is being offered in collaboration with The Institute of Chartered Financial Analysts, USA. Encouraged by this phenomenal success, the Institute launched a new course: The DBF Programme meant for non-financial executives.

The DBF Programme

The DBF Programme (Diploma in Basic Finance) is designed to help Business Executives get a good insight into Finance through structured self-study at home. The Programme covers the essentials of finance through a mix of four core and two elective modules.

Programme Coverage

Core Modules

- Financial Statement Analysis
- Management Accounting & Control
- Working Capital Management
- Project Finance & Appraisal

Elective Modules (any two)

- Marketing Finance
- Production Finance
- Project Management
- Financial Services
- Personal Finance & Investments
- Management Control & Reporting System
- Financial Management in Public Enterprises

Study Material

The study material includes a detailed study plan, easy-to-follow lessons, reference books, self-evaluation assignments and exercises. The study material has been carefully developed with the assistance of well-known academicians and professionals for use by non-financial executives.

Duration

Individual candidates can set their own pace of study. Each module can be typically completed in 3-4 weeks. The course can be completed in 6-8 months.

Eligibility

Executives, self-employed persons, entrepreneurs, bank and insurance executives, government officers, defence personnel, teachers and others without a formal professional/academic qualification in finance. **The Institute welcomes sponsorship of candidates from employers.**

Diploma

The diploma will be awarded to all candidates declared successful at the examinations to be conducted twice a year, in January and July at 25 centres all over India.

Corporate Sponsors

Over 1,000 candidates have already joined The DBF Programme. Reputed organisations such as Voltas, ITC, Berger Paints, India Cements, Abbott Laboratories, Hindustan Ciba-Geigy, Mather & Platt, Asian Hotels, Madura Coats, HCL, CMC etc., have sponsored their executives.

Prospectus

For Prospectus and Application form, please write to the Administrative Officer (DBF), giving your complete postal address with pincode, enclosing a demand draft for Rs. 50, drawn in favour of the DBF Programme A/c, ICFAI, payable at Hyderabad.

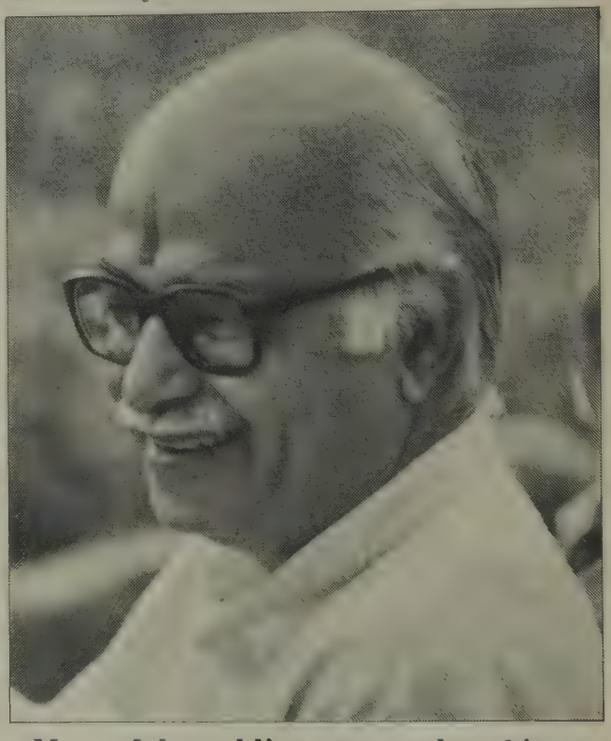
ELECTIONS

BJP's liberal economic agenda

Even though the Bharatiya Janata Party (BJP) will go to the forthcoming polls on the plank of *Ram Janmabhoomi*, it has readied an economic package to sell to the electorate as well. The package, which includes an action plan for economic affairs — the first that any party has prepared — is ready but has not yet announced.

The broad thrust of the action plan is towards deregulation, freeing the economy of controls, and securing economic growth with social justice. This, according to party sources, is sought to be achieved by a development strategy which is influenced by the cultural heritage of the country. (It is not, however, very clear from the plan how the heritage is to be uniquely exploited for the purpose.)



It is on the basis of this plan that a comprehensive industrial policy will be prepared, if the BJP comes into power. According to a party source, the policy will have certain broad parameters in the form of a few guidelines. Entrepreneurs will have to adhere to these guidelines. But beyond this, they are free to do anything. It will be akin to simple traffic rules: one is free to drive as one pleases and go anywhere as long as he or she adheres to the rules. The policy is geared towards complete debureaucratisation. The BJP's action plan is also expected to make clear that the purpose of organised industry is to produce goods and services; it is illogical to expect it to create employment.

Emphasis on agro industries

The major chunk of employment is expected to be created in small cottage and agro industries. Special emphasis will be laid on the latter for two reasons: to process local produce and to prevent large scale migration from rural to urban areas.

The BJP also promises to unveil a plan for the 'peoplisation' of public sector undertakings, if it comes into power. In certain areas like hotels and tourism, the public sector would completely withdraw; shares will be sold to the general public. In other areas, like public sector banks, there will be 'peoplisation' in a phased manner. But there is no plan for divestment from development banks.

Says the BJP source, "We recognise the need for the public sector in certain critical areas like defence. But, in view of the fact that most of the public sector undertakings are not functioning well and continue to depend on the public exchequer for support instead of contributing to it, there is no other way but to 'peoplise' them. This would also help to reduce the fiscal deficit that the government runs year after year, leading to imbalances in the economy."

Most of the public sector undertakings are not functioning well and continue to depend on the public exchequer for support instead of contributing to it... there is no other way but to 'peoplise' them

On the foreign exchange front, the BJP promises to consider the feasibility of free convertibility of the rupee and allow the market mechanism to determine the rate of exchange. The BJP insider says, "There is a case for delinking the rupee from the basket of currencies. In the short run, the rupee will depreciate, but that will make our exports price competitive abroad and obviate the need for subsidies. Imports will become costlier, but that will lead to curtailment of some of it, especially the inessentials. In the long run, all this will lead to the strengthening of the rupee. It would lead to greater foreign exchange inflow and solve our balance of payments problem."

He adds that this is the only long term alternative to approaching the IMF frequently with the begging bowl. The party also wants to encourage greater NRI investment. To woo them, it plans to set up industrial and technological parks, as in Taiwan, where those coming in will be given all facilities. Foreign investment is also to be welcomed but only in import substitution and export promotion areas — not in the consumer goods sector.

If voted into power, the BJP will also strive hard, it claims, to try and convince nations in the region to form a regional body called the 'Asian Corridor' on the lines of the EEC.

Tax promises

The BJP's economic action plan promises to rationalise the tax structure and weight income tax deductions to different sections, and especially salaried employees. For purposes of income tax, real income will be taken into account.

In the plan document, the BJP opines that the development process is meaningless if it does not lead to an improvement in the fortunes of the people. It says that the development strategy pursued till now, though successful in breaking the barriers of the Hindu rate of growth of 3 to 3.5 per cent, has led to the creation of only a small group who are conscious of the need and possibilities for growth. This is the group which has benefited from the growth process. Scarce resources are being diverted for production of goods for the benefit of this elite class. This, the plan says, has the potential for leading to partial paralysis of society. But these elite, however, cannot be ignored because such a move could lead to smuggling, etc.

What has to be attempted is a balance and adjustment among different groups of society. The party says it will attempt to end certain paradoxes — like rising foodgrain prices even in times of bumper crops.

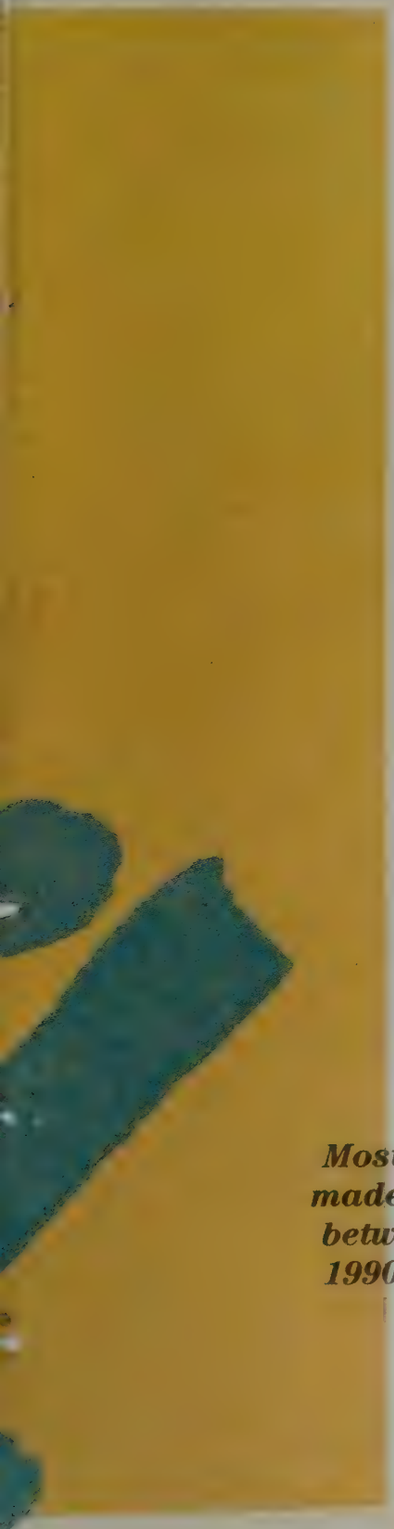
HTA 7806

A BUSINESS INDIA FORECAST



Corporate results for 1991

How 120 large companies will fare in 1990-91 and beyond

Illustrations by Avinash Godbole

The definitive picture on the corporate sector's performance in 1990 will not appear until the end of May this year, when the majority of results for the fiscal year ended 31 March will be available. Although six-monthly performance till September 1990 was excellent and unprecedented, there is good reason to believe that the second half of 1990 was different and that the economy suffered a serious setback. Hence, the rise in net earnings of the private organised sector of 60 per cent in the first half of the year, (while turnover rose 35 per cent) will not be maintained in the second half.

Most companies made zero profits between October 1990 and March 1991

How bad will it actually be on the bottom-line? *Business India* forecasts that profits for the corporate sector will rise by 30 per cent for 1990-91 while turnover will show a rise of 20 per cent. While this appears reasonable compared to 1989-90's rise in earnings of 40 per cent, it is not really so. When the numbers for the first half till September 1990 are factored in, the overall rise of 30 per cent means that most companies made zero profits between October 1990 and March 1991.

To find out what corporate performance is likely to be reported for fiscal 1990-91 and beyond, *Business India* polled 120 large companies about their functioning. Most companies were forthcoming with this information, which is presented in the table on pages 54, 55 and 58. Some companies were, however, coy and worried about the impact on the stockmarket and recourse had to be had to market analysts, dealers, competitors and bankers for the requisite information.

Government spending cut

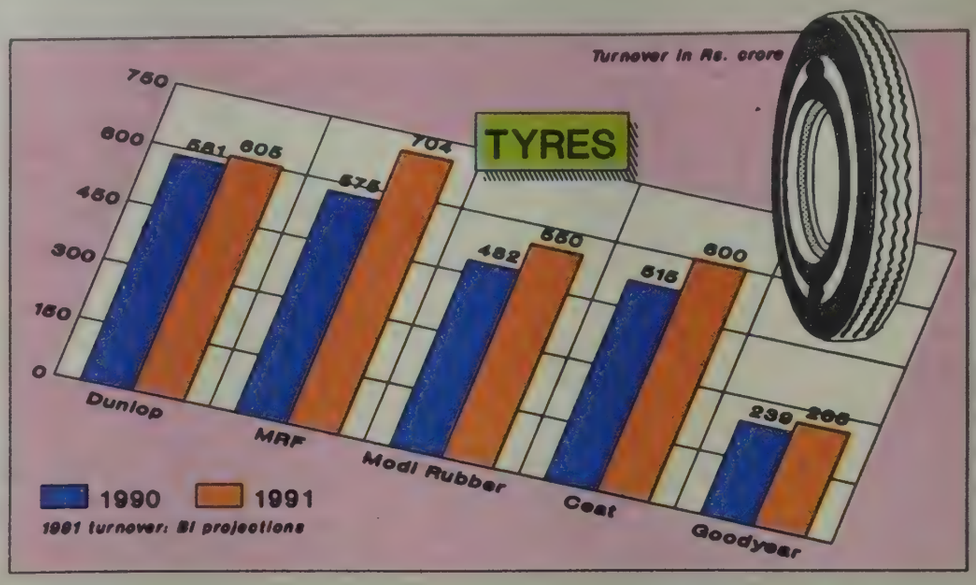
The most important factor of change was the Gulf crisis which began early last August, raising international petroleum prices by over 60 per cent. Facing a cash problem as a result, the government's spending on development programmes fell sharply. This hurt the expenditure of the rural and urban middle class on the one hand while government demand for capital goods also slumped. Hence, a broad range of consumer goods (including automotive, food products and paints) and specific capital goods sectors (such as pump-sets, power equipment and chemicals) were affected.

The government's knee-jerk response to the rise in oil prices, in fact, led to Indian petrol prices being one of the highest in the world. To make matters worse, the government imposed a supply cut — serpentine queues formed at petrol pumps and the surface goods transport system was thrown out of gear. The imposition of a "Gulf surcharge" on corporate profits did not exactly help sagging bottom-lines either.

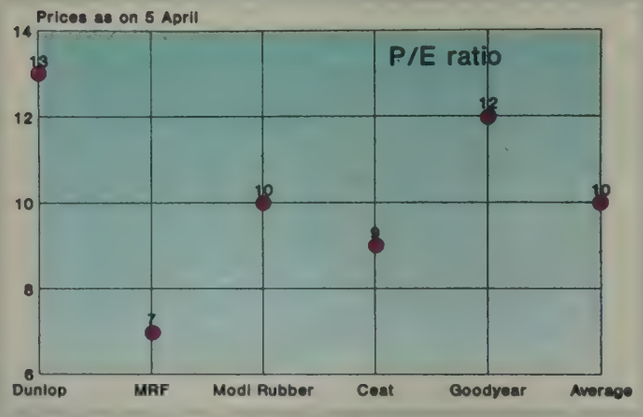
The government also responded to the Gulf crisis by raising the price of other petro-goods and by taxing synthetic and viscose fibres heavily. A wide range of industries was directly hurt by this move. Anand Rathi, senior president of Indian Rayon, said that raising taxes on synthetic fibres led to "a recession in viscose filament yarn and caused the textile division of Indian Rayon to go through a bad phase in the latter half of 1990 before settling down in February this year". F.C. Rustagi, president of J.K. Synthetics, also feels that the current recession in synthetic fibres was caused by the excise hikes of last December.

The second cause of the recession was the civic disturbance in the second half of 1990. Trade and

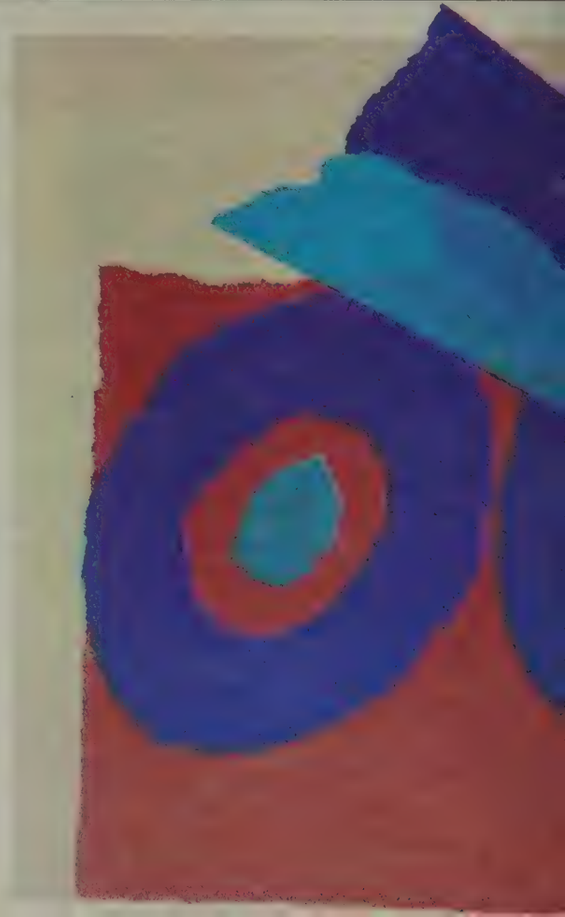
transport were seriously disrupted in the north, aggravating the problem caused by the supply cuts in diesel made earlier. Several managing directors who spoke to *Business India* complain of the effect "Mandal and Masjid" had on their corporate bottom-lines. For example, N.S. Sunder Rajan, managing director of Tomco, says that his company's sales in Bihar and UP were particularly affected by the civic violence last year.



In fact, most corporate observers wonder how an excellent first half performance could deteriorate to such an extent in the second, unless it was because the government, and especially the political leadership, had been overly cavalier. The consensus among them was: if the government spent most of the second half of 1990-91 talking of a gloomy economy, it alone was responsible.



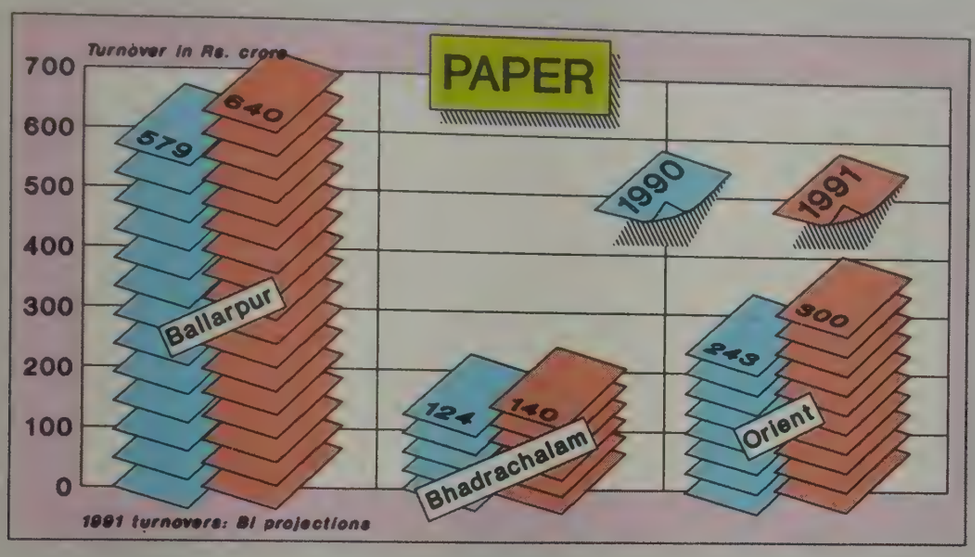
How bad was the resulting recession from this unfortunate mix of factors? Most economists are of the view that the economy will show almost a zero growth rate for the second half of the fiscal year. Since growth in the first half was a buoyant 8.5 per cent, this puts the likely GDP growth rate for 1990-91 at about 4.5 per cent. Kirit Parekh, director of the Indira Gandhi Institute of Development Research in Bombay, agrees with this figure. He does not see it exceeding 5 per cent and adds that the petrochemical industry would probably be the worst hit.

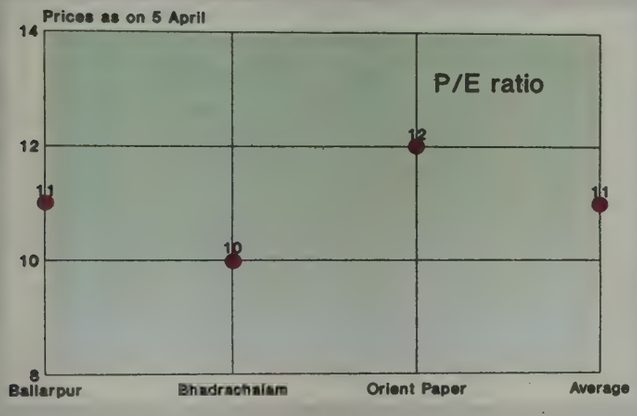


As R. Bharadwaj, director of economics at Bombay University, notes, the recession was accompanied by a sharp jump in the inflation rate from 10 to 12.5 per cent in the second half of 1990. With inflation likely to continue at 15 per cent through the first half of 1991, the Indian economy is in the peculiar condition of a demand slowdown at the same time that prices are up sharply. However, he believes the current year will be better, provided there is political stability and a good monsoon.

On the shop floor, the economists' words meet reality. K.K. Nohria, managing director of Crompton Greaves, notes that the 20 per cent growth rate registered in 1989-90 will not be matched in 1990-91. He expects a fall to 17 per cent (2 per cent real growth after expected inflation) but expects improvements in efficiency to keep profits rising as in the past. R.V. Raghavan, vice-president at Voltas, similarly states that he expects the company's margins to be under pressure due to higher input costs and substantial new investments.

It is clear that well-managed companies, which have gone in for modernisation in the past five years will be less affected. Thus, companies like Telco, Century and Grasim will come through this past year in better shape than companies like J.K. Synthetics, ICI and LML.





AUTOMOTIVE INDUSTRY

Some companies were severely affected by the disruption in transport. Among the hardest hit sectors is the automotive industry, particularly the segment catering to the rural areas. Umesh Banerjee, general manager, finance, at Escorts, admits that the company's performance would have been much better except for a slump in Rajdoot sales due to fuel shortages in rural areas. Still, Escorts will have a good year, thanks to buoyant sales of the Yamaha RX 100 and its tractors. The company is cautious about 1991 and is planning no new expansion projects for this year.

Similarly, Bajaj Auto was saddled with 100,000 unsold scooters in December as a

result of the civic unrest and violence. The company has cleared its stocks but is expected to sell 825,000 scooters this year, only marginally higher than last year's sales and much below its much publicised, but probably rhetorical, target of a million. (A company source says a target of 950,000 scooters is planned for the next year).

Meanwhile, Mahindra and Mahindra's performance for 1990-91 will also reflect the impact of last year's disturbances. But, its tractor division should do well for the full year while the coming general election should boost its performance in 1991-92.

Heavy and light commercial vehicles, on the other hand, have had a good 1990. These purchases are normally concentrated towards the end of the fiscal year, so the post-August events problems will not weigh as much. Ashok Leyland's spokesman says the company is doing well, and market leader Telco is also very optimistic. Telco had the usual sales spurt this February and the company expects to sell 80,000 vehicles this year, a 25 per cent increase. It is projecting next year's turnover at Rs.3,000 crore and net earnings at Rs.180 crore.

IRON AND STEEL

The steel industry will also do well despite no signs of decontrol. The stockmarket leader and the country's largest private sector company, Tata Steel, is expected to report good results for 1990-91 with net earnings of Rs.225 crore and an EPS of Rs.9.78. The current fiscal year should be even better. Sponge iron manufacturer Essar Gujarat is expected to have a spectacular 1990-91 with turnover at Rs.250 crore, against Rs.74.74 crore in 1989-90. Its sponge iron unit will work for only 10 months in the current fiscal year (ending May 1991) and the company expects 1991-92 to be even better with turnover touching Rs.400 crore. Meanwhile, aluminium manufacturers are expected to have a steady 1990, thanks to the declining rupee protecting their margins at home.

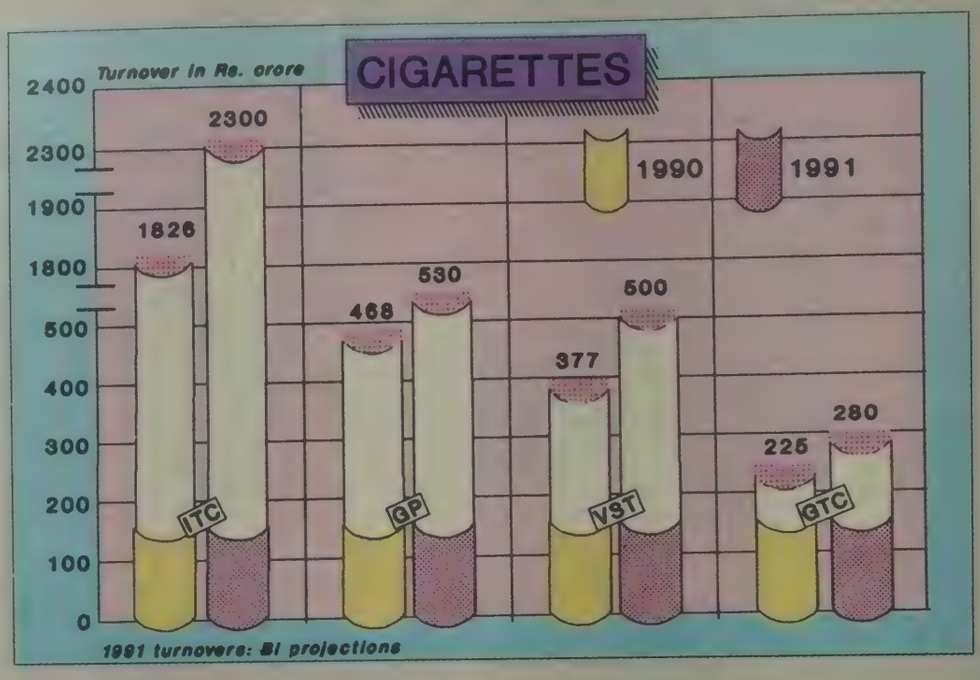
PETROCHEM-BASED INDUSTRIES

The second largest private company, Reliance Industries, has been caught by the excise-petrochem trap, like all the other synthetic fibre manufacturers. Its net earnings for 1990-91 is likely to be Rs.110 crore, moderately more than its half-year net of Rs.90 crore. Indeed, most companies that use petrochemical inputs expect to report poorer results for 1990-91. However, the Arvind Mafatlal duo — Nocil and PIL — will not perform as poorly as their first half results portend, according to company sources.

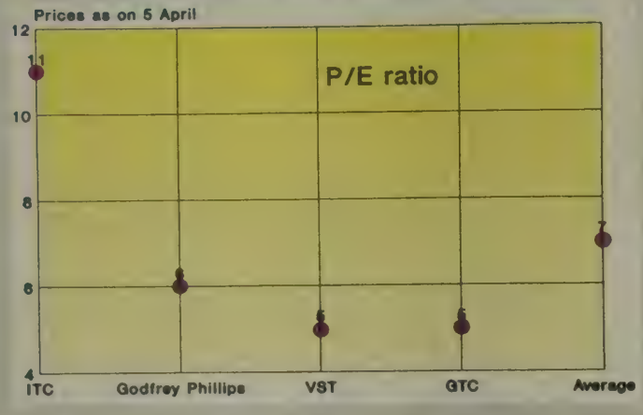
McDowell's polymer division, which makes polystyrene, though, will report a loss of Rs.3 crore for 1990-91. A company spokesman blames higher oil prices and low duty on imported polystyrene for the loss. Similarly, the tyre sector is expected to perform poorly due to hikes in petrochemical input costs. Ceat's vice-president, finance, A.A. Trivedi, is optimistic that it will be able to pass on costs. But most analysts are bullish only on one tyre company — MRF — which is expected to overtake Dunlop this year and become the country's largest tyre company.

SHIPPING

Like petrochemicals, the shipping industry faced its own trap set by the Gulf war. As K.M. Sheth, deputy chairman and



managing director of Great Eastern Shipping notes, "While freight rates fell, fuel oil prices rose." The end of the war, however, has completely changed the situation for long haul shipping. Freight rates have soared and international fuel prices have fallen to pre-August levels. Great Eastern and other shipping companies now expect to do well, even making up the losses sustained in late 1990. Essar Shipping, which had a poor second half to December 1990, now expects its turnover to jump 14 per cent to Rs. 163 crore.

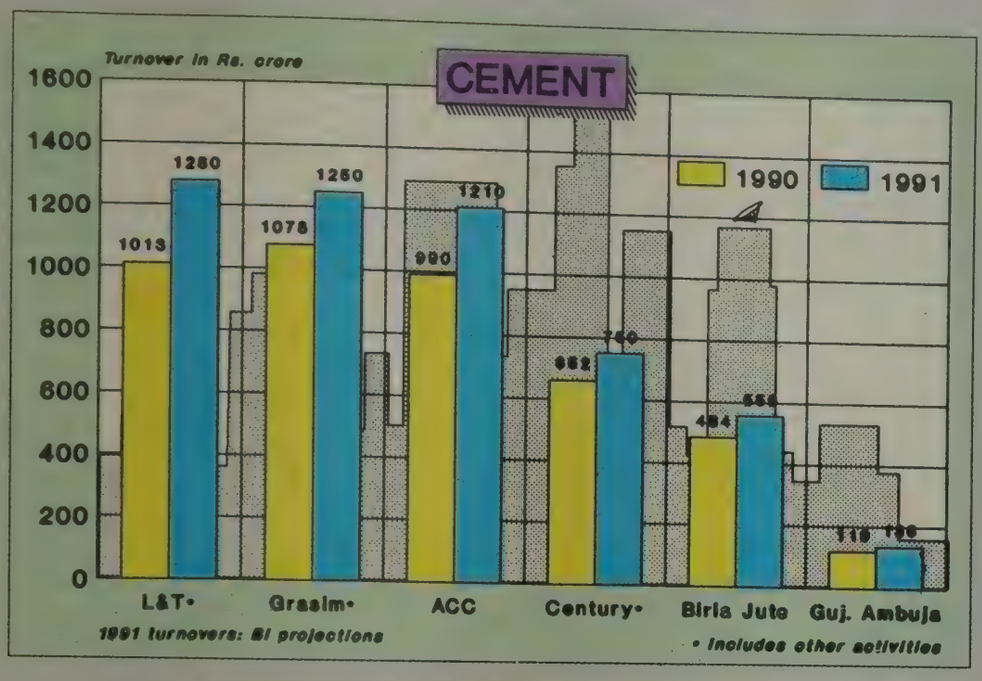


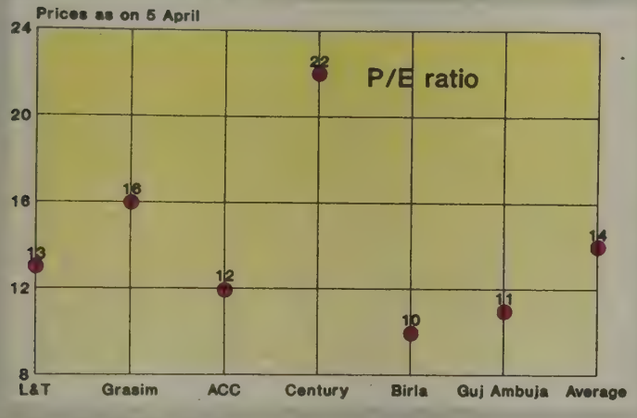
FERTILISERS

Fertiliser companies, hit by a declining rupee that raised the prices of imported phosphoric acid and by changes in depreciation and retention pricing norms, will show particularly poor figures for 1991-92. The exception to this group will be Gujarat State Fertiliser Corporation (GSFC) which went on a price raising spree on its monopoly product, caprolactum, after last August.

PHARMACEUTICALS

Pharmaceutical manufacturers will, surprisingly, not do as badly as expected this year. The products are essential and demand has been steady. But the future for the industry is not bright because price increases allowed under the DPCO have not matched inflation. H. Dhanrajgir, managing director of Glaxo, says that the long term outlook depends on the DPCO. In its present form, he notes, there is no incentive to invest. Bayer's managing director, H. Brenneiser, also notes that his company's high dependence on imports remains a constraint to both the pharmaceutical and agro-chemical divisions of his company. Hindustan Ciba's finance director, Jimmy Bilimoria, said his company is in a similar situation.





COMPUTERS

The computer industry is also in the doldrums. ICIM's managing director Ashok Jain, is particularly cautious about the next year's PC market given the slackening in November and December. However, he expects the mainframe market to improve after a poor 1990.

BEYOND 1991

Most companies feel that the outlook for 1991-92 is better. Videocon International for example, expects to maintain its pace of the past few years. While expecting to do well for 1990-91, the company expects turnover to jump to Rs.600 crore in 1991-92 S.K. Shelgikar an adviser to the

Videocon International Board explains its relative insularity from uncertain conditions by noting that the company is just beginning to cover markets in UP and Bihar and general declines in demand affect its competitors.

Wage pressure is the company director's biggest worry for 1991. With inflation rising, wages have to follow. A wide swathe of companies, including Bajaj Auto, Bayer, Ashok Leyland, Ceat Tyres, Bombay Dyeing and Standard Industries expect significant wage pressure this year.

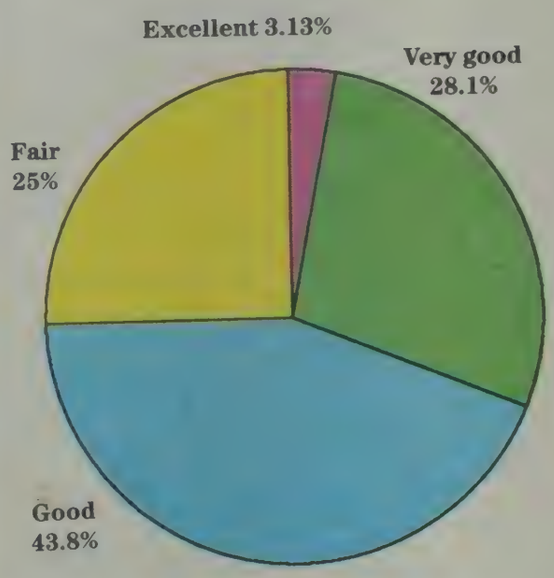
POWER

Among those expecting to do well in 1991-92 are Bombay Suburban Electric Supply (BSES). The power distributing company expects its turnover to jump by about 20 per cent to between Rs.500 and 550 crore in 1991-92 with profits growing apace. An analyst, however, reckons this is pre-issue hype; BSES has scheduled a public issue of Rs.100 crore this April to finance its Dahanu power plant, which will go on stream in 1995-96.

Indeed, power producers already in the field are less sanguine. Tata Power and Andhra Valley both expect modest jumps in turnover for 1991-92, following a mere 3 per cent jump for 1990-91. Ahmedabad Electric expects to earn less in 1990-91

than in 1989-90, thanks to higher wages and expects future profit growth to be positive but moderate.

CEMENT



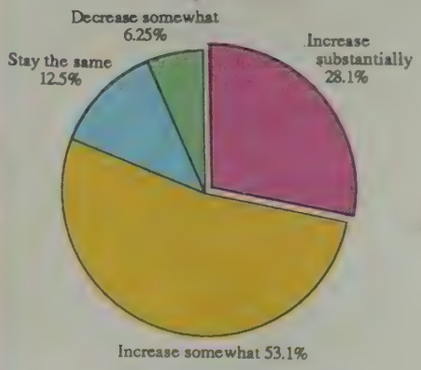
For cement manufacturers, cement is nothing less than gold dust these days. Since the industry's turnaround in 1990, the cement industry has boomed and will collectively gross Rs.10,000 crore in 1991. Anil Singhvi, senior finance manager of Gujarat Ambuja Cements, expects his company to close the financial year 1990-91 (this June) with a turnover of Rs.136 crore, up from Rs.119 crore last year. He expects it to rise further to Rs.150 crore by 1991-92, after which the company's million-tonne Himachal Pradesh plant will come on stream.

Why has cement done so well even when the rest of the economy faltered? One reason is the time lag in projects like road building and housing that are the main users of cement. The current demand for cement represents the plans for housing and roads made a year earlier. As builder Amit Dholakia puts it, "I could

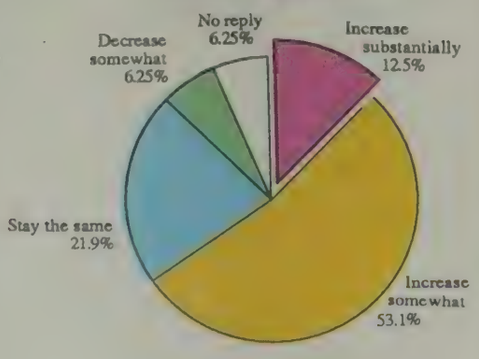
Top managers reply

Business India *polled top managers of many large companies during the course of this study. This is what they had to say.*

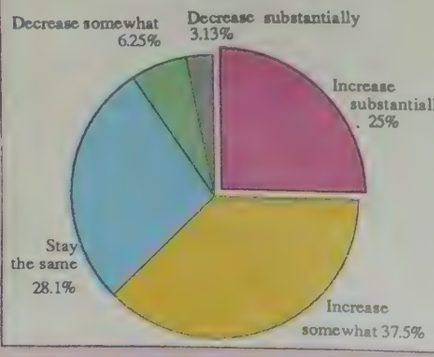
How do you think your company is faring?



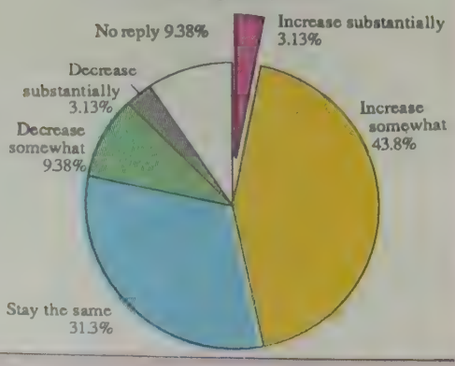
When do you expect business to improve?



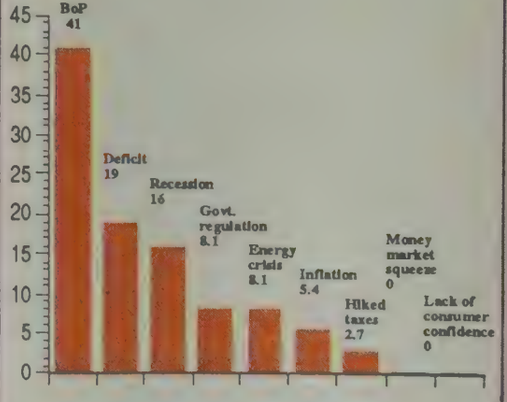
How do you expect the following measures of income and spending to change at your company in 1991?



Wages



Sales realisation



Capital spending

Advertising expenditure

What is the most serious problem facing the economy?

not afford to stop buying cement once my housing project was under way in late 1989". Of course, the prime beneficiaries of the cement boom are those with capacities in place. The best placed is ACC (*see table*).

While cement manufacturers are bullish on cement (as is the stockmarket), it should be noted that huge capacity are to be set up in the next five years. At least 8 million tonnes is expected to be added to the current capacity of 50 million tonnes. The gainers in the long term, says A.L. Kapur, chief executive of the Cement Manufacturers' Association, will be those like ACC with capacities in place because new capacity additions currently cost Rs.2,500 per tonne.

Century will also benefit from the cement boom. B.L. Jain, president of the cement division, expects the turnover of his division to rise by a further 15 per cent in 1991-92. Century has almost every other thing going as well for it. Its shipping division is doing well, while its textiles division is doing exceptionally well.

TEXTILES

Ramaprasad Podar, senior president of Century's textiles division, expects 1990-91 exports to cross Rs.125 crore, a jump of 25 per cent, and expects the current year to be even better. He is particularly hopeful of the outcome of tapping new markets like Dubai and Hong Kong. If true, that would indeed be like trying to sell silk to China; but Podar is not a man given to flights of fancy. However, Mafatlal Fine's executive vice-president, P.R. Amin, strikes a note of caution when he says that the upward movement in cotton prices in 1990 (when prices of raw cotton rose 35 per cent) shows no sign of abating in 1991 and it may not be possible to pass on all costs this year.

Besides cement and cotton textiles, record performances for 1990 and 1991 are also expected from the cigarettes, paper and bearings industries. Each of these industry groups will record earnings' increases of 50 per cent over 1989 (*see tables*) and expect the trend to continue. One result of the cigarette boom this year is that ITC will probably leapfrog over Reliance in the turnover table to take the number three spot this year. Cigarette exports are also booming to cater to the NRI market. GTC's managing director, P.P. Bhandari, expects his company's exports to rise to Rs.25 crore in 1990-91 from Rs.13 crore last year.

In all, 1990 will go down as a year of ups and downs. Companies will be glad if 1991 turns out to be the year of the turtle: slow but steady. How far this hope will be borne out is open to question. Recent import curbs announced by the Reserve Bank have once again raised fears of a foreign exchange crunch that could further slow down an already sluggish economy.

Even if curbs are relaxed fully after a few months, the performance of sectors like computers, consumer electronics, petrochemicals, textile machinery, machine tools, and diamonds in the first half of 1991-92 will be hit. Companies like Nocil, Suraj Diamonds, ICIM, Padmatex Engineering and Supreme Industries will be among those who are likely to be affected. And if the elections lead to a hung Parliament, political uncertainty will return to haunt the corporate sector.

ECIL

V

THANK GOD.

HIS FUTURE NEEDN'T BE TOLD BY THE STARS ANYMORE.

Electronics Corporation of India Limited (A Government of India - Department of Atomic Energy - Enterprise) 5, Sardar Patel Road, Begump

But by facts.

Based on the answers to questions like, how many children will there be by the year 2000 AD?

How many new schools will be needed for them?

How many more teachers will have to be trained to teach?

How many more jobs will have to be generated?

And countless other relevant questions that will be asked by planners. And need accurate answers.

Not tomorrow. Not the day after. But now!

Census 1991
— The Fact Finding Task

A statistical operation of this magnitude has never been attempted by anyone else. Anywhere in the world.

An exercise designed to generate a comprehensive information base to cover each and every Indian.

Where every man, woman and child does not end up becoming a mere statistic, but a tangible entity. A potential resource.

Forming a crucial base for long-term planning.

The Census 1991 will hold the key to the future. Helping formulate actionable plans. And assisting in the decision making process.

MEDHA 930. The Mainframe Computer At Work

MEDHA with its enormous data handling capability and high speed number crunching ability becomes the natural choice.

Facilitating analytical studies related to trends in migration; population projections; demography; occupational studies; cartography; anthropology; civil registration; village and town directories; mortality rates and causes; births; and other micro level studies.

Presenting this enormous amount of information in a precise and efficient manner.

Apart from performing this phenomenal task, MEDHA 930 comes with excellent communication features for networking in multi vendor environment; expansion capabilities; and powerful software incorporating all the current international standards.

MEDHA Mainframes-at work in diverse and critical application areas like banking, railways, large information management

MEDHA 930

systems, education, scientific research and development, oil and gas exploration, industry, defence, health care and hospital management.

Today, ECIL has the distinction of having the largest installation base of Mainframe Computers in the country. Proving themselves on the job, again and again.

Helping build the future of the nation on facts.

ECIL

What India needs most, we make first.

Key

a. Financial year 1989-90 is for a period of 9 months.
b. Financial year 1989-90 is for a period of 6 months.
c. Projections for turnover and net profit are for a 15 month period.
d. Financial year 1989-90 is for a period of 15 months.
*. Projected Net Profits (and thus EPS) are nil.
N.A. Not Applicable.

Notes

1. Turnover includes sales and other income.
2. Net Profit is profit after interest, depreciation and tax.
3. Earnings Per Share equal Net Profit divided by number of equity shares.
4. Price-Earnings Ratio equals market price divided by Earnings Per Share.
5. Earnings Per Share for 1990-91 are based on current equity, while Earnings Per Share for 1989-90 are based on Equity as on March 1990.
6. Price-Earnings Ratio for 1989-90 is based on share price as on 5/4/90 and earnings for that year.
7. Price-Earnings Ratio for 1990-91 is based on share price as on 5/4/91 and projected earnings for year ended March 1991.
8. Turnover and Net Profit figures for 1989-90 are taken from company balance sheets. Those for 1990-91 have been projected by Business India.
9. All net profit figures and earnings per share figures have been annualised.

THAT'S FENNER'S AUTO BELT

True grit, stamina and will power. These qualities make Fenner auto-belts the longest running on the roads. The name inspires trust and confidence, and offers real value for money.

THAT'S FENNER'S DEPENDABILITY

Outstanding innovations. Exemplified by Fenner Powerflex cogged belts, the most sought after. They deliver better flexing, superior transmission and longer life. Reasons why 80% of vehicle manufacturers depend on Fenner's technology.

TENACITY

THAT'S FENNER'S ACHIEVEMENT

Fenner is a thinking company. The undisputed leader for over 60 years. With formidable advances in research that have made every Fenner product a winner. No wonder Fenner is a front runner.

Fenner
THE FRONT RUNNER

What the numbers say

Of the 120 companies in the poll sample, 27 are projected to post declines in net profits in 1990-91. Eight companies are expected to maintain net profits at the same level as in the past year, though their turnovers are projected to increase. (The erosion in their net margins has been factored in.) Four are projected to come out of the red. And the remaining 81 are projected to post increases in net profits. Only one company, East India Hotels, is projected to post a net loss (Rs. 8 crore). But three — Ferro Alloys, Gujarat Narmada and Hindustan Motors — will post zero profits for the year.

The engineering company, GKW, is projected to post a steep decline (-62 per cent) in net profit. So are companies like Indian Hotels, McDowell, Baroda Rayon, Modipon and SPIC. These 10 companies will in fact be the biggest losers of 1990-91.

Scooter giant Bajaj Auto, tyre manufacturers Dunlop and Goodyear, pesticides manufacturer Bayer, Hoechst, Great Eastern Shipping, the fertiliser company EID Parry, and Britannia will have increased turnovers, but declining net margins will prevent their bottomlines from rising.

LML, the troubled scooter manufacturer, will just about break even. Atlas Copco, Indo Gulf Fertilisers and Mafatlal Fine are, however, likely to turn around and post modest net profits.

Ranked by the absolute magnitude of net profits earned, the top 10 companies are as follows:

1 Tisco	Rs.225 crore
2 Telco	Rs.150 crore
3 Reliance	Rs.110 crore
3 ACC	Rs.110 crore
5 Grasim	Rs. 90 crore
5 GSFC	Rs. 90 crore
7 ITC	Rs. 86 crore
8 Hindalco	Rs. 74 crore
9 Hind Lever	Rs. 72 crore
10 Cochin Ref.	Rs. 70 crore

If the top 10 companies are ranked by the percentage growth in their projected net profits, Birla Jute tops with a 700 per cent increase. ACC follows with a 518 per cent rise. Kesoram, Peico and Essar Gujarat occupy the next three places with over 300 per cent increases. Cigarette makers, VST and Godfrey Philips, take the sixth and seventh places, and are followed by Vikrant Tyres, Rallis and Raymond Woollens.

EPS ratios. The Earnings Per Share (EPS) ratios that appear in the table measure the net earnings a company is able to generate per share. The table shows that 36 companies are projected to show drops in EPS for 1990-91. Clearly, all of the 27 companies which will post declines in net profits will show drops in EPS.

For seven companies, net profit is projected to rise. However, as the number of their equity shares increased in 1990-91, due to bonuses or other capital issues EPS is projected to drop for these companies.

Due to this, EPS will show a drop for Bombay Dyeing, Klockner Windsor, Century Enka, Hindalco, and Videocon International.

P/E ratios. The price to earnings (P/E) ratios that appear in the table relate the market price of a company's share to the net earnings per share (EPS) that it is able to generate.

The table shows that Indo Gulf has the highest P/E ratio of all the companies listed — a good indication that the market looks beyond current earnings in valuing a share. Hoechst and Atlas Copco have the second and third highest ratios. These are followed by JK Synthetics, Procter and Gamble, Colgate Palmolive, Rallis, Britannia, Nestle and Cadbury's. These 10 companies have the highest P/E ratios of all the 120 in the present sample. Not surprisingly, multinationals with their high dividend payouts and steady earnings growth dominate the list.

The table also shows that the power company, Andhra Valley, has the lowest P/E ratio of all the companies listed. Su-raj Diamonds and Videocon International have the second and the third lowest ratios. These are followed by BSES, Modipon, VST, Tata Power, GTC, JCT and Tomco. These 10 companies have the lowest P/E ratios of all the 120 companies listed,

The P/E ratio also reflects the growth prospects of a company; the market risk of its share; the unique risk of its share; the behavioural orientation of the company's shareholders; the company's image; and the degree of liquidity in the stockmarket.

For Bajaj Auto, for example, the EPS for 1990-91 is the same as that for 1989-90. However, a Rs.150 increase in the market price in 1991 has pushed the P/E ratio up from 12.7 (in 1989-90) to 17.1. The EPS for Indian Hotels has actually fallen by Rs.3.4 in 1990-91. But an increase in the market price of the share has pushed the P/E ratio up from 11.8 to 22.7.

This means that though the P/E ratios appear too high when seen in relation to earnings for 1990-91, the market has already discounted the performance of these companies for 1991-92.

Clearly, the market had done the same for Birla Jute, ACC and Kesoram in 1989-90. The P/E ratios for these companies were 30, 13.6 and 18.2 respectively, in that year. In 1990-91, these companies will record stupendous growth in net profits, so EPS will rise smartly. And though market prices for the shares of these companies have risen too, the P/E ratios have climbed down to 9.8, 11.9 and 9.7 respectively.

Telco's high. For Telco, EPS will increase by Rs.4.6 in 1990-91. At its current price, its P/E ratio of 13.9 is lower than that of 14.2 in 1989-90. But kerb prices for Telco shares are already high enough to give it a P/E ratio of around 15.

The P/E ratios for Essar Shipping and Great Eastern Shipping make their shares attractive buys. Those for cement companies (around 10) also make cement scrips worth a flutter. Power companies continue to have amongst the lowest P/E ratios in the market, but plenty of uncertainty remains about their performance in the immediate future.

Finally, Reliance looks overpriced at a P/E of 17.7. And ironically, L&T looks much better at a P/E of 13.5; down from the 18.2 peak of last year. L&T's share price has marginally declined this year, but its EPS has increased by Rs.2. Reliance's share price, on the other hand, has more than doubled while its EPS has gone up by only Rs.1.20. Both share holders are probably quite satisfied which is why analysts claim the P/E ratio of a company mirrors the souls of its shareholders.

Say 'good morning' in Frankfurt.
Have a good day anywhere in Europe.

On Lufthansa you arrive in Frankfurt early in the morning. At just the right time to begin your day. Or catch your connecting flight to any major city in Europe or beyond. It's all part of Lufthansa's commitment to help you meet your growing business commitments. Swiftly, relaxed and on time.

VYSYA BANK

Committed to excellence

This private-sector bank has performed well against odds. Under the chairman's able stewardship, it is growing and diversifying fast. It is already into leasing, investment service and housing finance. And portfolio management, venture capital and mutual funds are being looked at

Ramesh Gelli, chairman of Vysya Bank, has a dream. He wants to turn his Bangalore-based sweat-shop into a 'super market'. "With a commitment to excellence, the bank is endeavouring to be the best in the country," he says. "We hope to become a financial supermarket with an array of financial products and services." A management graduate with specialisation in finance from the Asian Institute of Management, Manila, Gelli was only 37 when he took over at the helm of the privately-owned Vysya. Since then, he has transformed it virtually single-handedly into a financial powerhouse, the biggest and the most successful private-sector bank in the country.

In his efforts to realise his ambition, Gelli has taken Vysya into areas ranging from leasing to credit cards to investment advisory service and housing finance. And now he plans to get into portfolio management, venture capital, mutual funds, factoring, corporate counselling and mergers and acquisitions. "Given the highly competitive financial market of the eighties, the bank evolved growth and diversification as the two major strategies to challenge the competition and excel itself," he says.

Gelli: worked wonders

Said R.N. Malhotra, then governor of the Reserve Bank of India (RBI), while speaking at Vysya Bank's sixtieth anniversary celebration a short while ago, "The progress made by Vysya Bank, particularly in the last decade, has been most remarkable. I would urge the boards of directors of other private banks to take a leaf out of what the board of directors of this bank has been doing. The senior management in this bank has, for some years, been characterised by great imagination, good sense and technical skill."

Private-sector banks are a rather odd entity on the banking firmament. Since bank nationalisation in 1969, they have, at best, operated on the periphery of the country's financial system. Even the government control over them is of a rather ambiguous nature. They have been discriminated against by the government, though in some cases justifiably. RBI by law has its nominees on the board of these banks and has a say both in their expansions as well as dividend pay-out to shareholders. Yet, RBI has not been able to anticipate the problems that have in recent times overwhelmed many of the smaller private banks like the Bank of Thanjavur, United Industrial Bank, Parur Central Bank and Purbachal Bank.

Discrimination

And, as a general rule, the Union government, public-sector organisations and state governments do not bank with them, ostensibly because they are not financially sound. The more well-run of the banks like Vysya feel that this is outright discrimination in favour of public-sector banks and is the primary reason why they can't grow faster, despite better efficiency. The discrimination extends to even areas like the government's loan waiver scheme for farmers, where loans from private-sector banks are excluded.

It is against this background of restrictions that Gelli has worked wonders with Vysya Bank, building up the confidence of private-sector business and industry which constitute most of his clientele. Says T.T. Jagannathan, managing director of the Madras and Bangalore-based TTK group, "In one of our units, without Vysya Bank's help we could not have achieved the kind of growth we have achieved in the last 10 years." Adds Onkar S. Kanwar, vice-chairman and managing director of

Pics by Deepak Pawar

Vysya headquarters at Bangalore: growth and diversification

Apollo Tyres, "It offers services comparable with the best in India and abroad. It is one of the most innovative banks."

In the seven years that Gelli has been running the bank, its paid-up capital and reserves have jumped up from Rs.1.79 crore to Rs.16.21 crore, deposits have more than tripled to Rs.850 crore, and profits risen several folds from Rs.23 lakh to Rs.5.03 crore. An enviable position indeed, considering that Bank of Rajasthan, the second-best-run private sector bank in India, has an equity and reserve position of Rs.10 crore, total deposits of Rs.720 crore and a profit of just Rs.1.61 crore last year despite being nearly as big as Vysya.

So it was not very surprising when, in early March, a little-known Delhi businessman Basudev Garg bought a 3-per-cent stake in Vysya Bank by buying its shares on the Bangalore Stock Exchange, to become the single largest shareholder outside the community of the regional promoters. The bank's Rs.1.8-crore, 1.8-million-share equity is tightly held by 11,500 shareholders and, till Garg came along, Syndicate Bank with 4,500 shares was the largest outside shareholder. Ramesh Gelli and his relatives control about 22,500 shares.

Rarely traded

The family interest is so dominant in this bank that they almost never offload their holdings on the market. As a result, the scrip, though listed on the stock exchange, is rarely traded and hence does not appreciate in value. Garg denies he wants to upset the share-pattern of the bank. "I am not going in for further shares for the time being, though I will not hesitate to buy more when an opportune moment comes. But it does not mean I am trying to acquire controlling interest in the bank," he says. Besides, the Banking Regulation Act, 1949, restricts the shareholder's voting power to only 1 per cent, irrespective of the shares held by him.

Garg, however, can ask for a berth on Vysya's board and this by itself could mean substantial power. With the deposit base about to touch Rs.1,000 crore this year, the bank has a minimum lending capacity of Rs.500 crore. And even if Garg is not interested, he can always look upon his investment in Vysya as a very lucrative one. For the last four years the bank has consistently been paying dividend in excess of 17 per cent, last year's being a high 21 per cent.

Strong base

Gelli's success with Vysya Bank, to be fair, has its roots in the good work done by some of his predecessor chief executives. Since the sixties when it nearly went sick, Vysya has come a long way. It started growing significantly during the chairmanship of M.R. Arya (June 1969 to June 1974). There was a spurt in its activity during July 1974 to October 1978, when M.V.N. Shetty was the chairman. The rein of T.K.K. Bhagavat, the present chairman of Bank of Maharashtra, between February 1979 and November 1983, saw significant consolidation.

Viswanath Shetty: "Gelli's reputation difficult to emulate"

Even when Bhagavat took over in 1979, the bank had a very high level of non-performing assets. And he followed a conservative but prudent policy of providing for bad debts and loan losses from the profits made, rather than declaring high profits. By the time he left in 1983, Vysya Bank had not only provided for all bad debts but had made some provisions for the future too. According to a knowledgeable source, the bank ploughed back almost 90 per cent of its profits to building its inner strength.

Thus, when Ramesh Gelli took over, he had a strong base to capitalise on. He ushered in a new sense of professionalism and aggressiveness in the bank's outlook. Says M.K. Panduranga Shetty, former director of the bank, "Gelli has the ability to foresee the scenario and plan accordingly. He has good leadership qualities."

According to Sadananda Shetty, former chairman, Vijaya Bank, "He is a dynamic banker. His is the only bank in the private sector which can offer the entire package, and that's how profit has been generated. He has run the bank in a very professional manner." And according to B. Ratnakar, former chairman, Canara Bank: "Gelli is a man of vision and not afraid of experimentation. He has also concentrated on building up a sense of pride among the employees."

According to industry observers in Bangalore, what really makes Vysya Bank tick is its ability to compete with some of the smaller public-sector banks through a highly motivated staff, coupled with its compact size. While the last among the public-sector banks, Corporation Bank, with 437 branches, mopped up deposits of Rs.1,531 crore and recorded advances of Rs.899 crore during 1989-90, Vysya Bank with 289 branches mobilised Rs.850 crore of deposits during the same year, and had advances of Rs.458.58 crore.

Vysya Bank's efficiency is even more visible in deployment of its funds. Its profit as percentage of working funds, during 1989-90 was, for instance, 0.50 as against Corporation Bank's 0.26. Vysya Bank's deposits per employee, during the same year, was Rs.17.08 lakh against Corporation's Rs.17.05 lakh. All these are creditable, especially in the light of the fact that the staff strength of Corporation Bank is at least 80 per cent more than Vysya Bank's 4,983 employees.

"Let it be the best"

Vysya is one of the few banks which uses training as a motivation tool. Says Gelli, "We introduced a unique training programme which focused not so much on banking but on the individual, his self, his group, and his family. We also drummed in the slogan, that though the bank cannot be the biggest, let it be the best." Adds G.K. Valecha, former professor, IIM, Bangalore, who conducted some of these programmes, "Certain systems and policies

developed by Gelli encourage human resources development of the executives and management, upgrading knowledge and skills. He tries to visualise the future. He tries to develop systems which can be institutionalised and can be part and parcel of the bank so that it becomes the strength of the bank." P.V. Satyanarayana, senior general manager, Vysya Bank, concurs. "Our chairman introduced motivational strategy for involvement of staff at different levels to contribute their best to the bank," he says.

Rajagopal: hopes on higher profits

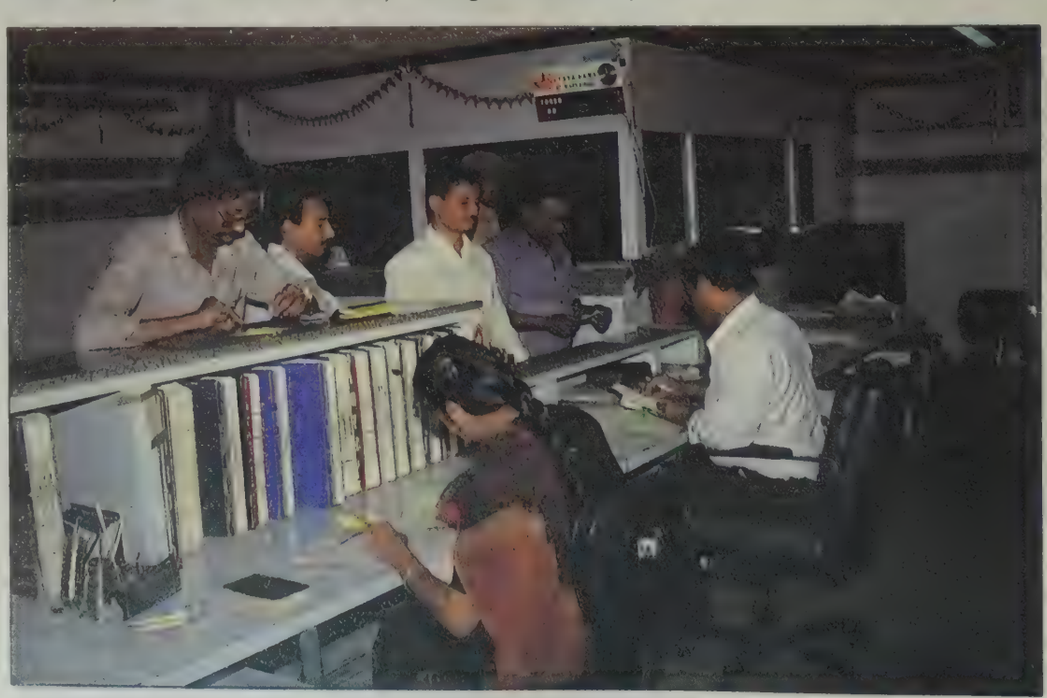
More than just profits, Gelli's premier contribution to Vysya has been to give it many firsts. Says he, "To be first has become an obsession with us." In 1985, Vysya became one of the first banks to introduce computers for customer service. Says Ashok Soota, president of the computer firm, Wipro, "The personnel at Vysya have been trained and a computer culture has been built up." Computerisation was followed by the introduction of MICR cheques and courier services for speedy clearance of cheques in 1986.

In 1987, Vysya went in for leasing and merchant banking subsidiaries. The following year, it launched a credit card in collaboration with Centralcard and Mastercard. The Vysya Bank Investors' Club was launched in 1989 and in 1990, it opened a housing finance subsidiary. In fact, last year when it signed an agreement with the employees to go in for further computerisation, it was the only other bank to do so besides the State Bank.

The 'three-tier' system

At the administrative level, the bank scrapped the 'four-tier' system (head office, zonal office, divisional office and branch) two years ago. Says Satyanarayana, "This has helped us in speedy movement of papers." Now, it has a 'three-tier' system (head office, divisional office and branch).

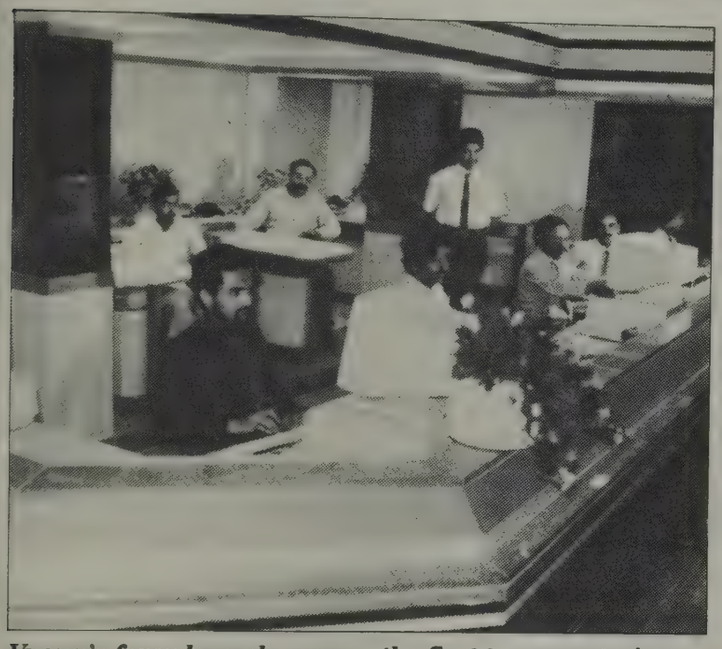
There has been a visible change in its customer profile too. While initially, the bank used to cater to the small traders and merchants, it shifted its focus by 1986 to the SSI sector. Today, 40 per cent of Vysya Bank customers are from the large and medium-scale industry, while 30 per cent are traders and 12 per cent, agriculturists. The rest are professionals and the services sector.



Its subsidiary, Vysya Bank Leasing, made profits in the first three months of its operations in 1987: the profit after tax (PAT) was Rs.2.05 lakh. And it also declared a dividend of 12 per cent. In the second year (15-month period) during 1988-89, its PAT jumped by more than 300 per cent while dividend rose to 15 per cent. During 1990-91 (12-month period), the leasing subsidiary's profit before tax (PBT) stood at Rs.60 lakh. And it will be declaring a 20 per cent dividend. According to G. Rajagopal, president, Vysya Bank Leasing Ltd, "RBI has permitted us to raise our capital from Rs.1 crore to Rs.1.5 crore. So, as our funds increase, we hope to make a gross profit (PBT) of Rs.75 lakh during 1991-92." The subsidiary has also been involved in loan syndication, merchant banking and underwriting.

Vysya Bank was the first private-sector bank to set up a housing subsidiary in November 1990 with a paid-up capital of Rs.3 crore. The bank has made good progress on the home loan account (HLA) scheme, launched in July 1989. Recollects Gelli, "In the very first month, we enrolled 80 per cent of the country's total HLA members." Today, of the 225,000 HLA members in the country, Vysya Bank has 110,000 members. Now that the housing finance companies have been allowed to go in for HLA, Gelli feels, "it will pose a healthy competition to our bank."

Gelli has also introduced seven committees which regularly meet to discuss, in detail, the problems of the divisions and branches, and the overall position of the credit portfolio. These committees are: policy committee; audit committee; performance review committee; advance review committee; deposit review committee; default and suit-filed accounts review committee; and staff review committee. Says Satyanarayana, "Almost all the executives visit the divisional offices and the branches in connection with development work and for follow-up of default and recovery activities. In deposit-mobilisation, 75 per cent of the bank employees participate and they are aptly recognised for their contribution."



Not encouraging

In 1988, when credit cards were launched

A Vysya branch: using training as a motivational tool

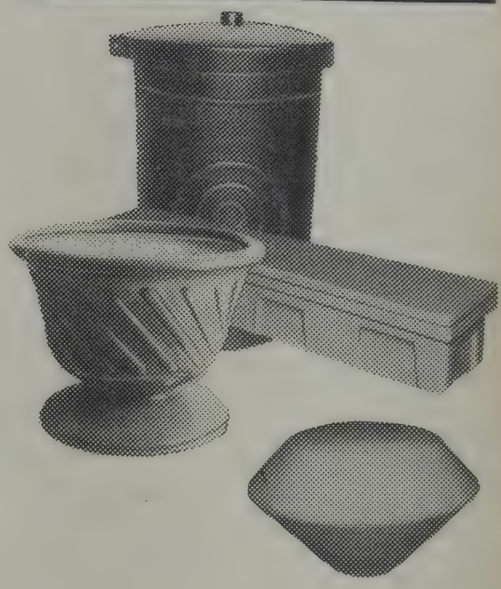
by Vysya Bank in collaboration with Central Bank, there were 10,000 cardholders and 7,000 establishments listed. But the growth has not been encouraging. It suffered due to lack of proper service; the bills were received late and hence the bank could not bill its members in time. The pace of credit card operations slowed down. Gelli says, "We are now evaluating the entire system so that processing can be done quickly." Adds Sridhar Subasri, deputy general manager who looks after credit card business, "We are in the process of re-positioning our credit card business. We have 20,000 members now and 1,800 own establishments." (Earlier, the bank never had any independent establishments).

Vysya's forex branch: among the first to computerise

Unique service

Its Investors' Club is a unique service among the banks. On members' advice, the club buys and sells shares for them at a commission. After six months of operations, it also offers loans against share securities. At present, the club has 10 centres and it plans to add 15 more in the near future. It has 3,000 members who pay an annual membership fee of Rs.500 and a security deposit (refundable) of Rs.1,000. Says Subasri, "The members of Investors' Club are neither speculators nor active investors. They are individuals holding investments." Points out Gelli, "That's why our average turnover is Rs.2 crore per month. For us, the club is a step towards merchant banking."

Gelli now wants to get into venture capital in the near future. "If any entrepreneur wants to set up a new unit or expand, we would like to provide the risk capital," he says. "A viable project may not get the necessary funds in time, in which case we may step in and bridge the time gap between declaration of the project as viable and sanctioning of finance. We also meet the short-term immediate needs of the industry and business." The venture capital operations will be launched during June-September 1991.



Growth limited

But Gelli realises that, despite his attempts at diversification, there is a limit to how fast Vysya Bank can grow, given its private-sector character. It is not easy to compete with the mammoth nationalised-sector bank network that runs the country's financial system. Former RBI governor Malhotra had suggested the way out for Vysya while speaking at its diamond jubilee celebrations. "The financial markets are becoming extremely competitive, and greater investments will be needed in technology if the banking sector has to remain competitive," he said. "Very small private-sector banks would gain greatly if some of them come together and form viable private-sector banks. I would urge the directors of these banks to give serious thought to this idea because very small institutions, to my mind, are likely to face difficult times ahead." But even this is not easy, as Gelli learnt last year when he tried to take over the Parur Central Bank in Kerala. RBI favoured Bank of India.

So for the moment at least, the only way Vysya Bank can grow is by being more efficient in its operations, seeking more private-sector clients and diversifying. But the question uppermost in the minds of Vysya Bank watchers is whether the bank will retain all its capabilities once Gelli leaves next year. And who will be Gelli's successor? As B.R. Viswanath Shetty, a director of the bank, points out, "Gelli has created a reputation that would be difficult to emulate." At least for Gelli, one thing is sure. By the time he leaves, he would have realised his dream, if not fully, but substantially.

Custom Moulding from Sintex

You name it, we can do it !

At Sintex we have refined the craft of custom moulding to an art.

In any industry the specifications vary from job to job and the standard containers might not be able to satisfy your need.

The next time you are stuck up in such a situation,come to us, give us the specifications and we will make a satisfactory product out of it. In fact, we have already developed a host of innovative products for a variety of customers.

Do you qualify for

Is your project innovative? Profitable? Does it have high-growth prospects?

Are you capable of managing it, nurturing it from infancy to adolescence to adulthood?

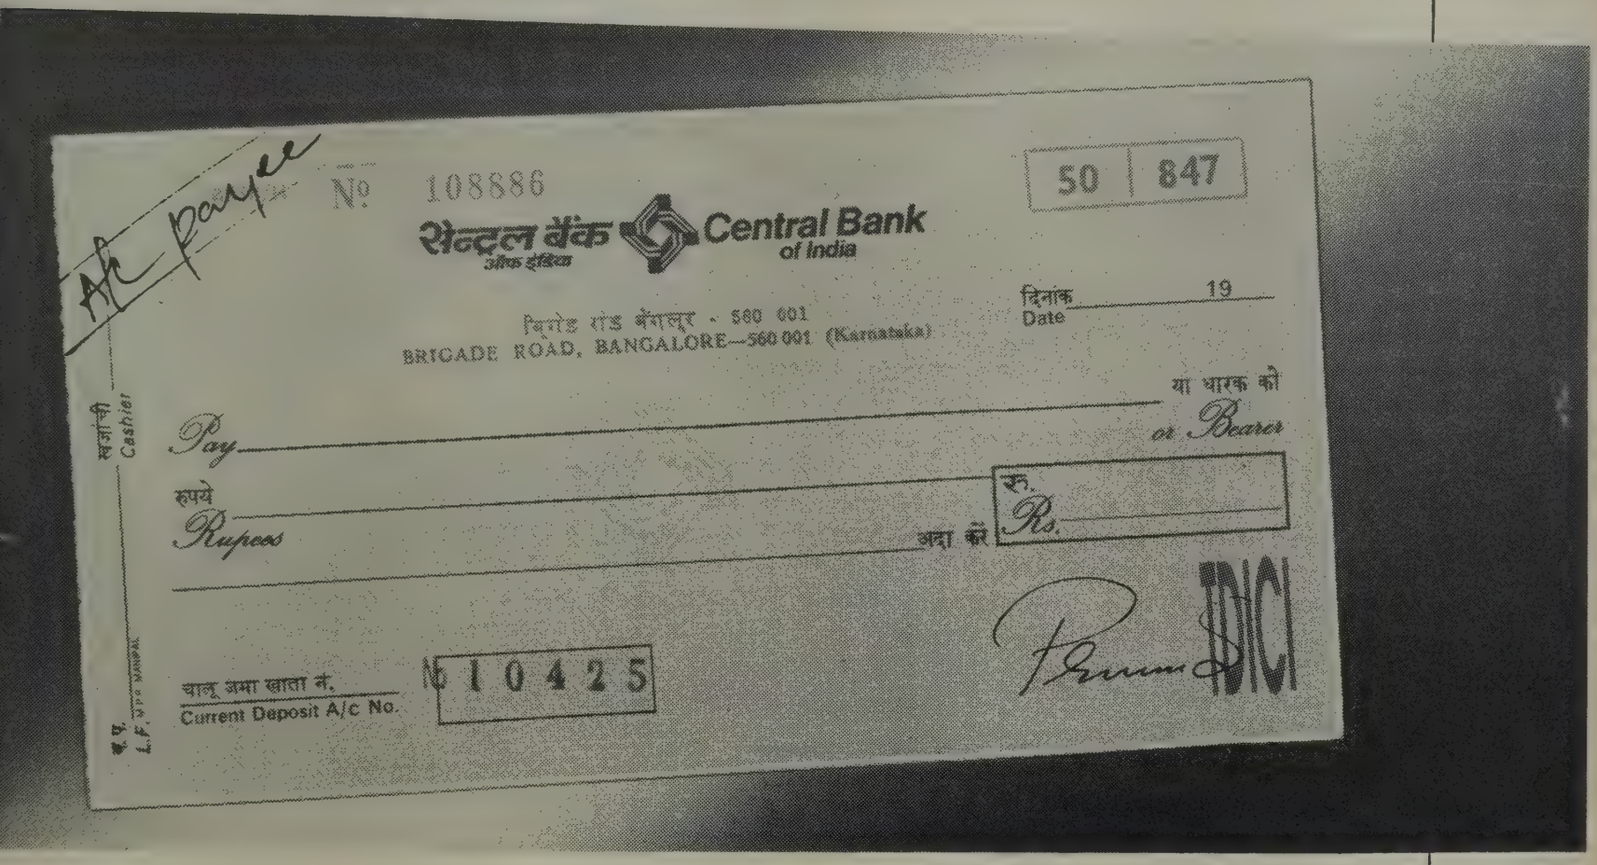
If the answer is 'yes' to all of these questions, TDICI will provide the necessary venture capital to convert your business idea into a commercial venture.

In the US, venture capital has propelled new ideas to major commercial successes. Some prominent examples: Apple, Lotus, DEC, Federal Express, Domino Pizza.

Who is TDICI?

TDICI is India's first venture capital company. Its promoters are the country's premier development bank, ICICI and the country's largest mutual fund, UTI.

See if you pass TDICI's test for the big idea in enterprise.



What is venture capital?

Venture capital is "equity support to fund new concepts that involve a high risk and, at the same time, have high growth and profit potential."

The objective of TDICI is to help professionals and small and medium enterprises.

Since 1988, TDICI has injected Rs. 40 crores into the ninety companies that have qualified so far for venture capital.

this cheque?

Almost all the companies assisted by TDICI have one of two things in common: a spectacular track record or a promising one.

If you think you have a winning formula, get in touch with TDICI in Bangalore or in Bombay.

You'll be glad that you did.

OMC COMPUTERS

Struggle for existence

In spite of its technological excellence and exclusive products, the company is not in the best of health. Competition has weakened its sales. Intensified exports, and more importantly, acquisition of more financial power through strategic alliances alone can save this company from losing its identity

Raj Reddy: the promoter

In the corporate environment of the computer industry, rumours travel faster than signals on a microchip. And now, the grapevine is abuzz with talk: that Voltas, the Rs.700-crore multiproduct company belonging to the Tata group, is planning to buy over the Hyderabad-based OMC Computers, in which it already has a 51 per cent share. Mohan Reddy, chief executive, OMC brushes aside this rumour, "How can a parent crush the identity of its own child? Right from its inception, the chairman of Voltas, A.H. Tobaccowala, has been the chairman of OMC. He has helped shape company policies and encouraged it to maintain a separate identity."

OMC, a medium-sized computer company, first came to the limelight in the mid-eighties when it introduced CAD (computer aided design) workstations in the country. In a span of five years, it increased its turnover seven times from Rs.3 crore in 1982-83 to Rs.21 crore in 1989-90 and consolidated its position in the CAD market. But competition from new entrants has been chipping away its profit margins. Net profits declined from Rs.51.72 lakh in 1988-89 (nine months) to less than Rs.33 lakh in 1989-90.

With the computer industry going through a major recession this year, things are expected to be even worse. In fact, industry sources say that the company is going through a working capital crunch. Says one competitor, "OMC seems to be financially stretched." One Bombay-based supplier told *Business India* that cheques issued to him by OMC had bounced recently.

Up for sale?

So, it wasn't surprising that, ever since the Computer Society of India's annual jamboree at Calcutta in December, speculation was rife in industry circles that OMC is up for sale. Says a leading computer manufacturer who was approached, "We studied the figures and found the offer unattractive." However, Shiv Nadar, chief executive of HCL, India's largest computer company, when asked whether he was approached, said, "I am surprised that some people are talking about OMC being on sale. It is a well-managed company."

Mohan Reddy denied that he had made anyone any offer. However, he does admit subtly that survival would be rather difficult for companies like his in future. The trend, he feels, will be for alliances between two or three medium-sized, like-minded companies to take on larger giants.

OMC already has an arrangement with Tata ELXSI to market its range of workstations. And some feel that this would eventually lead to Tata ELXSI picking up a stake in OMC. An alliance of this kind definitely does make good business sense. At the CSI conference in Calcutta, Tata ELXSI demonstrated a range of low-end workstations manufactured by OMC through a tie-up with the US-based Silicon Graphics (SGI). On the look out for a strategic alliance in India for its high end workstations in India, SGI may team up with Tata ELXSI in this venture. In that context, Tata ELXSI's teaming up with OMC, industry sources say, will benefit the latter considering its present state of affairs.

OMC Computers was promoted by Raj Reddy, (director of the Robotics Institute at Carnegie Mellon University in the US), Voltas and the Andhra Pradesh Electronics Corporation (APEC). Raj Reddy and his relatives have a 30 per cent stake in the Rs.2.1 crore capital of the company, while Voltas has the controlling 51 per cent and APEC the rest. The company started out as an exclusive manufacturer of CAD workstations in 1984.

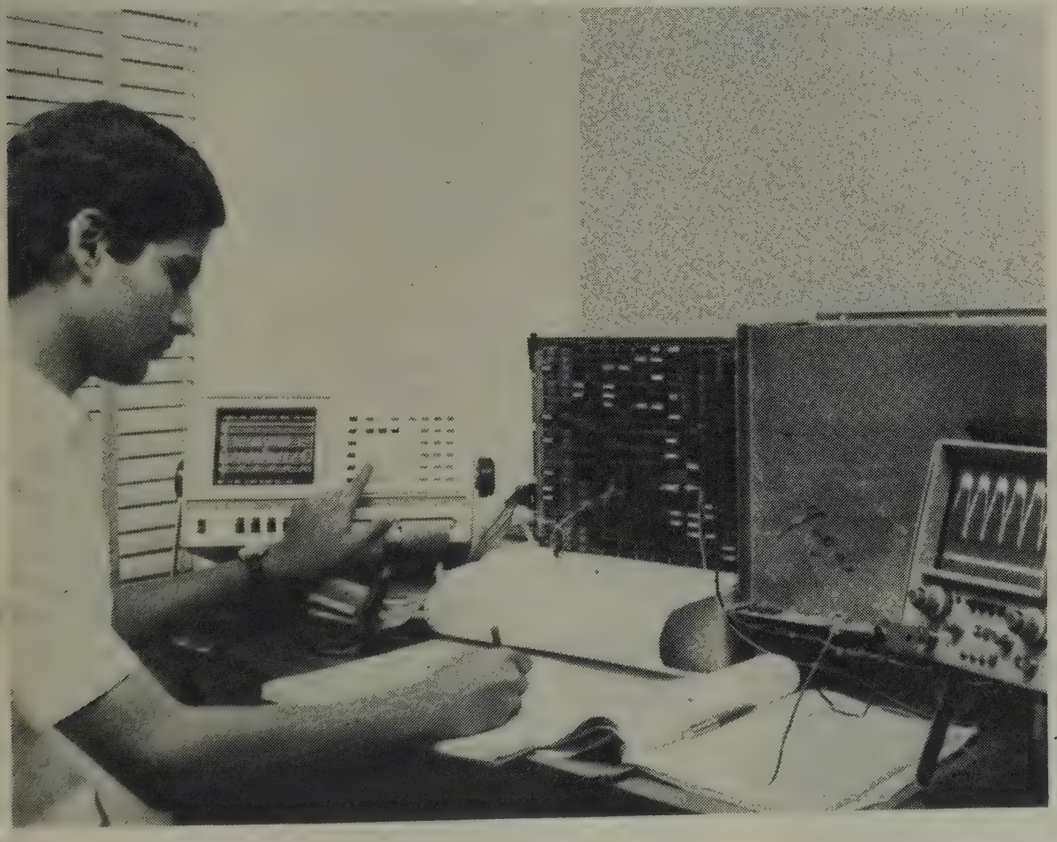
CAD being a new concept, OMC Computers had to first educate the customers before selling. This they did by selling 58,000 60 OMEGA machines in the first year of operation. The decision to concentrate on the CAD market was prompted by three factors: the need for an identity separate from the run-of-the-mill computer vendors, the company's access to latest technology from the US and possession of engineering talent. The subsequent years were marked with a strengthening of product base. As a manager from HCL remarks, "OMC's strength is its healthy departure from the trend adopted by most hardware vendors. It has concentrated on hardware as a platform, relying on a regular supply of varied software, introducing new products and keeping their customers continuously updated."

In 1985, OMC introduced Draftsman, India's first indigenous drafting machine — a result of 25 man years of R&D efforts. The Draftsman allowed the creation of a variety of drawings for architectural, mechanical, chemical, electrical and schematic purposes. The product was a runaway success, for the advantages of an indigenous product meant good after-sales service. Also, there was no problem of pirated copies either.

In 1986, when the Rangarajan Committee was formed to study computer applications in banks and financial institutions, OMC diversified into the banking segment. Modifying its products

to meet specific requirements of banks (like advanced ledger posting machine, etc), OMC Computers managed to gain 35 per cent share of this market. The contribution of banking to the total revenue came down subsequently to 10 per cent partly because banks' purchase came to a virtual standstill. Profits being low in this segment, a deliberate decision was made to concentrate on other areas.

In 1987, OMC introduced a CAD workstation, Omega Designer, which supports a number of engineering solutions for mechanical computer-aided engineering and architectural piping. This product had applications in defence, architectural and mechanical areas.



Variety of products

In 1988, OMC signed up with Silicon Graphics, US, to make Omega 3100 series. This product extended real time capacity on the machine and the product was actually simulated on the screen (the tie-up with Silicon ensured access to latest state-of-art technology). The next year, OMC launched RISC (reduced instruction set computers) technology for the first time in India at the CSI meet at Bangalore. This technology helped faster processing, useful in general purpose data applications and CAD. In 1990, at Calcutta, OMC launched Omega Iris 4D20 which processed five times faster and yet was considerably cheaper than Iris 3100.

Since 1987, marketing of CAD workstation has become more difficult and competition has stepped up — giants like HCL and Wipro teaming with world leaders like Sun Systems and Apollo to flood the Indian market. Where OMC had a virtual monopoly till 1987, its market share has now reduced to less than half. The stiff competition has resulted in undercutting of prices in a manner that seems to have affected OMC's bottomline. With the CAD market growing slower than expected, the going will be tough for OMC.

Mohan Reddy is still optimistic. He speaks of strategic alliances and intensified exports as a way out. On the export front, OMC made a beginning last year with exports of Rs.1.88 crore to the Soviet Union. Markets in Europe, Dubai and West Asia are being explored this year. Reddy finds the recent Tata ELXSI-OMC tie-up to be one of perfect synergy. For every power centre manufactured by Tata ELXSI, OMC sells about two to three workstations. But industry sources say that OMC will have to go beyond an alliance with Tata ELXSI to survive. It has to get substantial power to back it up if it is to take on the bigger competitors.

Production unit: access to latest technology

Sintex
Mixing
Vessels

Consistent performance round the year. For years

An ideal substitute for the wooden, lined and fabricated plastic vats, Sintex Mixing Vessels become indispensable for dyestuffs, paints, pharmaceuticals, food processing, chemicals, oil and other industries.

Extremely durable, leakproof and available in sizes upto 20,000 litres capacity, Sintex Mixing Vessels can be used round the year without any maintenance. Besides, they work out to be far more economical than others made of conventional materials.

Sintex Mixing Vessels are readily available with the option of flat bottom or tapered bottom assuring 100% discharge.

RALLIS INDIA

Changing course

The company has decided to sell off its loss-making fan division and two engineering subsidiaries at an undisclosed price to a Calcutta-based group

Darbari Seth has done it again. Last year, the Tata strongman sold off four of ACC's loss-making cement units; and last fortnight, he sold off the fans division of Rallis India and two of its engineering subsidiaries — Ralliwolf and Indian Standard Metal (ISM). In both cases, the plants have been sold to the Calcutta-based Hemraj Mahabir Prasad Poddar (HMP) group. Helped by strong cement prices, ACC bounced back this year with big profits, now it is to be seen whether Rallis can do the same.

The Rallis board, headed by Seth as chairman, took the decision to sell its engineering activities after the company's profits dropped sharply: from Rs.8.03 crore in 1988-89 to Rs.1.83 crore in 1989-90. This happened despite a sharp increase in sales from Rs.299 crore to Rs.361 crore. Worse, subsidiary Ralliwolf made a loss of Rs.4.22 crore on a turnover of Rs.19.21 crore, and ISM a loss of Rs.3.16 crore on Rs.2.85 crore.

Seth: better to sell than lose money

Poddar: big plans

The downturn in Rallis' fortune was mainly due to heavy losses in the engineering and pharmaceutical divisions. This severely eroded the good profits made by the agrochemicals division. The company decided to sell off the fans division (engineering) mainly because it has no synergy with its mainline chemical business and it was cornered in the industry by its above-average cost of production. "Being located in Bombay, our wage rates are far higher than those of other fan makers. Besides, it is impossible to compete with small-scale people who enjoy excise concessions," says Daljit Sabikhi, executive vice-chairman of Rallis.

Sabikhi was brought in from Tata Tea, another Seth group company, to Rallis mainly to oversee the restructuring of the company. Company sources say managing director Vijay Rai seems to have been totally sidelined after he came in.

Like Rallis' Rallifan, Ralliwolf's portable electric tools are also market leaders. But here too, increased cost of production, stagnant prices and a labour problem brought the company down.

The engineering division of Rallis and its two subsidiaries together have seven plants (six in Maharashtra and one in Gujarat) which are interlinked. The HMP group will take over all of them in a package deal. ISM, for example, makes castings for both the fan factory and the power tool factory of Ralliwolf. The latter makes special motors and armatures which goes for fan making. "All these plants are complementary to each other and it does not make sense to buy one and leave the other," says Mahabir Prasad Poddar, the 58-year-old group chairman.

The HMP group's total turnover is estimated at Rs.350 crore. It has six tea gardens, two jute mills, three sugar mills and four cement plants. "We have big plans for the Rallis plants. We will modernise, expand and introduce new products," says Poddar, who is confident of a turnaround.

And how does Rallis benefit from this deal? Unlike ACC's plants, which were sold at prices just a little above book value, Rallis' plants should fetch a good price. Although, neither Sabikhi nor Poddar are willing to disclose the price, people in the industry and company expect that it will be quite high. This is on the grounds that the price for the Rallis and Ralliwolf factories located at Mulund, in the eastern suburb of Bombay, will include the value of the huge plots of land they stand on.

The Rallis management has not only been secretive about the price, but it has also kept the details of the deal from the company's union. "We were kept totally in the dark about the buyer," complains Madan Phadnis, president of the Rallis Group Employees Union. "How can the management decide our fate without even informing us?"

The sale may lead to major savings for the Rallis. The estimated loss of about Rs.4 to Rs.6 crore made by the fan division every year will be plugged. Also, wages totalling Rs.4 crore on the division's 1,300 employees will be saved. And since the sale will be effective from 1 April 1991, Sabikhi hopes that the 1991-92 balance sheet will show a substantial improvement in profits. The loss in sales, about Rs.65 crore, is expected to be made up in 2 to 3 years.

But Rallis' problems are not completely over. About 85 per cent of its pharmaceutical sales come under the Drugs Price Control Order (DPCO) and therefore suffer from poor margins. According to a knowledgeable source, the pharma division lost about Rs.2.50 crore in 1990-91. Also the division's new bulk drugs plant put up at Ankleshwar in Gujarat, at a cost of about Rs.14 crore in 1987-88, is still not fully operational. It has, in fact, become a burden on the company. Many in the industry feel that eventually Rallis will also sell of the pharma division. Sabikhi maintains that "there is no such plan at the moment."

Sabikhi says that Rallis will now concentrate more on its chemicals division, which accounts for 55 per cent of the company's turnover. Fine chemicals, phosphatic fertilisers and pesticides are Rallis' main products and are expected to continue to do well in the future. The company also has plans to manufacture three new agrochemicals — anilophos, carbofuran technical and dithianon. "With the engineering division off our shoulders we now have more time to strengthen our chemicals business," says Sabikhi. "We must do what we do best." That sounds like the company has already decided its future course.

DILIP MAITRA

The EXIM Bank Casebook

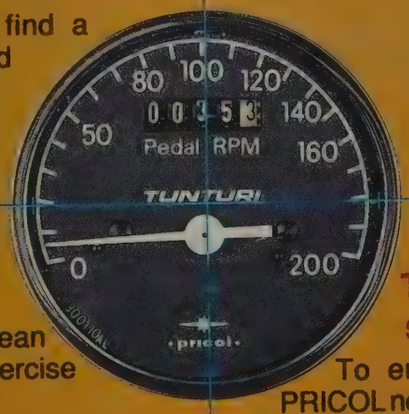
How PRICOL Zeroed In On An Export Niche

In the early 80s, when the Indian automobile industry opened up to Japanese technology, PRICOL was one of the first to upgrade its plant. The company entered into a collaboration with a Japanese firm, and developed a new range of dashboard instruments.

Now PRICOL could reach out for new markets. But, instead of satisfying itself with relatively easy markets, it took a strategic decision to target hard-currency nations.

Seeking out a niche

While many Indian engineering exporters cater to replacement part markets, PRICOL chose to build on its strengths as an OEM supplier.



The company could have aimed at the high-volume, price-sensitive automotive markets, where it would have been one among many vendors.

Instead, PRICOL chose to find a position from which it could dominate.

Hitting the target

In just two years, PRICOL achieved an annual export turnover exceeding Rs 1 crore.

Now, with an assured market in Europe, PRICOL is reaching out for bigger game: the truck and heavy vehicle builders of the USA.

Zeroing in

PRICOL zeroed in on European manufacturers of boats and exercise cycles.

Each of these required custom instrumentation. And the volumes they demanded did not call for major increases in PRICOL's production capacity.

PRICOL had found its special position.

The right kind of support

To enter these difficult markets, PRICOL need to develop special products for each customer — an activity where conventional financing sources are of limited help.

And an area in which EXIM Bank's presence made a real difference.

TRANSPEK INDUSTRIES

Challenging days ahead

Though sales have doubled in the last four years, the company still has obstacles to cross. Yet, through innovations in technology and aggressive marketing, the bottomline is being improved and this has led to a high degree of investor confidence

It was a strange get-together — a successful Bombay-based agrochemicals manufacturer (the Shroffs of Excel Industries), a reputed Baroda textile maker (Haribhai Patel of Shri Dinesh Mills), and a businessman-politician who was once president of the Bombay Pradesh Congress Committee (Dayabhai Patel). The year was 1965 and the purpose, setting up of a company to manufacture transparent acrylic sheets. The factory was to be located at the then fledgling industrial town of Baroda. And they named the company Transpek Industry Pvt Ltd.

Transpek has since come a long way. At last year's silver jubilee celebrations, the company offered 200 equity shares at par (the Rs.10 share was then quoted at Rs.180) to each of its 1,200 employees. It could well afford this generosity for sales since 1987 have more than doubled to around Rs.50 crore in 1990 and the net profit was over Rs.2 crore.

Daunting task

But more challenging days lie ahead for Transpek. True, in the last ten years, its sales have jumped by more than 10 times. But the target the company has set for itself — to touch a turnover of Rs.100 crore by the end of next year — appears daunting. And it is dependent on the changing fortunes of the textile industry in India. After years of struggle, textile mills are finally making money — sales have picked up and so have exports. Transpek stands to gain from this because three of its main products — hydro (sodium hydro sulphite), safolite (sodium formaldehyde sulphoxylate), and safolin (zinc formaldehyde sulphoxylate) which constitute 65 per cent of its sales — are all used largely in the printing, dyeing and bleaching of textiles.

Other Transpek products include thionyl chloride which is used as an intermediate for various pesticides, herbicides and pharmaceuticals, chloro acetyl chloride (CAC) an intermediate for pesticides and herbicides, a large variety of oil-field and rubber chemicals and the export-oriented speciality, zinc oxide. All these products are manufactured through home grown technology. "Indigenous processes have invested our products with the competitive edge," says Atul G. Shroff, chairman and managing director of the company.

Hydro is the company's main product, contributing 28 per cent of its total turnover and for which it has a 30 per cent all-India market share. And Transpek's manufacturing capacity for the product at 9,000 tonnes a year is at least 2,000 tonnes more than that of Tamil Nadu Chemical Products Ltd. (TCPL), one of the major competitors.

Pics by Rajoo Solanky

Mukesh Patel, Atul Shroff, Atul Patel: 'top group'

"We were not always the market leaders of hydro," explains joint managing director Mukesh D. Patel. "During the early years, we were pitted against leading business houses like the J.K. group and the Indian Electro Chemicals of the Nirlon group." When, in 1970, Transpek ventured into the production of hydro, the white granular powder was being traded as a speculative commodity. "Official price of hydro was then quoted at Rs.7 per kg. But the product actually commanded a market price of nearly Rs.45 per kg," explains Paresh M. Saraiya, vice-president, marketing and development.

Flooding the market

By maintaining a lower price (with the help of indigenous technology) and by flooding the market with the product, Transpek slowly stole a march over the others. Recalls Saraiya, "To break the stranglehold of the giants, we visited all the textile mills and stocked all the possible farmers' haunts such as *paan* shops and tea stalls with the product."

By the early eighties, Transpek began to dominate the hydro market. Says a competitor who does not want to be named, "Transpek definitely has performed admirably. Its professional approach to the business has been the reason for its success."

Transpek, however, was not planned as an inorganic chemicals unit. It was originally set up to make transparent acrylic sheets using IPCL's by-product HCN as raw material. Hence the name Transpek and its location at Baroda. The plan ran into rough weather, when, a subsequent shift in government policy reserved production of the plastic from HCN for the public sector. In 1971 at the behest of ICI, Transpek started making sodium hexameta phosphate. This marked its foray into inorganic chemicals. "An interesting aspect of our product launches," says Saraiya, "is that they are usually the outcome of customers' demands."

Transpek has innovated on the technology and marketing fronts. Its adherence to in-house technology provides products with an initial price advantage. For example, when Transpek developed expertise in the recovery of zinc metal from waste by electrolysis, it was able to maintain lower manufacturing costs vis-a-vis other competitors since this element accounts for almost 35 per cent of the cost of production of hydro.

However, as the production volumes of hydro increased, Transpek had to supplement its increased requirements of zinc through imports. Its recent breakthrough, the first ever in Asia, in the successful commercial extraction of zinc and

copper from waste employing plasma technology is expected to help the unit meet its entire requirements for these metals in the next couple of years. Transpek's bottomline is bound to improve subsequently.

The constant concern to contain production costs at the minimum level possible, without sacrificing quality, has enabled Transpek to tap European and American markets. It hopes to improve the value of these exports from the present Rs.1.25 crore to Rs.6 crore by fiscal 1991.

Back home, riding on quality and superior after-sales services, Transpek is able to realise 5 per cent higher prices for its products. According to Dilip Sheth, general manager (purchase & stores) of Arvind Mills, "We usually procure almost 30 per cent of our annual requirement of hydro of about 600 tonnes from Transpek. While price-wise the product at Rs.52 per kg is Rs.5 costlier than the other manufacturers, its quality and the company's after-sales services are amongst the best in the industry."

Transpek's service-oriented marketing strategies stretch beyond just timely deliveries, and include innovative packaging to ensure safe transportation (especially in case of hazardous chemicals). For example, for thionyl chloride, the original glass carboys were replaced by the more convenient and safer galvanised drums and totebins of 1 tonne capacity.

On other occasions, as in the case of safolin, a chemical used in the discharge printing of synthetic fibres, aggressive door-to-door advertising campaigns are also undertaken. Armed with such measures, Transpek effects 80 per cent of its sales through 14 country-wide distributors, and the remaining through direct sales.

Over the years, the company has also invested considerable energy to upgrade its manpower skills at all levels. "At Transpek, human resource development (HRD) is a tangible corporate ethos," states Shroff. Corroborating the statement, T.V. Rao, professor at the Indian Institute of Management, Ahmedabad and currently advisor to Transpek says that the policy makers at the company are firmly committed to HRD. According to Shroff, at any given time, the organisation invests in 10 per cent surplus manpower just to draw up plans.

Friendly management

The personal involvement of the 'top group', as the senior managers and the founding members of Transpek are called, in the career growth of their personnel has brought about a 'friendly and open style of management', and has resulted in extremely cordial industrial relations at the unit.

Atul Shroff with workers at Ekalbara: 'HRD is a corporate ethos'

However, several senior executives and managers express concern at the tardy implementation of new and large projects. They feel that plans should be worked out in greater detail for their efficient translation into action. It will also help administrative and manpower support systems to really think and act big. S. Ramnarayan, professor at the IIM, Ahmedabad and consultant to Transpek, concurs. According to him, Transpek is stretched to its limits in terms of manpower strength vis-a-vis its fast pace of growth. "At the same time, there is a considerable gap in the management capabilities between the top and core group," he adds.

To overcome the problem, Transpek is currently in the process of recruiting more people as well as upgrading the skills of existing manpower. And this, in essence, sums up Transpek's current dilemma — how best to maintain the existing workable and informal style of management despite the inevitable organisational restructuring that follows expansion.

Transpek's plans include expansion of production capacities for hydro, safolite and CAC. The stress will be on exports and the increased capacities will cater largely to international markets. Recently, the company concluded a contract with the National Petrochemical Co. of Iran to set up a turnkey project for the manufacture of 1,500 tonnes CAC a year. The job, to be completed in 30 months, is expected to rake in nearly $12.5 million as foreign exchange.

On the domestic front, to counter its over-dependence on hydro and safolite, which together contribute to almost 65 per cent of Transpek's turnover, the management intends to produce a new range of rubber chemicals on a commercial scale. "And for the next five years, we will concentrate on commercialising plasma technology for the extraction of non-ferrous metals required for internal consumption," says Shroff.

The company is financing most of its immediate expansion through secured and unsecured loans of approximately Rs.10 crore obtained from banks and various financial institutions including the IFCI. How these investments fructify into profits remains to be seen. Though its gross profit margin has risen over the years to 7.33 per cent last year, the company's borrowings and raw material cost have been rising fast — from Rs.10.9 crore to Rs.17.19 crore, and 54 per cent to 58 per cent of the revenue, respectively.

But Transpek shareholders are not worried. Of the company's Rs.2.5 crore equity, 40 per cent is controlled by the members of the founding families, while 56 per cent is with general public. And despite all the upheavals in the stock-market, the share price was quoting at a healthy Rs.155 at the beginning of the month. Not many chemical companies in India can boast of such a high degree of investor confidence.

■ NEERA SETHI

ALUMINIUM

Problems of plenty

The boom the industry started experiencing in 1989-90 still continues, though on a smaller scale. Downstream units' problems notwithstanding, the primary producers are making merry — raising prices, feeling out foreign markets, and going in for expansion

It was the year of superlatives for the aluminium industry — of record production and profits that touched dizzy heights. During the year, the country had also become an exporter of the metal instead of its importer. Producers of the silver-white metal cherish wonderful memories of 1989-90.

The boom still continues, though not on last year's massive scale. And nobody is complaining. Says S.P. Shorewala, vice-president (sales) of Hindalco Industries Ltd, the country's largest aluminium producer in the private sector, "Demand for aluminium is holding up well. I am also very optimistic about the future."

Last year, the three large aluminium manufacturers in the public sector and the two big private ones together had produced 435,000 tonnes of aluminium against an installed capacity of 610,000 tonnes. During the period April 1990 to February 1991, the total output reached 405,000 tonnes — an increase of more than 15,000 tonnes over the corresponding period in 1989-90. This upward trend in production has been accompanied by frequent price revisions which have benefited the five primary producers. Not surprisingly, a senior executive at one of these companies refers to aluminium as 'white gold'.

One word sums up the reason for this jubilation: decontrol. The deregulation of aluminium from price and distribution controls from 1 March 1989 onwards helped the more efficient units to increase production and make profits.

Scrips go up

As expected, this turn in fortunes has not been lost on marketmen, and the aluminium scrips have been rocketing high. Hindalco, which was always traded below Rs.60 before 1985, is now being quoted at around Rs.250 (ex 1:3 bonus and ex rights). Indal, which was traded at Rs.60 in December 1988, has now reached thrice that price. Surprisingly, even Malco, with huge accumulated losses, is being traded at Rs.200, thus demonstrating the immense confidence build-up around aluminium.

This 'white gold', which is causing all this excitement, is the most abundant metallic element in the world — about 8 per cent of the solid portion of the world's crust is aluminium. But although its ores are widely distributed in the earth's crust, only bauxite has proved economical as a source of ore from which the metal can be smelted. Bauxite is usually mined by the open-pit method, then crushed, sometimes washed to remove clay, and dried. It is then treated chemically and refined into alumina. Metallic aluminium is produced by an electrolytic process that reduces the alumina into oxygen and aluminium. Though it sounds simple and straightforward, production of aluminium is one of the most capital-intensive industries around. For every 100,000 tonnes of plant capacity, Rs.1,600 to Rs.1,800 crore worth of investment is required.

Finished aluminium ingots (Nalco): sharp increase in output

The metal's diverse properties lend it to a wide range of applications and it ends up being used in numerous products, from kitchenware to aircraft. Since it is a good conductor of electricity, aluminium finds wide applications in the electrical industry (cables, conductors, etc). Its light weight, corrosion resistance, high strength, energy-efficient recycling and high thermal conductivity also lead to many uses. About 45 per cent of the total aluminium consumed in the country is taken up by the electrical industry. And 15 per cent goes into the making of kitch-

enware. The packaging and transport sectors consume about 8 per cent and 6 per cent, respectively.

Downstream units flounder

These numerous applications may suggest that downstream aluminium units (which transform the metal ingots into bars, tubes, foils, cables, conductors, etc) must also be raking it in along with the primary producers. But this is not so. Many cable and conductor manufacturers are floundering. With the exception of the Bangalore-based Jindal Aluminium, most of the extrusion units are in a bad shape. Downstream manufacturers blame it all on the primary producers and the government.

"The primary producers are doing well because of the frequent price increases, none of which they have passed on to the downstream units," says Rajendra Somani, managing director, Oriental Containers Ltd. Many other consumers too complain about the frequent increases in the price of aluminium. Today, a tonne of aluminium, which costs Rs.36,000 at the factory gate of any one of the primary producers, costs the consumer Rs.49,086 per tonne after packaging costs, excise duty, surcharge and central sales tax have been levied.

It is this high price which stands in the way of this metal being put to new uses. While there are 25,000 known applications of aluminium in western countries, in India it finds only 300 applications. As a result, while the per capita consumption of aluminium in the US, Japan and France is 27 kg, 18 kg and 11 kg respectively, in India it is only 450 gm.

There are other allegations against primary producers. "The supply from primary producers is erratic. When there is a surplus, they dump their product. There are no planned despatches," says Somani. According to another consumer, Indian aluminium producers are ignorant about the niceties of after-sales service. "They are only interested in talking about outstanding dues," he complains.

Shriram Chokhani, managing director, Sudarshan Aluminium Industries Limited and president of the All India Aluminium Extrusion Manufacturers' Association, blames the government for neglecting the sector. "The total government taxes levied on us comes to 44 per cent. Excise alone is a high Rs.19,000 per tonne," he says.

While he may have a point, other factors have contributed to the sorry state of affairs as well. There is cut-throat competition all around. Again, there is an excessive licensed capacity of 135,000 tonnes when the demand is for only 65,000 tonnes. And most important, secondary producers have failed to upgrade their production facilities over the years and this has led to a decline in their profitability.

Ingot yard (Indal): now the stress is on alumina

Increasing input costs

On their part, primary producers point out that the high ingot prices are directly related to continually increasing input costs of raw materials like calcinated petroleum (CP) coke and coal tar pitch. International CP coke price is around Rs.4,100 per tonne but in India it works out to about Rs.9,000 per tonne.

Similarly, while the price of coal tar pitch in the world markets is around Rs.4,500 per tonne, in India it costs Rs.7,200 per tonne. Asks P.S.Ramaratnam, Nalco's executive director (commercial), "Why blame us alone? Haven't steel and copper prices been raised so many times in the recent past? We have acted in a very responsible manner by holding the price line for nearly one year and one month after the decontrol was lifted."

But consumers are not convinced, and point out that no industry can justify a 40-per-cent price hike between November 1988 and December 1990. Somani has an explanation: "The primary producers, who have formed a cartel in order to cover Nalco's high investment costs, are now jacking up the prices." Another downstream manufacturer adds, "There is a lot of customer resistance building up as a result of the high prices. State electricity boards are deferring their purchases. And people avoid going in for new applications of aluminium."

On the other hand, primary producers grumble about other hindrances like high excise duty. "There is no logic behind the government charging such a high excise duty except its need to generate additional revenue," says Shorewala. "Which should not be the case since ours is an industry which saves foreign exchange. If aluminium can be made available more cheaply in the domestic market, then the imports of copper and zinc can be reduced."

The aluminium industry is very power-intensive. And the erratic supply of power in almost all parts of the country has kept the average capacity utilisation of Indian aluminium plants to a low 65 per cent.

Among the first companies to solve this power problem was Hindalco. Earlier, it had to depend on the UP state power grid and its unreliable supply. Then it set up a new subsidiary, Renusagar Power Co, which installed in-house generators with a capacity of 327.5 MW. And now, for the last two years, the company has been self-sufficient in its power requirements.

Major advantage

The location of Hindalco's plant at Renukoot in Uttar Pradesh, very close to coal and bauxite deposits, has also been a major advantage. Hindalco, an Aditya Birla group company, was among the first primary producers which went in for ex-

FACTORY BUILDINGS FOR SALE

Factory Building and other Office Buildings located in Kovvur (near Rajahmundry), West Godavari District, Andhra Pradesh is for sale. Ideal location for any type of Industry with following infrastructure facilities.

1. Land – 7 acres.
2. Main factory building consisting 70,000 sq.ft. built – up area with Tubular structure with A.C. Sheet (North light)
3. Office Area – 5,000 sq.ft. with RCC Sheet and asbestos sheets.
4. Premises located adjoining Kovvur Railway station with sliding facility.
5. Industrial Gas pipeline for supply of gas from Godavari basin is passing by the side of the premises providing easy accessability to draw gas.
6. The premises is located on National Highway (Madras – Calcutta Road).
7. Rajahmundry town is within 3 kms from the premises adjacent to Godavari river, providing plenty of water availability.

MOULDS

We have been designing and manufacturing moulds and dies since 1970 and have 250 employees including engineers, designers, machinists, tool makers and moulders. Our engineers have been trained in the best tool rooms in the U.S.A. and are fully conversant with the latest techniques of precision mould manufacture.

We have a fully air-conditioned computer controlled tool room which is equipped with the best EDM's from Switzerland, three dimensional die sinkers from W. Germany, inspection and quality control machines from Japan and all other precision back-up machines.

We hold large stocks of the best imported alloy steels which are heat treated in our modern heat treatment plant. We can case-harden, harden, nitride and stress relieve all steels.

We are specialists in moulding the whole range of thermoplastics and can ensure supply of moulded components to your requirements. Our moulding shop is equipped with ten Toshiba 150 ton fully automatic moulding machines, a Kautex blow moulding machine and a team of experts to run them. Contact us for further information.

- High quality moulds for plastics and die casting industries.
- Moulded plastic components for general purpose and engineering plastics.
- Precision and electric discharge machining (spark erosion).
- Complex jigs and fixtures.
- Heat treatment of steels.

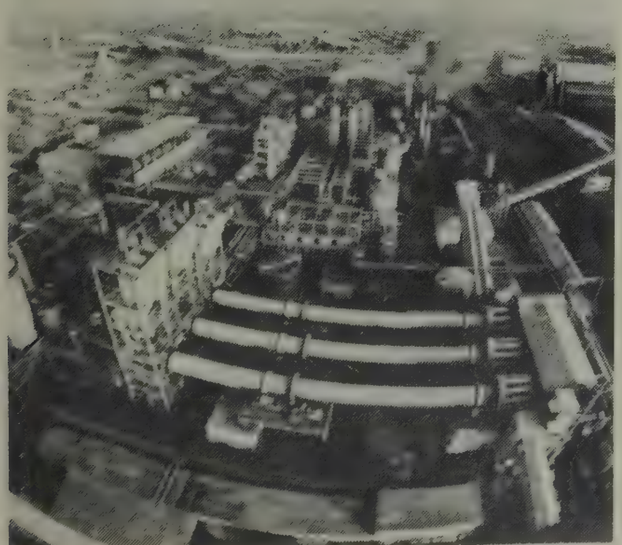
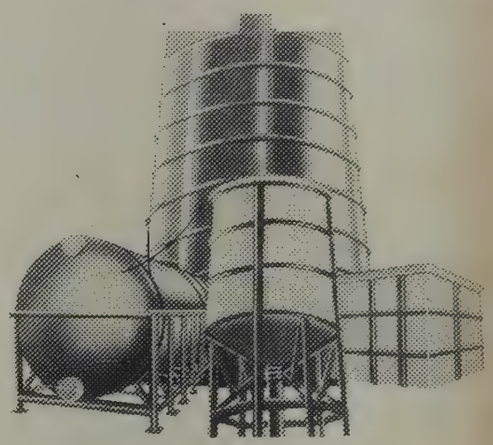
The friendly metal: a dossier



- The first aluminium object ever made was a toy rattle for Napoleon's son.
- Alcan Aluminium Ltd posted a profit after tax of $931 million in 1988 — the highest ever made by a Canadian company.
- In October 1885, American Charles Hall and Frenchman Paul L.T. Heroult (both born in 1863 and died in 1914) independently discovered an inexpensive method to separate aluminium from its ore.
- The US is the biggest aluminium producer and the biggest consumer.
- The principal elements used as alloys with aluminium are silicon, copper and magnesium. Silicon increases the hardness and corrosion-resisting properties; copper improves the mechanical properties; and magnesium increases the lightness and resistance to impact.
- For a given weight, some aluminium alloys are twice as strong as mild steel.
- Earlier, the metal was so rare that Napoleon III, the French emperor's nephew, had his artisans design an aluminium table for guests who deserved something better than gold.
- Aluminium recycling saved 10 billion kWh of electricity in one year, enough energy to light New York city's residences for over six months.

truded products where the value addition is as high as 20 per cent. All this helped the company put up a brilliant performance last year when net profit increased by 200 per cent and turnover by 47 per cent. Its EPS of Rs.35.67 compared very well with the Rs.14.10 of Indal, the second best performer in the private sector.

Like Hindalco, Nalco too has made its own arrangements for power supply. It has a captive power plant of 600 MW near its aluminium smelter at Angul in Orissa. (There is a proposal to increase this capacity to 960 MW.) This in-house power generation facility helped Nalco to record a sharp increase of 56,265 tonnes last year over the 1988-89 output of 78,753 tonnes. Says K.V.B. Pantulu, chairman and managing director of Nalco, "Till recently, India was importing substantial quantities of aluminium which required the outgo of considerable foreign exchange. Nalco was primarily set up to increase the production of aluminium in the country in order to make us more self-sufficient."



Nalco has also been in the forefront of India's export drive in alumina and aluminium. It has exported large quantities to countries like the US, the UK, France, Germany and Norway. Among the committed foreign buyers are Samsung of Korea (who pick up the metal for their electronic printed circuit boards) and the car giant Toyota of Japan. Toyota lifted 2,500 tonnes last year, and now Nalco has a running contract for supplying 200 tonnes every month. "Even after the fire at our plant (in March 1990, when metal worth Rs.100 crore was destroyed) Samsung preferred to wait for our good quality metal rather than buy from other producers, despite our advising them to do so," says Ramaratnam.

But Nalco's pioneering move in the area of exports has not gone down well with others. Complains the managing director of an aluminium extrusion unit, "I don't see the necessity of encouraging exports of the basic metal. For every 10,000 tonnes of aluminium exported, the country wastes 18 kWh of power. With this kind of electricity, 100 villages can be electrified or 2,400 tube wells operated for one year." In-

Hindalco plant in UP: location advantage

Sintex Industrial Tanks

Tried, Tested & Trusted for over 15 years

Now the Sintex Industrial Tanks have been in service for more than 15 years. Withstanding the test of acids and chemicals. A performance that speaks volumes for the quality, reliability and utility that is assured with each Sintex Tank.

Moulded to seamless perfection from superior grades of polyethylene materials, they are light-in-weight, easy to install and totally maintenance free.

Available in different shapes and sizes of upto 25,000 litres capacity. The Sintex Industrial Tanks have today become the standards for the storage of chemicals and acids.

Producers of 'white gold' in India

Company	Capacity (tonnes)	Plant site	Technology	Strengths	Weaknesses
Private Sector					
Indal	117,000	Hirakud (Orissa) Alupuram (Kerala) Belgaum (Karnataka)	Alcan (Canada)	Production of value-added products, a Rs.600-crore expansion and modernisation plan	Communication between Calcutta headquarters and various far-flung plants
Hindalco	150,000	Renukoot (Uttar Pradesh)	Kaiser (US)	Low depreciation costs, captive power	Old technology
Malco	25,000	Mettur (Tamil Nadu)	Monte Catteni (Italy)	Shift towards alumina production	BIFR case, crippling power problems
Public Sector					
Balco	100,000	Korba (Madhya Pradesh)	Vami (USSR)	High capacity utilisation	Labour problems
Nalco	218,000	Angul (Orissa)	Pechiney (France)	Energy-efficient technology, product registration on London Metal Exchange	High capital-related charges

Foil slitter: downstream units are not so well off

stead of aluminium, the government should encourage the exports of alumina of which India has abundant resources, he suggests, adding that Indal exported alumina profitably last year.

Even though Essar Gujarat and Larsen & Toubro also had applied to the government about a year back for setting up alumina EOUs, the proposals are still gathering dust in the industry ministry. According to another school of thought, the government should encourage the exports of value-added extruded products instead of aluminium ingots.

Critics of aluminium exports may have a point. For according to industry sources, Indian producers — who exported 25,000 tonnes of aluminium last year — will never be able to compete in the international market because they are not competitive enough. They face many obvious handicaps — high input costs; use of old technology; absence of any R & D efforts. Further, though labour costs seem low (taking up only 5 per cent of the total cost of production), productivity is also poor. Machinery costs too are very high, leading to a steep interest burden. Finally, with the exception of companies like Nalco, a major constraint for aluminium manufacturers in the country is the poor quality of the metal produced and the strict international standards they have to meet.

But for the time being at least, Indian producers may not be too keen to play in the overseas market and as a result, the department of mines' estimated level of 48,000 tonnes of exports are not likely to be met. Also, "When the domestic market is so attractive, why should anyone go in for exports?" asks a commerce ministry official.

With demand increasing in the domestic market, there are enough indications to suggest that the government will give the go-ahead for the three expansion proposals before it totalling 265,000 tonnes (Hindalco: 100,000 tonnes; Nalco: 115,000 tonnes; and Balco:50,000 tonnes). Once this happens, the total installed capacity will shoot up to 615,000 tonnes. But even that will be insufficient a few years down the road. For, the projected demand is 600,000 tonnes for 1995 and 900,000 tonnes for 2000. And for 2005, it is 1.2 million tonnes.

Each aluminium project takes about a decade to go on stream. But encouraged by the continuing boom and the projected demand-supply scenario, there is a great deal of activity among potential aluminium players. J.K. Industries is interested in setting up a greenfield project in Orissa. Hindalco and Indal are going in for downstream units. Cable manufacturer Sterlite Industries is going ahead with a Rs.50-crore aluminium sheet and foil project at Sanaswadi, Pune.

"The Indian aluminium industry took some time to take off but now that it has established itself, there is nothing which can hold it back," says Shorewala. "We have a huge growing population and there will always be a growing demand for the metal."

That, and a stabilisation of prices, should ensure more applications of aluminium. Once that happens, the 'white gold' would have truly earned its sobriquet.

All Said And Done, One Process Is Beyond Our Control.

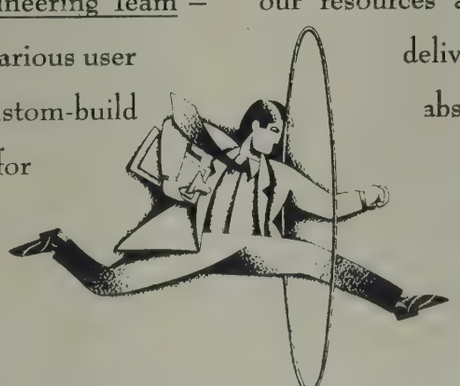
AT TAYLOR

'TOTAL CUSTOMER SATISFACTION' IS THE ENDURING PROCESS WHICH BEGINS WHEN A PROJECT ENDS.

This is everything we believe in. The very core of our philosophy: PROCESS SYNERGY – the effective integration of our comprehensive resources, to control . . . your processes.

It's an attitude, manifested in the actions of each of our resources:

Proven Technology – which is selected after scanning the globe for state-of-the-art technology that works.



The Project Engineering Team – specialists from various user industries who custom-build perfect controls for your specific requirements.

World Class Infrastructure – facilities that help deliver on time. Every time.

The Service Team – who measure downtime only in seconds. For every second counts.

And of course, a range of 4,500 products, unmatched quality, and some of the best professionals in the industry.

This is 'process synergy'. Where all our resources are synergised to deliver only one thing: absolute satisfaction.

As a **plastics processor,** you supply critical components to your various clients for use in Teletronics. Office Equipment. Electricals. Transportation. Agriculture. Consumer Durables. And so much more. Critical components that take much of the strain. On whom depends the functioning of the whole.

Making things tougher: So you need to make these critical components tougher. More durable. And what better material than Celcon. Because Celcon is superior to and more durable than acetal homopolymers and other engineering thermoplastics. And even conventional materials.

Celcon is an acetal copolymer manufactured by Hoechst Celanese Corporation, U.S.A. And brought to you, in India, by Polyolefins Industries Limited. In continuance of its pioneering spirit. Kindled more than twenty-five years ago.

Making life easier: Celcon offers you easy processability. A lower melt temperature. Wider processing window. Better thermal stability. Faster cycle times. Better flow properties. All of which mean lower processing costs. For a superior, more durable finished product. Celcon also has less gassing problems. Making processing it infinitely safer. And life, for you, much easier.

There's the PIL advantage of course: When you use Celcon, you get the added bonus of the invaluable expertise and experience of PIL's Marketing Technical Services Department. To provide a Total Systems Package. Including state-of-the-art CAD/CAE facilities. And, of course, the PIL reputation of putting technology to work for a better life.

With Celcon, PIL makes yet another commitment. To be a long-term lead player in the market. For your benefit. For the benefit of the Indian plastics industry.

For more information on Celcon, please fill in the coupon below and mail it to **Polyolefins Industries Limited,** Business Unit Polymer, Mafatlal Centre, Nariman Point, Bombay 400 021.

Yes, I would like to know more about Celcon. And the advantages of using it in my industry. (9)

Competition is the key

S.L RAO

Foreign investment in India has been low and, in the last year, declining. It did pick up in 1985 when India received foreign investments worth Rs.126 crore and soared to Rs.316 crore in 1989, but came down last year to Rs.127 crore. The average annual foreign investment over the last decade in China, Thailand, Malaysia and Indonesia was $1,217 million, $344 million, $976 million, and $334 million respectively. India has consistently not used the opportunity of substantial foreign funds for investment.

The arguments in favour of foreign investments as equity holdings are well known. They help reduce the balance of payments. The cost is low, return is not guaranteed, dividends are taxable and paid only when profits are earned. Thus there is a premium on performance.

Likelihood of a stranglehold

On the other hand, critics argue that foreign investment exposes the country to increasing foreign interference in domestic policies, and must therefore be limited to sectors that are considered unavoidable and essential. The crux of the argument against free foreign investment in the country appears to lie in the fear in the minds of policy makers, as also in the minds of many industrialists, of foreign competition. Are these fears valid any longer?

A quick look at a variety of market segments in India shows that markets dominated at one time by subsidiaries and associates of world leaders, have given up significant shares to local enterprises. Some examples among consumer goods are: Nirma vs Hindustan Lever in detergents; Balsara vs Colgate and others in toothpastes, deodorisers, etc; Rasna vs General Foods in the soft drink concentrates market; Raj Travels vs Thomas Cook in overseas group travels; Parle vs Pepsi; Hindustan Computers Ltd vs ICIL; and Hero vs BSA.

These small entrepreneurs who have battled and won appear to have something in common. They have understood the consumers and the market so well that they were able to identify neglected market opportunities. They were not bound by the rule book, written by the large companies with successful experiences in developed countries. They are wholly Indian and have the ingenuity to manage the maze of laws, rules and procedures as well as the persistence and the courage to overcome the many hurdles and constraints in their way. The Indian entrepreneur has shown his ability to compete with foreign investment. If constraints on Indian enterprises were reduced, they could be even more active and effective. And it is the small and new entrepreneur who has shown this ability.

The government in India has also, over the years, developed a good understanding of foreign investors and sees that they conform to the requirements of the country in which they invest.

Fiscal measures are always available to limit the dividends that foreign investors take out of the country. If foreign investors are able to transfer money by other means (such as the so-called administrative/service charges for purchases overseas, made centrally through the foreign headquarters at much higher prices; or exports at low prices to the overseas collaborators), these are not difficult to identify and prune.

Specious argument

Another argument is that foreign investment should not be allowed into what are considered low-technology areas. This argument is specious. Any product can be manufactured by many different technologies. Manufacturing industries in the country need to be competitive. Competitiveness, in an international sense, must result in lower costs and consistently good quality. This needs new processes, equipment and technologies.

Some recent surveys suggest that in a majority of industries, the gaps in developing newer technologies in India compared with those in many developed and developing countries range from five to well over 15 years. These gaps can never be bridged unless India is willing to either enter into expensive collaboration arrangements, or, as a lower priced alternative, allow foreign companies to operate in India with Indian partners.

Frontline technologies apply as much to articles of daily consumption as to industrial equipment and components. The consumer wants, and is willing to pay for, a high-quality product. He is not willing to accept shoddy products even if prices are low. The artificial distinction between such products needing new and modern technologies because they are "sophisticated" or "easy", is not in the interests of the consumer nor is it in the long-term interests of the economy.

India's policies regarding foreign investments must change because we must make our industry modern and competitive. With our balance of payments difficulties, we must accept foreign investment as equity. Apart from a core list of a few vital industries in which we must have purely Indian ownership, other industries must be open, but with Indian partners. Administrators must use information to ensure that investors — foreign and domestic — are good citizens of India. To be competitive overseas we must be competitive internally.

CALL MONEY RATES

RBI comes to the rescue

Foreign bankers approached March 1991 with a pile of cash and great hopes of making it big again this year in the inter-bank overnight (call) money market. The signs, as in March 1990, were good. There were the usual set of regional Indian banks who were chronic borrowers in the call money market, as confirmed by Ramesh Kumar, vice-president of Citibank. Thanks to the withdrawal of funds for advance tax payments, it was expected that they would be short of the funds needed to maintain the required reserve ratios with the Reserve Bank. Since corporations would also probably be selling units issued by the Unit Trust of India (UTI) in order to raise funds, the latter might also be a borrower from banks.

Last year, these factors had led the call money rate to cross 70 per cent in late March. The Unit Trust had then had to repurchase over Rs.600 crore of units as cash-rich companies like Bajaj Auto sold units in order to pay tax or to profit — though indirectly, via high return certificates of deposit — from the call money market. The really big profits went to the cash-rich banks — mainly the foreign banks — which had been able to lend at the high rates prevalent.

No real action

This year turned out to be quite different. Although the call money rate started promisingly for lenders when it rose to 28 per cent by mid-March, volumes were low. But the real action, which was expected towards the end of March, never occurred. Instead of rates rising further thereafter, they crashed, falling to 7 per cent by the end of the third week of March and recovering to only 12 per cent by the end of the fourth week. The fall continued into the new financial year. In the first week of April, rates have averaged below 5 per cent.

Meanwhile, the UTI which had had two runs on its money in the fiscal year 1989-90, came out a winner. Units issued by UTI under Unit Scheme 64 have historically played the role of a store of liquidity. Such units normally earn a yield of 11 per cent and the price of units is carefully adjusted every fortnight in accordance with this yield. Hence, when interest rates are low, there is good short term demand for units; when interest rates are high, there are heavy repurchases of units.

With call money rates so low, there was naturally a strong demand for units. According to market sources, there were net sales of over Rs.100 crore in March compared with a net redemption of Rs.500 crore last March. The low redemption was aided by the cash-rich corporations such as ONGC and Indian Oil holding on to their units because of low interest rates.

So who were the lenders this year? Several private and foreign banks indeed lost heavily as their carefully stored spare liquidity came to naught. Towards the end of March, they, too, were lining up for units. In fact, several banks with spare liquidity put everything into units and bill discounting and even borrowed money in the call market to do so. This year, besides foreign banks, regional banks like Punjab National Bank and the State Bank of Jammu and Kashmir were also lenders. This could be due to a slowdown in the economic activity in the northern states of Punjab and J&K, leading to a surplus of funds.

The national economic slowdown since last October did contribute to fall in demand for funds to meet advance tax payments, but the real reason was threefold.

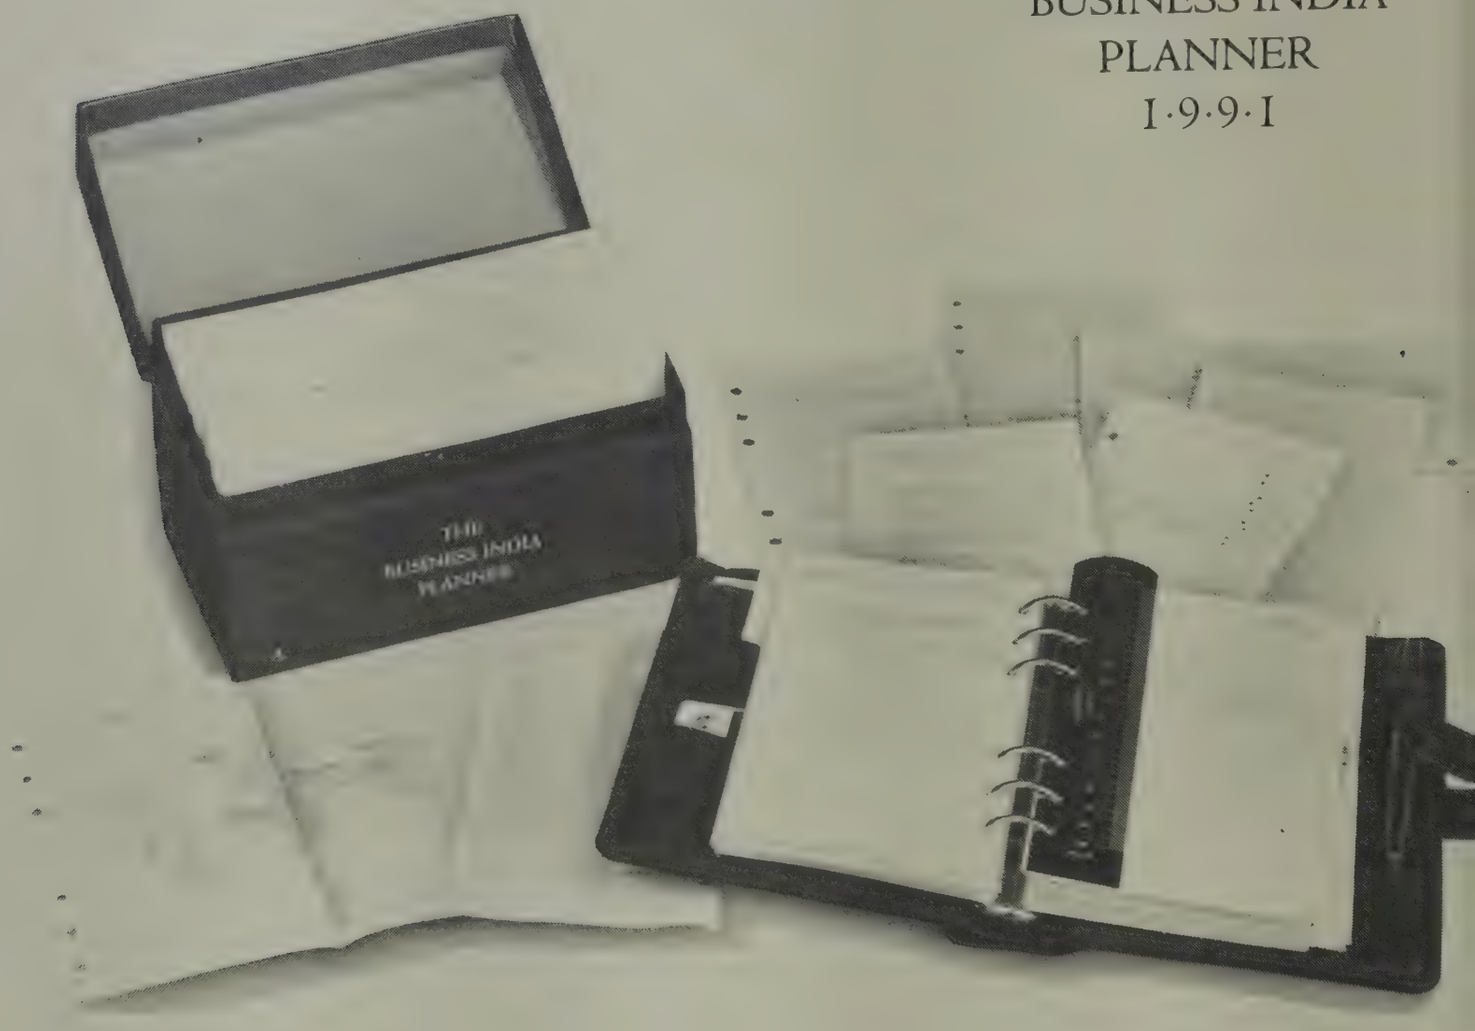
The most important one was the willingness by the Reserve Bank to provide discretionary finance to banks. This is not normally provided at the year-end, but this time the RBI — in order to forestall the catastrophies of last year — agreed to extend discretionary finance upto 75 per cent of banks' limits. State Bank and the regional banks actively took advantage of this facility. This factor alone is estimated to have pumped an extra Rs.1,500 crore into the banking system in March. In addition, last year's rationalisation of penalties for being below statutory reserve limits also meant that banks were willing — unlike last year — to pay penalties rather than borrow at any cost to meet the required reserve ratios.

Golden opportunity

The second factor, as the general manager of a foreign bank pointed out, was that the Reserve Bank allowed foreign banks to bring in funds from their head offices on the same basis as FCNR (foreign currency non-resident) funds. Given that FCNR rates are 1 per cent above LIBOR (the benchmark London Inter-Bank Offer Rate), and that there is no tax deduction at source, it was a golden opportunity for foreign banks to make money for their head offices abroad. It is estimated that over $500 million of such money was remitted to India by a range of foreign banks, including Citibank, Societe Generale and Standard Chartered Bank. This influx of money, however, meant that there was an increased supply of about Rs.1,000 crore into money markets towards the end of March.

An analyst at a public sector bank further notes that a third significant factor was the combination of a declining stock-market and cash-heavy mutual funds. Of the Rs.3,000 crore raised by Canbank, Indian Bank and Bank of India last September, only about 30 per cent has been fully invested in equities to date; then there were the Elsies (equity linked savings schemes) of March 1991, which mopped up a further Rs.525 crore and Unit Trust's US 2000 scheme which collected Rs.250 crore this year. In the absence of a thriving stockmarket, the mutual funds have been reluctant to place their funds in shares and have had plenty of surplus funds to place in money markets. Hence, with every small rise in interest rates, there were large placements by the public sector mutual funds. An estimated Rs.2,000 crore was available for banks to borrow from these sources in March.

Discretionary finance... is estimated to have pumped Rs.1,500 crore into the banking system in March



Not surprisingly, the large supply of funds effectively caused the call money market to crash in March. As of now, most analysts expect the market to remain quiet until August when agricultural demand will start picking up. The average rate for April has been below 5 per cent in the first week and the rate is expected to average no more than 12 per cent over the next three months.

Most public sector bankers are pleased, as are government planners. The real credit should probably go to the Reserve Bank whose willingness to liberalise its rules set the ball rolling the right way.

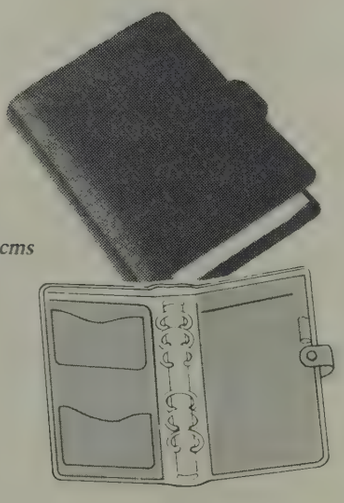
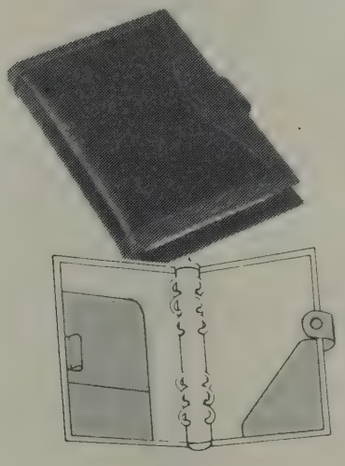
The Diary cum Organiser

THE
BUSINESS INDIA
PLANNER
1·9·9·1



Bound in rich real leather, the Business India Planner can be used for several years. Its trigger operated ring binder gives you the flexibility to change ,add or refill pages as and when you require. And, at the beginning of each year all you need to do is pick up the new diary section.



Select between the Day Plan (a page-a-day) or the Week-at-a-glance (a week on a double spread). This year you can choose between two designs: the Classic (which allows more space for storing documents and papers) and the Contemporary (which is a more compact version).

With its valuable Information section, versatile Diary section, handy Network section and indispensable Organiser section the Business India Planner is a revolutionary way to organise one's life.

that can be bought *anytime* of the year

FACTORING SERVICES

At the take-off stage

Early this month, the Reserve Bank of India (RBI) cleared proposals to start business by two newly set up factoring companies — State Bank's SBI Factors and Commercial Services Limited, and Canara Bank's Canbank Factors Limited. The proposals for the new service — "a step forward in financial liberalisation" — were prepared by the banks at the RBI's own prompting. The RBI also directed interested banks to offer factor services through separate subsidiaries.

The Kalyanasundaram Committee, appointed by the RBI, had, in 1989, recommended the introduction of factoring after examining the feasibility of the service here. The Banking Regulation Act, which governs banking business in India, was amended in July 1990 to allow banks to commence activity in the field.

The RBI demarcated field areas for banks which wished to start factoring subsidiaries. SBI was asked to take over the western region and Canara Bank the southern. Punjab National Bank is likely to take care of the north and Allahabad Bank the east. The SBI and Canara Bank subsidiaries are ready to take off with all the logistics in place *(see box)*, save the final okay from the government.

Dandekar: enthusiastic despite difficulties

Debt-collection service

Factoring is a debt-collection service where the factor — usually a financial institution — buys out a client's (supplier's) book debts (accounts receivables). At present, only a part of the receivables are financed, by banks and other financial institutions, through bill discounting. Full service factoring also involves the factor taking over the administration of a client's sales ledger, chasing debtors and evaluating credit risk.

Factoring has many similarities with bill discounting. Both make available to the supplier finances against invoices. Both discount (purchase at a price lower than the face value) invoices which the buyer would have otherwise paid to the supplier at the end of the credit period. It is here, however that the similarities end.

The discounted bills may be rediscounted several times before they mature for payment. The last holder of the bill receives the full amount of the bill. Debt purchased under factoring cannot be rediscounted, at least as of now. It can only be refinanced.

The factor buys the book debt of the client at a discount, normally 20 per cent, giving 80 per cent of the invoice value to the client. The factor pays back the discounted 20 per cent to the client when the latter's customer makes payment.

The commission and fees received in the course of providing his service is what the factor earns. These earnings are higher than the earnings from bill discounting. K. Mohanan, executive vice president, Canbank Financial Services Limited, estimates the earnings to be in the range of 2.5 to 3 per cent. With the discounting rate at a minimum of 16.5 per cent (bank rate), the minimum cost of factoring works out to about 19 per cent. The responsibility for collecting debts rests with the factor who must ensure that customers pay on time, unlike in bills finance.

The main benefits of factoring would accrue to the small sector where payments are often unduly delayed or held up in public-sector undertakings or government departments. Says a small entrepreneur, "Debtors of this category really harass us. We have to bear with them because if we push too hard, we may lose their orders." Now that a special agency will collect their dues for them, small units will neither have to face the problem of debts nor be victimised by their bigger customers.

Limits for factoring

Besides, the limits for factoring are fixed on the basis of the turnover figures of a concern and not on the basis of its current assets and current liability position. Unlike bills discounting, which is transaction-based, factoring is a continuous relationship between client and factor. M.N. Dandekar, chief executive, SBI Factors, says, "Once a client's factoring limit is sanctioned it is automatically re-

vised when the sales figures in his balance sheet move up. There is no need to apply afresh again and again." For this reason, factoring is often known as sales finance. Adds P.S. Iyengar, manager, business development, SBI Factors, "With the factor purchasing the book debts of the client, these debts no longer remain on the current assets side of the balance sheet. Factoring thus becomes an off-balance sheet means of financing. The client can utilise the money so received to reduce his current liability. The improved cash flow means an improved current ratio." Iyengar is confident that these advantages will more than offset the high costs of factoring.

B. Ratnakar, chairman, Fairgrowth Financial Services Limited, thinks "having specialised agencies for debt collection will significantly improve payment culture." Dandekar concurs, "Having dealt with a debtor once, we will know the systems followed by them. This will give us an advantage in follow-up. We will know whom to approach, thus expediting debt repayment.

To be able to do this effectively, though, factors will need information on clients and their customers and credit risk evaluation skills. While computers will help the two banking subsidiaries keep their structures lean to ensure commercial viability, the computerised database will also enable them advise clients on whom to sell to and in tight follow-up.

Banks clearly have an advantage here with their wide network of branches. Says Dandekar, "If necessary, branch managers can follow up with customers". By demarcating areas of operation for each subsidiary, the RBI has, however, restricted their ability to recover debts. "What if the customer is based in Calcutta and the factor in Bombay?" asks a borrower. Although the subsidiaries have not worked out a strategy in such cases, the obvious way out would be either to swap business among themselves or have co-promoters banks in different regions so that their branches could be utilised for the debt-collection service.

Clash of interest

There is a chance, though, that a clash of interest could arise between the factor company and the co-promoter, both being banks. A senior official of a co-promoter bank, however, thinks this is unlikely. "The risk of the promoter bank appropriating the co-promoter bank's business through its factor subsidiary is minimal. This is because the demand for credit is much higher than its supply." The two new factor companies are ready to utilise the services of specialised agencies for debt collection such as those of a few ex-bankers or ex-truck operators who help finance companies recover possession of assets.

Despite the advantages, however the factors may not find it too easy marketing their services. Says Dandekar, "People are accustomed to use their sales force for to collect debts. They might be reluctant to using a specialised agency, that too for a cost." And though nationalised banks may not indulge in profiteering, a minimum break-even amount and a marginal return on capital would be necessary. "We must have a strong reserves base to withstand any possible loan losses," says Dandekar.

The main obstacle in the way of smooth factoring, though, will be the legal framework. For instance, assignment of debt is permitted only if it is agreed upon in advance. In the absence of this, the factor will have to collect debts as an agent of the client. This could be a stumbling block when recourse to legal means need to be taken to ensure recovery. "We will make clients affix a stamp on the invoices regarding an 'irrevocable arrangement of assignment of debt'." Again, as stamp duty have not been waived, the costs to the client will go up to that extent. But as a deed on stamped paper will be required only if it has to be enforced in a court of law, factors can make do with a mere assignment undertaking from clients.

At present, the factor companies will not service export bills. Says an official of a co-promoter bank, "As export credit is concessional, it is not possible for commercial organisations to take up export factoring." He indicates, however, that the Export Credit and Guarantee Corporation may take up export factoring.

Another difficulty in selling factor services is that, as of now, factors return to the client on failure to recover the client's debt. Says a senior banker, "This reduces factoring only to an enhancement in credit limits to the client, which could have been done through banks without much ado."

Useful to entrepreneurs

Nevertheless, factoring does ease the cash flow of the client and is useful especially to the small entrepreneur. "The point is," says an observer, "in a developing financial market, having newer products that suit specific needs of different sectors are welcome."

Despite these difficulties, both SBI and Canara Bank are enthusiastic about the business. Says Dandekar, "Clients have already started approaching us." Canbank hopes to do Rs.40 to Rs.50 crore worth of business on a capital base of Rs.10 crore in the first year itself. According to one study, the potential demand for bill finance (outstanding at any one time) was about Rs.14,000 crore as of March 1990. This includes business in fresh receivables finance worth more than Rs.3,600 crore.

Though, at present factoring may seem to be a spin-off from the banking business, it is likely to take over the entire sales finance activity from banks in the future, leaving banks only inventory and asset related finances, as is the case in the developed world. Says a banker, "All we need now is a rating agency to evaluate companies on the basis of their payment performance."

Company executives, businessmen and frequent visitors to Delhi.

You can now enjoy the privilege of owning an executive residence in the Capital city.

Ashiana's

STUDIO IX

Executive Club

A new concept in living for those visiting Delhi frequently on business. A home away from home, not a hotel but you still enjoy all the luxuries and comforts without paying through your nose.

Each room is tastefuly decorated and furnished with piped music, channel video, air-conditioning, telephone, refrigerator beside facilities like STD/ISD, fax. telex, and secretarial services.

The club is conviniently located in a posh colony of south Delhi. A five minute drive from Nehru Place.

The club membership is available in multiples of a week (can be used staggered/flexible) each for Rs. 25,000/- which you pay only once in a life-time. And that's not all, you also get a money back guarantee.

The project is beeing developed and promoted by Ashiana group of builders and real estate promoters. The group has the experience of executing more than 14,00,000 sq. ft. of commercial, industrial and residential projects. Plans are afoot to build more such clubs in other industrial cities and metro centres in India.

Now, you can own a prestigious executive address in Delhi. For further details contact:

Sintex
Material Handling Containers

Unmatched Durability and Performance

Industrial Material Handling is never easy. The ordinary bins and containers call for frequent replacement resulting in high maintenance cost.

Sintex Material Handling Containers are designed to withstand rigourous and tough working conditions while affording ease,safety and economy. Thats why they have successfully replaced the conventional Cane, Wooden,G. I. and even ordinary plastic containers.

Available in various shapes, sizes and capacities, they can also be changed to match specific situations and applications.

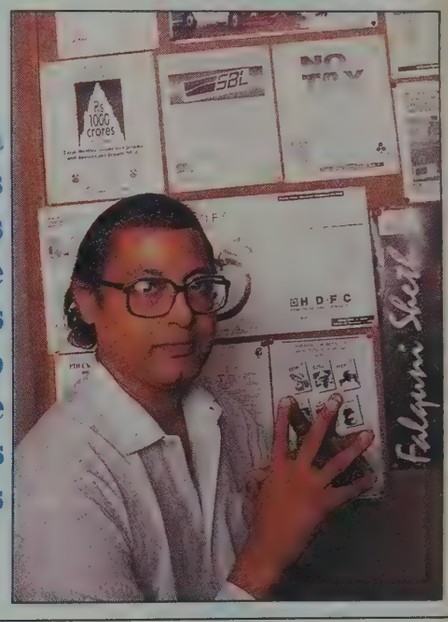
CONSULTANTS

The brave new breed

The term 'marketing consultant' is no longer synonymous with retired executives who are re-hired by the same company. These days, marketing consultants could be quite a different breed altogether. Young and savvy, they prefer to leave the security of their jobs well before retirement, to branch out independently. The marketing hot shops that they set up are much in demand today. They can be called upon to work on a short-term basis, achieve a set marketing target, or work over a longer period to give the organisation's marketing strategy a total overhaul.

What makes these consultants such sought-after commodities is the fact that, with their years of experience, they are clued in on the market's pulse. Krishan Goswami, who was with Hindustan Lever's marketing division and later with advertising agency Lintas India as a marketing director, now runs a consumer marketing consultancy outfit called Market Accelerators. "There is no town with a population of over 20,000 that I have not visited. I've also been to villages in every state in India," he says.

Experience helps



Brinston Miranda, who has worked for 20 years with several advertising agencies, is today a consultant for a clutch of agencies like Trikaya Grey, Hindustan Thompson Associates, Ratan Batra Associates and Adroit. Miranda acknowledges that his "experience in dealing with over 250 products certainly helps when it comes to judging the market and its trends".

Indeed, faced with a market that is getting more competitive and customer-driven, companies on their own find themselves struggling to keep pace with the increased tempo. Even those organisations that have a full-fledged marketing department and sales team have begun to call in the consultant. They have a good reason: with immediate and routine targets to meet, the in-house marketing staff seldom has the time to plan for the future. Walter Vieira of Marketing Advisory Services, who once worked as marketing controller for Boots and has been operating independently for the last 16 years, feels that consultants help "when the company needs a fresh idea or someone with a new vision".

While they can be viewed either as 'job snatchers' or 'fault finders' by a company's in-house marketing department, the consultants may not quite conform to this picture. M.K. Chouhan, founder director, Management & International Marketing Services (MIMS), says the consultant's is a complementary role. As an outsider, his objectivity can only serve to supplement the effort of the in-house marketing department.

But Raja Smarta of Interlinks, who holds a doctorate in pharmaceutical marketing and has worked with multinational corporations like Roche, Parke-Davis and Wockhardt over the last 23 years, assesses the situation differently. He feels the consultant can at times be called upon to play trouble shooter and problem solver too. Smarta himself has performed such a task on more than one occasion. He cites the case of a pharmaceutical company whose expensive incentive schemes for their sales representatives failed to yield positive results. Smarta repackaged it more attractively. "This helped in motivating the field staff to promote the product more effectively," he says.

With his pharmaceutical background, Smarta chooses to specialise by focusing on the industry he is most familiar with. His clients include companies like Alembic, Glaxo and Sandoz.

Miranda acknowledges that his experience certainly helps when it comes to judging the market and its trends

Goswami is involved with "all aspects of consumer marketing" including new products as well as new markets

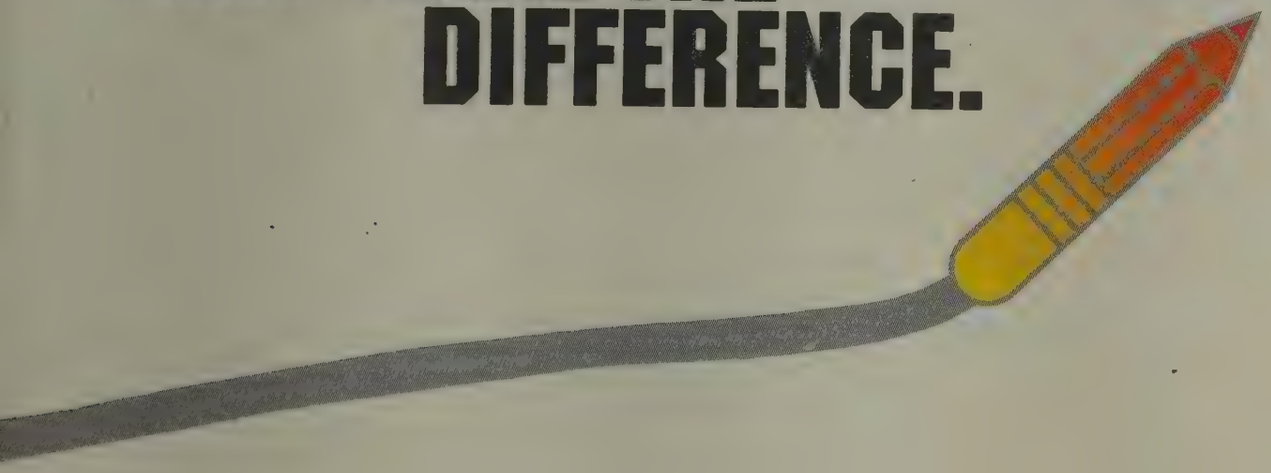
Consumer marketing

Similarly, Goswami too has his speciality — he's involved with "all aspects of consumer marketing". That includes new products as well as new markets. In the case of Ion Exchange's Zero-B water purifier, Goswami got into the act at the launch stage. The company was seeking to diversify from an industrial product organisation to a consumer product one. Working from the conceptualisation of the product, he developed with them a water purifier for the tap and the cooler as well as a handy carry pack. Says Vieira, "While diversifying, a company's lack of experience or exposure to the new field makes a consultant's advice invaluable for settling into a profitable market."

Another area that consultants provide their expert knowledge on is market expansion. Goswami helped in widening the

PERFORMANCE IS QUALITY

Products that point the way to a different lifestyle, and sometimes provide the impetus for it. For over forty years, Escorts has focussed on developing products that do not merely fulfil their purpose successfully, but actually provoke change reactions in the existing way of life.



The best known example of this is the Green Revolution — a time when the ubiquitous Escort Tractor became the symbol of a phenomenal shift in agricultural productivity. And the Rajdoot motorcycle which has, over twenty five years of steady innovation and adaptation, revolutionised rural transportation.

But these are only the more spectacular representatives of an overall product philosophy. One that has inspired us to form alliances with the world's most advanced engineering companies and to constantly upgrade and adapt their technology, to Indian needs and situations.

To make sure the finished product delivers on its promise, we have created an extraordinary marketing network, that stays with the customer and helps him get the most out of the product.

MAKING PRODUCTS THAT MAKE THE DIFFERENCE.

Agriculture, construction, transportation, telecommunications... Escorts is at work in the country's core areas of development. Areas where we are a potent force for engineering change, through product performance that alters the very quality of life.

Anthem EL 10

Smarta feels the consultant can at times be called upon to play trouble shooter and problem solver too

distribution network for Hawkins pressure cookers. Smarta has worked on a similar assignment for Vicks Vaporub drops and is currently involved in doing the same for Wipro's baby care products.

In smaller organisations, the consultant has a bigger role to play. "Often the managing director is a technocrat, who has no inkling of the market nor the capabilities for extensive research," points out Vieira. A consultant then steps in and provides the necessary support. A new opportunity opening up, according to him, is project consultancy for NRI investors. Vieira himself has worked on several NRI projects, undertaking the entire planning and liaison work.

Experience alone, however, is not enough qualification for a consultant. "A strong entrepreneurial spirit," says Smarta, "is also needed." Smarta has helped in setting up Alintosch, an allopathic firm for Baidyanath, the ayurvedic medicine manufacturer. In the case of project implementation, the involvement of the entire company, and not just the marketing division, has to be procured. For this, the consultant conducts training programmes for the personnel who will eventually handle the product marketing. This could mean selecting new people for the job or shuffling around the staff to utilise their abilities to the maximum.

Project implementation is a long drawn process usually taking over a year to see through. Seeing it firmly entrenched in the market is the responsibility of the consultant who is accountable to the company for its performance there. As a result, most consultants are wary of taking on a project unless they are convinced of its market feasibility. Both Vieira and Goswami scrutinise such proposals carefully before accepting them.

For all they do, consultants are paid a handsome fee. And in some cases, they succeed in negotiating more lucrative terms into their contract. So, it's both pecuniary and professional satisfaction that keeps market consultants going. And growing.

BOMBAY PORT TRUST

PUBLIC NOTICE

Applications were invited for the registration of actual users/Importers/Exporters for selling the goods by negotiations vide our advertisement in this publication's issue dated 18-2-1991. The last date of which has now been extended from 28-2-1991 to 30-4-1991. Interested parties may apply to the Deputy Manager (Co-ordination) with necessary details indicating category of the commodities as specified in the earlier Public Notice.

DOCKS MANAGER

INTRODUCING CASTROL GTX2

In these times, when every drop of petrol is precious, we would like to introduce you to the new generation engine oil.

***Castrol* GTX 2.** It saves you enough fuel in a year to give you free petrol for a week.

This fuel conservation is made possible by ***Castrol* GTX 2**'s selective Friction Modifier, which dramatically reduces friction; conserving energy and fuel.

Only ***Castrol* GTX 2** is certified as energy conserving by the American Petroleum Institute. It conforms to the highest gasoline engine performance specification in the world - API SG.

API SERVICE SG/CC SAE 15W40 ENERGY CONSERVING

FREE PETROL FOR A WEEK

Your engine needs ***Castrol* GTX 2.**

If not for its ability to conserve fuel, then surely for its ability to increase your engine's working life. Protecting it better over vast temperature ranges; smooth running at scorching temperatures and quick cold starts.

And if even this is not reason enough, you may still wish to buy it. Because it comes to you from Castrol.

Available at leading auto accessory shops. In case of difficulty contact Delhi: R.Kaul 3318038, Bombay: Chatterjee. 4923707. Calcutta: S.Bannerjee 201996. Madras: Venkatachalam 513844.

THE DIFFERENCE BETWEEN MANAGING PEOPLE, AND MOTIVATING THEM...

Managing people in most companies implies directing their work. Crompton Greaves, however, believes in motivating people to set and achieve their own goals. Which is why our dedicated team of 2000 engineers and 8000 personnel pool their resources towards one common objective – leadership. **In** telecommunications, for example, we grew to be the leader in just 4 years. In electrical engineering, we continue to remain far ahead of the rest. And are racing to the top in electronics, industrial automation and robotics as well. Besides our committed people, you could attribute this success to our vast experience. A highly participative work environment. State-of-the-art testing laboratories. And more. **Last** century, we brought electricity to India. Before the turn of this one, we will be a Rs. 2000 crore company. As we continue to bridge the gap between emerging needs and changing technologies.

...OR WHY CROMPTON GREAVES IS INDIA'S LEADING COMPANY IN MORE THAN A DOZEN DIVERSE AREAS.

Crompton Greaves LIMITED

WE WERE THE FIRST.
WE ARE THE FUTURE.

sense.

Madras inches forward

There was promise aplenty. That's why the top agencies promptly made tracks for Madras, to include the southern city in their branch network. But judging by current trends, Madras has not lived up to their business expectations. For example, these days the most exciting event is the city-based commercial vehicle manufacturer Ashok Leyland's (AL) forthcoming Rs. 260 crore rights issue. At last count, 10 agencies were knocking at AL's door, armed with their presentations.

Similarly, for the forthcoming Rs.1.8 crore issue of Devaki Hospitals, six agencies are preparing to make a pitch. When questioned, AL executives shrug their shoulders and say they haven't crystallised their thoughts as yet. They can well afford to take their time to choose. As is obvious, there are too many agencies chasing too little business.

Chaudhuri: "dynamic movement forward"

Indeed, although the number of public issues from Madras has been growing, it still lags behind Bombay and Delhi. According to figures compiled by R.K. Swamy BBDO, between April 1990 and February 1991, Bombay accounted for 34 per cent of the issues, Delhi 32 per cent and Madras 16 per cent. Two other southern cities, Hyderabad and Bangalore, have a 10 per cent share each. The value of the issues floated in the south is also much lower than the funds being raised in the other two metro cities; which only means that publicity budgets are smaller too.

Frustrating business

"Thus the scramble for business in the south is understandable but it can also be quite frustrating at times," says Prem Parekh of Sobhagya, a Bombay-based agency specialising in financial issues. One of the few successful agencies handling financial advertising is Madras-based TnQ Communications. Mariam Chandy, who runs this small agency, handled the Best & Crompton's zero-bond issue, and is also pitching for the Ashok Leyland one. She too says that "the Madras market is slow. There is not enough business to support an entire agency infrastructure".

If there is a scarcity of financial advertising, the general advertising scene is not booming either. Historically, Madras has always had a smaller share of the national business. Most agencies place the figure at around 10 per cent. Explains Srinivasan K. Swamy, director, R.K. Swamy, Madras, "The hard-core business of Madras is really industry-related and, traditionally, advertisers have never been big spenders. This situation has certainly not changed in recent times." Mohan Menon, the Madras-based vice-president of Ogilvy and Mather, states it even more forcefully: "The large engineering sector is still in the Dark Ages when it comes to their outlook on advertising. The only light at the end of the tunnel is the small entrepreneur who is emerging as the new breed of advertiser."

The contrast between Madras and Bombay is best illustrated by R.K. Swamy's billings. The agency, which is based in Madras and is nearly 20 years old, has a turnover of Rs.9 crore. Meanwhile, its Bombay office which became fully functional only in 1986 has billings of Rs.12 crore! Clients like Hawkins, LIC Mutual Funds and GIC in Bombay spend around Rs.3 crore on advertising. But the budgets of Swamy's Madras clients barely cross Rs.1 crore.

Nevertheless, senior agency executives are still optimistic and feel that Madras is a market worth hanging on too. Swamy feels that business here is growing steadily, although not by leaps and bounds as in Bombay. Rita Choudhuri, senior vice-president and general manager, Hindustan Thompson Associates (HTA), Madras, points out: "There has been a dynamic movement forward in the last three years. Our traditional clients like Ponds, Parry's and Parryware, are spending more." They are likely to continue to do so to meet the challenges of the nineties.

Swamy: business is growing steadily

Prakash Idnani, general manager, Everest Advertising at the Madras office, agrees. "Industrial houses like the Elgi group in towns like Coimbatore are becoming very receptive to advertising." Everest opened its Madras office in 1988 and already has billings of Rs.1.5 crore.

Another promising area is consumer durables. The present slump notwithstanding, TV manufacturers like Dyanora and Solidaire have emerged as high profile spenders. Groups like Gangadharan Appliances (the makers of the Butterfly brand of goods) are keen on having a national presence. Their ad budgets now exceed Rs.1 crore. Minnie Menon, account director, Artig Advertising, says that such 'high' budgets can lead to the absurd situation of an account being sliced several ways and shared between half a dozen agencies. Currently, Menon says, regional advertisers have cut back. "So it's a real jungle out here," she adds.

The signs are there that in the nineties Madras might shed its conservative image once and for all. The shifting of Citibank's credit card division from Bombay to Madras as well as other new developments will aid the transformation. Therefore, for agencies like HTA, which has been around for 35 years and has a well-established infrastructure to draw upon, staying on should finally pay off quite handsomely.

■ SUSHILA RAVINDRANATH

ASHOK LEYLAND

The right connections

Six months ago, Madras-based Ashok Leyland (AL) executed the first of its many export orders to Iran. The $5 million (Rs.8.5 crore) order fell in the "non-company" category — the Hinduja-controlled automobile giant exported textiles. This was followed by a $3 million (Rs.5.1 crore) order for leather products.

And now comes the winner — a $12.9 million (Rs.24.5 crore) order for 3,000 diesel engines (to be used for agricultural purposes). An accompanying order is for the supply of $1.3 million (Rs.2.4 crore) worth of spare parts. For AL, it certainly pays to have the right connections. "These orders are the result of the Hindujas' business contacts in Iran," acknowledges R. Jagannath, executive director, projects, of the company. AL is undeterred by currency fluctuations since the payment will be in dollars, which is steadily appreciating in value.

Not that anybody is complaining. "You do need a lot of contacts for exports," says a senior executive in Telco's exports department. "We too operate on the same basis. The Tata group is a well known and respected name. So it helps."

Fillip to the programme

The Iranian orders have given a fillip to AL's export programme. "Our aim is to achieve the status of a star trading house from the present export house position," explains Jagannath. Once that happens, AL will be entitled to a variety of incentives like free import of some restricted items, certain capital goods and office machines. The company seems to be on the right track. Export turnover doubled to Rs.39 crore during 1990-91, from Rs.17.64 crore (annualised) in 1989-90. And it is no longer just buses and trucks which are bringing in the dollars. Export of non-company products like textiles, leather and engineering goods is also playing an important role.

Having got into the export of commercial vehicles, the company discovered the potential for exporting a variety of goods about four years ago. In 1990-91, export of vehicles and parts brought in Rs.28 crore (1989-90: Rs.15.85 crore) while non-company products totalled Rs.11 crore (Rs.1.79 crore). "Exports of non-company products will double by 1991-92," predicts Jagannath. AL is therefore stengthening its infrastructure. Non-company exports is handled from a special division in Madras and a newly-opened office in Bombay. A similar office is likely to be set up in Delhi soon. And there are plans for representative offices in Europe and Kuwait to handle samples and orders.

Of the Rs.28 crore company exports, Rs.4 crore consisted of spare parts. These were sent to 12 countries including Sri Lanka, Tanzania, Mauritius, Oman and Nepal. Of the non-company exports of Rs.11 crore, Rs.8.5 crore came from the supply of textiles to Iran, tyres to Bangladesh and aluminium sheets to Sri Lanka.

AL is sourcing its supplies from smaller companies. With its finanical strength, AL can be counted upon to provide working capital, if required, on an order to order basis. Thus, it has teamed up with Pune-based Modern International Ltd for supplying textiles to European markets. For leather, AL contracted with a Kanpur-based company for the supply of shoes to Iran. Kerala Automobiles and AL will jointly provide 3-wheelers to Bangladesh. All orders will be shipped in AL's name.

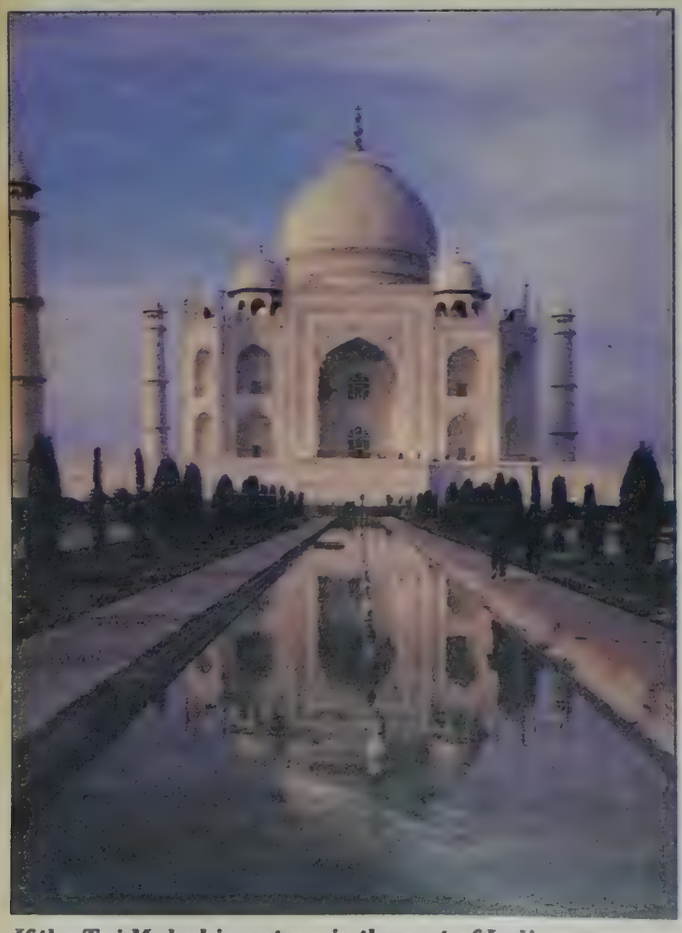
School buses too bring in the dollar

Also waiting to be tapped is the international commercial vehicle market which is 3.2 million units strong. Progress has been steady in the export of commercial vehicles, AL's main product. "The aim is to grow at the rate of 10 per cent in this segment," says Jagannath. Fortunately, AL's traditional markets — in neighbouring countries — are perking up. In Sri Lanka, for example, sales had been linked to the political situation, and according to AL sources, "Business has improved after the IPKF withdrawal." Exports to that country is now in the region of Rs.9 crore — an improvement of 60 per cent after the withdrawal.

AL has also made a breakthrough in the Philippines, largely due to its Iveco connection, and is shipping out a trial order for 20 bus chassis worth $300,000 (Rs.57 lakh). (Iveco is the second largest manufacturer of commercial vehicles and diesel engines in Europe and along with the Hindujas, is the largest shareholder in AL, both of them jointly holding 39 per cent of the equity). Tanzania is another new market, where AL has clinched a deal for 150 bus chassis.

However it still trails behind its competitor, Telco, which notched up an export turnover of Rs.99 crore for 1989-90. While Telco, with exports of 4,000 vehicles a year, has grabbed a 65 per cent share of the Indian export market, AL with 500 exported units to its credit, trails way behind with a 25 per cent market share. "The reasons are historical. AL entered the export market for trucks and buses only in 1975, while Telco ventured out in the late sixties," explains Jagannath.

However, while AL concentrated only on exporting to neighbouring countries, Telco had set its sights further afield. But now that AL is working on a much broader canvas, does the Tata giant feel threatened? "Not really. They will not cut into our export market," says the Telco executive quoted earlier. "We have a much wider product range extending from 4 tonne GVW (gross vehicle weight) to 14 GVW. So a customer who buys a low GVW vehicle from us will continue to buy from us when he shifts to a higher GVW vehicle. But Ashok Leyland exports mainly vehicles weighing around 9 GVW. Also, we export special vehicles like step ladders used at airports and for fire fighting. They have no presence whatsoever in this particular market segment." Maybe true. But for the first time AL, like Telco, does have the right connections.



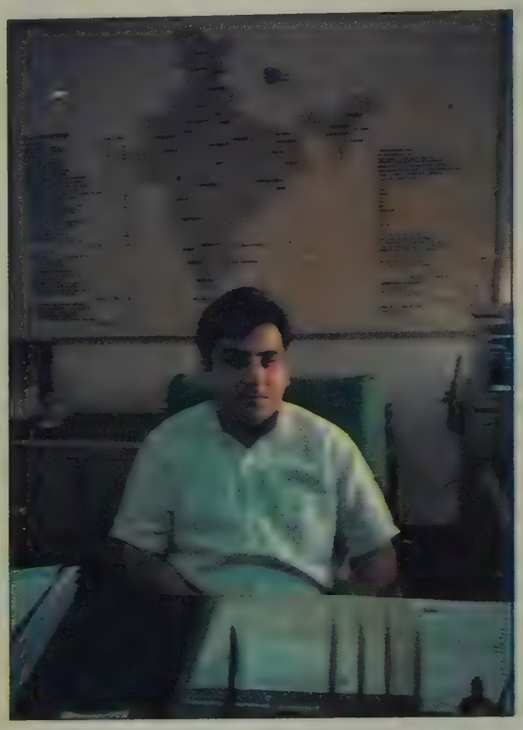
■ DHARANI K. PANI

VISIT INDIA YEAR

Sabotaged by circumstances

"We have been preparing for your visit for 2,000 years," said the advertisement campaign. Three months into the crucial Visit India Year-1991, all that preparation seems to have been wasted. Tourist arrivals have registered a negative growth, tourist destinations have never looked gloomier and hotels are vainly trying to hide empty rooms.

The bleak prospect for this year follows a dismal showing in 1990 when, for the first time since 1983 (the post-Asiad year), tourist arrivals to India actually declined. Against a target of 1.44 million, the number of tourist arrivals was 1.32 million. And this despite a fantastic take-off — the first three months registered a 14 per cent rate of growth. "Blame Mandal, Ayodhya, the Gulf war and our political instability" appears to be the common refrain amongst tour operators, hoteliers and bureaucrats alike. Add to this the American government's advice to US citizens against visiting India and the picture is complete. "The last one year has been very damaging," admits K.B. Kachru, senior vice-president of the hotels division of Indian Tourism Development Corporation (ITDC). "So much so," agrees director general, tourism and acting chairman of ITDC, Yogesh Chandra, "that we were asked to put off the Visit India Year. But we decided to face it as the year of challenge."



If the Taj Mahal is out, so is the rest of India

Virtually no visitors

For the industry, the woes began in April last year. The summer months — until September — are the relatively 'lean' period, but still account for 40 to 45 per cent of the annual traffic — usually, that is. Last year, however, this dropped to 30 per cent, the major cause being trouble in the Kashmir Valley. The picturesque destination, normally serviced by five Indian Airlines flights a day and over 2,000 rooms in hotels and houseboats, had virtually no foreign tourists.

To cite an example, tour operator Sita World Travel, which sent 4,400 tourists in 1989 to Kashmir, could send just 153 in 1990. Says the company's joint managing director, Avinash Anand, "More than 70 per cent of the summer tourists traditionally visit Kashmir. Unless we develop and provide an alternative to Kashmir, it will be difficult to revive the summer traffic, either this year or in the years to come."

Some tourists were diverted to Shimla and Kulu, but these hill stations compare poorly with Kashmir in infrastructure. Says Anand, "We took a group of 55 to Shimla but there is not even a single hotel there with 55 rooms. So we had to put them up at two hotels 10 km apart. This is certainly no alternative to Kashmir, which has more than 1,000 rooms in houseboats alone." Also, the airports at these hill stations are meant for small aircraft and cannot cope with increased load. In contrast, Srinagar airport serviced three airbuses a day.

Kachru: "Our rooms are perishable"

While the summer last year was lost in this manner, the ensuing 'peak' season beginning October, followed suit, but for other reasons. The month-long *rath yatra* and the fall of the V.P. Singh government were severe dampeners to business visitors to the country. Conferences and seminars, which normally keep the hotels' banquet halls choked full up in winter, were cancelled *en masse*. And as if this was not enough, the US state department issued its 'advisory' asking its citizens not to visit India, and, worse still, for those already in this country, to 'consider leaving the country'.

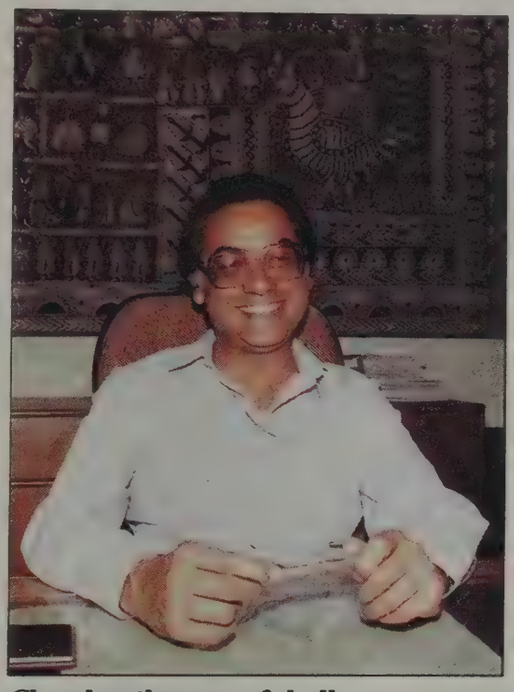
Blown out of proportion

Most in the industry are moaning that the US has 'over-reacted'. Says Kachru, "The overseas media blew things out of proportion." Echoes Anand, "The foreign press is looking for this sort of thing to highlight." Adds D.S. Chavda, area director, northern region, of the Taj Group of Hotels, "The point they have missed is that trouble, if at all, in one region leaves the rest unaffected. Would you cancel your visit to London if there is trouble in Stockholm? That is approximately the distance between Delhi and Madras."

Grumbled a tour operator, "The Americans' general ignorance of Asian geography was also evident when Khomeini returned to Iran. There were mass can-

cellations to Delhi by Americans because they thought Teheran was near Delhi."

Of course, the US, being a major source of tourist revenue the world over, has come in for criticism from virtually all continents. Even the British, whose tourism industry is also hit, are making snide remarks that while the US army was engaged in a fierce battle in the Gulf, its citizens were scared of imaginary terrorists in Europe. But Indian tour operators complain that our government did little in terms of diplomacy to alleviate the blow to tourism. While Thailand, which too was hit by a US 'advisory', came out with a prompt statement in the Washington media that things were safe on its soil, the Indian Embassy failed to act.



So ended the year 1990, but the already battered tourism industry had no better luck when the sun dawned on 1 January of the Visit India Year-1991. Despite it being the midst of the 'peak' season, hotels opened with one-third to half of their rooms empty, when they normally should have been saying, "sorry sir, we have no room". And in mid-January, when US missiles left their shelters to bury Baghdad under rubble, they also left an indelible mark on profitability figures of Indian hotels.

Cancellations galore

The already depleted tourist arrival dropped by another 35 per cent. The Soviet Union, which sends some 15,000 visitors a year, announced cancellations for the second consecutive year. The number of overseas tourists visiting Jaipur and Agra fell by 50 per cent, at Khajuraho by 75 per cent and in Goa by 60 per cent. ITDC had 1,000 rooms empty in Delhi alone, despite discounts. Its Ashok Hotel, which had 200 rooms booked for conferences in January, saw 170 cancellations. And in the month of February, ITDC's restaurant billings were down by Rs.40 lakh. Says Kachru, "We were forced to freeze recruitments from January onwards."

Private hotels did as badly. Bombay's Leela Kempinski, which had 99 per cent occupancy in the first fortnight of February last year, had a mere 44 per cent full in the same period this year. The Taj Palace in Delhi, which barely managed 52 per cent occupancy in March, had only 35 per cent of its rooms full in the first week of April. Says Chavda of the Taj Group, "Profitability has been adversely hit. Our expansion plans will now be delayed." Adds Anil Madhok, vice-president at East India Hotels (the Oberoi chain), "Occupancies dipped really low during the war. Even now, it is 20 per cent below normal."

This difference will increase when the 'lean' summer begins and most hotels start gearing up to attract the local tourist. The public sector ITDC is trying to push up volume by offering huge discounts. It has introduced seven new packages, many of which offer 5-star rooms for just Rs.160. This, in its honeymoon package, works out to Rs.80 per head, and in the students' package (four to a room), to just Rs.40 per head. Accompanying this is discounted rates for meals too. Says

Chandra: the year of challenge

Kachru, "Our rooms are perishable, if they are not used today, they are lost forever."

One region that has escaped relatively unscathed is the south. There were not as many cancellations from tourists who had planned destinations directly to places in southern India. But these, unfortunately, are not many. A study done in 1989 showed that 70 per cent of the tourists have Agra's Taj Mahal on their itinerary. And since the north was hit badly (and with the US advisory specifically mentioning Agra, among other places), the overall tourism picture remains grim.

Next 'peak' ruined too

Since most overseas travel plans are made eight to 12 months in advance, the industry here is not very hopeful of gaining much ground in the coming peak season beginning October. And while Britain has withdrawn its 'advisory', the US, after withdrawing it briefly in March, has reintroduced its warning. Says R.C. Gupta, general manager of Ashok Hotel, "We cannot salvage anything this year. Now is the time to concentrate on building infrastructure in the hope that things will improve from 1993."

The Union tourism ministry is planning just that. "We intend to use this time to give a thrust to development of new routes and destinations," says Yogesh Chandra, of the ITDC. Grants to state governments have been doubled this year, and the ministry plans to spend Rs.175 crore to develop a new 'Buddhist Circuit'. This will be in UP and Bihar linking Bodhgaya, Sarnath, Patna, Nalanda and Vaishali. Plans are also afoot to start new tourist trains (like the Palace-on-Wheels in Rajasthan) in UP, West Bengal-Orissa and in Goa-Karnataka. Further, the government is planning to develop Udaipur as a water sports attraction, and to promote sites in southern India as independent tourism destinations.

The Gulf war depressed travel worldwide, as evidenced in British Airway's publicity gimmick of carrying 50,000 passengers free to London from all over the world. Tour operators here are hoping that the Indian government will undertake some such publicity stunt to attract people to India. "What we need now is a re-assurance campaign," says Anand of Sita Travels. Adds Madhok of Oberoi, "We are getting as aggressive as we can, but it's difficult to bring people to a country they don't want to come to."

However bad (or sad) the outcome may be of the Visit India Year, there is near unanimity in the industry that it was a step in the right direction. They point out that India being a long-haul destination (unlike European nations), it needs such a promotional campaign to push its tourist arrivals up from the present figure of 1.3 million.

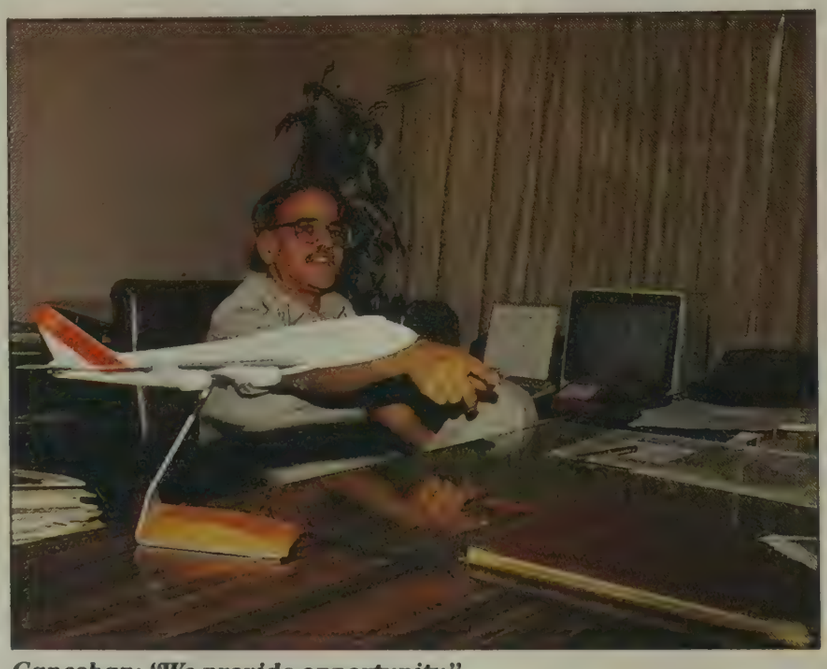
But the disappointment for the industry is more because their expectations based on the Malaysian experience, were higher. The Visit Malaysia Year in 1990 turned out to be a stupendous success, thus rendering redundant its image as 'the world's best-kept secret'. Even the optimistic tourist arrival target of 4.2 million was achieved in eight months itself, elevating that country's tourism industry's status from the seventh to the fifth largest foreign exchange earner. But, as a travel agent in New Delhi comments, "They didn't have Mandal and *Mandir* and a caretaker government."

■ R.S. VENKATESH

AIR-TAXIS

Getting off the ground

The Indian skies might never be the same again. A large number of aircraft of the likes ranging from Beechcrafts to Boeing 737s, from Dorniers to TU 154s, from British Aerospace HS-125 to the 720 series of Boeing 707s are suddenly crowding the country's airspace, flying flags of private air-taxi operators. The long-held dream of re-privatising aviation in the country has finally reached a take-off stage. It might still be the thin end of the wedge. But a beginning has been made.



Vijay Mallya's UB Air, launched in June last year from Bangalore, was the first regular one off the ground. The company says that profits are still some time away but its brand-new 15-seater Dornier 228 now flies five times a week to Madras from Bangalore, three times to Mangalore and, as of early January, four times to Goa. The group now plans to acquire a 19-seater Dornier and is also considering the possibility of acquiring a larger aircraft.

Game begins

Air Asiatic, launched by Madras-based entrepreneur K.C.G. Verghese and his NRI associate G. George, who lives in the Middle East, with a capital outlay of Rs.5 crore, has been operating a leased Boeing 737 since November last year, on the Madras-Bombay-Calicut-Cochin-Coimbatore sector. Some industry sources say that the company is in a financial crisis, but Verghese denies this. "In the past five months we have flown about 30,000 passengers. We fly a busy sector and should be making a profit by August," claims Verghese. He will be acquiring another Boeing 737 soon, he adds.

Two other airlines already operational are based in Delhi. India International Airways, in which the Thapars reportedly have an interest along with a London-based NRI Surinder Gill, offers a seven-seater BA HS-125 on charter hire at the rate of Rs.35,000 an hour to anywhere within the country and the neighbourhood. On the other hand Delhi Gulf Airways, in which B.K. Modi has an interest, offers helicopters on hire.

But the real game is just beginning. The companies that are already in operation are the ones that were launched when the then aviation minister Arif Mohammed Khan, in April last year, announced that private air-taxis will be allowed in the country without any restrictions except on the question of foreign exchange outgo. The government, in fact, has been quite liberal in giving out licences and permissions. As many as 21 projects have so far been sanctioned. Says A.V. Ganeshan, Union civil aviation secretary, "Our responsibility is to provide opportunities which we have done. Now a private air-taxi can fly any aircraft on any route to any airport and charge any fare. As to how they make their operation viable is up to them."

Ganeshan: "We provide opportunity"

But while big players like Tata Steel and Oberois who have the permission are still keeping out, it is the small entrepreneurs who are stepping into this as yet unchartered territory armed with ambitious plans. The Madras-based Phoenix Airways has acquired a Russian TU-154, 165-seater aircraft to be run on trunk routes and is busy recruiting staff for the same. And so is Delhi businessman Jagdish Gupta who has launched Jagson International with two Dorniers acquired from Bhutan.

The Bombay-based East West Airline is waiting for its three leased 737s to arrive in Bombay before it can take off. Its NRI promoter Nassiruddin Wahid, the chairman of the Bahrain-based East West Travel & Trade Links Pvt Ltd, has drawn up an ambitious flight schedule for his new airline covering 15 cities ranging from Bombay in the west to Thiruvananthapuram in the south and Indore in the north. Says his brother Thakiuddin Wahid, who is the managing director of Bombay-based East West Travels, "With our decade-long experience in the travel business, it makes sense to get into air-taxis. We have seen for a long time that there is a crying need for more passenger carrying capacity."

Deregulation progress

Sam Verma is another small time US-based NRI who is brimming with plans for his air-taxi company called Continental Aviation. Speaking at a crowded press conference in Bombay last week he said, "The government has gone a long way in deregulating airlines. It is an opportunity I had been hoping would come up for a long time." Verma, who owns a small tyre and tube company called Wear Well Tyre & Tube Industries in Betul, Madhya Pradesh (turnover: Rs.9 crore last year), has already flown in its 160-seater Boeing 707-720 into Bombay. He plans to utilise it on the Bombay-Delhi sector first, and later fly to Bangalore and Goa as well.

Of the new entrants, Ajay Kilachand of Synthetics & Chemicals, the promoter of Trans-Bharat Aviation (along with Geneva-based NRI Chand Kaul) is one of the few who can claim impeccable aviation credentials. His family promoted Hindustan Aeronautics which was eventually nationalised and he also ran Hans Air Service, operating two 48-seater Viscounts to the Gulf, mainly transporting cargo between 1974 and 1982.

TBA got its NOC in May last year and its operating permit last month. It launched services on 6 March with two 15-seater Beechcrafts of 1969 vintage. While one is in use now, the other is undergoing an overhaul in the US. TBA offers its charter services to tourists to destinations like

Agra, Varanasi, Jaipur and Udaipur from Delhi. "The tourist charters will be our mainstay," says P.N. Kumar, managing director of TBA and an ex-deputy managing director of Indian Airlines.

Easy passage

But Kilachand and TBA, on the face of it, would have relatively easy passage by virtue of the fact that they are a charter service and that they depend largely on the tourist traffic. The tourists would ensure foreign exchange revenue to pay back the cost of the aircraft while the charter service will ensure that the airline does not get into a self-defeating competition with Indian Airlines. TBA charges Rs.16,000 for a flying hour and Kumar estimates to break even at a passenger load factor of around 60 per cent. "The survival in this industry," he says, "depends on the type of aircraft you have. We have smaller aircraft and are going in for charters while those with bigger ones will have to attack the trunk routes. I think there is business in both."

But things are not going to be all that easy for those operating on trunk routes with Indian Airlines' shadow looming large over every air corridor in the country. Thus, industry experts say that it would be too early to even predict anything on the economics of operating the airlines in India. Says a top industry expert, who served the government for a long time, "The investment is very high, maintenance is a headache, hangars are difficult to come by and competitor Indian Airlines has virtually unlimited resources."

The opinion of air-taxi owners vary from modestly optimistic to high optimism. UB Air says it is neither making profits nor cash losses after almost a year of operations. "We cannot make profits on a single aircraft, we need to have one more at least," says Suneel Mehra, general manager. Air Asiatic expects to break even in two months time. A.K. Roy, chief executive of Continental Aviation, estimates that Continental will start making operating profits in one month, as they have calculated the break-even load factor (passengers per flight) at 100 with a 160 capacity aircraft. This, despite the fact that each flight will cost Rs.150,000, of which 65 per cent will be fuel costs.

Running these airlines is an expensive proposition. The way the guidelines are framed, no exclusive Indian company can operate an air-taxi because government will not release any foreign exchange for the purchase of aircraft. The scheme thus will have to necessarily include an NRI. Here again interest repayment of loans, if any, will have to be made either by the NRI or through foreign exchange earned through tourist traffic.

And aircraft don't come cheap. Vijay Mallya paid upwards of Rs.5.4 crore for his 15-seat Dornier. Verma of Continental is paying around Rs.17 crore for his nearly three-decade old Boeing 707-720. East West is leasing three vintage Boeing 737s from the US for Rs.2 crore a quarter while Air Asiatic is paying a $150,000 a year for its Boeing 737. In addition, there is a 15 per cent duty on the imported aircraft, which air-taxi operators have objected to since Indian Airlines pays only 2 to 5 per cent for its aircraft. Says Ganeshan, "I agree they have a point here. I have told them to talk to the finance minister."

Vintage TBA and Air Asiatic aircraft, and UB Air's brand-new Dornier : all optimistic

But the bigger headaches start once the aircraft is flown into the country. Indian Airlines is not taking to these airlines kindly and is doing everything to retain business. When UB Air started operating late last year on the Bangalore-Madras-Mangalore sector, Indian Airlines increased their flight frequency on the circuit. And UB Air had to slash its ticket rates by 30 per cent to the level of Indian Airlines' rates.

Unethical IA

On 6 March, when Trans-Bharat Aviation put an ad in Delhi's *Hindustan Times* saying that it would operate a Delhi-Lucknow flight, Indian Airlines which till then had one flight a day on the sector increased it to two. "We are forced to withdraw," says Kumar. Adds Verghese of

Asiatic, "Indian Airlines resorts to unethical means to kill private air-taxis. For example, there was no morning flight by IA in the Madras-Bombay sector. When we started flying, IA also introduced a new flight around the same time. In the process, neither IA nor we could get full occupancy."

Redeeming effect

To be fair, the Indian Airlines' competition has had at least one redeeming effect. The private air-taxis have been forced to keep ticket rates at the Indian Airlines level. In fact, it seems they will have to actually cut ticket prices if they have to win away passengers from IA. Also, Indian Airlines has vastly improved its services on some of the key sectors. It offers brand new A320s on trunk routes which any passenger would prefer to old Boeing 737s and 707-720s. Says M.C. Nair, managing director of Everest Advertising, who has flown by Air Asiatic to Kochi, "Given a choice I would rather fly Indian Airlines. The only reason for taking Air Asiatic is the availability of tickets. Service is just about the same. Air-taxis will have to add value in terms of service and elegance."

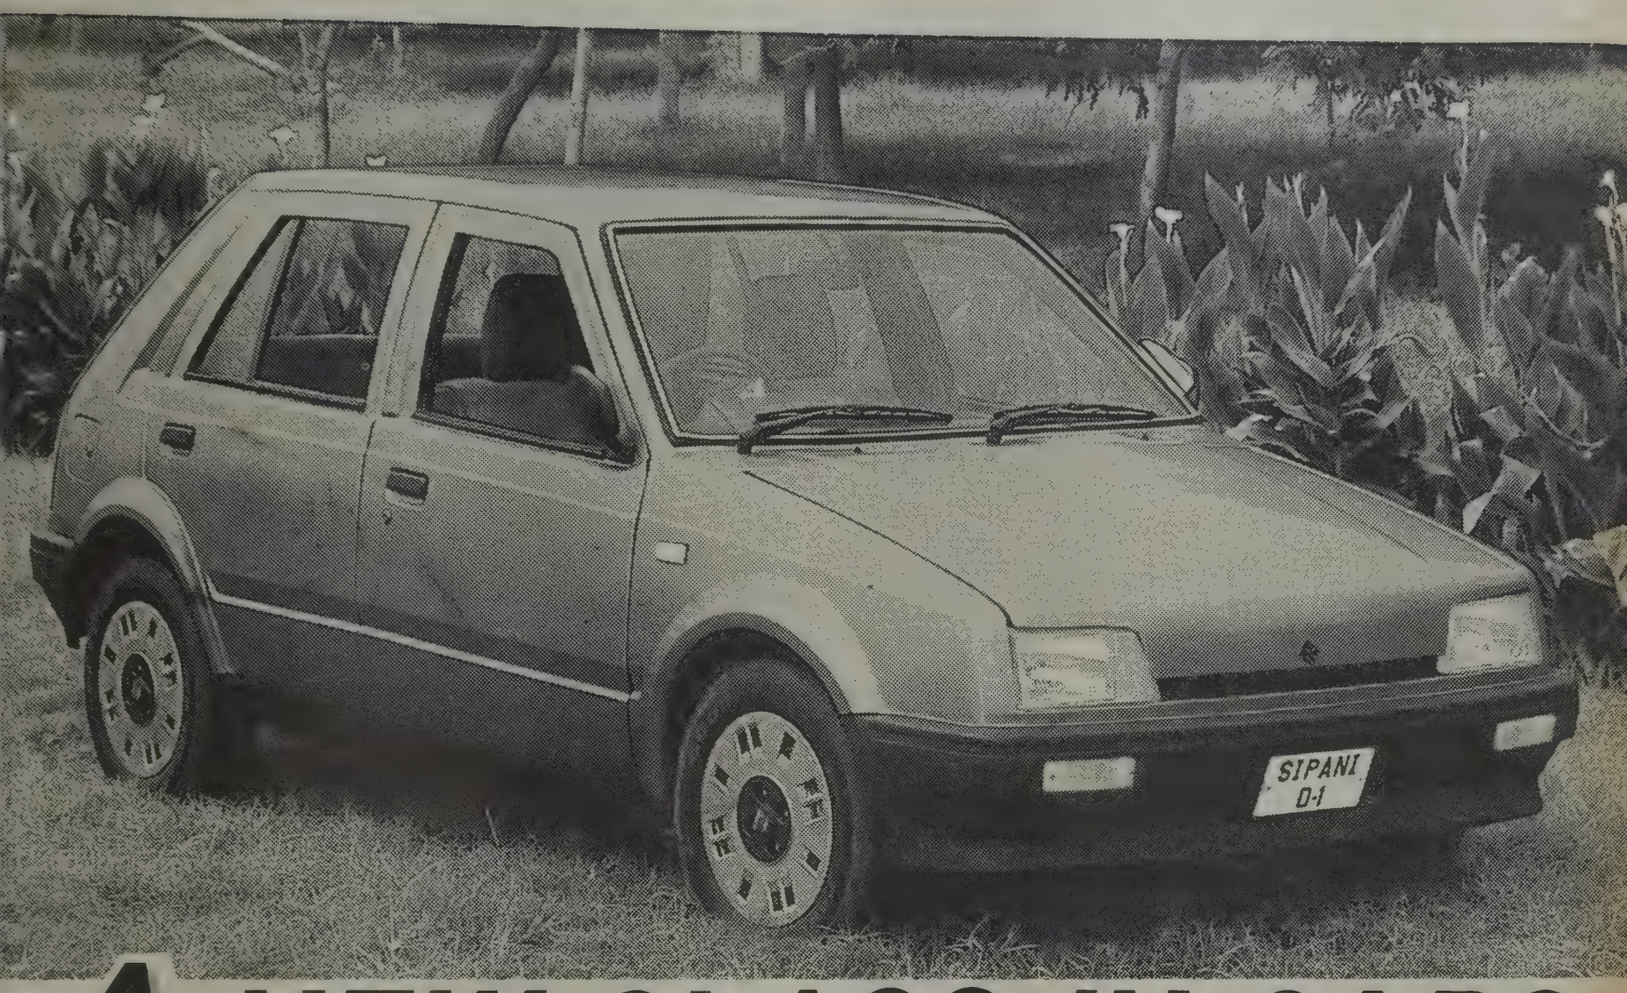
Service in Air Asiatic 737 is on a par with IA

The other area where Indian Airlines has an upper hand is in the airport infrastructure. Says Verghese of Asiatic, "Last month, our aircraft needed re-charging facilities at Bombay. It is just a two-minute job. But IA refused to do it. Our flight was stranded for nearly 10 hours." According to Roy of Continental Aviation, "Getting things done at the airports is the most frustrating part." He has been running from pillar to post for facilities like an office and a check-in counter. Mehra of UB Air, too complains that they now have to share a check-in counter with IA as its terminal at Bangalore was taken over by the NAA. Ground handling is another major headache. Roy says that they will have to make separate arrangements for ground-handling equipment as IA is not willing to sell the equipment.

Ganeshan states the government's view in this matter. "It would be impossible for Indian Airlines to maintain or allow the air-taxis to use their infrastructure. As it is Indian Airlines' hands are full with its own aircraft maintenance, so much so, that they have to send some aircraft abroad. And anyway, the private operators are in competition with Indian Airlines, so how can they expect to use its maintenance facilities?" He, however, added that the government has decided to give space at Nagpur airport to anyone willing to build a maintenance shed. "I know it is capital intensive, but if any entrepreneur is willing, the place is ready."

How safe are they?

The issue of maintenance also raises the major question of how safe the aircraft operated by the air-taxis are, considering that they are using very old aircraft and that the DGCA is not very well known as a very effective air safety enforcing body. The Boeing 707-720 for example, belongs to the first series of jets of the sixties, and has been phased out all over the world (the last airline to use these planes was Ethiopian Airlines), and spare parts are hard to come by. Industry experts also claim that the planes available on lease are the oldest ones around. And some retired Air India and Indian Airlines engineers who were offered jobs by these air-taxi companies are known to have rejected them because of the poor state of the aircraft.



The air-taxi operators, however, claim that the aircraft have undergone stringent testing. East West claims that its aircraft has been certified by the Federal Aviation Authority of the US, so does Air Asiatic. Verghese asserts that though his aircraft are 10 years old, their engines are brand new. Verma is quick to point out that Continental's aircraft has an average of 26,000 landing and take off cycles, while the average for some of IA's planes is 70,000.

UB Air, in turn, claims that out of 500 flights so far, they have had only one minor breakdown. The maintenance contracts too have been issued to experts. Airworks Ltd of Bombay, a 40-year old maintenance and overhaul outfit, is to be responsible for the inspection and major maintenance of Continental's plane, as well as the major maintenance for East West. Says B.G. Menon, the senior partner of the firm, "These aircraft are old, but they are still airworhty. We are confident we can handle the maintenance."

So, all in all, running a private airline in India is not going to be all that easy till such time the government allows free foreign exchange to buy aircraft and spares, though no doubt there's tremendous scope for their growth. While passenger growth in the Seventh Plan was estimated at 12 per cent, Indian Airlines' target was for a growth of only about 8 per cent. This obvious lack of capacity should sustain many of the more enterprising private air-taxis.

But as Kumar of Trans-Bharat laments, "The fact is that today aircraft cost is high and so are landing parking charges and fuel. The resultant margin is thin. But this is the first experiment of this sort in the country. If the future, despite all problems, looks bright it is because of the growing passenger demand."

A NEW CLASS IN CARS

ENGINEERED TO PERFORM

SOON, A new driving sensation will hit the Indian roads.

The SIPANI D-1. Sleek and versatile with a rare blend of sporty elegance.

- Large four door hatch back family car.
- Smooth aerodynamic styling with that extra special, high gloss colours.
- Plush, Spacious interiors.
- Superb handling and manoeuvrability.
- A Powerful 1500 cc Diesel engine (British Leyland design) with a 50,000 km warranty. Achieving remarkably low levels of vibration and sound.
- Also available a Petrol version with a 48 BHP high performance engine, designed by Reliant Motor Co. U.K.

And all this at a lot less than you expect to pay....

AWAIT THE D-1. Its been engineered to perform.

PLUG INTO
OUR FUTURE

Share The Earning Power

Bombay Suburban Electric Supply Limited is a well-established, 61-year-old private sector company engaged in the business of power distribution. Over the years, BSES has diversified into related areas such as electrical contracting and computer services.

The Company has an excellent track record of growth, profits and bonus issues, and is now poised for tremendous growth through a prestigious backward integration project – a 2 x 250 MW Power Station at Dahanu in Maharashtra.

BSES recorded the highest-ever turnover of Rs. 390.20 crores with Net Profit after Tax of Rs. 12.04 crores for the year ended 31st March, 1990 on the Share capital of Rs. 11.70 crores (including 1 : 1 Bonus Issue) and Reserves of Rs. 88.09 crores. For the six months ended 30th September 1990, Sales reached Rs. 223.64 crores and the Net Profit after Tax was Rs. 8.06 crores with Earnings per Share (annualised) of Rs. 13.66.

The Dahanu power project will make BSES a well-integrated private sector power company, fully equipped to undertake a broad spectrum of activities – from execution of electrification and erection contracts to generation, transmission and distribution of power.

The project which is estimated to cost Rs. 991 crores is to be part financed by an Issue of 80,00,000 – 12.5% Fully Convertible Debentures of Rs. 125 each for cash at par aggregating Rs. 100 crores.

Each Debenture will be fully converted into 5 Equity Shares of Rs. 10 each at a premium of only Rs. 15 per Share at the end of 12 months from the date of allotment.

The Issue includes reservation of 23,40,700 Debentures aggregating Rs. 29,25,87,500 on preferential basis for the Equity Shareholders of the Company and offer of 23,55,300 Debentures aggregating Rs. 29,44,12,500 to the Indian Public.

With the existing profitable business activities of the Company and the ready market for the power to be generated by the new project, BSES is confident of earning returns to service the Fully Convertible Debentures being issued and the Equity Shares to be issued on conversion.

Debentures from BSES. An opportunity for you to plug into a bright future.

HIGHLIGHTS

- **Well-established, 61-year-old private sector power distribution company with an excellent track record of growth, profits and bonus issues**
- **Poised for tremendous growth through a prestigious backward integration project – a 2 x 250 MW Power Station at Dahanu in Maharashtra**
- **Uninterrupted record of dividends ever since inception in 1929 (20% from 1987 to 1989 and 18% for 1990 on enhanced capital after 1 : 1 Bonus Issue)**
- **Guaranteed return under the Electricity (Supply) Act, 1948; with no gestation for investment on account of its existing business**
- **Excellent potential for private sector participation in power industry through a package of incentives and current trends of liberalisation**
- **Financial participation by World Bank, International Finance Corporation (Washington) and Indian Financial Institutions/ Mutual Funds**
- **Single-stage, full conversion of Debenture into 5 Equity Shares of Rs. 10 each at a premium of only Rs. 15 per Share at the end of 12 months from the date of allotment**
- **Market price of Equity Share of Rs. 10 each as on 28.2.1991 – Rs. 115 (cum-Preferential right) on Bombay Stock Exchange**
- **Easy payment terms : 25% on application, 25% on allotment and balance on call(s)**
- **Earnings per Share : Rs. 10.17 (on enhanced capital after 1 : 1 Bonus Issue) for the year ended 31.3.1990**
- **Easy liquidity : listing on Bombay, Ahmedabad, Bangalore, Calcutta and Delhi Stock Exchanges**

The CCI has stipulated that, if the Company does not receive the minimum subscription of 90% of the issue amount, the entire subscription will be refunded to the applicants within 90 days from the closure of this issue. If there is a delay in refund of such amount by more than 10 days, after the said period of 90 days, the Company will pay interest at the rate of 15% per annum for the delayed period.

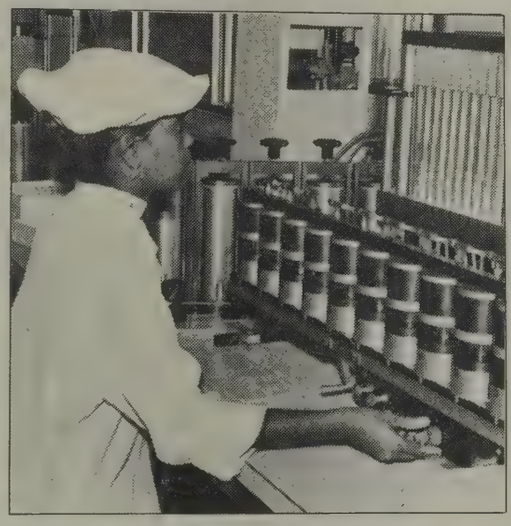
TIDCO declares a dividend



For the first time in 25 years, the Tamil Nadu Industrial Development Corporation (TIDCO) will pay a dividend of 4.31 per cent (Rs.4.45 crore) to the state government. The corporation will earn a net profit of Rs.6.56 crore. At last, its perenially loss-making companies have registered an improvement. Of the 56 TIDCO-sponsored units, 50 per cent are going to declare dividends, 40 per cent are making profits, 6 per cent are incurring losses and 4 per cent remain closed.

This is a vast improvement over its past performance. Till the eighties, TIDCO hardly received any dividends, and was stuck with loss-making units. But by the mid-eighties, it began registering nominal profits, mainly because of the dramatic turnaround of the joint sector fertiliser giant SPIC. Now TIDCO has two more jewels in its crown — Tamil Nadu Petro Products Ltd (TNPPL) (jointly promoted by TIDCO and Spic) and Titan Watches — a TIDCO-Tata project. These three companies account for most of the dividends.

Political games

The organisation was down in the dumps towards the end of the MGR regime. The TIDCO chairperson was a political appointee. It was alleged that corruption was rampant. Industrialists used to complain that while all the other states offered attractive incentives to entice them to put up projects, Tamil Nadu was the only state where they had to pay money to do so. Although TIDCO was supposed to disinvest its shares in on-going projects to raise resources for new industries, this did not happen during the AIADMK rule. The only notable exception was Tamil Nadu Chemical Products, where the successful bidder was liquor baron Ramaswamy Udayar, reputedly very close to MGR.

When the DMK came to power in 1989, it decided to speed up the disinvestment process. For a start, rules and regulations have been loosened. The government does not have to clear projects where TIDCO's investment is less than Rs.25 lakh. Now TIDCO has at last finalised its disinvestment plans and hopes to raise Rs.4 crore in the current financial year. By unloading its stake in the joint sector and public sector projects, the corporation can raise between Rs.30 and Rs.40 crore in the near future. Since its inception in 1965, TIDCO has promoted 56 projects (including those under implementation) at a total cost of Rs.1,239 crore. Of this, the corporation's total share capital contribution was Rs.112 crore.

Titan watches: one of the flagships being retained by TIDCO

In the first phase 12 companies have been identified for privatisation. Already, decisions have been taken on fixing share prices. The three criteria for price fixation are prevailing market value of the share (average of three months), the net value of TIDCO's equity capital assessed on a compound interest of 13 per cent till the period of disinvestment, and the actual book value of the shares. "The price will be based on whichever of these is higher so that there is no favouritism of any sort," says a senior government official. The first refusal will be given to the join sector partner.

The corportion has already disinvested its holdings in Vanavil Dyes and Chemicals (in favour of Colour Chem Ltd) and Malladi Drugs and Pharmaceuticals Ltd (in favour of the promoters). Other well known companies where TIDCO plans to unload its share capital are Pentasia Chemicals (in favour of Asian Paints), Tamil Nadu Flourine & Allied Chemicals Ltd (promoted by Aditya Birla), Dynavision (makers of Dyanora TVs) and Tamil Nadu Dhadha Pharmaceuticals Ltd.

Confusing decision

TIDCO will not disinvest its shares in what it calls its flagship companies, namely SPIC, TNPPL and Titan Watches. Actually this decision does not make much sense to a lot of outside observers who feel that these flourishing concerns would fetch a lot more money than 'also rans' which the original promoters themselves are not so keen on touching. They observe that this reluctance to dilute in the flagship companies may discourage industrialists from other states from putting money in major projects.

Perhaps, TIDCO and other state government units gained momentum because DMK chief minister, M. Karunanidhi saw to it that not a single public sector unit (there are 62 of them) was headed by a politician. And he also conducted monthly industry review meetings, each lasting three to four hours. Much of the action visible now is the result of decisions taken during the DMK rule.

One can only hope that the next government will not let TIDCO fall into its earlier apathy.

■ SUSHILA RAVINDRANATH

Road tax leads to strike

The Chautala government in Haryana fell last fortnight and with it also ended the eight-day transporters' strike. The strike had brought all commercial vehicular movement in the northern states of Punjab, Haryana, Rajasthan, UP, Jammu and Kashmir and Delhi to a grinding halt.

The strike followed an ordinance passed by the Haryana government on 21 December, obliging every motor transport vehicle entering the state to pay a *path kar* (road tax) of Rs.100, over and above all the taxes in existence. Moreover, the

Varun Shipping investors consistently rewarded.

Impressive Track Record.

Continuous dividends for 6 years. 25% last year.

Varun is one of the few shipping companies to weather successfully the decade long depression which afflicted the shipping industry from the late 70s. Varun had successfully managed through the recession years by cashing on the opportunities available at that time. This was by purchasing relatively younger vessels when ship prices were depressed and operating in areas which assured regular revenues and hedged the company's operation from market volatilities.

This foresight and strategy have contributed significantly to Varun's excellent track record. The Company has notched an impressive post tax profit of Rs. 4.53 crores during the year ended 31st March, 1990—a growth of 164% over the previous year. And with increasing profits, come increasing dividends—25% in 1990, against 21% during 1989. Varun shipping has the distinction of having an uninterrupted dividend record during the last 6 years. Moreover, Varun is one of the few Indian Shipping Companies to pay a dividend of more than 20%. Even on the increased equity which went up by more than 160% in 1988.

Varun is now embarking upon a Rs. 190 crore expansion programme to take advantage of the current good conditions in the Shipping Industry. To ensure greater success and to reap reasonable profits for its investors'. Consistently.

Rights cum Public Issue of 22,66,154—12.5% Secured Fully Convertible Debentures of Rs. 200 each for cash at par aggregating Rs. 45.32 crores

of the Issue. If there is a delay in refund of such amount by more than 10 days, the Company shall pay interest @15% per annum for the delayed period.

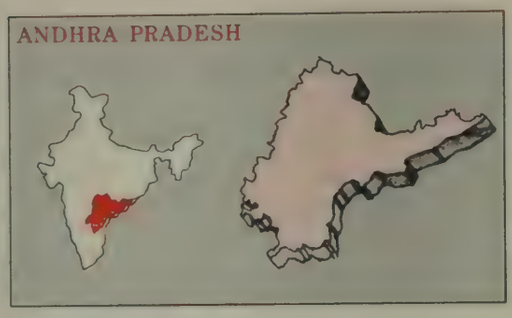
ax had a time clause by which, vehicles vere required to pay the *kar* for each day hey remained in the state. However, in- erestingly all vehicles registered in Hary- ana were exempt from this additional evy.

Says Chittranjan Dass, secretary gen- eral of the All India Motor Transport Con- gress (AIMTC), the apex body of over 600 ransporters' associations all over the ountry, which organised the strike, Through this tax the Chautala adminis- ration tried to fleece non-Haryana trans- porters to the tune of Rs.6 crore annually nd get extra revenue for the state with- ut taxing its own people."

Comments an economist, "At a time vhen the trend is towards freeing road ransport and withdrawal of all barriers o movements of traffic, this measure was patently unfair one, prompted by reve- nue considerations."

Centre-state question

Haryana government officials are chary bout commenting on the motives behind he impost, though it seems that some hinking did go in before it was imposed. The AIMTC had got wind of the move in December and took up the matter with he then chief minister of the state, a Chautala protege, Hukam Singh. But to no avail. The matter was also taken up vith the union minister of surface trans- port, Manubhai Kotadia, who refused to ake cognisance, on the grounds, that the subject was on the state list and outside he purview of the central government. And this, when the levy was applicable for commercial vehicles plying on the na- ional highway, which is under the juris- diction of the Central government.



Failing to get justice, the truck opera- tors of the northern states went on the strike from 25 March. Says a transport operator, "When we approached the Haryana government, they told us to get our vehicles registered in Haryana and escape the *path kar*."

Says Dass, "The strike was necessary as the tax set a bad example and would have given ideas to neighbouring states to fol- low suit." In fact, similar schemes were al- ready being considered by the Delhi administration and the Punjab government.

The strike added to the loss of trans- porters and affected trade in the region. In all there are 250,000 vehicles moving about in this region every day, carrying 2 million tonnes of cargo. According to Ajit Singh Khurana, a large scale transporter, each vehicle earns around Rs.600 per day. On an average this means a loss of around Rs.4,800 on each vehicle during the strike. Again, there are fixed costs of Rs.700 per vehicle per day; that too is lost. Added to that are the other losses incurred by manufacturers on goods (both perishable and unperishable) which have not reached their destinations on schedule. Another transporter says that if the government had paid heed to their appeals earlier and behaved responsibly, this loss could have been avoided.

The strike finally came to an end when, with the imminent fall of the Chautala government, the Central government moved in and promised to prevail upon the state government to withdraw the levy.

APSEB detects pilferage racket

Last month, the Andhra Pradesh State Electricity Board (APSEB) uncovered a massive power pilferage racket involving eight mini-steel units which has cost the state a whopping Rs.26 crore. The eight units were using a sophisticated hi-tech device comprising simple electronic components, like those normally used in TVs and VCRs for the remote control operation, to steal power. According to A.P.V.N. Sharma, member-secretary of the APSEB, "The units were supplied this device by the same source."

A power-stealer being removed by APSEB authorities

Following a tip off, the board authorities raided the concerned industrial units on three consecutive days starting 19 March. When the sleuths discovered the hi-tech device, nicknamed the power stealer, power supply to these units was cut off. Following this, the APSEB has launched an operation to detect similar wrongdoings in other industrial units.

Sharma points out that there are 6 million power consumers in the state. Out of these, 4,000 high tension (HT) consumers consume 75 per cent of power. "If we are able to detect and stop the power pilferage among the bulk consumers, it can solve our problem to a considerable extent. The pilferage among 25 per cent small consumers will not pinch us so badly."

Commenting on the episode, M. Venkata Rao, secretary general of the Federation of AP Chambers of Commerce and Industries (FAPCCI) says, "If anybody is involved in such an offense he should be brought to book because he is stealing from others' pockets. It is not the board's problem alone. It is a problem common to all consumers."

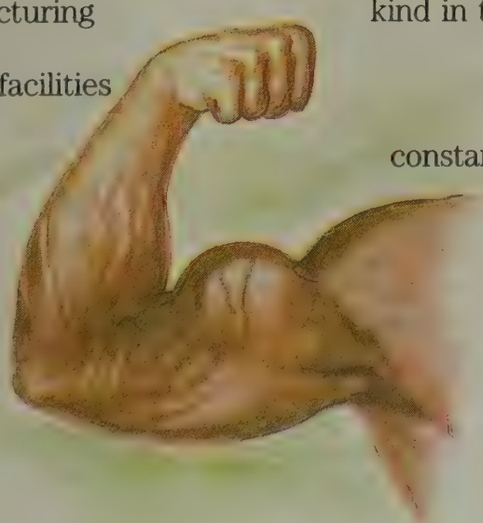
According to industrial circles, the purpose behind pilfering power is to show less consumption of power, lower production and therefore lower revenue. This saves both sales and income tax.

This power theft has been uncovered at a time when the state is facing a grave power crisis. According to Balarama Reddy, member, transmission, APSEB, there is shortage of power for seven to eight months in a year. Power supply to HT consumers has been cut by 40 per cent.

Chief minister N. Janardhan Reddy points out that about 20 per cent of power is lost during transmission due to different operational reasons and pilferage, which, incidentally, he maintains is reasonable by Indian standards. However, both he and the FAPCCI secretary general agree that theft is a relatively insignificant and negligible part of the total loss. Insignificant or otherwise, in a state strapped for power, every unit counts.

■ MOHAMMED OMER FAROOQ

THANK YOU MR. HERCULES FOR TEACHING US HOW TO BUILD MUSCLES ON OUR OWN.



Your inherent strength and your grit in taking on challenges alone is legendary. With us at Akay too the same spirit of self-reliance and developing our own strength has made us what we are today.

Development and upgradation of products through continuous research is an on-going process with us. Our CAD/CAM systems, automated manufacturing facilities and advanced test facilities have been instrumental in customisation and standardisation of our products – Chemflo process pumps and valves that match international standards.

At Akay we have never believed in turning out pale imitations of obsolete borrowed technology. With our R & D efforts we have forged ahead and created technology far ahead of its time. And nothing illustrates this better than our API 610 Seventh Edition Pump – the first of its kind in the world.

And this single-minded trait of constantly tapping our own resources is something for which Sir, we can never thank you enough.

ARMS-AI-1-91

I'll never forget my daughter's first birthday party.

Mainly because I wasn't there. As they were cutting the cake, I was thirty thousand feet high. Winging my way to Poona for the first customer call the Mysore Kirloskar marketing department ever made.

My heart had suddenly surfaced in my mouth and my pulse was busy imitating an overwound wristwatch. Nervous.

But, the more romantic will be disappointed to know that there was no spectacular

PRATIBHA.BLR.91MKL1

breakthrough that time. No massive order.

Three months later when I called with news of our first order —— 21 twin spindle turning machines, followed by 40 special purpose turning machines —— I knew we had that first step to thank.

Mysore Kirloskar came into its own as a customer oriented, market driven company only recently. But progress has been spectacular.

The facts. Two marketing offices employing just two in 1985 are thirteen offices with one hundred and thirty marketing professionals today. The product range has been dramatically upgraded. Turnover has almost doubled in four years. And exports have gone up by 500% in three.

But for us at Mysore Kirloskar, these are more than impressive statistics. They are evidence of strategies and successes. Of failure and redoubled effort. Of a passion for perfection.

Sanjeev Baithmangalkar (General Manager Marketing)

For me it began with missing my daughter s first birthday party. I can never forget that.

Though, to be absolutely frank, I d be happy if my wife did. I dont think I'll ever hear the last of it from her.

The Smart People's Computers

When you expect to use your computer for many years, day in and day out, what you look for is Performance. Quality and Service. Over the years you realise these are so much more important than the price you paid for your computers. High Performance translates as shorter response times, which means you have more of your valuable time for other important activities. This represents a lot of money over the years. Good Quality translates as fewer problems or breakdowns, and Good Service ensures that when problems or breakdowns do occur, their effects are kept to a minimum. This also represents a lot of money saved over the years.

Smart People know and appreciate the value of Performance, Quality and Service, and know that it represents much more money than a few percents "saved" on the purchase price of a computer.

Aurelec is in its 11th year of selling Smart Computers to Smart People.

Aurelec: Quietly building the best.

The $100 million man

He is short, has an unusual name, and a slightly tousled look. He wears a gold bracelet on his wrist, has a slight twang in his voice but, for all that, he could be any other Indian immigrant to the US. He doesn't strike you as a man who walked away with a $100 million. John Kapoor did exactly that when he sold his stake in Lyphomed, a US pharmaceutical company, last year.

Behind this lies a tale. John Kapoor was born Jatindar Kapoor in 1943 in Amritsar. He comes from a family of businessmen, his father was in the movie distribution and production business.

After finishing high school in Amritsar, he joined Khalsa College in Bombay. Later, he graduated from the University Department of Chemical Technology at Bombay with a B.Sc (Tech) in pharmacy. He left for the US in 1964 and joined the State University of New York, at Buffalo in New York state. Here he took a doctorate in medicinal chemistry in 1970.

He then joined Invenex Laboratories, a San Francisco-based company, which made injectable products. He helped set up and run a plant which boosted the company's turnover from half a million to $20 million in the eight years he worked there.

Thus far, no further

"As a professional and an immigrant there is only so far that one can go in an American company," says Kapoor. He decided that he had to strike out on his own. So he approached Stone Corporation, a paper producer, and a Fortune 500 company. Stone had a wholly-owned pharmaceutical subsidiary, Lyphomed.

Lyphomed was going through a bad patch. Quality problems had led to product recalls. Straightening out similar problems had been Kapoor's forte at Invenex. While negotiating with Stone about joining Lyphomed, he learnt that they wanted to sell the subsidiary. He requested that the first option on the sale be granted to him and they agreed.

When Kapoor joined Lyphomed in 1978 it had a turnover of half a million dollars and was losing an equal amount. In nine months Kapoor was able to turn the company around. In 1981, Stone Corporation decided to sell it. The total acquisition price was $2.6 million but for the leveraged buyout, a total equity of 1 million dollars was required. Kapoor had only $24,000. He managed to get a venture capital firm, the Pathfinders, based in Minneapolis, Minnesota to put up the rest of the money.

At the time of the buyout took place Lyphomed had a turnover of $3 million dollars. It supplied products to hospitals. Kapoor's strategy was based on finding niche markets that several large companies were not interested in.

"The area we tackled was nutrition in hospitals. This was for patients who can't eat, can't swallow and have to be fed totally intravenously," says Kapoor. Though no one really knew how large this market was, Kapoor developed a whole range of products for this segment which received a good reception.

After establishing a firm foothold, it was logical that hospitals were considered a natural area for expansion. "Patients with cardiac problems, cancer or infections use our products. So it made sense for us to develop products to treat such patients," he says. Drugs with expired patents were targeted. Lyphomed developed formulations which were cheaper than those of its competitors. Luck was on Kapoor's side.

Dame Luck smiles

At about the same time, in 1982-83, that Kapoor was developing these products, the US government passed a legislation that revolutionised the health care industry. It replaced the cost-plus system of treating patients who received coverage under its Medicare scheme, with a fixed amount per patient. Private insurance companies soon followed suit. Hospitals scrambled to cut costs. Lyphomed's discounted prices were a real winner. But production was no match for demand. To keep pace, "We grew like crazy," says Kapoor.

When Kapoor joined Lyphomed in 1978 it had a turnover of half a million dollars and was losing an equal amount. In nine months Kapoor was able to turn the company around... "We grew like crazy," he says

Lyphomed went public in 1983. By 1984, Kapoor realised that there was only thus far that he could go with patent drugs. He needed to introduce proprietary medicines. But these were expensive and money had to be poured into research to develop them.

Kapoor found that the third largest Japanese drug company, Fujisawa Pharmaceuticals, which had a turnover of $2 billion wanted to buy a stake in the company. As the venture capital firm, Pathfinders, who had initially helped Kapoor wished to sell their 22 per cent stake, Fujisawa bought it in 1984. Over the next three years they improved their stake raising it to 30 per cent.

Pathfinders made out like bandits on the deal. For an investment of $1 million they made $22 million in three years.

Fujisawa wanted to buy Kapoor out almost immediately. Says Kapoor, "They said we'll make you a rich man. You paid $25,000 — we'll give you a cheque for $20 million." But Kapoor wanted to continue with building the company. An agreement was reached with the Japanese that they would not buy him out for six years till 1990.

Kapoor walked away with over a $100 million and decided that maybe he'd retire. This was easier said than done. Within two weeks he realised he couldn't just sit around. At the same time, he was not certain that he could accomplish what he had at Lyphomed, all over again.

Kapoor's philosophy has been to invest a significant stake, say over 20 per cent, in what he considers undervalued companies. They could have a unique product or service concept but were poor performers. He wanted to take them over and develop them, like Lyphomed, but this time he would be the strategist.

"Any project has to be financially viable to survive. Our strategy, over the next five years, is to build a really professional organisation which would be known by top physicians in the country"

Taking them on

For instance, one of the companies he has invested in is UniMed, which has developed Marinol, a synthetic version of THC, the active ingredient of marijuana. This has been approved by the FDA for treating nausea in patients undergoing chemotherapy. It is also remarkably effective in boosting appetite and is being tested on AIDS patients to see whether they gain weight. In spite of the remarkable features of the drug, UniMed has been performing poorly. This is where Kapoor's expertise is called for.

He found that UniMed's marketing of marinol was inappropriate. Channelled through a hospital supply company, it ought to have been a product that caught the doctors' attention. Here too existed a problem. The doctors' natural resistance to marijuana and having anything to do with it, had to be broken. Well-trained salesmen would have to visit doctors and convince them of the value of the drug.

Kapoor contacted some of the former colleagues at Lyphomed who had left after Fujisawa took over. He asked them about their willingness to join UniMed to build a sales force. Not only were they willing, they were confident of putting together a sales force in 90 days.

When Kapoor bought into UniMed in December last year, they were left with only one million dollars which the company expected would last a year. Kapoor went about pruning expenditure so that the amount would last them two years. He pumped in enough money to support a sales force for those two years so that even in the worst scenario, the company has a fair chance of breaking even. Says Kapoor, "To me it was a real challenge. Here was a company that was almost written off. When I bought the company, the share price was a dollar and a quarter, now, two months later it is four and a half."

Kapoor is currently in India to set up a unit, CritiCare Laboratories (P) Ltd. This decision was taken when he was working for Lyphomed earlier. On one occasion he visited Tata Memorial Hospital and found that certain basic cancer drugs, easily available in the US were just not available. The reason for this was not the lack of money. Says Kapoor, "Multinational companies may not consider it worth their while to make available the latest drugs in India." Kapoor now plans to provide products for which there is a need and is confident of being able to procure the technology.

His first project involves nutritional products for the critically ill. There are no big margins in this kind of business. Much of the product development in this area has taken place in the US, and modifications will be made in India. The products are so designed that they will not require many imports. Kapoor's involvement with India does not arise just out of a desire for doing good. "Any project has to be financially viable to survive. Our strategy, over the next five years, is to build a really professional organisation which would be known by top physicians in the country," he says.

CritiCare is headed in India by V.A. Padwal, earlier, director (marketing) with Burroughs Welcome. It will have three divisions — nutrition, pharmaceuticals, and diagnostic imaging. CritiCare's initial capital is only Rs.25 lakh. Its nutritional products will be manufactured by companies which have extra tetrapack capacity to pack products in tetrapack containers. One of Kapoor's companies, Tech India, has a 40 per cent stake in the company.

For the future, the kind of products that Kapoor can access are numerous - anti-cancer drugs, intra-ocular lenses for cataract patients, anti-malarial drugs, etc. If his track record is anything to go by, then CritiCare should be a company to watch.

Look how the country's first UltraFine White Cement gives floors the perfect finish. And design.

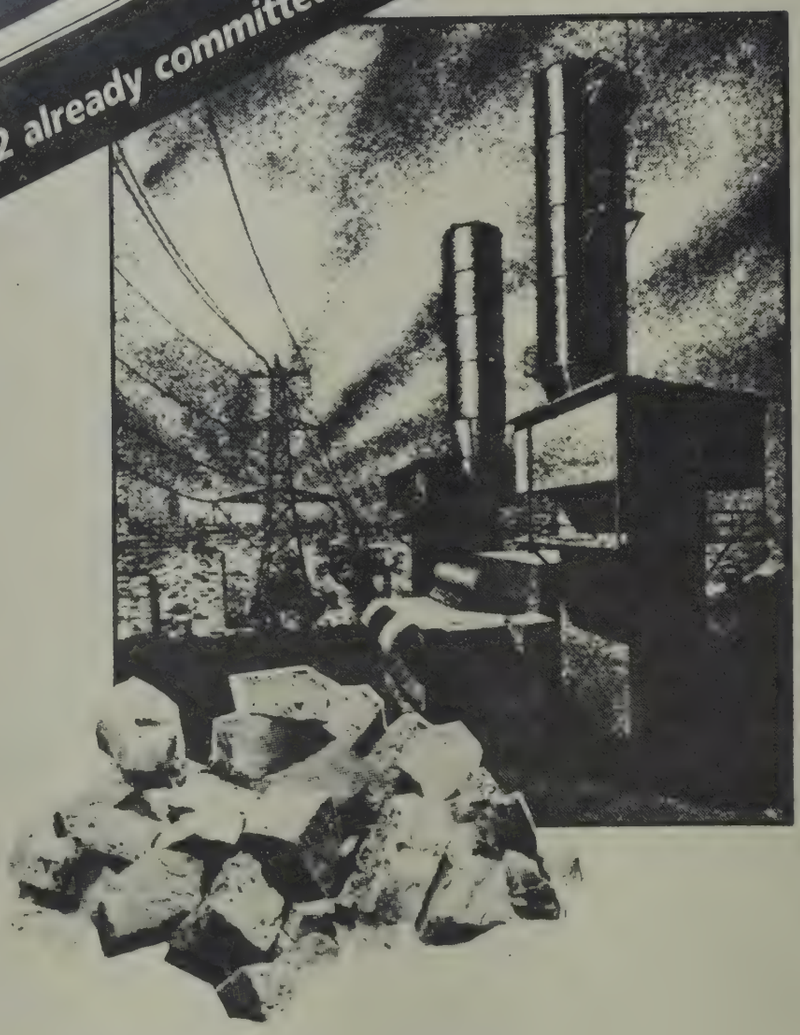
Designer floors begin this way. With UltraFine White Cement Nihon Supreme. A product of technology perfected by Japanese world leaders, Nihon Cement—makers of the renowned ASANO brand. To ensure ultra-whiteness, ultra-brightness, ultra-high strength and even ultra-economy. That's because UltraFine Nihon Supreme can be used with larger quantities of filler material. It mixes easily with pigments to give you brighter colours. And adheres better with marble chips to create longlasting designs. So go ahead, plan your fantasy floor. In Mosaic Tiles and Terrazzo patterns. UltraFine Nihon Supreme performs better, looks better. Truly, the essence of ultrafine decor.

NIHON SUPREME
ULTRAFINE WHITE CEMENT

The Essence of UltraFine Decor

Made by ***Nihon Nirmaan Limited***
A Bhalotia Group Company in technical and financial collaboration with Nihon Cement Co. Ltd., Japan.
Nicco House, 2 Hare Street, Calcutta-700 001.

also marketed as Nihon Supreme
Silvicrete by ACC



FOR ▲ MOSAIC TILES ▲ PATTERNED FLOORS ● TYROLEAN WALL FINISH ▲ COLOURED CEMENT PLASTER
▲ AGGLOMERATED MARBLE ▲ CEMENT PAINTS ▲ PAVEMENT BLOCKS ▲ BUILDING & CONSTRUCTION

Also marketed as Nihon Supreme Silvicrete by ACC in J&K, Himachal Pradesh, Haryana, Punjab, Chandigarh, Madhya Pradesh, Goa, Andhra Pradesh, Karnataka, Tamil Nadu and Kerala.

POWER PLANT
Integrated thermal power plant
meeting full requirement

CHARGE CHROME PLANT
100% output of 1991-92 already committed

Double Advantage from ICCL

This 100% export oriented High Carbon Ferro Chrome/Charge Chrome plant has all the advantages on its side. For instance, the exclusive facility of an Integrated Thermal Power Plant. This ensures uninterrupted production and, being coal-based, will stabilise manufacturing costs. Currently, the surplus power generated is fed to the State Grid which can later be utilized for future expansion and diversification.

Add to this the agreement formalised with Tata Steel for conversion of Chrome Ore from its captive mines – with 100% buy back for export.

Direct marketing in the international markets is yet another thrust which has yielded significant results. This is the first time that a direct contract has been made with an international consumer —Krupps Stahl AG of Germany. In this ongoing agreement, the first shipment has already been executed.

Charge Chrome is a strategic product essential for producing a wide variety of Special Steels – vital for both the armaments and rapidly growing environment protection industries.

In view of the upward trend in the demand for Charge Chrome worldwide plus all the built-in advantages of this Unit, the prospects of the Company carry the promise of a bright future. And, assured growth.

Meeting a worldwide need

PRESSMAN

The great survivor

Boudoir journalism arrived in India two decades ago with the launch of *Stardust*. The sassy film magazine not only re-wrote the staid rules of film reporting, but inspired a brand-new magazine stereotype too: gossipy, irreverent and people-centered. Now in its twentieth year, this publishing *wunderkind* of the seventies continues to hold sway over its loyal readership in India and abroad.

Perhaps what is most remarkable about *Stardust*'s success has been its ability to sustain it. Clones have come (*Cine Blitz*, *Movie*) and gone (*Super*, *Film Mag*) but *Stardust* has managed to remain on top of its segment. With a circulation of 180,000 it has established an almost unbridgeable lead over its closest competitor *Cine Blitz* (circulation: approximately 79,000).

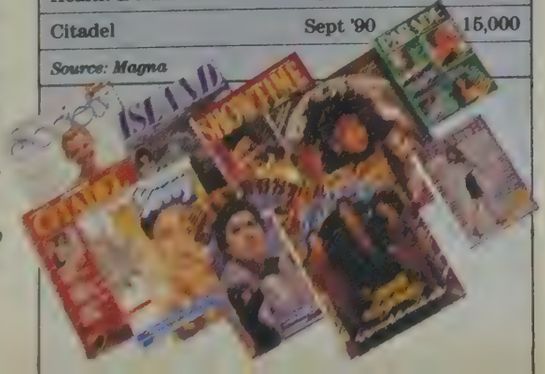
For *Stardust*'s publisher Nari Hira, 1991 marks the twentieth anniversary of both his flagship magazine as well as his recently rechristened publishing empire. The magazine line-up at Magna Publishing (which was called Lana Publishing before Hira split up with his erstwhile partner Lallo Bajaj) consists of eight monthlies, each occupying its own distinct market niche. Which is why Hira insists that "Today there's more to Magna than just *Stardust*."

Indeed there is. You name the segment and Hira has filled it: people's magazine *Society*, *Savvy* a women's magazine, the semi-serious film monthly *Showtime*, two city magazines *Island* and *Citadel* for Bombay and Pune respectively, *Health & Nutrition* for the fitness buffs, and *Parade* which is Magna's answer to Readers' Digest. There are also two language editions of *Stardust*.

One launch per year

Apart from *Society* which was launched in 1978, all the others are products of the eighties. Since 1984, Hira has kept up a record of one launch per year and he claims that every magazine has passed the break-even stage. But clearly, it is Hira's first baby that continues to be the prima donna of the group. According to one observer, "The rest are piggy-backing on its success."

What makes *Stardust*'s position virtually unshakeable? Perhaps one reason could be that the magazine continues to adhere to its original 'hit' formula. Modelled along the lines of the old Hollywood film magazines such as *Photoplay*, it wasn't a wildly original idea in the first place. Former editor Shobha De calls it "one of those wonderful accidents that worked". Since De's days, the magazine has seen a succession of editors but none has been allowed by Hira to tamper with the winning formula of gossip, gossip and more gossip. By June, the circulation is expected to leap up to 200,000. As Hira boasts, "With *Stardust*, it's not a question of demand but supply!"



Hira: "supply, not demand"

Perhaps the same cannot be said of the sister publications. Ever since its launch, *Showtime* has been suffering from an identity crisis. It was originally conceived as a TV and video magazine but the idea didn't seem to work. Its current tack, a behind-the-scenes, analytical approach, hasn't exactly set the newsstands on fire either. Another laggard so far has been *Island* which was pitched against Living Media's *Bombay*, which recently folded up. Will *Island* too go the *Bombay* way? Hira's reply is a fervent "No!" Says one ex-staffer of the group, "It has been Hira's long cherished dream to have a magazine in every city." When questioned, Hira is reluctant to divulge whether other metro mags are on the way. But insiders insist that the next one will be from Bangalore, and three are at the planning stage.

Launch & circulation figures

Stardust English	Oct '71	176,000

Citadel	Sept '90	15,000

Source: Magna

Rise in figures

Meanwhile, *Parade* and *Health & Nutrition*, the newer additions, have been recording smart rises in their circulation figures. "We believe in giving the advertiser return for their money," says Hira. And that, in essence, is the key to staying afloat in this business, according to him.

While one eye is on the numbers, the other is firmly focused on readers. Hira's editorial policy resembles that of any formula film-maker: 'Give them (the readers) what they want'. As De says, "If people want dirt, Hira is prepared to give it to them." However, Ingrid Albuquerque, *Savvy*'s editor, looks at it differently. "We never talk down our readers," she says.

Amidst the comings and goings in the media world, Hira has managed to build a core team of editors. Each magazine is run as a lean, tight ship. Indeed, that applies to the group as a whole since all other activities are in-house. Magna has its own printing facilities, undertakes its own distribution and advertising. This self-owned infrastructure gives both a distinct cost advantage and flexibility. Marketing is another obvious strength. Today Hira is working on a promotional video magazine that will be used to boost circulation.

Not all that Hira has touched has turned to gold. Hiba Films, a video film venture, went kaput. The reason: "Cable TV ate into our market and we had to depend on advertising to survive," he explains. Now all his energies are concentrated on publishing.

The senior team is given a free hand for Hira himself claims to have "retired". But De doesn't buy that. "Hira is a driven man. He would rather die than retire!" she exclaims. In the final analysis, maybe that really explains how his group has managed to stay alive.

■ NAAZNEEN KARMALI

GOPI APPLIANCES

The hard grind to success

After years of hard luck, this persevering entrepreneur has made his mark on the Indian scene and is trying his hand at exports

Rajendra Nath has been through the grind. For five years he struggled in vain to make it on his own. But his will proved to be as sturdy as the kitchen machines he now manufactures. Nath's company, Gopi Appliances, has four manufacturing units spread over the country and housewives, especially in north and central India, swear by Gopi mixers. Last year, the company churned out appliances worth Rs.15 crore and Nath claims that his mixers stand second only to market leader Sumeet. Now Gopi is looking at a whole new range of kitchen appliances and examining their export potential.

A post-graduate in mathematics from Jullunder University, Nath decided not to go the academic way of his father. Instead, he went to Calcutta and joined forces with a clearing agent. His clients included the Bhilai Steel plant. But this stint proved to be short and unsatisfactory. "I did not quite enjoy the job," remarks Nath. Moreover, there was the overwhelming urge to venture out on his own. Therefore he returned to Jalandhar in 1959 and joined Aggarwal Kakkar Pvt Ltd — a family concern manufacturing nuts and bolts. The company was going through a low phase, and Nath pitched in with some funds.

Pics by Subhash Bhardwaj

Nath: overcoming bad luck to prosper

Early debacles

Shortly thereafter, the family members began to squabble among themselves. Before matters could get out of hand, Nath withdrew his money and left. His search for a business opportunity continued. He teamed up with three other entrepreneurs-in-the-making to set up a small-scale unit for the production of single-phase electric motors (which form the heart of the kitchen mixer). Unfortunately, here too, discord arose among the partners and Nath was forced to opt out. He returned home to Ambala a defeated man.

But the healing hand of time renewed his entrepreneurial resolve once again. This time Nath decided to go it alone. In 1963, he set up a single-phase motor manufacturing unit at Ambala. The experience he had gained in this field in the past three dismal years worked to his advantage.

But it took a while for the venture to really get going. In 1965, Nath decided to manufacture sirens also. There were few siren manufacturers then and the demand had gone up due to the Indo-Pak war. Nath started out with a Rs.2-lakh order from the government. Unfortunately, by the time the sirens were manufactured the war had ended and he was left with no buyers. The government too backed out. "It took me one-and-a-half years to fight my case and finally they stood by their commitment," he says. Work suffered at the factory and business came practically to a standstill.

By this time, Nath had developed the confidence to take such business vagaries in his stride. At around that time, he hit upon the idea of manufacturing motors for mixers. The market was flooded with foreign brands of mixers and a couple of local manufacturers also had just entered the scene. The product seemed to enjoy an ever growing demand. The Hindustan Instrument Corporation (HIC) at Ambala announced its intention to enter this field and placed orders for the motors with Gopi.

Ill luck continued to haunt Nath. HIC dropped the mixer project and he was left in the lurch. The only other mixer company, Ramco, initially approved Nath's product. But to his consternation, he soon discovered that Ramco had passed on his design to another motor manufacturer and had begun fixing the motors onto their mixers.

The only way out for Nath was forward integration: Gopi went ahead and made its own mixers as an original equipment manufacturer (OEM). The mixer was priced at Rs.295 — Rs.45 costlier than Ramco's product. "I could not have possibly priced it any lower than that," says Nath. But with a cheaper alternative available in the market, Nath's product, being new, found few takers.

At the same time, he had been developing centrifugal juicers along the lines of

the German make Braun. An order from Bajaj Electricals proved to be the crucial break Nath had been so patiently waiting for. His company became a regular OEM for Bajaj, Racold and Singer. Gaining confidence from this, Nath decided in 1982 to launch his own mixer in the northern and central Indian markets.

Improving sales

Since then, "our sales began to show a upward trend and almost every year we doubled our turnover," says Nath. Production volumes have zoomed up from 7,000 mixies per month last year to 10,000 per month now. Despite having its own brand, Gopi continues to supply to Bajaj as an OEM. G.K. Aithal, senior marketing manager (consumer durables) of Bajaj Electricals, confirms that Gopi's quality is "quite acceptable".

Everything about Nath now exudes prosperity — a half-acre factory area, almost half of the industrial sheds in the city, a branch network of 13 offices all over the country and an R&D unit in the Okhla industrial area in Delhi. Another factory is coming up in the Kundli Industrial Zone. In Ambala, which has almost 200 mixer manufacturers, Nath's success has made him a local hero. According to the divisional manager of Hotline, one of Gopi's competitors, Gopi has acquired considerable manufacturing strength.

"We spend 40 per cent of our turnover on R&D," says Nath. "My aim has always been to make appliances that suit the needs of an average Indian housewife." According to him, though western kitchen appliances have now mostly become throw-away models, Indians cannot yet afford the luxury of such disposable mixers. Moreover, to make the product attractive for the customer and compete with other models, continuous value addition is necessary. The Gopi mixer, says Nath, can be converted to a food processor. (A mixer usually consists of a grinder and juicer, while a food processor is a complete kitchen machine.) But Dilip V. Saptarishi, all-India sales manager, Power Control & Appliances (the makers of market leader Sumeet) does not concur. According to him, Sumeet is the only two-shaft machine which serves as a food processor-cum-mixer.

Inside the Gopi factory: catering to the Indian housewife

Nath claims that Gopi has a 20-per-cent share of the mixer market in the organised sector, second only to Sumeet which holds 30 per cent of the market. But with mixers being reserved for the small-scale sector, it is difficult to estimate with as much certainty as Nath does, the size of the total market or even individual market shares.

Packing of Gopi mixers: nation-wide business

Last November, Gopi test-marketed a whole new range of products: geyser, iron, washing machine and heating pillar. Sunil Jain, Nath's nephew who looks after the washing machine division, explains that the Gopi product will be based on the latest international technology. "It will be cheaper than other available models. And its spinning time has been so adjusted as to give best results for Indian clothes," he says. Already a sum of Rs.50 lakh has been spent on dies and moulds. A formal launch was delayed, says Jain, only because they wanted to get their quality right.

In fact, it is only with superior quality that Gopi has been able to hold its own on its own home turf at Ambala. "All our products are designed keeping in mind the Indian housewife and the conditions that are peculiar to our country," claims Nath. The heating pillar is an instance in point. It is claimed to be the only one of its kind, with a vertical design having two high-energy quartz tubes and a parabolic reflector plate to scatter the beams.

Gopi will be making its export moves soon. It has just received a Russian order. The first consignment of 15,000 mixers bearing the now familiar logo of a *gopi* churning butter will leave shortly.

Nath is preoccupied with his export schedules and launching of new products. Of course, he has big plans. Microwave ovens could be the next step and more hi-tech products too. Perhaps it's time to give the *gopi* a modern, new look to match this.

NORMAK FASHIONS

Tapping a virgin market

At the Eros cinema theatre in Bombay, where *Pretty Woman* is being screened, the *Estelle Face of '91* contest attracts considerable attention. Every Saturday, five members of the audience at the 1.30 pm show are chosen for the final round. This rather innovative marketing strategy comes from a large-scale manufacturer of branded imitation jewellery. Estelle is the chosen brand name and Hyderabad-based Normak Fashions Pvt Ltd is its maker.

Until Estelle entered the scene, Indian women on the lookout for good quality imitiation jewellery had to shop abroad or settle for unbranded products of the not-so-perfect quality. Normak Fashions is a collaborative venture with Normak Canada. The Canadian company, considered to be the country's largest maker of fashion jewellery, supplies its Indian counterpart with the latest in international designs. Since labour constitutes 30 per cent of material costs, producing them is far cheaper here. Under the agreement, Normak is to buy back 25 per cent of the Indian company's produce. The range consists of 5,000 rings, bangles, earrings and necklaces, some set intricately with pearls, crystals and imported lacquer, prices ranging from Rs.25 to Rs.2,000.

Man behind the venture

"It all began with the dissatisfaction of working for a Marwari firm," says soft-spoken Gusti Noria, the man who runs this venture with his wife Mita. For a year, he tried marketing an electrical safety product with a friend. When his NRI cousin proposed introducing designer jewellery in India, he did not exactly jump at the idea. He was more cautious. He employed a firm, Research and Consultancy Group, to study fashion jewellery trends and buying patterns in India. The study showed that everyone earning above Rs.1,500 bought some fashion jewellery and that India was a virgin market. Besides a growing Indian market, there was, in addition, a tremendous export potential.

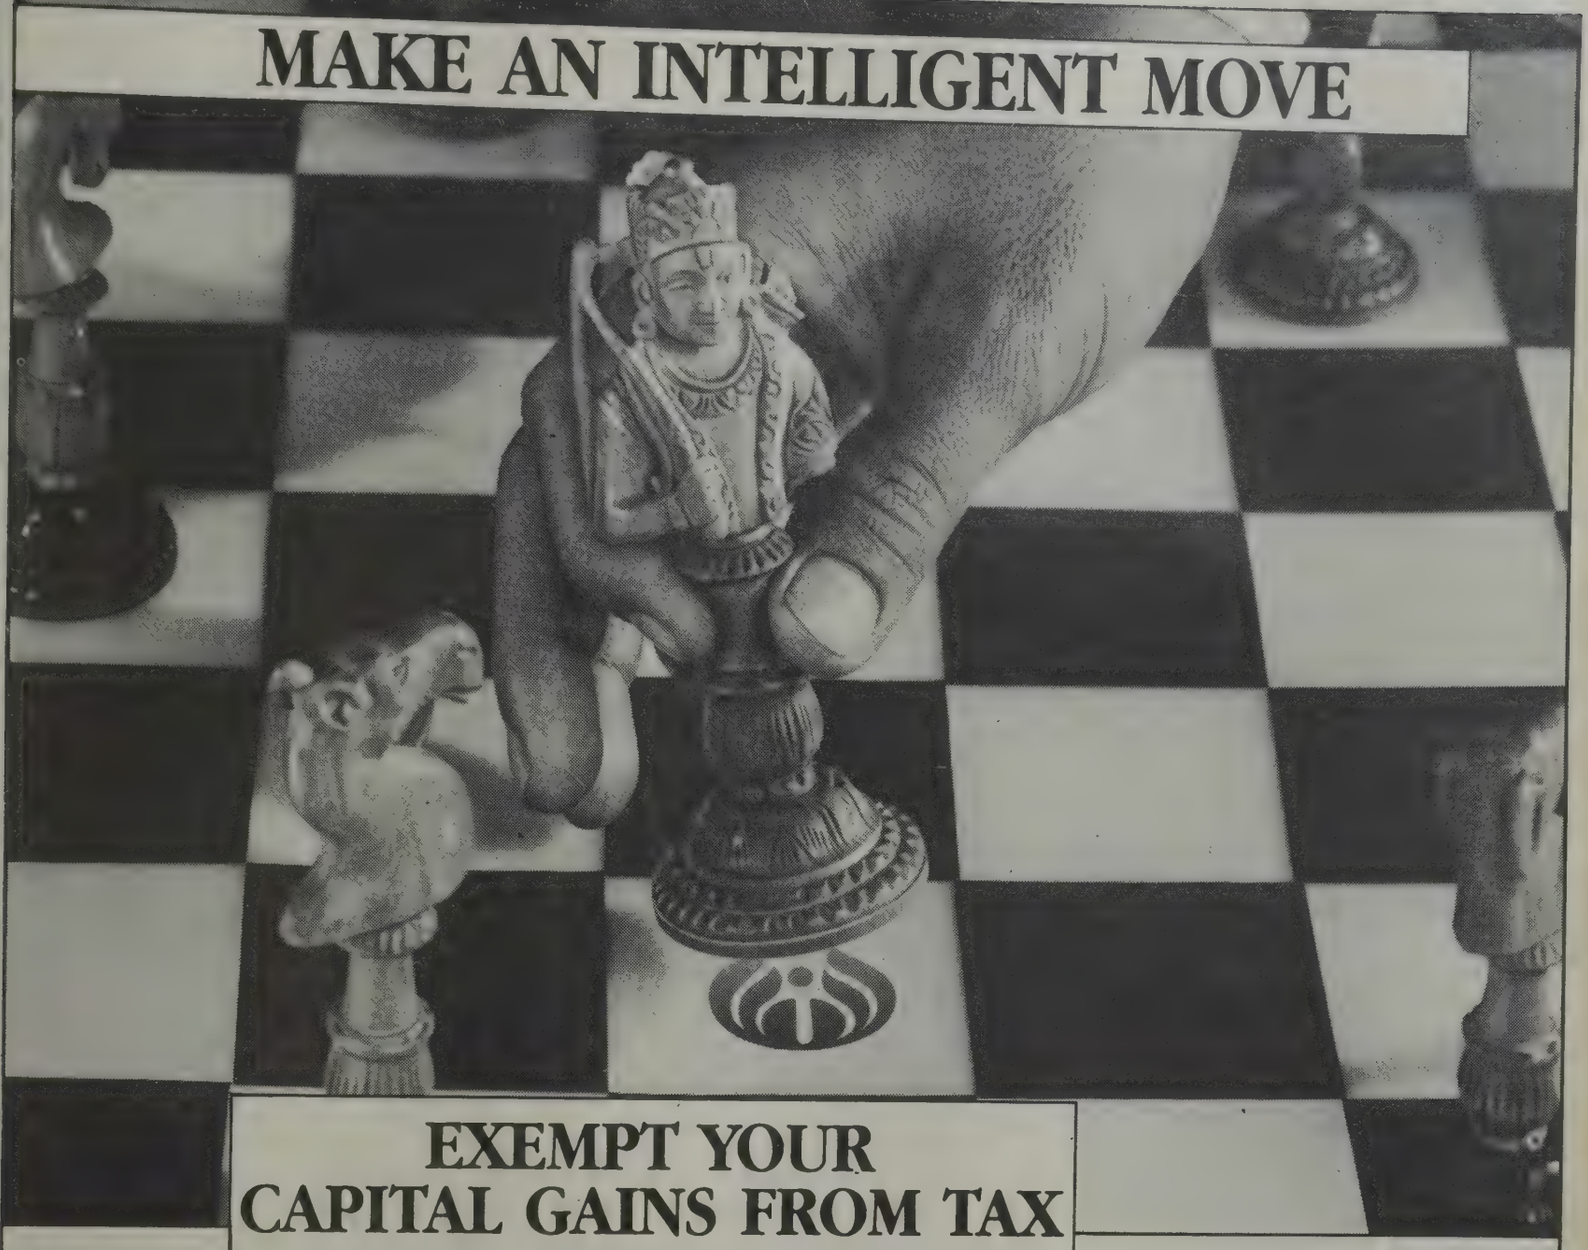
With a capital of Rs.80 lakh, of which Rs.55 lakh was borrowed from the Andhra Pradesh State Finance Corporation (APSFC), Normak Fashions Pvt Ltd began to take shape on a family property at Uppal, Secunderabad. But it took a year to implement the project. Noria complains bitterly of bureaucratic delays at every stage. One serious consequence of this is India's small presence in the North American market. Though that country is the largest importer of fashion jewellery from the Orient, India does not feature as a major supplier.

The process of manufacturing is fascinating. Moulds are made by vulcanising rubber and preparing a cast by the centrifugal process. The alloy is indigenous. Assembling, sorting and machine polishing follow. The metallic jewellery is first dipped into an alkaline solution which removes all impurities, next into a neutralising acidic solution and finally into molten gold. Holding them under running water removes any excess gold dust. The jewellery is then dried before packaging.

A final check and (inset) Mita and Gusti Noria: beginning a trend

Intricate handwork

Of the 120 workers, more than 50 per cent are women. This is perhaps because of the intricate handwork involved — stones have to be glued on, stringent quality checks made, etc. The installed capacity is for 50,000 pairs of earrings, 5,000 necklaces, bracelets and brooches in over 500 styles per month. Working in one single shift, production is valued at Rs.2 crore per day.



All that glitters however, is not so easily sold. And the next area requiring smoothening was product positioning. A preview exhibition revealed that a brand name, proper packaging and adequate display were needed. This would lend credibility to the product and set it apart from other similar imitation jewellery.

Within a year, distributors and exclusive showrooms were set up in Bombay, Bangalore, Hyderabad, Pune, Madras, Delhi, Indore, Nagpur and Aurangabad. One range is introduced at a time. "After a while the customer asks, what next? Then we launch our next range. In Bombay, for example, we have launched our fifth range," says Noria. The next launch will be in Calcutta, after which the plan is to move to the smaller cities like Madurai and Coimbatore, where a large untapped market exists. Plans are on to link up with a large textile agency for distribution. Other plans include the introduction of colourful and safe fashion jewellery for children.

In the West, fashion jewellery manufacture has moved from its position as a cottage industry to a highly sophisticated fashion accessory industry. With Estelle a new trend has begun here too.

J.K. Industries

Reasonably good results in spite of the industry not performing well; fall in profit margins; increase in dividend

Higher input costs and increased competition have created problems for the tyre industry lately. A fact reflected in the results of J.K. Industries for 1989-90.

Raw material costs have increased by 12.43 per cent from last year. This is attributed to the shortage of nylon fabric and polybutadiene rubber, which meant high cost imports.

While gross sales are up 17.71 per cent from Rs.276.38 crore to Rs.325.33 crore, gross profit is down from Rs.34.60 crore to Rs.28.25 crore. Gross profit margins have also declined from 12 to 9 per cent.

The net profit is Rs.16.63 crore as compared to Rs.17.74 crore last year. This is in spite of the fact that provision for tax is Rs.0.90 crore as compared to Rs.4.30 crore last year. Surprisingly, the company has not provided for tax for the months from April to June 1990.

J.K. Industries *(Rs crore)*

Year Ended	30 Jun '90	30 Jun '89	% change
Gross sales	325.33	276.38	17.72
Other income	6.78	11.34	-40.21
Raw materials' cost	143.65	127.77	12.43
Employee costs	11.01	9.79	12.46
Interest	7.25	4.92	47.36
Gross profit	28.25	34.60	-18.35
Depreciation	10.72	12.56	-14.65
Tax	0.90	4.30	-79.07

Dividend (%)	30.00	25.00	
Market price: (Rs)			
Current	72.00		
1990: High	75.00		
Low	45.00		

The company however expects to do better during the current year, due to an improvement in both productivity and efficiencies. Accordingly, the company has decided not to cut back on the dividend and is in fact increasing it to 30 from 25 per cent last year.

Expansion and diversification plans are also underway. A new tyre plant with a capacity of 1.5 million tyres per annum is being set up. In the first phase, 569,000 tyres will be produced at a cost of Rs.130 crore. Diversification into other areas, namely hybrid and high-yielding seeds has already begun, and plans to set up research and testing laboratories and seed processing plants are on.

A project for manufacturing 7-ADCA and semi-synthetic cephalosporins, the latest range of life-saving antibiotics is also being undertaken. Exports have increased over 250 per cent this year, and the FoB value of foreign exchange earnings is Rs.52.63 crore.

The company is also planning a Rs.30-crore plant to manufacture flavoured milk and yoghurt.

Hindustan Lever

1:2 bonus; dividend up seven points; margins stagnant; downtrend in DAP made up for by performance of other divisions; biopolymers project commissioned

Hindustan Lever, living up to the good distribution image normally associated with FERA companies, has announced a 50 per cent bonus (1:2) along with improved results for the year ended December 1990.

Higher volumes in soaps, steady growth in detergents and higher average price realisations/tonne for personal products and tea all served to offset the impact of lower volumes in the diammonium phosphates (DAP) division. This was due to constraints in availability of imported phosphoric acid which took its toll on all DAP units in the industry. Overall sales went up by 19 per cent to Rs.1,201.15 crore while margins at operating and gross levels remained static at 12.2 per cent and 10.7 per cent respectively. Export turnover grew by 24 per cent to Rs.162 crore. (While earnings in foreign exchange were Rs.149.79 crore, value of imports on CIF basis was Rs.72.35 crore.) Exports mainly comprised branded consumer products including toothpaste, cosmetics and agricultural products.

Hindustan Lever *(Rs crore)*

Year Ended	31 Dec '90	30 Dec '89	% change

Net profit	65.85	54.97	+20
Equity capital*	93.32	93.32	
Reserves & surplus	162.06	135.20	
Dividend (%)	42.00	35.00	
Market price: Rs			
Current	164.00	(4 Apr '91)	
1990: High	173.00		
Low	101.00		

Equity capital after the 1:2 bonus will go to Rs.139.98 crore

On an equity base of Rs.93.32 crore, the company earned Rs.7.06 per share against Rs.5.89 last year and will distribute Rs.4.20 per share as dividend as against Rs.3.50 last year. Payout at 60 per cent remains almost the same.

The company has made a provision of Rs.8.03 crore in respect of retirement pensions on the basis of actuarial valuation. It has also provided for liability on account of social security and rehabilitation schemes for employees' voluntary retirement. All this has been done without discounting the cash outflows of future years.

Had they continued accounting for these items on the basis followed in earlier years, the profit before tax would have been higher by Rs.12 crore. Under contingent liabilities, net claims made against the company not acknowledged as debts amount to Rs.36.89 crore. Upto 31 December 1982, such items which were provided for have been retained and carried forward, pending formal disposal of the company's cases.

During the year, the Functionalised Biopolymers project at Pondicherry was commissioned. This will cater to the needs of the paper, textiles and foods industry. While the LAB project will not take off till the supply of raw material is resolved, steps are being taken to implement the 30,000 tpa synthetic detergents plant at Andhra Pradesh. Expected to be commissioned this year are two 30,000 tpa plants for manufacturing toilet soaps, at West Bengal and Pondicherry. The first phase of the 10,000 tpa plant is also expected to be commissioned in the current year.

While implementation of all these projects will exert cost pressure on margins in the current year, the full impact in terms of contribution to turnover and profits will be felt only from the next year onwards.

Moving between a low of Rs.52 and a high of Rs.212 in the last five years, the scrip now quotes at Rs.164 (cum bonus as on 4 April 1991) discounting earnings 23 times.

Mangalore Chemicals & Fertilisers

Dismal results, main products lose out in sales; company trying hard to gather funds for rehabilitation

Mangalore Chemicals & Fertilisers (MCF) has produced dismal results for the 18 months ended September 1990. On an annualised basis, sales have come down by 33 per cent, interest cost by 27 per cent, while both employee costs and depreciation have increased by 31 per cent. Gross profit has shown a marginal growth of 7 per cent. Whilst poor results have caused the company to withhold dividend, the equity capital has jumped fourfold from Rs.12.45 crore in March 1989 to Rs.59.72 crore for September 1990. The increase has been due to the issue of 17.2 million equity shares of Rs.10 each at par and 30 million shares of Rs.10 each towards conversion of loans and outstandings.

Mangalore Chemicals & Fertilisers *(Rs crore)*

Year Ended	30 Sept '90 (18 months)	31 Mar '89	% change (annualised)
Gross sales	225.18	223.95	-33

Market price: Rs			
Current	13.00		
1990: High	23.00		
Low	10.00		

The company's main products are urea, diammonium phosphate (DAP) and ammonium bicarbonate (ABC). There has been a drastic reduction in the capacity utilisation of both urea (down by 24 per cent) and DAP (down by 38 per cent) causing a commensurate drop in production. Raw material costs are also down by 26 per cent on an annualised basis.

Whilst urea production fell due to a variety of reasons including the failure of the urea plant HP condenser, DAP production suffered a set-back due to the non-availability of imported phosphoric acid. This the company blames on changes in government policy. Even though ABC production saw a 5 per cent increase at 3,084 mtpa, according to statements in the annual report, production was affected due to problems with the main plant.

Karnataka accounts for 70 per cent of the total sales of urea and DAP, both of which the company markets under the brand name *Mangala*. The company is yet to be declared sick and is trying hard through further issues of equity shares and loan packages from financial institutions to obtain funds for the maintenance of its various manufacturing facilities. Between them, IDBI, IFCI, ICICI and IRBI have already sanctioned rupee term loans of Rs.23.40 crore to the company. Once again, MCF is trying to obtain a collective loan of Rs.6.60 crore from IDBI, IFCI and ICICI for the replacement of its HP carbonate condenser.

The company intends making yet another issue of 15 million equity shares of Rs.10 each, on a rights basis to its shareholders and an issue of 300,000, 13 per cent, redeemable preference shares of Rs.100 each. Of the present share capital, 25 per cent is held by government companies, banks, insurance companies and financial institutions. The UB group, chaired by Vijay Mallya, holds 16 per cent of MCF's equity capital.

Even though the total inventory of fertilisers has been brought down by 146,000 mt over the previous year's figures, the company has high inventory carrying costs. As per auditors' notes, provisional claims made by the company towards inventory carrying costs for Rs.28.6 crore, are pending acceptance.

Interestingly, last month, the UB group offered to buy back the shares of MCF from the existing shareholders at par.

TRENDS

Blow Plast

Blow Plast Ltd has announced very good results for the six months ended 31 January 1991. Net sales and gross sales increased by 21 and 241 per cent, respectively, over the corresponding period last year. Net profits rose steeply by 337 per cent and stand at Rs.1.08 crore as against Rs.0.43 in the corresponding period last year and Rs.1.08 crore for the full year ended July 1990. According to K. Dasgupta, general manager, finance, of Blow Plast Ltd this excellent performance can be attributed to several factors. The first of these is the good performance and interim dividend announced by VIP Industries in which Blow Plast has a more than 45 per cent share. The second is a rise in volumes due to larger rural penetration. Streamlining of the market is the third. And cutting down of discount wars of the past the fourth. The net profit margin for the period is 3.21 per cent compared to 0.89 per cent for the corresponding period last year and 1 per cent for the full year 1989-90. The company expects to better its performance in the next six months.

Business India

period July to December 1990. Compared to the first six months of the previous year, ended 30 June 1990, turnover has increased by 79 per cent. Gross profit has increased by 62 per cent from Rs.2.93 to Rs.4.77 crore. Depreciation shot up by 117 per cent and net profit has upped by 58 per cent from Rs.16 crore to Rs.2.54 crore.

Even though turnover has increased substantially, net profit margins have fallen from 23.77 to 21.07 and gross profit margins have declined from 39.42 to 43.53.

The company is engaged in information technology, financial services and software exports. Early this year the company made an issue of convertible debentures which aggregated Rs.12.65 crore from the public and Rs.8.4 crore, including a 15 per cent over subscription, from the rights issue. The company's current share price is Rs.36 and the scrip is being actively traded discounting its earnings by around five times.

Govind Rubber

Govind Rubber Ltd, the manufacturer of rubber tyres and tubes, has posted encouraging results for the six months ended September 1990. Sales increased by 25 per cent while gross profits shot up by 115 per cent. Net profits also increased by nearly eight times. There is no tax liability expected for the current and the next year.

Since the second half is considered to be the busy season for the industry, the results are expected to be even better.

The whole year's turnover is expected to be around Rs.60 crore. Exports for the six months under review went up from Rs.1.47 to 3.52 crore and is expected to touch Rs.8 crore by the end of this financial year. Annualised EPS has shot up from Rs.0.99 to Rs.8.18 on a Rs.10 share during the same period.

RIGHTS ISSUE

Alkyl Amines Chemicals

The Bombay-based Alkyl Amines Chemicals Ltd (AACL) is setting up a new plant at Patalganga to manufacture ethylamines and methylamines. This expansion-cum-diversification, expected to cost Rs.15.5 crore, is being set up in technical collaboration with Acid Amine Technologies Inc of the US.

To part finance the project and to meet other capital expenditure, the company is making a simultaneous rights issue of partly convertable debentures (PCDs) and non convertible debentures (NCDs). The company is offering 332,520 14-per-cent PCDs of Rs.145 each, aggregating Rs.4.82 crore, and 110,000 14-per-cent NCDs of Rs.100 each, aggregating Rs.1.10 crore. The company proposes to issue six PCDs for every 25 equity shares and one NCD for 12 equity shares held.

The PCDs will comprise of two parts. Part A of Rs.45 will be converted into one equity share of Rs.10 at a premium of Rs.35. The conversion will take place at the end of six months from the date of allotment. Part B of Rs.100 is nonconvertible and will be redeemed in three annual instalments of Rs.30 and Rs.35 at the expiry of sixth, seventh and eighth year respectively, from the date of allotment of the PCDs. The NCDs will be redeemed together with a redemption premium of Rs.5 per NCD at the expiry of the seventh year from the date of allotment.

The company was promoted in 1979 and had teething trouble for eight long years. Now it seems to be on its way to recovery with net sales of Rs.8.70 crore and net profit of Rs.1.53 crore for March 1990. Result for the ten months ended January 1991 have shown a growth in both sales and profit at Rs.11.01 and Rs.1.46 crore respectively.

AACL is managed by the Kotharis who also run DSP Financial Consultants Ltd.

According to AACL's chairman Yogesh Kothari, "the company has been making profits since 1985 and has even declared dividends in the last two years."

AACL's existing capacity for ethylamines and methylamines is 3,200 million tonnes per annum (mtpa). Once the new plant goes on stream in September 1991, this will increase to 8,500 mtpa. The main strength of the plants is their combined capacity to produce both ethylamines and methylamines.

The company has recently started exporting its products. "Exports for this year were a mere Rs.20 lakh but should double next year," says Kothari.

At a capacity utilisation at 85 per cent the existing plant has a growth rate of about 25 per cent. The new plant will add around Rs.5 crore to turnover according to Kothari.

The current issue will increase the equity capital only marginally by Rs.34 lakh from the present Rs.1.33 crore. But for the shareholder it will mean getting a share for Rs.45 against a current market value of Rs.120.

RESULTS ANNOUNCED

Sandvik Asia

Sandvik Asia, a FERA company and a leading carbide tools manufacturer has turned in good results for the year ended December 1990. On a turnover of Rs.61.14 crore (up 23 per cent), Sandvik has posted a gross profit margin of 19 per cent (up by 5 percentage points). On an equity base of Rs.5.78 crore, the company has doubled its EPS to Rs.87.20 (face value: Rs.100) and stepped up dividend by 5 percentage points to 30 per cent. Payout has been relatively conservative at 34 per cent as against 57 per cent in the previous year. The scrip quotes at Rs.1,325 (2 April 1991) which discounts the current earnings 15 times.

E. Merck (India)

E. Merck has announced disappointing results for the year ended December 1990. The good news is that it has simultaneously come out with a 1:2 bonus issue proposal. Though sales rose by 28.5 per cent to Rs.84.12 crore, margins have suffered with gross profit margin declining by 2.5 percentage points to stand at 4.6 per cent. This has been attributed to higher input and interest costs and a decline in the value of the rupee. On an equity base of Rs.5.94 crore, the company has earned Rs.3.27 per share and will distribute Rs.2 per share as dividend. This is against last years EPS of Rs.5.24 and dividend of Rs.2.50. The scrip quotes at Rs.95 (2 April 1991), which gives a P/E ratio of 29.

Asea Brown Boveri

For the year ended December 1990, ABB's turnover has risen by 11 per cent to touch Rs.228.38 crore while profit margins at gross and net levels have also increased. Gross profit has gone up by 67 per cent to Rs.16.64 crore, yielding a margin of 7.3 per cent up by 2.5 percentage points. On an equity base of Rs.9.86 crore, ABB has earned Rs.8.64 per share of face value Rs.10. This is against Rs.5.59 in the previous year. The scrip now quotes at Rs.147.50 (3 April 1991) discounting these earnings 17 times.

Ponds (India)

This Unilever group company, a dominant player in the health care industry, has improved its performance for the year ended December 1990. Ponds earned a gross profit of Rs.9.55 crore on a turnover of Rs.125.45 crore, posting a margin of 7.6 per cent. On ex bonus equity of Rs.10.01 crore, the company has both stepped up EPS to Rs.7.56 from Rs.6.05 and has maintained its dividend at Rs.3.75 per share. This amounts to an EPS of Rs.11.33 and a dividend per share of Rs.5.60 on cum-bonus equity. Payout in line with a better bottomline has eased to 50 per cent from 62 per cent. The scrip is now quoting at Rs.192.50 (3 April 1991) giving a P/E of 25.

IN BRIEF

Jayant Vitamins is in the red. For the six-months ended December 1990, the company has notched a gross loss of Rs.98.54 lakh against a reverse of Rs.29.65 lakh in the corresponding period last year.

Bhopal Sugar plans to re-enter the capital market with a premium equity shares at issue of Rs.20 per share aggregating Rs.2.10 crore.

Goetze (India) is going in for an expansion cum diversification programme for which it plans to issue debentures on a rights basis in the last quarter of 1991.

Escort's total turnover for the year ended March 1991 is estimated at over Rs.974 crore with pre-tax profit expected to increase by 53 per cent.

Polar Latex is slated to begin commercial production shortly. Its trial runs have been highly successful.

Shreyans Paper Mills plans to issue partly convertible debentures on a rights-cum-public basis to part finance its proposed project for the manufacture of cotton yarn.

Modi Xerox has proposed an interim dividend of 10 per cent for the year ended March 1991.

Vadilal Industries is now diversifying into the manufacture of machines for the dairy industry and turnkey projects for refrigeration plants.

Indofil Chemicals is likely to post a net profit of Rs.4.50 crore for the year ended March 1991.

Swaraj Mazda's sales have dropped marginally to Rs.39.07 crore for the six months ended September 1990 as against Rs.38.66 crore for the same period last year.

MICO has maintained its dividend at 14 per cent for the year ended December 1990.

Brooke Bond has proposed to issue bonus shares in the ratio of 1:3.

Reckitt & Colman have proposed a dividend of 47.5 per cent for the year ended December 1990.

Arihant Fabrics has declared a 25 per cent interim dividend for the year ended March 1991.

KEC International, an RPG group company, has secured an order from the North Eastern Electric Power Corporation for supply of towers and erecting transmission lines from Baipara to Bongaigaon and from Kathalguri to Mariani, all in Assam. The estimated value of these orders is about Rs.38 crore.

Tata Kothari Steels promoted by Kothari Industrial Corporation of the D.C. Kothari group is setting up a Rs.50 crore pig iron manufacturing project in association with Tisco, for which it will tap the capital market.

Andhra Pradesh Power Tools is setting up a Rs.100-crore power tools project in Andhra Pradesh, and is likely to go public in July this year.

Buy NHB 9% Capital Bonds.
It offers 100% tax exemption plus handsome returns.

Tax exemption plus growth. NHB 9% Capital Bonds have benefits in store for you - and your Capital.

- Your investment earns 9% per annum payable on a six-monthly basis.
- Or, you can opt for advance payment of interest at the rate of 9% per annum for the full period of 3 years on a discounted basis, at the rate of Rs 240 per Rs 1000 invested payable 3 months from the date of investment. This takes into account the interest for the intervening period of 3 months in full - so, you do not lose interest even for a single day.

Long-term Capital Gains from land, buildings, shares, securities, jewellery, etc?

NATIONAL HOUSING BANK
YOU GAIN THE NATION GAINS
9% CAPITAL BONDS

- Exemption from Capital Gains Tax U/S 54E of the Income Tax Act, 1961.
- No deduction of tax at source on the interest earned.
- Exemption up to Rs 5 lakhs from Wealth Tax U/S 5(1) (xvie) read with 5(1A) of the Wealth Tax Act, 1957 along with other eligible assets.
- Exemption of interest U/S 80L of Income Tax Act, 1961.
- Remittance charges borne by NHB.
- Available at par throughout the year at more than 150 outlets all over the country.
- As the apex housing finance institution in the country, our sole concern is shelter. To make more funds available for housing. So, here's something equally satisfying about this investment - it will go towards helping more and more people acquire a home of their own.

Application forms available and accepted at:

STOCKMARKET REVIEW

A puzzling oddity

(For the period 25 March 1991 to 6 April 1991)

	6/4	23/3	per cent change over fortnight	year
BSE Sensitive Index	1218.12	1171.59	+4.0	+58.0
BSE National Index	610.22	591.18	+3.2	+46.1
Vol (Rs.cr) for fortnt. ended	76.18	91.50	–16.7	–35.3

The rise in the stockmarket over the fortnight under review continued to be at odds with the country's economic situation and with analysts' expectations. With turnover figures oddly in contrast with the market's movement, things appeared more puzzling.

For those on the trading floor, it was a piece of magic resulting from an individual's actions. This person, who had been a big buyer of ACC when it had crossed Rs.1,600 last September, has apparently received a huge dollop of funds from some cash-rich public-sector institution and has been investing steadily in shares likely to perform well this year, such as ACC and Raymond Woollen. The amounts, mentioned in hushed tones, exceeded Rs.100 crore and the cash-rich institution was rumoured to be an oil producer.

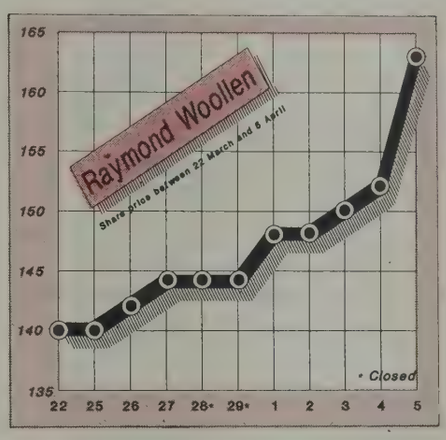
Brokers' experts. Given the expertise of brokers in the "after this, therefore because of this" sort of explanations, and given that the individual concerned was trading via proxies, the reason was impossible to verify or dismiss. Nevertheless, it explained why a small number of shares with an expected good performance rose sharply while the overall trading volume was down. This explanation also accounted for the bulk of activity being in scrips with large capital bases (such as Telco) where large block purchases by individuals are possible.

To economists in air-conditioned offices, the situation was a result of the unexpected crash in call money rates in March. This had led mutual funds to withdraw from the call money market and place them in stockmarkets instead. Also, the equity linked saving schemes (Elsies) raised a healthy Rs.525 crore (but below the institutional expectation of Rs.1,000 crore and even below the market's expectation of Rs.600 crore). However, enquiries revealed that mutual funds had not been actively investing after the close of the financial year — which is when the market took off. The Unit Trust was, in fact, reportedly selling.

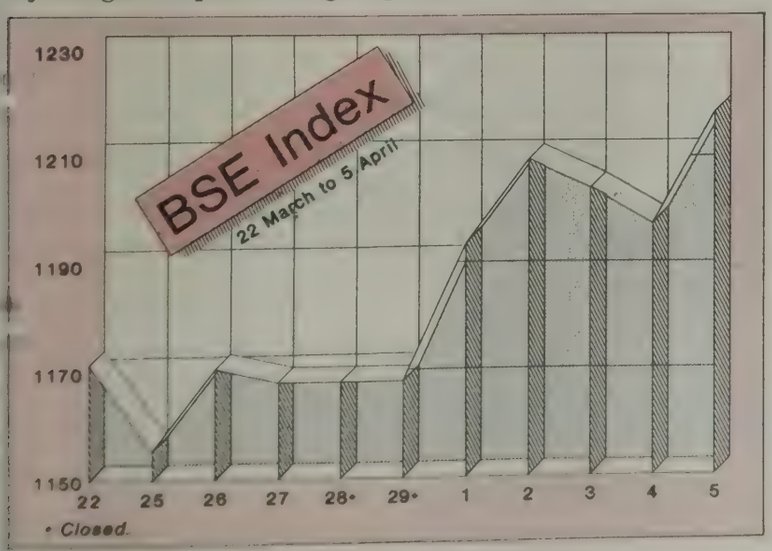
To the eagle eyed, it was all a matter of the "April effect". According to their theory, the market zooms every April because it marks the start of a new financial year. The reason for such April cheer is that most investors complete their tax-planning in March and are reluctant to take new purchase positions for fear of incurring unexpected losses while still in the old financial year. Come the new year, and there are still 12 months to plan taxes. So one can proceed with buying.

Has this occurred every year? In 1989, the BSE Sensitive Index had risen by 67 points in April to 780. In 1990, it had also risen, but moderately, by 15 points to 795. Of course, the economic situation and the budget had been more favourable in each of those years.

In fact, the unfolding of the economic situation continued to reveal a grim situation. Although the RBI modified its harsh import curbs, this led to confusion. Most corporate results that were announced showed that the second half of 1990 was dismal even though the year-by-year-comparisons made were favourable.



Volatile scrips. Among the unusually active scrips was Raymond which rose sharply over the fortnight (*see chart*). The scrip was quoted in kerb for the first time this year. Tata Locomotive was also firm on good year-end performance expectations as was GSFC. The former rose to Rs.201.25 from Rs.172.50 (+16.7 per cent) while GSFC rose to Rs.195 from Rs.177.50 (+9.9 per cent). Century Textiles and ITC were also firm on bonus expectations. On the other hand, Tata Steel which rose to Rs.166 from Rs.158.75 and Reliance which rose to Rs.127.50 from Rs.122.50 merely kept pace with the market. Bajaj Auto was another moderate gainer at Rs.590, up from Rs.575 (+2.6 per cent).



In the cash list in Bombay, Jindal Strips rose sharply to Rs.230 from Rs.195 (+17.9 per cent). Another Jindal group company, Saw Pipes rose to Rs.79 from Rs.63 (+25.4 per cent) following a positive report in a financial daily. Most of the cash activity was, however, concentrated in cement and cotton textile shares.

Meanwhile, the BSE announced the delisting of 28 companies for three days from 8 April to 10 April because of the companies' not having submitted their six-monthly 30 June 1990 results. The BSE's action came too late, apart from its efficacy being dubious. Since 10 of the 28 companies are investment companies, they are possibly tax-shelters for their promoters.

The fortnight ended with stock prices unaffected by rumours of the raising of interest rates in the credit policy to be announced on 19 April. Most brokers were confident that this was not another bubble in the making. Unfortunately, most brokers had felt the same way last October. ■

INVESTCARE

Exclusive service

After the launch of its 'Investcare' services in Bombay early last year, ANZ Grindlays are now offering their expertise to Calcutta stockmarket afficionados. Says Shakti Saran, manager, Investcare, "Investcare is the most comprehensive personal portfolio management service in the country."

The gamut of services offered ranges from buy/sell advice to applying for new issues on behalf of the client, from keeping the investor informed about the daily market movements to even advancing money against securities.

Stressing on professionalism and exclusivity, Lance Cooke, general manager personal banking says, "Our service is aimed at top market personnel. It is not for the masses." At present, Investcare

Cooke: not for masses

manage portfolios aggregating Rs.6 crore, though the actual turnover is not specified. The service handles only individual portfolios.

Client satisfaction. At the time of the launch, the minimum value of the portfolio was Rs.1 lakh which has since been revised to Rs.5 lakh. Plans are on to increase the limit. Justifying this move Cooke says, "This is a very paper-intensive service and we want to do justice to our clients."

Elaborating on the service, Saran emphasises quality of production and says that all the technical data is developed in-house. These include the software packages on share price movements and company fundamentals. Clients use them to get information in the form of a monthly newsletter or weekly/quarterly valuation reports, etc.

Investcare Calcutta will run along the lines of its Bombay counterpart. Says Rajesh Malkani who is in charge of the Calcutta operations, "The minimum value of the portfolio we accept will be Rs.3 lakh. Our turnover will depend on market conditions."

Portfolio management services are here to stay. Now, it is up to performance and client satisfaction to determine the success of the service. Investcare already faces competition from State Bank of India's Personal Banking Division and the popular Vysya Bank.

However, Cooke is confident of Investcare's analysis of the market and its operations. "We are ready to promote our services all over India," he says.

■ MANALI RESHAMWALA

SHARE OWNERSHIP

A middle class phenomenon

Sponsored jointly by the Securities & Exchange Board of India, SBI Caps, Canfin and BSE, a survey on Indian shareholders was carried out in mid-1990. Around 60,000 interviews were conducted. Compiled and presented by L.C. Gupta, director of the Society for Capital Market Research and Development, the study highlights features that could be of use to issue managers who advise clients on the choice of an instrument and also to investment bankers who devise an ideal mix for their clients. It could also help new policy formulation and regulation.

The study estimates that there exist around 3.8 million households owning shares and 9 to 9.5 million shareholders. This covers only about 2.5 per cent of Indian households. In terms of geographical spread Gujarat topped the list, followed by Rajasthan, Maharashtra, Kerala and Karnataka while Bihar and Assam were at the bottom.

Share ownership has been more a middle class phenomenon in the last decade, participation being from nearly 40 per cent of the educated middle and upper class households. Also, two-thirds of today's shareholders have entered the stockmarket for the first time after 1980; a higher proportion of them are from among the lower middle class and the younger people.

The extent of diversification was found to be grossly inadequate in a majority of shareholders, exposing them to a considerable unsystematic investment risk (chance element) which in turn leads to a distinctly higher incidence of unsatisfactory investment experience. This was true also for small sized portfolios. The survey has defined diversification in terms of number of companies rather than an industry-wise classification.

Experiences on investment performance were found to be systematically related to a number of inter-related factors like income level, occupational class and educational level. Contrary to common belief, a majority of shareholders earn no more than just about a reasonable rate of return on their investment.

In terms of risk perceptions, bank fixed deposits and various UTI/Mutual Fund schemes were perceived to be far safer than company deposits/shares/debentures. Interestingly, corporate debt securities (convertible debentures (CD), non convertible debentures (NCD) and company deposits) are nearly as risky as equity shares. Incidence of ownership of various kinds of financial assets reveal that LIC policies, national savings certificates, bank fixed deposits, employer maintained provident funds and equity shares rank topmost in the above order.

Number of companies in share portfolio of households

No. of companies	Distribution of share portfolios (%)
1	13.1
2	11.9
3	9.9
4-5	17.4
6-10	18.1
11-20	13.9
Over 20	15.7
Total	100.0
No. of households analysed	2844
Media for share portfolios = 4.7 companies	

In the investment area, demand for NCDs is phased out while demand for equity seems fairly strong and higher than before. Despite the image of better safety and higher return than fixed deposits, UTI/Mutual Fund schemes have not been popular among the lower income groups as among the higher income groups. It was found that the bulk of the investors who are shareholders do so for a long term, say, for periods of over three years. It is the share traders as distinct from shareholders, whose excesses lead to volatility in the stockmarket. This is one area that needs reform.

THEY'D ALWAYS SIT HERE,
THEIR OLD BONES SOAKING THE SUN,
PLAYING THE SAME GAME.
OURS WAS A LITTLE DIFFERENT.
YOU WERE SHY.
AND I KEPT RUNNING AWAY.
I WONDER SOMETIMES.
HOW IS IT BOTH OF US WON.

You're looking at the most advanced

The Release 3.1:
Because you want your Business Plan to be just perfect.

Yes, this is what you've always wanted:

An interactive graphical environment which gives you the ability to mix text, graphics and numbers – within the spreadsheet.

Now, see what you can get out of it:

Spreadsheet publishing capability with a combination of fonts, colours, lines, borders and shading.

All in a WYSIWYG mode.

Graphical user environment with full mouse support.

High impact Business Graphics.

Graphic drawing and editing tools with 'Zoom' facility.

Application development power through extensive macro command language.

Fully programmable Lotus Add-in-Toolkit for Release 3.1.

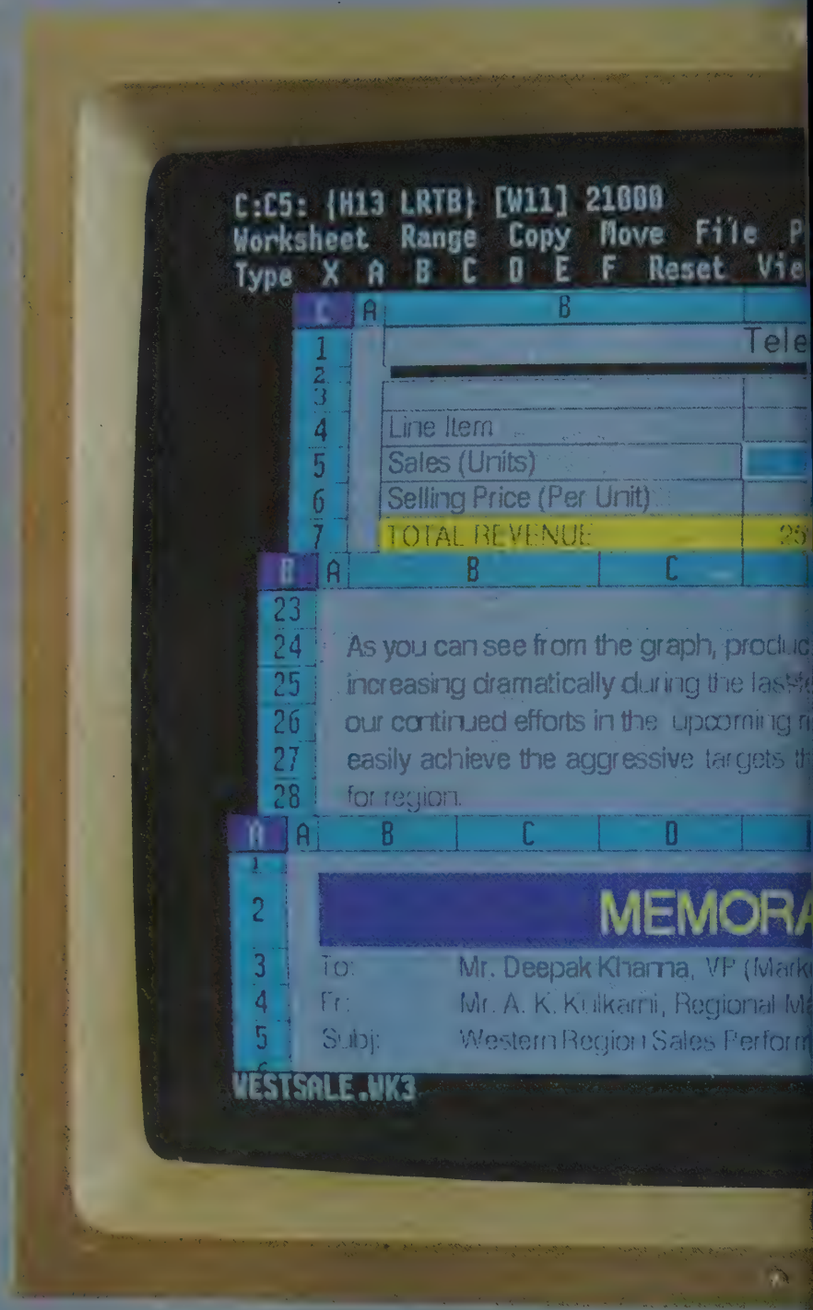
What's more, Release 3.1 is compatible with DOS 3.0 or higher and DOS with Windows 3.0.

In addition, Release 3.1 offers you superb analytical capabilities like 3-D worksheet, file linking and powerful Relational Database capabilities with access to external databases.

All designed to help you be more organised, more responsive and more competitive.

And now the "Windows of Opportunity" special scheme.

TCS has an attractive scheme for organisations which buy Release 3.1 in large numbers.



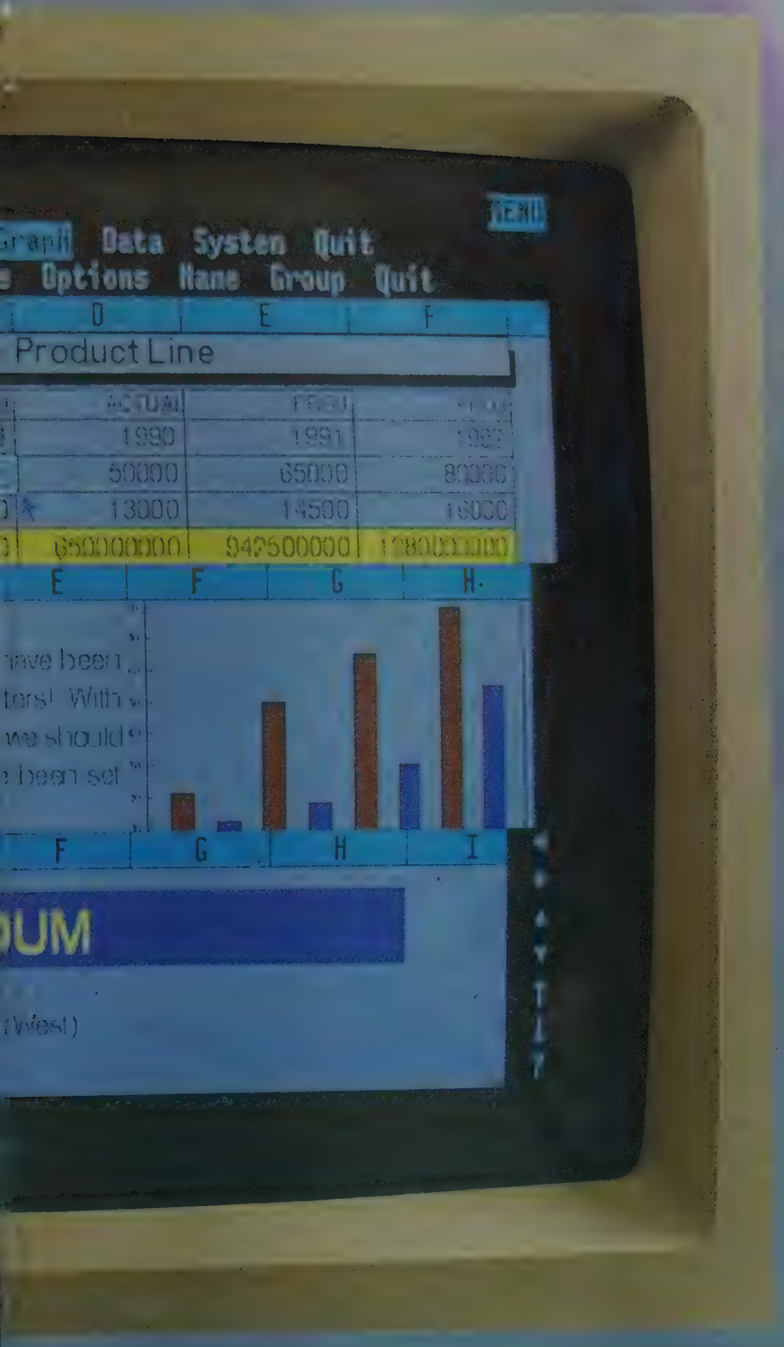
The "Windows of Opportunity" special scheme includes:

Warranty services, support and training.

Upgradation to future releases of Lotus 1-2-3.

Valuable information updates on Lotus products – through seminars and newsletters.

An opportunity which can prove very beneficial for you – and your Company !



Lotus 1-2-3

The spreadsheet that gives you a Business Plan

TATA CONSULTANCY SERVICES. AIR INDIA BUILDING, NARIMAN POINT, BOMBAY 400 021.

graphical spreadsheet in the world

A demonstration of TCS' commitment to the advancement of Information Technology.

TCS launched the Release 3.1 in India – just three months after its introduction in the U.S.A. !

Yes, as India's leading company in Information Technology, TCS is committed to providing the Indian user with the latest and best in software.

The Release 3.1 is the most recent example...

CARVING OUT A REPUTATION...

WITH SUCCESS TO MATCH. STI

STI forged together superior technology and motivated people to become the No.1 in precision steel tubes both in quality and service. Its dynamic diversification in cold rolled strips has added promising dimensions.

STI Biplus has, within a span of three years, become the market leader in copper coated tubes.

STI International Limited is going strong in global marketing.

Steel Pipes of India at Bangalore adds to the portrait of success.

Hand in hand with two world giants, Kobe Steel Limited and Tokyo Boeki Limited, the successful joint venture in Singapore, Steel Tubes of Singapore Pte. Ltd. has brought laurels to Indian enterprise and technology on the highly competitive international scene.

That's Steel Tubes Group – where constant expansion and growth is opening ever-new horizons.

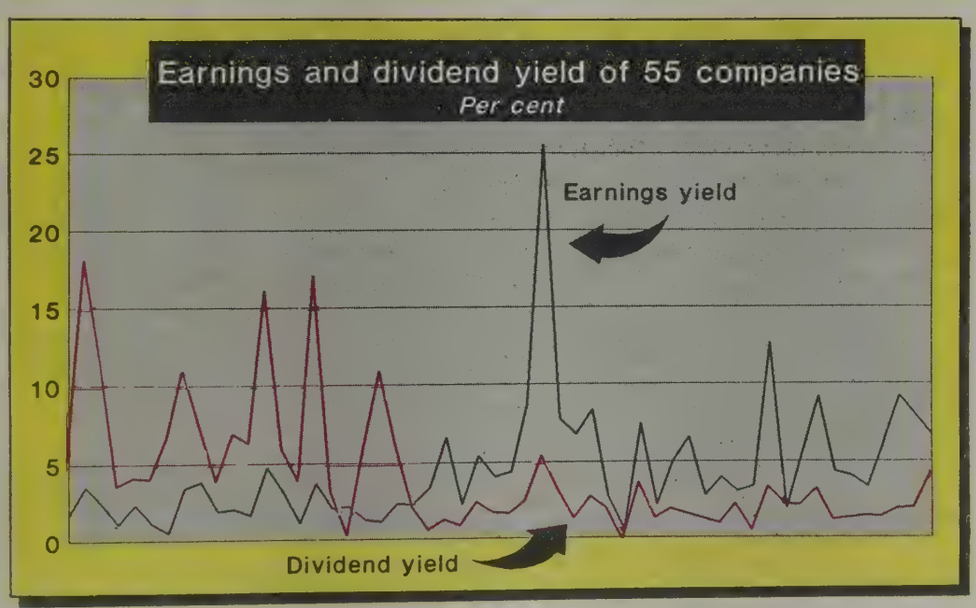
SHARE PRICE DETERMINANTS

Earnings or dividends?

When Tata Locomotive announces its results in the third week of June this year, two figures will be keenly awaited. One is its dividend, which is expected to be 35 per cent, and the other its earnings, expected to be Rs.12 per share (on expanded capital after its recent rights issue). The effect of these two figures — more than anything else, including cash earnings or production figures — will determine the company's share price. Of course, the scrip will later move with the market 'technical factors', with company-specific factors (such as new product introductions or labour problems, if any) and with ongoing economic trends. But in the short-run, at least, earnings and dividends are usually considered the most solid basis for determining the price of any share.

But which factor — earnings or dividends — matters more for stock prices? Herein lies a fierce controversy. For fundamental analysts the debate tilts in favour of earnings, especially cash earnings. To such analysts, earnings per share are the shareholder's true profits from his investment and that is what should be valued. Dividends, on the other hand, are decided at the management's discretion and may have nothing to do with a share's true worth.



Not so, say the dividend loyalists. Although dividends are discretionary, managements do not set them at random from year to year. Most companies tend to have target payout ratios (the amount out of earnings that they will pay to shareholders) which they vary from year to year depending on their assessment of future performance. For example, when the fertiliser industry went through a bad patch in 1987-88 thanks to a bad monsoon in 1987, the southern fertiliser giant, SPIC, maintained its dividend at 25 per cent in spite of lower earnings. They were thus able to convey to their shareholders that current earnings did not show a true picture of future worth because the situation would be reversed soon. It appeared that the market responded to this, because its share price stayed steady after the results were announced — although other factors may have been at work here, especially expectations about the results versus the actual results.

Misleading shareholders

It is true that stock prices respond to dividend announcements. It is also true that this very fact is misused by some managements. Companies that wish to raise fresh money from the public will often pay a high dividend in order to mislead shareholders about the firm's prospects — a sign both of the importance of dividends to share valuation and to the problem of using it as a guide to every share's price.

In sum, to the extent that current earnings are only an imperfect guide to future earnings, dividends ought to be a more valuable guide to market prices, especially for firms with unpredictable earnings patterns.

According to analyst Vallabh Bhansali, the key, therefore, is to understand the combination of quality of management and stability of earnings. For multinationals like Colgate which have both, either dividends or earnings should be good indicators. For companies like Essar Gujarat which are expanding rapidly, dividends might be a better guide. But for manipulative companies which use dividends to mislead the market, earnings ought to be a better guide. In other words, says Bhansali, yes, dividends are better in most cases but *caveat emptor:* let the buyer beware.

An analysis of 56 larger companies confirms this view. Their earnings and dividends were compared to their stock prices on a random day (14 November, 1990). The companies chosen included all those on the forward list of the Bombay Stock Exchange which had announced their results for 1989-90 by 14 November and which had not declared losses. This ensured that market expectations of upcoming results would not be a significant influence on market prices.

The dividend yield, ie, dividend as a percentage of market price, was compared with the earnings yield of these companies. As the graph shows, while earnings yields vary greatly across the 56 companies, there is much less variation for dividend yields. A much-used statistical measure of variation called the sample variance confirms the eye-view. The variance for the dividend yield was 1.36 per cent while for earnings yield it was over 20 times higher at 30.3 per cent. In other words, the market felt more comfortable setting prices in relation to dividends than to earnings.

To test whether the difference narrowed for companies with more predictable earnings, it was decided to repeat the study for multinationals alone. This was because the bulk of the multinationals in the list were dominant in their fields and tended historically to have steady earnings from year to year.

The figures make for a striking comparison. The sample variance for earning yields drops off to 9.4 per cent while the variance for dividend yields is 1 per cent, bringing the disparity down to less than ten times.

However, the disparity still exists, and the message is clear. The market tends to use dividends as the appropriate base for valuing a stock rather than its earnings. But remember Bhansali's advice: *caveat emptor.*

■ RAFIQ DOSSANI with KALIKA DALVIE

Bombay Suburban Electric Supply

BSES is engaged in power distribution for 60 years. The new project at Dahanu is being implemented with technical assistance from NTPC and Development Consultants Ltd. Bharat Heavy Electricals Ltd will supply the major plant and equipment for the project which is expected to be completed by the end of March 1995.

BSES	
Issue opens	: 22 April 1991
Size of the issue	: Rs.100 crore
To Indian public	: Rs.29.44 crore
Instrument	: Fully convertible debentures of Rs.125 each for cash at par
Promoter	: A professional group headed by M.L. Shishoo, chairman and managing director of BSES
Project	: To set up two power generating units of 250 MW each
Cost of project	: Rs.991 crore
Plant location	: Dahanu, dist Thane in Maharashtra
Listing	: Bombay, Ahmedabad, Bangalore, Calcutta and New Delhi

The total project cost is Rs.991 crore. The forthcoming rights-cum-public issue of fully convertible debentures is expected to raise Rs.100 crore. Each debenture of Rs.125 each will be converted into five equity shares of Rs.10 each, at a premium of Rs.15 per share, at the end of one year from the date of allotment. This, in effect, gives a conversion price of Rs.25 per share.

Turnover and net profit have grown at an annual average rate of 14 per cent and 22 per cent respectively over the last five years. For the current year ended March 1990, BSES posted a turnover of Rs.390.20 crore, earned Rs.10.29 per share (before statutory appropriations) and paid Rs.1.80 per share as dividend.

For the half year ended September 1991, turnover was Rs.223.64 crore while net profit was Rs.8.06 crore. The company expects to close the year with an earning per share of around Rs.14.

While the Dahanu plant is expected to go on stream by end March 1991, BSES's equity is going to balloon out to Rs.51.70 crore by July 1992. Will the bottomline keep pace? Well, the plus points lie in the fact that the present power demand in the company's licensed area is about 600 MW, which is expected to rise substantially during the construction period of the power project.

Also, electricity companies are allowed to revise their tariff rates once in every financial year to cover any shortfall in clear profit. However, BSES's biggest advantage is its distribution system which caters directly to end users rather than the state electricity boards. As a result they don't have to face problems of outstandings and collections.

Ambuja Foods

The Ambuja group is familiar to investors. In the last 15 months, investors have had opportunities to own shares of Gujarat Ambuja Proteins and Ambuja Agro Industries. Ambuja Foods (AFL) which went public in September 1989 provides another chance.

Engaged in the production of wheat products and ready-to-eat foods, the company has an installed capacity of 45,000 tonnes per annum (tpa) of wheat products and 3,000 tpa of ready-to-eat products at its factory in Kadi, Gujarat. The prospectus, however, gives no description of the products.

For the year ended March 1990, sales of Rs.2.54 crore and a net profit of Rs.10 lakh was recorded. A dividend of 11 per cent was declared. As against this, sales for the half year ended September 1990 has jumped to Rs.6.74 crore while net profit was Rs.66 lakh. On an equity of Rs.1.93 crore, the EPS for September 1990 works out to Rs.3.4.

The present debenture issue offers 388,900 debentures of Rs.135 to existing shareholders on a rights basis while the public issue component consists of 611,100 debentures. As per the terms of conversion, Part A of the Rs.50 debenture will be converted into five equity shares of Rs.10 each, at par, six months from the date of allotment. The conversion terms for the balance Rs.85 will be decided two years after allotment. A good marketing strategy, adequate availability of power and sustained raw material costs, will determine the future success of the company.

Ambuja Foods	
Issue opens	: 18 April 1991
Size of the issue	: Rs.8.25 crore
To Indian public	: Rs.4.57 crore
Instrument	: Fully convertible debentures of Rs.135 each bearing 14 per cent interest
Promoter	: Vijay Kumar Gupta
Project	: To increase the refining capacity of the edible oil unit, the solvent extraction unit and to put up a seed crushing plant
Cost of project	: Rs.16.67 crore
Plant location	: Jaipur, Rajasthan
Listing	: Bombay, Ahmedabad, Delhi, Calcutta, Madras

RCS Vanaspati Industry

RCS Vanaspati Industry Ltd is an existing profit-making company engaged in the manufacture of vanaspati under the brand names, Maharaja, Veena and Rama.

In 1971, this plant was part of the Ramuggar Cane and Sugar Co Ltd, but in 1984 S.S. Sharma, RCS Vanaspati's chairman, converted the division into a new company called RCS Vanaspati Industry Ltd. For the six months ended 30 September 1990, the company earned a profit (after tax) of Rs.64.99 lakh on a paid-up capital of Rs.78.97 lakh.

Recently an amount of Rs.189.30 lakh was spent on a modernisation-cum-expansion programme increasing the installed capacity from 32 to 50 tonnes per day. The company is now setting up a solvent extraction plant with an installed capacity of 60,000 tpa in its existing premises at Jaipur at an estimated cost of Rs.3 crore.

RCS Vanaspati Industry	
Issue opens	: 25 April 1991
Size of the issue	: Rs.2.71 crore
To Indian public	: Rs.1.96 crore
Instrument	: Equity share of Rs.10 each for cash at par
Promoter	: RCS Vanaspati Industry
Project	: To set up a solvent extraction plant with an installed capacity of 60,000 tpa
Cost of project	: Rs.3.01 crore
Plant location	: Jaipur
Listing	: Delhi, Bombay, Calcutta, Ahmedabad, Jaipur

Visaka Industries

Visaka Industries (VIL), a registered company in Hyderabad, currently manufactures and markets asbestos cement products. Commercial production began in 1985 with 100 per cent capacity utilisation in the first four months. A profit after tax of Rs.17 lakh was realised for the year ended December 1986 and a maiden dividend was also declared.

Turnover for the seven months ended October 1990 has already shot up to Rs.12.13 crore, while profit after tax rose to Rs.1.03 crore. The company now plans to take advantage of the boom in the textile industry by diversifying into the production of synthetic blended yarn.

For this VIL will employ the latest air jet spinning technology and import 10 twin air jet spinners from Murata, Japan. The trading house has agreed to buy back 25 per cent of the yarn produced.

The plant is expected to go on stream by March 1992 with a 100 per cent capacity utilisation within six months of operation. According to managing director, K.V. Ramaseshan the company hopes to maintain its EPS even on the enhanced equity of Rs.4.88 crore for the year 1992.

Diversification, to cost the company Rs.19 crore will be partly-funded through a public-cum-rights issue of convertible debentures. The public issue will consist of 69,000 fully convertible debentures of Rs.300 each. Of this, Rs.200 will be converted into ten equity shares of Rs.10 at a premium of Rs.10 at the end of six months. The balance Rs.100 will be converted into five equity shares of Rs.10 each, at a premium of Rs.10, at the end of a year from the date of allotment.

Currently priced at Rs.46, the conversion offer is attractive.

Visaka Industries	
Issue opens	: 23 April 1991
Size of the issue	: Rs.6.69 crore
To Indian public	: Rs.1.73 crore
Instrument	: Fully convertible debentures bearing 14 per cent interest
Promoter	: G. Vivekanand and Associates, APIDC
Project	: Diversification into the production of synthetic blended yarn
Plant location	: Nagpur, Maharashtra
Listing	: Bombay, Hyderabad, Madras

Tapuriah Steels

Tapuriah Steels Ltd (TSL) a steel castings manufacturer commenced production in June 1986. During its first ten months of production, the company made an operating profit of Rs.13.11 lakh on a turnover of Rs.1.78 crore. During the year 1989-90 TSL obtained a record turnover of Rs.4.35 crore.

The new project is meant to hike its capacity from 2,000 to 12,000 tpa by installing sophisticated machinery. A trial run is scheduled for June 1991. The estimated project cost is Rs.3.8 crore, of which Rs.3.4 crore will be financed through equity capital. The new issue will increase the equity base from Rs.24.50 lakh to Rs.3.64 crore.

Tapuriah Steels	
Issue opens on	: 24 April 1991
Size of the issue	: Rs.2.04 crore
To Indian public	: Rs.1.91 crore
Instrument	: Equity shares of Rs.10 each for cash at par
Promoter	: Janki Prasad Tapuriah
Project	: To increase installed capacity of steel castings from 2,000 to 12,000 tpa
Plant location	: Gujarat
Listing	: Ahmedabad, Bombay, Vadodara stock exchanges

Khaitan Hostombe Spinels

Khaitan Hostombe Spinels Ltd (KHSL), incorporated in 1984 as Khaitan Refractories Pvt Ltd is engaged in the manufacture of dead burnt magnesite.

KHSL's new products, special dead burnt magnesite (SDBM) are used for the manufacture of basic refractories and for fettling in furnaces used by the steel and cement industries and simultan clinkers (SC) is used for the manufacture of super duty refractories in core sector industries like cement and steel.

According to Ajay Khaitan, KHSL's managing director, "Quality SC will be produced by us for the first time in India and will also be an import substitute." The company has indigenously developed the technology to manufacture SCs. An MoU has been signed with Steeley Magnesia Products Ltd, UK, one of the leading manufacturers of SC, to ensure international acceptability for this product.

Sales has jumped to Rs.19.17 crore for March 1990. This has increased further at Rs.17.08 crore for the seven months ended October 1990. Net profit has been Rs.41 lakh and Rs.38 lakh respectively. The company has declared a 15 per cent dividend on only two occasions.

The present issue of Rs.12.46 crore will take the company's capital up to Rs.13.85 crore. It also means that 66 per cent of the total project cost of Rs.18.5 crore is being funded through the equity issue. Internal accruals make up only Rs.1 crore of the total project cost.

Khaitan Hostombe Spinels	
Issue opens on	: 23 April 1991
Size of the issue	: Rs.12.46 crore
To Indian public	: Rs.6.15 crore
Instrument	: Equity shares of Rs.10 each
Promoter	: Kanti Prasad Khaitan and Ajay Prasad Khaitan
Project	: Setting up a plant to manufacture special dead burnt magnesite, capacity 15,625 tpa, simultan clinkers, capacity 9,375 tpa,
Cost of project	: Rs.18.5 crore
Plant location	: Nainital, UP
Listing	: Bombay, Calcutta, Delhi, Kanpur

Chubb's Diamonds

Chubb's Diamonds Ltd's project will cost the company Rs.4.45 crore. Of this, 50 per cent will come from the public. The cost of the project also includes Rs.2.89 crore of margin money for working capital.

How well the company does will depend upon the revival of the diamond industry which is in the doldrums at present.

Chubb's Diamonds	
Issue opens	: 22 April 1991
Size of the issue	: Rs.2.22 crore
To Indian public	: Rs.2.04 crore
Instrument	: Equity shares of Rs.10 each for cash at par
Promoter	: Jagdishchandra C. Parekh
Project	: Setting up of a 100 per cent export-oriented unit in SEEPZ for manufacturing and export of jewellery
Plant location	: SEEPZ, Bombay
Listing	: Bombay, Ahmedabad, Calcutta

Note: EPS: This represents the earnings after tax for the full year divided by the number of shares outstanding. EPS half year: after tax earnings per share for six months taking into account announced half yearly profits. PE: ratio of market price to after tax per share. Yield: dividend as a percentage of market price.

- The leading merchant banker in the private sector
- Associated with several large and prestigious assignments
- Track record of introducing innovative products in the capital market
- Highly qualified and experienced team of professionals

YES, INDEED!

J.M. Financial – the merchant banker known for its innovations and dynamism.

Now Promotes J.M. Share & Stock Brokers Limited

J.M. Financial is a company that has repeatedly proved its capability in the financial sphere. The Company has numerous firsts and several successfully executed challenges to its credit. Today, J.M. Financial is well established in the merchant banking field in the country and is associated with several large and prestigious assignments to raise funds from both, Indian and overseas capital markets.

J.M. Financial offers its clients an extensive range of services through three major divisions:

■ **Merchant Banking Division**
Project finance, loan syndication, capital structuring and raising funds from the primary capital market are some of the main activities. During 1986-91, this division managed/marketed issues for its clients in excess of Rs. 5000 crores.

■ **Funds Management Division**
Advising corporate clients in mobilising and placing funds through the intercorporate deposit market, bill discounting market and secondary market of units of UTI and public sector bonds. Also in raising short term working capital funds from institutions/banks.

■ **International Operations Division**
Advising corporate clients in raising foreign exchange loans and also identifing overseas projects for Indian/overseas investors.

In keeping with its commitment to providing a complete range of financial services, J.M. Financial has promoted J.M. Share & Stock Brokers Ltd. (JSB) – a company which will engage directly or indirectly in the business of share and stock broking, finance broking, underwriting of securities including shares, debentures, etc.

Note: CD: convertible debenture; NCD: non-convertible debenture including debentures that were earlier partially convertible for which the conversion is over.
Debenture yield is calculated as a percentage of market price without adjusting interest due component. This can make a significant difference in actual return.
The fact that the debenture market is generally active can be surmised from the dates of last business done. Hence readers are advised to seek suitable professional advice before deciding.
All care is taken to ensure accurate and up to date information.

EXIM BANK
EXPORT-IMPORT BANK OF INDIA

EXIM BANK INTERNATIONAL TRADE RESEARCH AWARD 1991
in International Trade and related financings

THE AWARD

The objective is to promote research in International Trade and related financings by Indian nationals, at universities and academic institutions in India and abroad. The Award will consist of a sum of Indian Rupees Fifty Thousand and a citation.

THE ENTRY

Research work in International Trade and related financings leading to a doctorate from a university and equivalent academic institution in India or abroad is a prerequisite for eligibility of the Annual Award. EXIM Bank will also accept, as entries, theses by which doctorates have been obtained from January 1, 1987 to July 31, 1991. Last date for submitting entries is July 31, 1991.

Entry Forms available from:
Manager (Planning),
Export-Import
Bank of India,
Post Bag 16100,
Bombay 400 005,
India.

Two in a million

In spite of the large number of entries received for this Investor Contest (IC339), we have only two winners.

Scrips	Prices as on Friday 22 February 1991 (Rs.)	Prices as on Monday 25 March 1991 (Rs.)	Ranks
Castrol	225.00	242.00	2
Escorts	143.75	138.70	6
Hoechst	3,350.00	3,500.00	4
Orkay	28.00	27.75	5
Sesa Goa	173.75	192.50	1
Voltas	112.50	120.00	3

Given below is a new list of six scrips, and their closing prices on 5 April, 1991. Pick the share that you think will rise the most in percentage terms by 6 May, 1991 and rank it number one. Then choose the one that you expect will rise the second most and rank it number two. Then number three, and so on till rank six. It's as simple as that!

So, in this Investor Contest, you don't have to predict the price of shares; you merely have to rank the performance (in percentage terms) on the basis of the prices you expect each to reach on 6 May, 1991. You don't have to tell us either the prices or even the percentage changes you expect — only fill in the ranks from one to six.

Please note that if you assign the same rank to two scrips, then the following one should be ranked the next consecutive number. For example, if you rank two shares at number three, the next will be number four (in which case, of course, your last rank will be five).

Rules:

1. There is no entry fee.

2. The price mentioned last in the official quotation list will be taken as correct for purposes of calculation. If the stock exchange remains closed on the stated last day, the closing price on the prior day will be used.

3. Entries must be on the printed form given below. Any other entries will be disqualified.

4. Only one entry will be permitted per form.

5. Envelopes sent in should be marked Investor Contest. All entries should be sent to: Investor Contest, **Business India**, Wadia Building, 17/19 Dalal Street, Bombay 400 001, by 5 pm, 2 May, 1991.

6. Business India's decision on the winning entries is final and binding, and no correspondence in this regard will be entertained.

7. The contest is open only to residents of India. No employee (or any direct relation of an employee) of the **Business India group of publications** is entitled to enter the contest.

8. The prize of Rs.5,000 will not be carried forward if there is no winner. In the event that there is more than one winner, the prize will be shared equally.

Literary thriller

POSSESSION
By A.S. Byatt
Vintage, 1990. Distributed by IBD, Bombay, pp.510, Rs.150

One hesitates many many times before embarking on a book by an author described, by *Cosmopolitan*, as "the most consciously intellectual woman writer since George Eliot". Add to this the vague rumour that it's "something to do with Victorian poets" and one all but drops it and runs. But never having hated a Booker prize winner yet, one plunges in, and comes out dazzled.

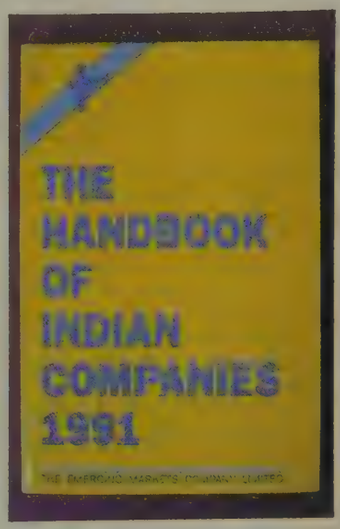
The basic framework of A.S. Byatt's *Possession* is simple enough. Roland Michell, nondescript literary researcher, discovers, among bills and laundry lists, rough drafts of letters written by Victorian poet Randolph Henry Ash to an unknown woman, also a poet. All Ash's previous correspondence has been urbane, witty, considerate, wise. But in these discarded drafts, Michell perceives a quality of urgency that has never been apparent in the poet's other correspondence. Michell's secret and obsessive preoccupation with the mystery of these letters, his meeting with Maud Bailey who shares this passion and joins him in the unravelling of the past, form the main story.

Subtle undercurrents

From the beginning one feels the "narrative curiosity" that drives Michell, and later Bailey, into digging deep even as they are uncomfortable about invading the privacy of a person long dead. One understands their childlike secretiveness in keeping their discovery hidden from the rapacious "biography business". What particularly amazes and delights are the subtle undercurrents that weave in and out of both the stories, the current one and the Victorian.

The relationship between Maud and Roland, too, though it develops in a thoroughly modern setting, complements the Victorian mystery they are unravelling. Maud, a tough, intelligent woman, hurt in the past because of her good looks, comfortably feminist; and the gentle, unsuccessful, un-macho Roland, grow to care deeply for the very things about each other that have in the past come in the way of their other relationships — an almost ideal relationship based on an acceptance of the other person that is separate from any socially dictated rules — a very modern, non-sexist relationship. To delight us, there comes the realisation that the two Victorian poets shared, briefly, this very same union of mind and heart, in circumstances that were much more difficult.

Roland's dull and depressing relationship with longtime girlfriend Val, every bit as suffocating as a bad marriage, finding an echo, amazingly enough, in the semi-lesbian relationship between Christabel La Motte and Blanche Glover, two determinedly independent Victorian ladies. This then is the strongest thread in the complex fabric of this story: a sense of being female, of the jealous guarding of the female individuality from real or imagined threats. Lamotte writes, in one of her letters, of sending some of her poems to a famous, though tantalisingly unnamed poet of the time. And receives this reply that all of us, male or female, will recognise as a frequently heard one: "He replied ... that they were pretty things ... not always regulated by a proper sense of decorum, but ... they would do well enough to give me an interest in life until I had sweeter and weightier responsibilities"!



Though the letters and journals of the peripheral characters make somewhat tedious reading, the story holds your interest till the melodramatic climax, complete with special effects, at Ash's graveside.

You look at your watch to find you have spent most of the time meant for your precious sleep engrossed, yes, 'possessed' by this haunting story that is subtitled 'a romance'.

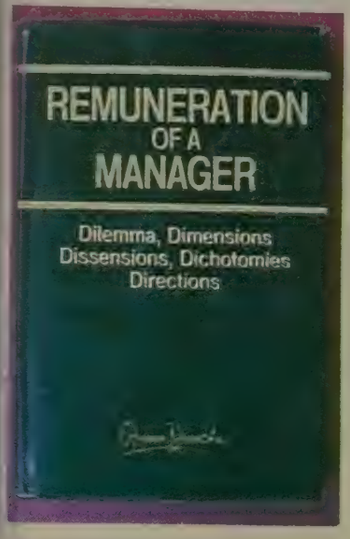
Commendable effort

THE HANDBOOK OF INDIAN COMPANIES 1991
Compiled by Brian L. Brown. Emerging Markets Company, Bombay
pp. 501, Rs.195.

For those who want a general idea or some basic data on larger Indian companies without having to fumble through the cumbersome stock exchange directories or other voluminous corporate directories, here is a book which might make matters simpler.



The 501 large companies covered are alphabetically listed with a page for every company. First, on each company, a short background is presented on products, capacities, collaborators, the group the company belongs to and major projects underway. Next comes a short review of the latest year's performance along with factors responsible for the change, with some hint about the future outlook. The handbook gives four years basic operational data, some financial information from the balance sheet (assets, liabilities, equity etc) and share price data.

Most interestingly, the handbook also provides uncommon but very useful data on change in capital, break up of equity holding and break up of cost of production between raw material and labour.

However, there is scope for improvement. Although the operational data is for the past four years, the performance review is only for the latest year. A line or two about the company's past performance will be useful. Also important efficiency ratios like gross profit margin and return on net worth are not given. Hopefully, the next edition will take care of these minor flaws.

■ DILIP MAITRA

Managers and money matters

REMUNERATION OF A MANAGER: DILEMMA, DIMENSIONS, DISCUSSIONS, DICHOTOMIES, DIRECTIONS
By Anwar Divecha
Sterling Publishers, 1990,
pp 334, Rs.300

A hands-on manager of the nineties has to provide dynamic direction and achieve results by stimulating and not threatening, guiding and not imposing, pro-acting and not reacting. It is obvious that a manager of such competence is essential for the success of an organisation. But do these managerial skills explain why managers are paid what they are? Apparently not! Does 'money' work as a motivator? Yes, to a very large extent. But is it always the consideration of seeking higher remuneration and perks which compel a manager to go job-hopping? Not always.

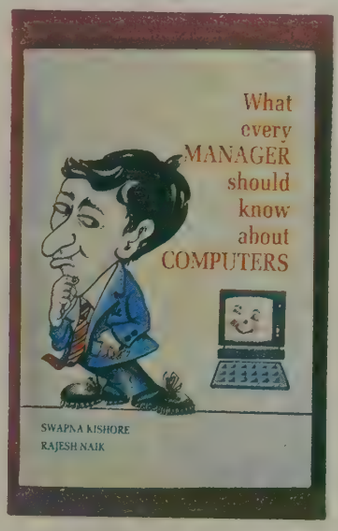
There are scores of reasons which compel managers to change jobs, such as stagnation, lack of goal congruence and future development, maladjustments, problem bosses, hierarchical imbalances, lack of delegation of power and authority, etc. But do these factors determine managerial remuneration? Certainly not!

Remuneration criteria

Managerial remuneration is related to a manager's needs — the cost of living, his commitments and responsibilities, status, and so on. On his side of the equation, there is no room for the organisation's needs or cost consideration, whereas the organisation considers, going price, selection, induction and training costs and other direct and indirect costs.

Every organisation would like its managers to be happy. Whether they are so or not is a different matter. Job dissatisfaction is often caused by imbalances in the organisation, between prevailing cultural values and attitudes, and a keen desire to professionalise its setup. Further, when an organisation recruits people beyond its actual capacity utilisation, managerial remuneration is adversely affected.

Here, it is pertinent to note that the present tax laws leave nothing tax free (except conveyance on company's business) in managerial remuneration. A very significant change has been brought about by the Direct Tax Laws (Amendment) Act 1989, which has extended the scope of the term 'income' to include any special allowance to meet expenses in the performance of duties and any allowance to meet personal expenses at the place where one performs his duties. Thus allowances like uniform/attire allowance, books/periodical allowance, entertainment allowance and furnishing allowances, etc, will be construed as part of income effective from the assessment year 1992-93 and subsequent years.



Although money matters, a mere increase in remuneration does not satisfy a manager. He is also looking for status symbols. Successive switchovers do hold out the promise of such benefits, which he looks upto before the onset of middle age. But that rarely happens in reality, and the result is a mother-in-law daughter-in-law syndrome.

The author builds up an excellent, engrossing and interesting account of the dilemmas, frustrations and disappointments of an Indian manager. Moreover, since he is a management consultant, his insights are drawn from personal experience, and ring true. The contradictions of managerial remuneration in the context of an organisation's balancing activities and the aspirations of managers remain a reality. It is imperative for an organisation to attract, retain and develop managerial talent and build up an effective remuneration system without sacrificing equity, but by incorporating encouragement and reward for excellence. The efficient manager of the nineties is a scarce commodity and his recompense involves much more than merely issuing a contract of employment.

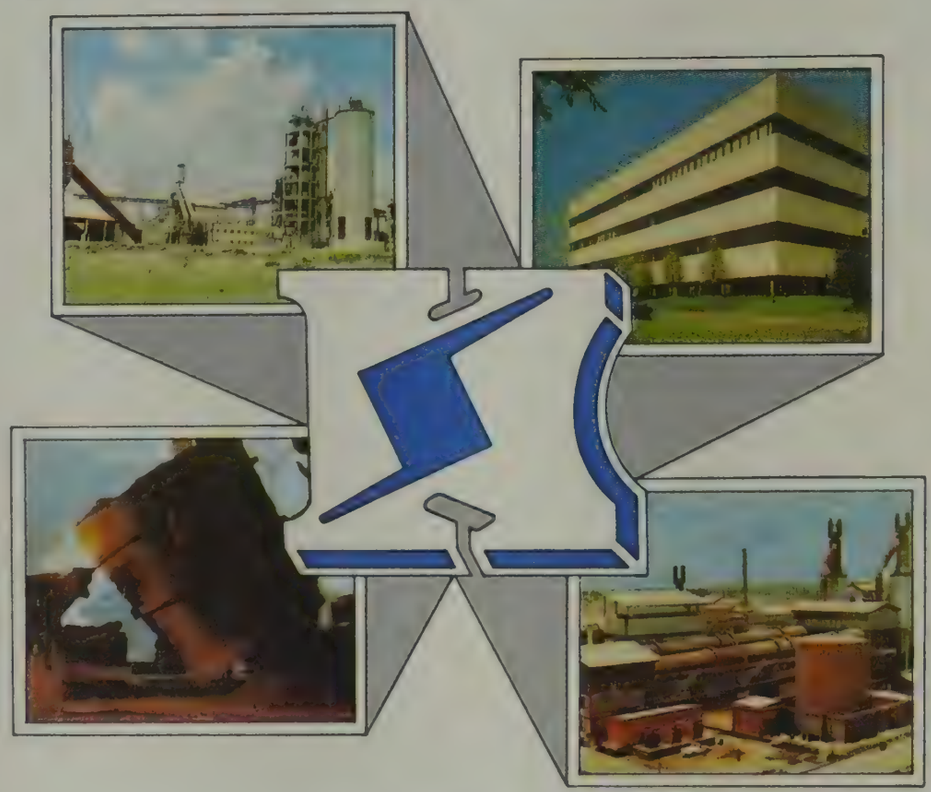
A good teacher

WHAT EVERY MANAGER SHOULD KNOW ABOUT COMPUTERS
By Swapna Kishore and Rajesh Naik
Tata McGraw-Hill, 1990,
pp. 142, Rs.60

At the outset and at various junctures in this handy volume, the authors emphasise two important facts. One, that it is importantto know how to work your computer, not how it works. And, secondly a computer can only do what it is told, and is thus essentially a very sophisticated aid, and not a form of artificial intelligence, as a lot of people seem to believe.

Like all good teachers, the authors use easily understandable metaphors and analogies to explain concepts like systems and application software. Also, like all well-conceived books of this kind, this one uses diagrams and illustrations. However, if the book gives any cause for complaint, it is in the particularly poor quality of the illustrations, especially of the human figure, and the most unfunny cartoons.

Chapters on computerisation in an organisation, wordprocessing, spread sheet, data base management systems and trends in the field, the accompanying glossary and the index cover just about everything that a manager (or anyone else for that matter) needs to know.



For people whose working environment is on the verge of being computerised, for those in the thick of computer use but need to get a good overall picture about who's who and what's what in their computer, and even for those who feel they are standing aside while the computer world is passing them by, this book is an excellent anchor.

KHAITAN HOSTOMBE SPINELS –
AT THE CORE OF THE CORE SECTOR

You can't make Steel and Cement without us.

Improved quality and higher productivity means a greater demand for our products – Special DBM and Simultan Clinkers.

As the giant core sector industries like Steel and Cement take a quantum leap forward with advanced technology – the need for specialised refractory raw materials becomes indispensable.

Khaitan Hostombe will be entering this hi-tech area – to produce specialised Refractory Raw Materials for the **first time in India.** And, thereby, stemming the dependence on imports.

The Company is setting up a plant for the manufacture of 15625 tpa of Special Dead Burnt Magnesite and 9375 tpa of Simultan Clinkers at Tanakpur, Dist Nainital (U.P.).

The technology for the plant has been developed indigenously and recognised by **Steetley Magnesia Products Ltd., U.K.** – one of the leading manufacturers of Simultan Clinkers in the world. An MOU has been signed with them for optimisation and upgradation of this technology and for matching product quality with highest international standards. Yet another MOU has been signed with **R. Hostombe Ltd., U.K.** for the regular supply of Caustic Calcined Sea Water Magnesia – a vital raw material.

By identifying a core need of the core sector – Khaitan Hostombe makes a commitment to the technological advancement of the Steel and Cement industries.

PRESSMAN

Life in the public sector

The current talk about re-vitalising the public sector is meaningless if the focus is going to be only on technology. The real problems lie in operational styles and managerial cultures. The public sector is afflicted by a peculiar malady. There is simmering discontent and frustration amongst the managers, and yet there is very low managerial turnover. This anomaly is worthy of analysis because, if organisational commitment is low, the enterprise is certainly not being run anywhere close to its peak operational efficiency. And given the huge investment in the public sector, this situation is untenable.

The most well-known and oft-quoted reason for management's shortcomings is the political interference that it is subjected to in almost every sphere. But a far more important reason is administrative and perhaps not so obvious. It has to do with the ethos that the government sector has passed on to the public sector. Unless this system is revamped, we will continue to have competent managers who have lost the will and the desire to manage effectively.

The concept of cadres and cadre-based seniority is now firmly rooted in the public sector. This is obviously inspired from the IAS, IFS and revenue services, where career progression can take place only within the respective cadre. Therefore, the accountant in Air India can never be moved into the commercial cadre even if he has the aptitude or there is a shortage of staff in the commercial department. Strangely enough, an outsider is more likely to be accepted than a colleague from another cadre. Horizontal movement is, therefore, possible only at the initial recruitment stage. Otherwise, the transferee has to forego the seniority of his previous position. Inevitably, senior managers in key positions rarely look beyond the four walls of their own departments.

The public sector operates on the basis of sanctioned or approved manpower strength. On the face of it, that is the way it should be: but go below the surface and see how it dampens personnel management. A competent person may be denied promotion only because all the approved posts in the next grade are full. Such people (since there are so few of them) end up being loaded with responsibilities but must necessarily accept a lower position. Sympathy is the only consolation offered, with the promise that the moment a post falls vacant the concerned manager will be considered for elevation.

The process is, however, not that simple. There are two other barriers to traverse: seniority and the reservations quota. Waiting in the wings are also those schemers with ministerial connections. This is one hurdle managers find difficult to negotiate, because it is invisible and outside their control. It requires tremendous integrity and conviction on the part of top management to ward off such attacks on competence and fair play. Sadly, few chief executives measure up to these yardsticks.

Negative ramifications

In many public-sector organisations, promotions are based on union agreements that naturally favour seniority of service. This has two negative ramifications. The qualified youngster has to keep tabs on the retirement ages of those above him for the next opening to come up. For the person who gets elevated only by virtue of his seniority, the situation can be even more frustrating. Thus, a despatch clerk may find that he is suddenly in the grade of an assistant manager, but must continue to maintain the despatch register. Since the basis of promotion was not competence, he would not be really qualified to handle increased responsibilities. Thus, the numbers game and the 'caste' system together make it impossible for an organised career planning system to be instituted.

It is almost impossible to create management positions whereby job satisfaction can accrue from the discharge of one's responsibilities. Career planning is simply out of the question, because all openings are contextual, depending upon seniority, reservations and cast-iron eligibility criteria. Measurement of performance becomes a function of the ability to merely adhere to procedures and evidence of physical efforts, like staying on late in the office. Manipulation is seen as the only remedy for advancement. The importance of a person lies in his accessibility to the top or in making oneself indispensable by holding on to information.

Since there is no objective method for assessing performance, questionable standards are set. In fact, a vicious cycle begins to operate: because there are no objective criteria, the devious and the cunning manage to move up; and conversely, because these characters with their scheming ways or political connections have to be accommodated, sufficient leeway has to be kept in the reward system. Notice, for example, how the staff of the chief executive's office always move up merely because of their proximity to the top. Often, criteria are changed to suit such people.

Upright managers who are not prepared to scheme their way to the top are in a bind. They have no market value because, often, they may be in a highly specialised discipline. They also lack the confidence to step out of the security of their public-sector posts. Salvation for them is only in having a merit-conscious chief executive who allows competence to reach its rightful level.

■ SUDHAKAR NAIR

Senior executive positions

A compilation of executive jobs advertised in **Business India** and other major publications between 25 March and 7 April 1991.

THE FOUR BEST JOBS

- VICE-PRESIDENT (Manufacturing) * South India * *Sal* Good package, house, car, driver * *Age/Qlfn* 40-50 years * Chemical/Mechanical engineers preferably with PG management qualifications * *Reqd* 15-20 years experience in a process industry * *Cont* VPG/MDS/95, M.Madhusudan, Director, ABC Consultants Pvt Ltd, 4 Khader Nawaz Khan Road, Madras 600 006 (TOI-1.4) Ph.470778
- PRESIDENT (Technical) * Ahmedabad * *Sal* Excellent * *Age/Qlfn* 40-45 years * B.Text * *Reqd* 15-20 years in composite cotton textile mills/cotton cloth processing including 5-7 years as head of production department * *Cont* Executive Director, Modern Denim Fabrics, B/201 Popular Centre, Someshwara Complex No.1, Satellite Road, Ahmedabad 380 015 (TOI-1.4)
- PRESIDENT * Raigad * *Sal* Best in industry * *Age/Qlfn* Mid 50s * Preferably technical professional, or non-technical leader with engineering appreciation * *Reqd* Top manufacturing experience in large Petrochemical/Fertilisers/Allied Industries * *Cont* Mukesh D Ambani, Executive Director, Reliance Industries Ltd, Maker Chambers IV, 222 Nariman Point, Bombay 400 021 (TOI-25.3)
- VICE-PRESIDENT (Human Resources Development) * Bombay * *Sal* Attractive + car + housing * *Age/Qlfn* Around 45 years * Appropriate specialist academic qualification * *Reqd* Senior level HRD experience preferably in a multi-unit/multi-division situation * *Cont* R.Banerjee, Consindia Pvt Ltd, Anand Ashram, 2nd Floor, 22 Pandita Ramabai Road, Gamdevi, Bombay 400 007 (TOI-25.3)

WEST

- GENERAL MANAGER * Bombay * *Sal* Attractive * *Age/Qlfn* 32-40 years * Engineering/Science graduates, preferably with PG Business management qualification * *Reqd* Experience in marketing/sales, with last 3 years in senior management position * *Cont* BPL - India, BPL Towers, Kasturba Road, Bangalore 560001 (TOI-1.4)
- GENERAL MANAGER (Exports) * Bombay * *Sal* Rs.2.20 lakh + pa * *Age/Qlfn* NS * Graduate preferably in engineering * *Reqd* 12-15 years experience in promoting exports * *Cont* The Dy.General Manager—HRD, Concept Pharmaceuticals Ltd, 167 CST Road, Kalina, Bombay 400 098 (TOI-1.4)
- GENERAL MANAGER (Personnel) * Bombay * *Sal* No constraint * *Age/Qlfn* Around 40 years * Preferably a degree in Personnel Management * *Reqd* 10-15 years experience in the personnel field * *Cont* Mr B.S.Kalsi, 8-A Pali Hill Road, Bombay 400 052 (TOI-1.4)
- GENERAL MANAGER * Miraj * *Sal* Competitive * *Age/Qlfn* 40-45 years * NS * *Reqd* Experience in development/management of micro processor based equipment * *Cont* Marathe Engineering Industries, 79 Nariman Bhavan, Nariman Point, Bombay 400 021 (HT-25.3)
- SENIOR VICE-PRESIDENT (Diversification) * Bombay * *Sal* Rs.6-8 lakhs * *Age/Qlfn* 42-48 years * NS * *Reqd* Very senior manager with experience in chemical industry/consultancy firm/industrial agency * *Cont* B.P. Agrawal, Chairman, Ph.744947/751318/6854, SVPD/BPA/3071, ABC Consultants Pvt Ltd, 43/3 Hazira Road, Calcutta 700 019 (TOI-25.3)
- GENERAL MANAGER * Bombay * *Sal* Attractive * *Age/Qlfn* About 40 years * Chemical Engineer * *Reqd* 10-15 years with a bulk drugs/pharmaceutical company * *Cont* Box J 611-K, Times of India, Bombay 400 001 (TOI-25.3)

NORTH

- GENERAL MANAGER (Finance) * Ludhiana * *Sal* No constraint * *Age/Qlfn* NS * CA preferably with C.S. * *Reqd* 15 years of experience, including 5 years at a senior level in manufacturing organisation * *Cont* The General Manager (Personnel, Hero Cycles Ltd, Hero Nagar, G.T.Road, Ludhiana 141 003 (TOI-1.4)

IN PURSUIT OF PERFECTION

VIDEOCON

mps have been retained by **VIDEOCON** to recruit **GENERAL MANAGER** for setting up a **TOOL ROOM** with foreign collaboration for the manufacture of Dies and Moulds for making various sheet metal and plastic components.

GENERAL MANAGER

The incumbent will be responsible for setting up the Tool Room facilities right from scratch, involving plant design & layout selection of machinery, their procurement, installation and commissioning and, eventually, running of the unit.

Applicants should be graduate engineers, around 40/45 years old preferably with post-graduate qualifications in metal working or die design.

They should have 12/15 years of relevant experience in automobile/2-wheeler and/or consumer durable industry and should be fully conversant with and aware of the sources of availability of advanced NC/CNC equipment for die/mould making. In addition, they should also have had experience in setting up of a new tool room or in substantially expanding/modernising an existing one.

This is a very challenging and demanding assignment requiring a high degree of technical competence and an ability, as well as willingness to work to exacting and punishing schedules. Compensation is designed to attract the best talent available and will be no bar for the right candidate; the bigger attraction, however, will be the opportunity to set up one of India's most modern and sophisticated Tool Rooms.

This position is based in Aurangabad.

Please send your application, alongwith a recent photograph, mentioning two, non-relative references to:

hemendra k. varma
management productivity systems, post box 9313, bombay-400 036

THE

Business India

GROUP

The Business India Group, publishers of Business India, the leading business magazine in the country, has recently launched a new division, **The Directory Division.** This division will produce specialised and business directories for various segments. The division has already launched its series of Export Directories and has been contracted to produce directories of Member Establishments for major credit cards of banks both Indian and foreign . We will also be shortly entering the Telephone and Yellow Page Directory market.

The Directory Division is now expanding its operations to an All India base. For this the Group requires information marketing and sales personnel at the following levels:

Branch Managers **Area Sales Managers**

Territory Managers **Asst. Territory Managers**

We are looking for people with experience in frontline selling and with at least 3-5 years experience at supervisory levels. Experience in advertising space selling/sale of office automation products/institutional selling will be an added advantage. People who have independently handled branch level operations and have administrative skills will be considered for senior levels.

We have openings in Bombay, Delhi, Calcutta, Madras, Hyderabad, Bangalore, Lucknow and Indore. Applicants should send their resume with details of past experience to.:

Mr. T.R. Padmanabhan
General Manager (Technology Div.)
Business India Directory Division
59 Regal Bldg., Connaught Circus
New Delhi 110 001.

BRANCH MANAGERS

MARKETING / ACCOUNTS BACKGROUND

If you need reasons to sell our software, take a look at our competitors' products.

Or better still, take a look at what you'll be ridding others of !

Unlike other accounting software, WINGS 5.0 is the brainchild of practising chartered accountants. The outcome of intensive research, WINGS 5.0 is unique in more ways than one. In its friendliness, elegance, power, versatility and range, WINGS 5.0 is arguably the best business software in India. Having acquired more than a 90% share of the Hyderabad market, WINGS 5.0 is poised to conquer the national market.

To do this, we are on an active search to appoint **Branch Managers** in Bombay, Delhi, Calcutta, Bangalore, Madras, Pune, Ahmedabad, Surat, Baroda, Coimbatore, Trivandrum and Cochin. These senior level executives should have a strong accounts background, be MBAs or CA/CA Inter, and show a flair for marketing. The branch managers will head teams of **Marketing Executives.** Incumbents for this post must be motivated young people with accounts background. Preferably fresh graduates with initiative and individuality.

Lastly, while our software is priced on the lower side, our pay scales aren't!

If you think you're one of the people we're looking for, rush us your complete bio-data in absolute confidence. If you're good but in a city other than those mentioned above, do apply.

We may soon start a branch in your city too.

The Manager
Industrial Electronics Division
Crompton Greaves Limited
71-72, MIDC Industrial Area
Satpur, Nashik 422 007.

PRESSMAN

WE'VE GROWN 996% IN THE LAST FOUR YEARS.

THAT'S THE PROBLEM.

Most companies would be thrilled with a 996% growth rate. We aren't.

NOT ENOUGH What's good for others isn't good enough for us. Since our inception in 1986, we haven't simply doubled, or trebled. We've grown a full ten times. With turnover at 996% and net profits at 531%

Today, our Information Technology (IT) and Financial Service divisions are 600 people strong, spread over 26 cities in India.

With a pace like this, who can stop? That's why we need someone like you.

We're looking for a catalyst. Someone who can convert big into bigger. You'll be heading our IT division. It's 450 people strong, bristling with talent and comprises Computer Education, Corporate Training, Software Consultancy and Marketing of CBTs and Software related products.

THE CRITERIA You should be between 35 to 45 years of age. But you don't necessarily need to have any prior experience of the IT industry (although it'll help). What we'd rather you have is strategic vision. Strong marketing savvy and the rare ability to move the company on a forward thrust-cohesively, decisively. Obviously, we're speaking of some very special talents here.

THE REWARDS What do we give you in return?

For one, total freedom of operations. No red tape, no interference. Your style becomes the company's style.

Second, we're offering tremendous scope. The IT industry is the fastest growing in the country. You could be the new corporate messiah.

And thirdly, you get the most comprehensive pay packet going. Including housing, if necessary.

Write within 7 days, superscribing the envelope with "IT/CE/11/91". Better, call 2041413/234530.

ATUL NISHAR, Managing Director, Apple Industries Limited, B-4 Amarchand Mansion, Madame Cama Road, Colaba, Bombay 400 039.

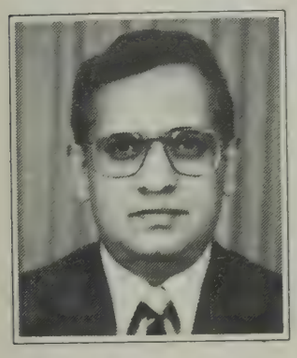
D. C. Bhaumik has been appointed additional director-general, news, of Doordarshan.

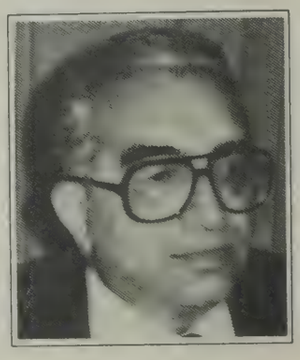


R.T. Kumar has been promoted as executive director, Bangalore unit, of Bharat Electronics Ltd.

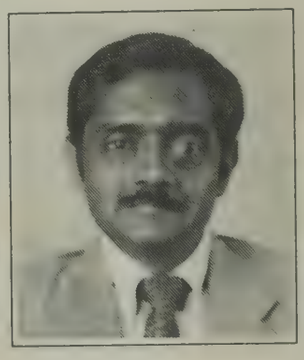
N. Gupta has been promoted as vice-president, sales and marketing, of Videocon Ltd.

S.N. Jha has been appointed general manager, maintenance and inspection, of the refineries and pipelines division of Indian Oil Corporation Ltd.

K.C. Joseph has taken over as additional general manager, human resources.



Jayant Ambast has been promoted as deputy general manager, Searle India Ltd.



Sharad Kulkarni has been nominated as a director of Meltron Ltd.

A.R. Banerjee has taken over as director of the Gujarat State Fertilizers Company Ltd.

C.Y. Pal has been elected president of the Bombay Chamber of Commerce and Industry.

Bapty Seshasayee has been elected southern regional chairman of the Engineering Export Promotion Council.

ASSOCIATIONS

N.B. Patel has been elected chairman of the Chemicals & Allied Products Export Promotion Council. **A.C. Padamsee** and **S.S. Dhupia** have been elected vice-chairmen.

Nilima Kilachand and **Kiran Bajaj** have taken over as president and vice-president, respectively, of the Indian Merchants' Chamber's ladies' wing.

Shekhar Datta has been re-elected vice-president of the Bombay Chamber of Commerce and Industry.

R.R. Nair has been re-elected president of the National HRD Network's Bangalore chapter.

Pralhadrao Patil has been re-elected chairman of the Maharashtra State Co-operative Bank Ltd.

Happy home-coming

Pradeep Bhargava, *41, is managing director of Kalyani Sharp Ltd*

t is like a home-coming for Pradeep Bhargava. After a brief stint in Videon VCR Ltd as president, last November Bhargava rejoined the Pune-based Kalyani Sharp Ltd (KSL) which he had eft about one-and-a-half years ago.

Bhargava has reason to be happy about is return to his old firm. After all, KSL, nakers of the Optonica brand of TVs, was onceived and created by him in 1985, nd he was the chief executive of the comany till he left in May 1989.

Son of a government employee in Rajasthan, Bhargava had an outstanding cademic career. A BE in electronics and ommunications from the Indian Institute of Science, Bangalore, and an MBA rom IIM, Ahmedabad, he stood first in all is examinations. He also excelled in ports. He was the Rajasthan state champion in table tennis in 1965 and represented the state in the national hampionships for two years.

Useful spell. Bhargava started his career n 1971 at the age of 22 when he joined he Atomic Energy Commission. Subsequently, he did a spell in the Department f Electronics (DoE) and Bharat Heavy lectricals Ltd (BHEL) till 1982, before hanging over to the private sector. Says e, "My eleven years of working in the ublic sector proved to be very useful ubsequently." For example, Bhargava isited and monitored about 200 elecronics units in the country while he was n DoE, and this experience helped him in etting up Kalyani Sharp later.

A major breakthrough in his career ame when he quit the public sector and joined the Pune-based Kalyanis (Bharat Forge, Kalyani Steel, etc) in 1982. "I changed to the private sector because in a government job you can't make a career unless you have a cadre label," says Bhargava. At Kalyanis, he took charge of the corporate planning department and worked on various diversification plans. Promoting KSL was the direct result.

Once KSL was promoted, Bhargava took full charge of the company and in four years made Optonica a well known name in the industry. He was also actively involved in getting the prized licence for the manufacture of VCRs for KSL, one of the three companies in the country (the others are Videocon and BPL) having this licence.

Now Bhargava has some other major tasks in hand. Although KSL has been around for five years, it is still small in comparison with the leaders in the industry. It sells only around 4,500 CTVs a month. "My aim is to make it a major player in the industry," says Bhargava.

Poor marketing. With technical collaboration from Sharp Corporation of Japan, KSL's TV plant is one of the most modern in the country. But the company lacks aggressiveness in marketing. Bhargava is aware of this deficiency and is therefore concentrating on it. The next most important job before him is to launch the VCRs. The new Rs.50-crore VCR plant near Pune is almost ready and he hopes that the sets will be available in the market in about two months.

Bhargava's plans, however, do not end with VCRs. To make KSL a complete consumer electronic company, there are plans to introduce the entire range of audio systems. "Sharp audio systems are one of the best in the world. This is our advantage," says he. To translate the advantage into achievement, Bhargava will certainly have to move fast as the market is getting more crowded day by day.

■ DILIP MAITRA

FRONTRUNNERS

At 37, **Debashish Dasgupta** is the managing director of Ipitron Times Ltd, a wholly-owned subsidiary of the Electric Corporation of Orissa.

An economics graduate, Dasgupta worked as an officer at Life Insurance Corporation of India and later the Indian Revenue Service which he quit to join Unitel as a full-time director. From April 1988 to August 1990, he was the financial director of two companies, Elconmet and Magnetix India Ltd, both belonging to the Orissa State Electronics Development Corporation. He turned them around and is now doing the same with Ipitron Times.

Says Dasgupta, "The name of the game is combining long-term strategies with short-term tactics and putting the sick companies back on the rails."

— N.R.

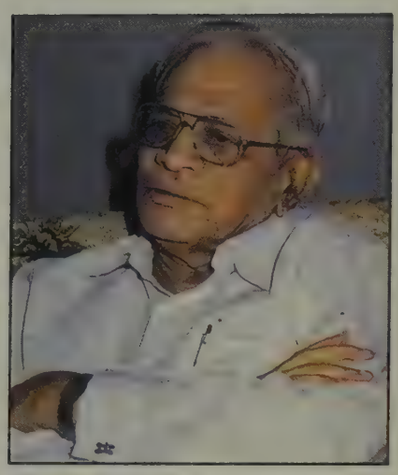
"We are known as conscience-keepers of the bank," says **Ajay Kohli**, 30, audit manager of American Express Bank Ltd, New Delhi, who was recently awarded Amex Bank's global auditor award for the year 1990. He is the first Asian to have received the award.

After graduating from Sri Ram College of Commerce, Delhi, in July 1980, Kohli went on to do his chartered accountancy. From the very beginning his interest lay in banking organisations. He began his career at Banque Nationale de Paris, where he did financial and credit appraisals of corporate clients. His next job, as assistant vice-president of Capital Trust Ltd, gave him the opportunity to handle development of correspondent banking in India for foreign banks.

At American Express Bank, he has greater responsibilities. Says Kohli, "My ambition is to become the country audit manager, the bank's auditor for the whole of South Asia."

— R.P.R.

WARANA



Striving and thriving together

Thirty years ago, the Warana valley, about 32 km north of Kolhapur, in Maharashtra was an area infested by dacoits. Today it is an area of prosperity — a prosperity generated by a highly successful co-operative movement. Sixteen well-managed co-operatives contribute to a combined turnover of Rs.200 crore per annum. Primary among these are the sugar co-operative and the milk co-operative, which account for about Rs.120 crore of the turnover. New co-operatives have come up for poultry products, cattle feed, poultry feed and for food processing too.

All this has happened in large measure due to the pioneering efforts of Tatyasaheb Kore, now 76, a local farmer and social worker, who started a sugar co-operative in 1960. He collected the share capital with great difficulty by convincing hundreds of the poorest of farmers to shell out Rs.250 for each share. Tatyasaheb's missionary zeal has been translated into prosperity for all at Warana.

The landless labourers, who were well below the poverty line before 1960, are now earning an average of Rs.20,000 per annum. "We would like to see this figure raised to Rs.40,000 in the next five years," says Tatyasaheb, who was awarded this year's FIE Foundation Award for his outstanding contribution to the co-operative movement.

Warana now has an education trust, which runs schools and colleges, including an engineering college, and a college with arts, science and commerce faculties. It also boasts a modern supermarket where 5,000 farmers buy their requirements everyday. The supermarket, also a co-operative, has a turnover of Rs.13 crore, and is mainly intended to cater to every need of the local populace at the lowest price.

Tatyasaheb Kore: pioneer

Water weirs built

Water scarcity used to be one of the main hindrances to the agricultural development of this region. The Warana river is the main source of water, but it flows for less than half the year after the monsoons. The three storage weirs constructed by the state government provided water only up to the end of February. The sugar co-operative constructed three additional weirs and increased the capacity of the existing ones. It has also financed lift irrigation schemes costing Rs.4 to Rs.5 crore. The result: a dramatic increase in the average yield of sugarcane from 18 to 32 tonnes per acre.

Soon the sugar co-operative was doing well but Tatyasaheb wasn't satisfied. He wanted to see prosperity reach the lowest strata of the population. The sugar co-operative had a direct impact mainly on the upper class farmers, who constituted only about 15 to 20 per cent of the population. So, in 1968, Tatyasaheb founded a milk co-operative, with the idea of benefiting the middle class and poor farmers. The steadily increasing acreage of sugarcane fields yielded a lot of natural fodder for cattle — making it possible for even landless labourers to keep a few head of cattle.

The Warana Sahakari Dudh Sangh was aimed at benefiting these farmers, and sure enough, it brought amazing results. The milk producers' co-operative, which started with a collection of just 3,000 litres a day, and a turnover of Rs.10 lakh, is now the third largest dairy in Maharashtra, with a turnover of Rs.50 crore. A massive 120,000 litres of milk is collected everyday and an additional 80,000 litres is brought in from neighbouring areas. Warana's co-operative movement covers 66 villages and a total area of 25,000 hectares.

The milk co-operative has transformed the lives of 55,000 families. Everyday, collection begins at 6 am and goes on well into the night. Twenty-five trucks ply a total of 1,500 km every day, collecting the milk cans. The Warana milk co-operative boasts the

Pics by Prakash Jadhav

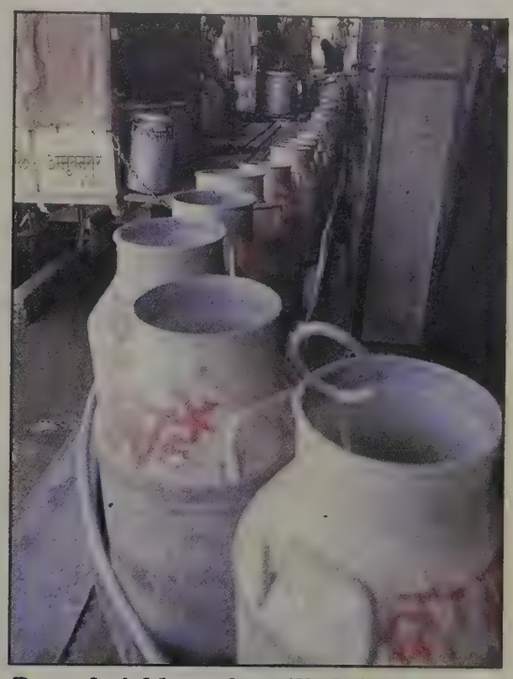
Cows being fed: even the landless own cattle

highest yield in the country, collecting as much as 46 litres/km. C.N. Gulave, managing director of the milk co-operative, says this is primarily due to the high rate paid by them to purchase milk.

Highest price for milk

"In 1989-90, we paid an average of Rs.5.85 per litre for buffalo milk. This is at least a rupee more than what the state government pays to milk producers in Maharashtra and perhaps the highest in the country too," remarks Gulave. Besides, the co-operative also supplies dry and green fodder and protein-rich cattlefeed at subsidised rates. Free veterinary care for the animals is available on four mobile clinics which carry out regular vaccination programmes. "We also get a better variety of cattle from other parts of the country for cross-breeding. Artificial insemination is provided free of cost," says Gulave. All this adds up to an annual subsidies bill of Rs.25 lakh.

The farmers' supermarket: everything at the lowest price possible



The co-operative also manufactures milk products like ghee, spray-dried milk powder, *shrikhand* and lassi. These, especially the ghee and the milk powder, are marketed in five states, from Rajasthan in the north to Andhra Pradesh in the south. Warana *shrikhand* has become a hot favourite in Bombay city, pushing Amul *shrikhand* to second place. A Rs.3 crore manufacturing facility to make 5,000 tonnes of malted milk food is now being set up.

"However, all this success was not without hiccups", says Gulave. By 1980 the co-operative had run up huge losses — Rs.45 lakh against its Rs.12 lakh equity base — and was on the verge of closure. This was because, till then, the co-operative used to sell its milk only to the government. The rate paid by the government was calculated on the basis of the cost incurred by other world bank-funded milk co-operatives and did not cover Warana's production costs.

"It was then that we decided to market our milk directly to the consumer," says Gulave. The decision was a bold one, as they had neither a distribution network, nor any transportation facilities in place. However, the risk paid off and the losses were wiped off within three years. Now Warana has 450 distributors selling 1,10,000 litres in Bombay alone. Add to this another 12,000 litres in other cities everyday. There are 100 distributors for the milk products. The co-operative now has 40 tankers to distribute its milk. Other acquisitions include a large cold storage unit and a packaging and processing facility, both in Bombay. Turnover is a healthy Rs.50 crore per annum and the last five years have generated a cash surplus of Rs.11.5 crore.

New pastures

Tatyasaheb Kore and his brother, Nanasaheb have also been thinking of women's welfare. Warana has two women's co-operatives. One is a franchisee of Lijjat papad, and makes Lijjat products worth Rs.27 lakh a year. The other, with 800 workers, has a turnover of Rs.50 lakh and makes plastic products, mainly containers for *shrikhand*. It also has seven injection-moulding machines and supplies plastic spoons and caps to companies like Glaxo and Cadbury. The prosperity of the Warana valley can best be gauged from the fact that the Warana Cooperative Bank has fixed deposits worth Rs.20 crore.

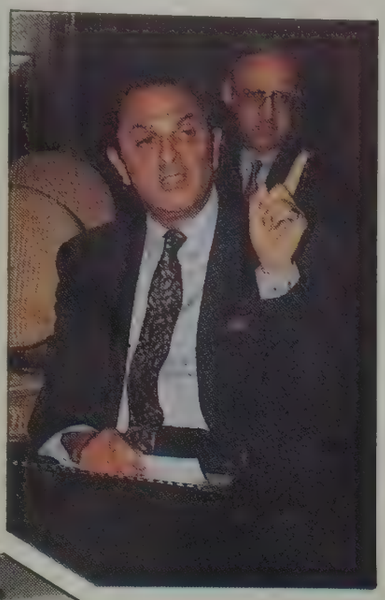
Record yields at the milk dairy

Among the many farmers who have prospered is Mahadeo Patil, an unlettered man. When the sugar co-operative was being started, he had four acres and no money. He sold one acre to buy a single share for Rs.250. Today, he has 20 acres, two bungalows, a tractor, jeep and motorcycle. He produces Rs.10 lakh worth of agro products and exports 50,000 kg of grapes every year to the Gulf.

Warana is not just an example of a model co-operative movement but of integrated rural development. Its planners have paid equal attention to education and the fine arts — Warana is also becoming famous for its orchestra. This is a 30-piece orchestra with a difference — it consists of only children, aged six to 15 years, who play a variety of Indian instruments. The orchestra performed in Yugoslavia in 1978 and won several international awards. It later went to Russia and Mauritius, and will tour South Africa in May.

All this is so much wonderful music to the old time residents of Warana valley, who now no longer live in fear of decoits. ■

ROOP KARNANI

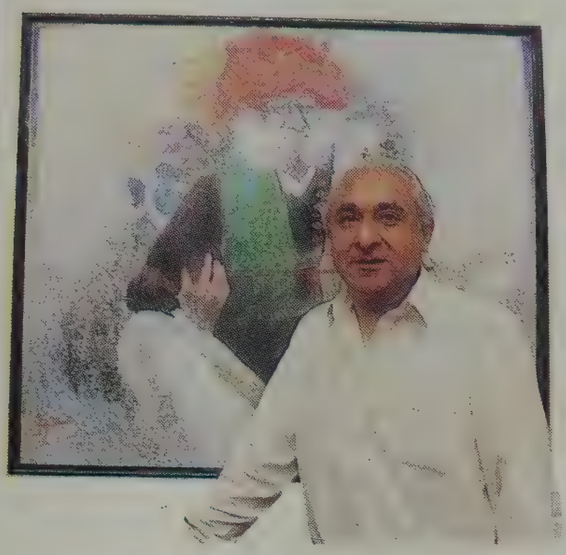


We'll deliver. Wherever on earth. SKYPAK The worldwide couriers.

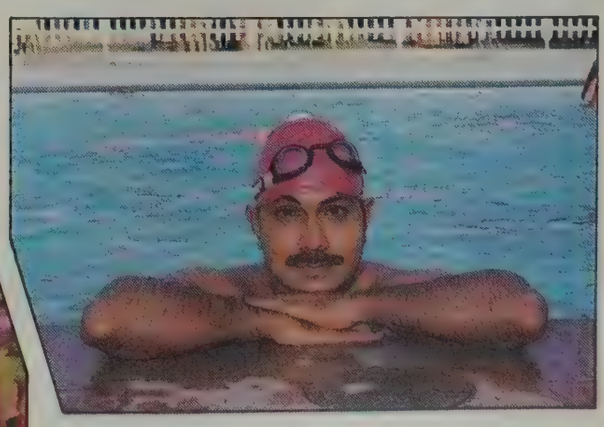
Skypak House, Off M. Vassanji Road, Marol, Andheri (E), Bombay 400 059.

Avenues:SC;605:90

Okay now, rack your brains. When was the last time you saw **Dhirubhai Ambani** at a public function? At the Reliance AGM? Or was it at Anil Ambani's wedding? Anywhere else? No? Then why did he suddenly turn up at the Leela Kempinski recently for the launch of the Leela Centralcard at a glittering ceremony? C.P. Krishnan Nair, chairman of the Leela group of hotels, scotched the speculative rumours circulating amongst the 50-odd guests, with a simple explanation. Ambani and Nair go back a long way, to the days



when the industrialist was a yarn trader and the hotelier ran the lace and garment company, Leela Lace. The unexpected chief guest was drawn by the threads of an old friendship, explained Nair.



Another recent surprise public appearance was **Nusli Wadia**'s. At a press conference called immediately after paraxylene — which constitutes 60 per cent of Bombay Dyeing's raw material costs — was shifted to the OGL list, he asked, "Thirty seven raw materials have been shifted to OGL in the last six weeks, so why this hullabaloo only over paraxylene?" The normally reclusive Wadia brushed away political motives, went to great lengths to explain how his company was being starved of the essential input and revealed that Bombay Dyeing would earn Rs.94 crore in foreign exchange this year. He sounded like a man oppressed but at no point did he lose his cool. Wadia maintained a charming profile even when a trioka of persistent journalists from a particular publishing group tried to corner him. When the last of the grilling questions had been tackled, he quipped, "Now have I earned my tea?"

The first thing that strikes a person about **Rummana Hussain**'s paintings is the perfect harmony of reality with fantasy. Her use of mythological references as metaphors to present the social situation is unique. Says Hussain, "My objective is to focus on the dramatic force of events. Using these images as metaphors, I attempt to address complex realities." Married to Ishat Hussain, Tisco's executive director, finance, she displayed her paintings at the Jehangir Art Gallery in Bombay. Comfortable with both oil and water colours, Hussain has held several one-person shows and participated in group exhibitions.

Tanil Kilachand, managing director of Polychem Ltd, is as flexible as the industry that initiated him into business — a synthetic rubber project started by his uncle. His interests range from mountaineering to music. Of the two, however, it's music that makes him nostalgic. "There was a time when I used to play the *tabla*," he says. Today, after shouldering the responsibilities of running a Rs.112-crore business, Kilachand finds no time to play any instrument. So the music enthusiast turned patron floated a music society called Sajan Milap which organises annual music *sammelans*. The three best performers receive a scholarship of Rs.400 a month to pursue careers in music. Smaller functions are organised every month and the 200 members of the society hold a conference every year.

At 5.30 on a chilly morning last month, when the world around him was fast asleep, **Mukund Jaisingh** began swimming at the Cricket Club of India pool in south Bombay. Four-and-a-half hours later, cheered on by 250 fellow club members, the marketing executive of the Bombay-based manufacturer of non-ferrous tubes and coils, Hindustan Steel & Metal Works, had achieved his target: 500 lengths of the pool. The members had backed the unique event by sponsoring it at a minimum rate of Rs.100 per length. The money thus raised is to be divided among five charitable organisations including Missionaries of Charity and Mobile Creche. At the time of going to press, the collections have totalled Rs.85,000 and if the same enthusiastic response continues, they should cross Rs.1 lakh by 27 April, the last date for donations.

YACHTING

The call of the waves

While tourists throng the crowded commercial ferries, an occasional dinghy moves off a quiet, private slipway next to the familiar bulk of Bombay's Gateway of India. The selected passengers head out to a fleet of gracefully swaying yachts, for a sail around the harbour.

"It's one step off the Gateway but a million miles from the city," says Sevi Singh, an enthusiastic sailor. Singh runs his family company, Pioneer Enamelling Works, during the week, but every weekend during the sailing season (September to May) finds him on the water.

A qualified helmsman and the commodore of the Colaba Sailing Club (CSC), Singh has been sailing regularly for the last eight years. "Even if I have to cut a few corners, I make sure that I get time to sail," he says.

Singh is typical of the fraternity of ardent sailors. To them, sailing is not a pastime, but a passion. Admits Kishore Mariwala, of Bombay Oil Industries, "At one time, if anyone called for me on a Saturday afternoon, the operator would tell them to check the harbour." Mariwala, who sails his own yacht, is an oldtimer — he's been sailing since 1965, and has even gone as far as Okha, at the tip of the Gujarat coast. Though he now goes in for fewer races and competitions, his is still a familiar face at sea.

Competitive events

Another well-known figure in the harbour is J.N. Godrej of Godrej and Boyce. Though he has had to curtail his time on sailboats since the death of his father, N.P. Godrej, who was himself an accomplished sailor, he still managed to win the handicap section of the recently concluded Seabird nationals on one of the family's two yachts. Of the 8-10 races organised every year, most are informal events. The recent World Enterprise Championships and the National Seabird Championships are two of the more important competition events. "The thrill of competition sailing is challenging, but it is difficult to organise on a regular basis because we do not have enough participants," he says. Vice-president of the Yachting Association of India, the apex yachting body in the country, Godrej has been sailing with his father from an early age. "My father always wanted to go to the Seychelles, but it meant taking two months off, and we never had the time," he reminisces. His uncle, Kersi Nowroji, who is still an active sailor at 72, is one of the first Indian members of the Royal Bombay Yacht Club (RBYC), the city's biggest and oldest sailing club.

While dedicated sailors lament that more than half the members of the Yacht Club rarely venture out of its gracious rooms opposite the Gateway, all sailors perforce foregather there. RBYC controls the mooring of the yachts in the harbour, but everyone desirous of sailing need not be a member. The other sailing clubs in the city have a loose and informal relationship with RBYC. The club also owns around four Seabirds, a class of yachts designed in 1910 especially for the Bombay harbour. "The Seabirds have a classic design, and are one of the most stable boats around," says Mariwala. The other clubs have their own boats too.

Most popular craft

Though many private yachts are imported, the Seabird continues to be the most popular with Indian sailors. The Colaba Workshop in Bombay manufactures these boats, and only the sails have to be imported. Another popular design is the Lightning class, a two-man yacht which is faster than the Seabird. "I used to own a Lightning earlier, but I sold it when I started taking my family out as the Seabird is more comfortable and stable," says Singh, who came second in the Nationals on an RBYC Seabird.

Of the other two clubs in the city, CSC functions out of RBYC, while the Bombay Sailing Association also has a charming clubhouse across the harbour in Mandwa. CSC, which owned only a few Lightnings and two Seabirds, has been pooling its boats with RBYC for the past two years. A little known fact is that the sailing clubs are amongst the few established clubs in Bombay that take members at reasonable intervals.

While the sailing circuit is still dominated by old faithfuls, younger executives are taking to the sea. "The profile of the crowd is changing. It is no longer a preserve of the rich and the expatriates, and youngsters from the middle class are getting in," says Mariwala.

Companies are also beginning to take an interest in the sport. ANZ Grindlay's owns a Seabird which is used by its officers. However, it is yet to become popular. Shakti Saran, manager, Investcare, ANZ Grindlays, who has been sailing for ten years, estimates that only about 15 executives use the boat regularly. "Unfortunately, sailing is still looked upon as an esoteric sport in this country, and while many are game for joyrides, few are willing to put in the time and ef-

Pics by Deepak Tolani

Singh: "... a million miles from the city"

ort required to learn to sail," he says.

Not surprisingly, the sailing circuit is disdainful about those who own yachts but do not use them. "To some, it is just like an extra car, a status symbol," says one. Then too, sailors like Mariwala and Godrej swear by their sailboats. While others prefer motorboats, sailors in fact are somewhat disdainful of the *motor boat wallas*. Sadruddin Daya of Dawood Shoes is one of the rare people who use both regularly — he owns a 32-foot yacht and a 250 hp cruiser, the fastest in the country. "A motorboat is like a peppy young girl, while a sailboat is like a graceful, sedate lady — one is exhilarating, and the other is soothing," he says.

Mariwala: he swears by his boat

Daya, who feels that sailing gives him a sense of peace and a closeness to nature, is one of those for whom sailing is a leisure activity. "I tried to learn sailing, but I prefer to just relax on the boat instead — the competition scene is not for me," he says. He now plans to pick up an Arab dhow scheduled to come up for auction, and renovate it as a pleasure boat, complete with a dance floor. "Somehow I cannot settle for the fibreglass contraptions — they cannot compare with the beauty of traditional craft," he says.

In the harbour, however, increasingly fancy imported fibreglass motorboats saucily turn their sleek bows up at the sea-scarred yachts, some of which are over 50 years old. One of the most distinctive doyens of the harbour is *C'est la Vie*, the ocean cruiser belonging to Kapal Mehra of Orkay, which he and his family use for cruises to Kihim. Vijay Mallya, typically, has not one but two powerful ocean cruisers. "Besides pleasure cruises, motorboats are also very useful for getting to places on the coast," says Singh.

Though imported motorboats can cost a hefty bit (Orkay's cruiser is listed in the company's gross block as worth over Rs.38 lakh), sailing as a hobby is surprisingly cheaper than its aura implies. A brand-new Seabird can cost up to Rs.1.5 lakh, and maintenance costs range from Rs. 2,000 to Rs.5,000 a month.

Second-hand boats, however, are much cheaper, costing from Rs.40,000 to Rs.80,000. A lucky buyer may even chance on a second-hand Lightning for as little as Rs.10,000. Daya estimates that the dhow he hopes to acquire soon will cost him around Rs.5 lakh. But even this investment is not necessary for those who wish to sail. At the bottom end, CSC charges only Rs. 500 for membership, and Rs. 200 a year. An afternoon's sailing costs a mere Rs. 15. "It is cheaper than going for a movie," claims Godrej. RBYC, too, gives a special sailing membership to those who are keen for Rs.3,000. For students, there is a further concession at the clubs. "If anybody, especially a youngster, is really interested, the clubs make sure that he gets a chance. It is a pity to see boats lying idle on holidays," says Mariwala.

Resources pooled

In an effort to encourage the sport, CSC and RBYC have pooled resources and relaxed membership rules. "People complain that there is no open space in Bombay, but very few take advantage of the city's best resource — the sea," says Singh, who plans to approach colleges to attract youngsters. The Sea Cadet Corps, an NCC-like organisation, has been encouraging the sport among children as well. Of those who take up sailing, quite a few give up after a time. Felix Wiesinger, who runs a printing business and owns a Laser, a small two-man yacht, mourns about the lack of time. "I've hardly had the time to go sailing this year. I shoul call myself an ex-sailor." And Godrej says "The major constraints are time, enviror mental factors — winds are favourabl only in the afternoons — and also the cos of buying and maintaining good equip ment and boats."

But every member of the sailing frater nity claims that sailing as a popular spor is yet to take off because most Indians ar scared of the sea. "It is no more dan gerous than riding a motorcycle, but it i seen as a dangerous sport," says one "Another problem is that not man youngsters learn to swim in Bombay, s naturally they are scared of yachting. I the past decade, few good sailors hav emerged," says Godrej.

As the sailing season draws to a close there is a spate of what are facetiously called "Party Races". These overnigh races to Mandwa, Manori or Khanderi ar very popular, and almost always over booked. "Usually it means sailing th whole day, and camping and partying th whole night. The competition is only fo fun," says a sailing enthusiast.

During the monsoon months, when n sailing is allowed, the clubs still buzz wit activity. Sailors gather to drink, gossip swap tales and bemoan the end of the sea son. Come September, however, and the are all out on the bosom of the sea again

■ SUDESHNA SE

Bombay has a big role to play

Hemendra M. Kothari, *44, is one of the youngest presidents of the Bombay Stock Exchange (BSE). A multi-faceted personality, he played an important role in launching the India Fund and India Growth Fund. Kothari's tenure as president should see the BSE taking new directions. He talks to Rafiq Dossani*

What change would you like to see most in the structure of the Bombay Stock Exchange?
The BSE has always encouraged the concept of corporate membership. This ought to be crystallised now. Earlier, at least two member-brokers need to combine to form a limited company. I would like to allow incorporation even for single member firms. The other shareholders would have the status of approved members. The advantage is that there will be continuity of the firm's status and more transparent functioning. Bankers will be able to see the firm's balance-sheet and assess its credit needs. It would improve the liquidity of members and their capacity to take on more business.

Why not take new members in order to increase the capacity of the exchange to handle more business?
What is needed is better service and not necessarily more members. Also, each broker should make more income in order to make the investments necessary to be able to service larger volumes of business. This is where incorporation and allowing more floor representatives per broker can help.

In a democratic institution which claims to be the capital market for the nation, should only those be members whose grandfathers or fathers were members?
Well, someone can always buy a card from a selling member. Second, new stock exchanges are opening all over the country and memberships are available there. But more important is the need to understand the business. With due respect to the new members, some of them have failed because trading is not the same as other business. One needs to understand the issues of risk and exposure. Besides, if I look back to when I joined in 1969 and now, 80 per cent of the firms have a new educated generation of members' sons that have come in. Plus now, we have a training institute. So, it is not as if we are not getting increasingly professionalised.

Small investors complain of a lack of service. How is this to be remedied?
Computerisation will change all this. Until then, the smaller investors could invest in mutual funds. In any case, with inflation, it becomes less worthwhile for a broker to service trades below Rs.1,000 in value. Given the situation, I think brokers are doing a good job for their clients.

But can brokers regulate themselves? Even the chairman of SEBI has raised this issue.
The chairman of SEBI has been supportive of our efforts at self-regulation. Ultimately, unless we look after the investors, we cannot make more money. You will admit that the BSE has done quite well in this regard. Remember that market capitalisation fell by almost Rs.40,000 crore between 9 October 1990 and 25 January 1991. Yet the default was of the order of only Rs.1.5 crore.

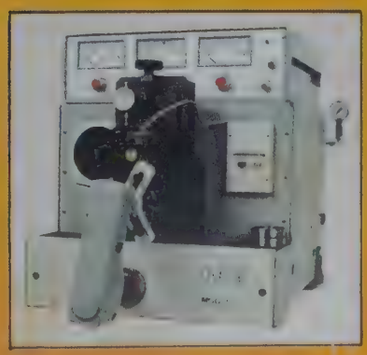
What are your plans for computerisation?
We started with grand plans but have slowed down recently because of the settlement problems. This is now our priority — timely settlement. Through last year, when trading volumes soared threefold, the computers often failed due to overload. To sort out this problem over the next two years, we need to invest more in computerisation. Over the longer term — 10 years or so — we want on-line trading, a screen on every broker's table.

How will you raise the large funds needed for this?
This will not be a problem because the higher volumes that will result will more than pay for the cost. I am confident that brokers will not be burdened by this. In any case, we plan to phase in on-line trading in order to build up the broking community's confidence. We may start with computerising less-active scrips first.

How is your relationship with the government? Why must it be asked to approve of everything you do?
Well, until the legislation to empower SEBI is passed, that is inevitable. But the relationship is better than what most people imagine.

Do you plan to introduce new trading instruments like options and warrants? And what about a grey market for new issues until they are listed?
A committee is looking into this. Basically, our attitude is that the more the choice the better, provided there is proper regulation to prevent manipulation. In other words, more freedom of choice, provided that there is transparency of transactions. For example, a grey market is better than an unofficial one which can hurt investors.

In what ways can a capital market in Bombay help mobilise savings?
First, by providing liquidity. Over two-thirds of the total secondary market transactions take place in Bombay. Second, Bombay acts as a clearing house for other exchanges, even for Delhi and Calcutta. Third, all the financial institutions that raise funds are in Bombay. Fourth, even today, 25 per cent of new issue money is raised in Bombay although that proportion has been declining. Given our premier position and continued good relations with other stock exchanges, Bombay has a major role to play in mobilising savings through capital markets.



WE HAVE NEVER BEEN IN TOUCH WITH THE MUSIC

The idea of a musical bearing is surely not exciting. Modern day applications of rolling bearings demand that bearings perform noiselessly. This however, is not a matter of love or hate with music. It is a test of precision.

NORMA bearings achieve the ultimate in precision using state-of-the-art technology of **FAG** - Germany - World leaders in rolling bearing technology. Optimal designs evolved and updated through FAG's extensive R & D, Superior materials, automated manufacturing and handling systems; and above all the single minded perseverance of our people for precision ensure that NORMA bearings run smoothly and silently - even when the going is rough!

Each bearing passes through an Anderometer which checks vibrations and running noise.

LETTER FROM THE PUBLISHER

The Delhi-based Thapar group has steadily pursued growth. It has continued to climb in ranking and is amongst the top five business houses in India. In spite of its size it has retained its dynamism and competitive edge. Lalit Thapar is certainly amongst the most respected businessmen in the country.

Yet, interestingly, a study of the group makes one think carefully about the major issues that every large business house must deal with. To start with, the question is how close should one be to government and politicians. Being based in Delhi only focuses the question more sharply. On the one hand proximity to politicians can result in enormous benefits in a 'licence quota raj'. On the other hand one has to tread a tightrope in not getting too close. The situation can get quite tricky when governments change frequently. In fact, the world over, the current preference is to stick to business and stay away from politicians.

It is now also well accepted that the entire licensing regime, far from controlling large houses, in fact only benefited the big houses — at the cost of the economy and the consumer. So far, large business houses, including the Thapars, have had to depend on licences for growth.Yet, today most — even the big houses — would agree that licensing has become stifling and that liberalisation would be better for all. To be sure, there would be increased competition and many of those who are used to the old ways are bound to wither under pressure. But a competitive atmosphere would tone up the functioning of the better run companies and, in today's market conditions, this would allow them to grow rapidly and, in due course, become competitive internationally.

It is also true that most of the largest business houses have a very poor track record in exports and in fact are very large net users of foreign exchange. Since they are now being forced to earn foreign exchange, and they cannot export their main products, they have had to enter into lines or projects that they really have no skills for, only to export or for some other such reason. This only underlines the fact that they just cannot compete internationally and have prospered in a totally protected market — with the consumer paying the price. In theory, all the captains of industry would love to be competitive. But none would like, or more importantly be able, to face competition from free and unrestricted imports. Yet at some stage the day must come when we as a country will also have to allow free imports.

The Thapar group also seems to have managed successfully the transition from one generation to another. The history of Indian business houses has been that when it is time for the brother's children to take charge, then the quarrels start and divisions take place. A new generation of younger Thapars have join the business and are now taking positions of responsibility. Yet this is one of the few groups that has accommodated the next generation and not split. Many business families would love to be in a similar position.

It is against this background that we must judge the success of the Thapar group.

POWERICA —A PROMISE FOR POWER

ART-5701

You don't have to be the world's youngest grandmaster to be a Raymond's man.

When, in 1987 at the age of 18, Viswanathan Anand became India's first grandmaster, he was also the world's youngest, launched on a brilliant career which would see him in 1989 beat former world champion Boris Spassky at the 4th International Games Festival in Cannes, France.

Too young to be checked by his own mate, still, he is not beyond making a few dashing moves when fittingly attired – e.g., in this blue/grey Jodhpuri made from a polyester-wool combination aptly called "Sapphire".

You don't have to be a jewel in India's chess crown to be a Raymond's man. For that matter, you don't even have to be a Raymond's man.

...buf it helps.

Raymond's

Never say no to life.

LETTERS TO THE EDITOR

• Right on target

The Cover Feature, 'The Foreign Exchange Squeeze' (1 April) gives a graphic account of the causes leading to India's present economic situation. It is rightly said that the current foreign exchange squeeze is merely a symptom of the systemic failure in the economy. Sadly, this failure is not really a reflection of the economy's intrinsic strengths and weaknesses.

The consequences of the Gulf War and the depletion of receipts from NRIs of West Asia should not be ignored while taking stock of our economy. This is only a temporary phase and there is no cause for panic. A solution should be sought through the wisdom of economists, and not through rash bureaucratic actions. Irrational steps like control on imports will only choke industrial growth.

J.B. WILLIAMS
Madras

• It's not a weapon

T.V. Rao has analysed the appraisal system in organisations very well (HRD, 1 April). He is right in stating that since appraisal reports are linked to promotions which are always controversial, their value is diluted. Further, its sanctity is lost when a sincerely prepared report fetches a result that is not intended. Appraisal reports should be used to identify employees who need counselling, not to write them off.

HEMANT SRIVASTAVA
Pune

• Not always 'goodbye'

The article, 'A smooth succession' on J.R.D. Tata (Corporate Report, 1 April) made excellent reading. It brought to mind a hoarding put up long ago by Air India — Tata doesn't always mean goodbye. Speaking about J.R.D. as he is so well known, I guess there are hundreds of people who will have a story to tell about this eminent personality — especially the humility with which he conducted himself all his life.

If only other industrial houses and commercial establishments could emulate his principles, they would be able to offer a better quality of life to the nation at large, not to speak of the politicians we have today.

• Technology mix up

The Special Report on fertiliser co-operatives (1 April) states that IFFCO's Aonla plant is using the same technology as that of KRIBHCO and, therefore, has remarkable results.

The IFFCO Aonla plant does not use the ammonia technology used by KRIBHCO. It uses ammonia technology from Haldor Topsoe A/S of Denmark (which is being used by Rashtriya Chemicals & Fertilisers Ltd's Thal plants: National Fertilisers Ltd, Vijapur and Indo-Gulf Fertilisers, Jagdishpur).

S.P. GUPTA
General manager (Aonla), IFFCO
Delhi

• A clarification

The news item (Businessmen in the News, 1 April), contains an erroneous statement — "Thermax was preferred to Keltron and ITI who were also in the race for the technology transfer deal. Tata Unisys has also applied for the technology transfer, but a formal agreement is yet to be signed".

In fact, eight companies had approached C-DAC for transfer of technology (ToT) of PARAM and related parallel processing products. From among these, three were selected and ToT agreements have been signed with Thermax, Keltron and ITI. The case of Tata Unisys is under negotiation.

• Strengthening the economy

Your Cover Feature, 'Living with uncertainty' (18 March) made interesting reading. It appears that our country is destined to have coalition governments for the next several years. Legislation must be made effective if bodies such as the capital goods committee are to function in a meaningful manner. Secondly, states must be given greater autonomy in matters such as public issues, issue of industrial licences and approval of term loans. This would ensure that fortunes of businessmen do not remain tied to a single power centre in New Delhi.

A.V. VEDPURISWAR
Calcutta

• Fallout of Gulf war

This refers to the Cover Feature on the Gulf war (21 January). West Asia is now in the grips of a grim war. The war will definitely affect Indian economy to a large extent. The oil resources which comes mainly from Gulf nations will be affected because of UN sanctions against Iraq. So after three months, there will be a total shortage of oil products in India.

Indian exports to the Gulf Nations will suffer. This means no foreign earnings. Indian migrants in the Gulf who have come back to India will have to be supported, etc.

S. BACHAN JEET SINGH
Hyderabad

• Not so new

This is with reference to your news item about Dena Bank (Businessmen in the News, 18 March). The report states that the bank has come up with a new long-term deposit scheme.

We have to state that, the scheme referred to is not new. Our bank had introduced a similar scheme known as *Amrutkumbha Yojana* in 1983.

A.S. PATIL
The Kalinakar Bank Ltd
Kolhapur

• No long-term views

The Cover Feature, "The foreign exchange squeeze" (1 April) made interesting reading. The most impressive was the trade balance graph which suggested that, over the past one decade, the absolute trade (im)balance in our country has remained more or less constant, although trade has increased manifold and the base is much larger. This is a healthy sign.

The graph indicates a high correlation between imports and exports. A regression analysis can perhaps indicate a clearer picture. Which is the cause and which the effect remains to be known. Nevertheless, in such a scenario, a change (reduction) in one is likely to have a similar effect on the other.

The fate of the ongoing projects, in which cost and time overruns now seem unavoidable are shocking. With price increases inevitable, domestic demand is bound to suffer. One can argue that surplus funds are poured into the economy by the government enterprises. However, the productive capacity of the rupee (more of which now is in the possession of the government) and its multiplier effect on the economy is definitely questionable.

Like the author concludes in the article, "The finance ministry has a short-term view whereas the commerce ministry has a medium-term view." The long-term view is certainly absent.

If you are in exports this is your hot line to buyers around the world

Business India EXPORTER

Advertise in it

and see your message reach

key buyers in international markets.

The Business India Exporter is a unique and new medium for Indian exporters. In the form of Illustrated Product Catalogues, these carefully compiled directories will contain relevant data and information about exporters, providing them an opportunity to advertise their products.

The first three Business India Exporters will be on Gems & Jewellery; Apparels & Textiles; and Chemicals, Pharmaceuticals, Cosmetics & Allied Products.

To be sent free, to a vast community of importers in key markets overseas, these directories are an easy, cost-effective and convenient way of advertising your product for the export market. There are advertisements to suit every budget and every requirement. So get in touch with us today and take your business around the world.

Can you afford to miss out

Hundreds of promises, but few ideas

Like cheaters at an examination, the economic content of the manifestoes and campaigns of the three major political parties — the Congress, National Front and BJP — bear a striking resemblance to one another. All favour a reduction in budget deficits in order to control inflation, decentralisation of decision making to the village level, privatisation of infrastructure, job creation via the small-scale sector and better terms of trade for agriculture. The Congress and National Front would both reserve 30 per cent of government jobs for women. As in Ajit Singh's aborted industrial licencing policy, the Congress would abolish licencing selectively (starting with monopolist-dominated industries). There is the usual wishful thinking by all the parties; for example, the Congress would roll back the prices of cheap cotton sarees to July 1990 levels, while the National Front would provide the rural poor with adequate housing in the next five years and the urban footpath dwellers with shelters. All the three parties similarly hope to reconcile a lower budget deficit with an expanded public distribution system of essential commodity distribution at controlled prices. There are the usual unbelievable — because they are unlikely to be implemented — ideas: stable taxes for five years from the Congress, for example; stoppage of evictions from agricultural land by the National Front.

Boring stuff? Not at all. The above indicates how the terms of the debate have changed over just one and a half years. Of course, in terms of social issues, there is a dramatic change in the openness of debate if not in its content. But even in economic terms, the broad thrust is now clearly stated as pro-liberalisation and anti-big government.

Beyond the common change from "justice and equity" in 1989 to the "decentralisation and deregulation" manifestoes of 1991, the similarity between the Congress and BJP views and the difference with the National Front on economic issues becomes a little sharper.

Primarily, the National Front's manifesto claims to be more pro-poor and rural in thrust than the other two — land reforms, better terms of trade and crop insurance, for example — while proposals like a convertible rupee and taxes based on inflation-adjusted income from the BJP and a time-bound programme of a stable tax regime, private sector mutual funds and offshore banking from the Congress give their manifestoes a more growth-via-liberalisation and urban middle class flavour.

The reason for this is partly the absence of compelling social issues in urban minds but perhaps also due to a general awakening about the usefulness of economic liberalisation. As the urban classes in India have prospered, their economic views have turned increasingly right-wing. Increasingly, the urban areas have voted for right-wing or centrist parties, while the left that used to perform well in the cities has moved to the rural areas — Bombay is a good example of this trend.

The National Front's relative neglect in its manifesto of a sizeable (150 million plus) urban constituency is surprising considering its strong pro-liberalisation record during its year in office but is understandable in the context of its targeted clientele of rural backwards. Read together with the manifestoes of the other parties, it suggests that political parties view voting patterns to be more segmented this time than a simple rich-poor, backward-forward classes or rural-urban divide.

Credit policy blues

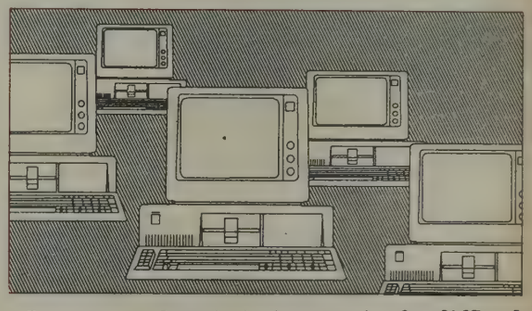
The Reserve Bank of India's (RBI) credit policy for the first half of 1991-92 is unlikely to be remembered as S. Venkitaramanan's significant contribution to economic development. Like its predecessors, it contains one significant liberalisation, some minor ones and a clutch of new controls. It continues, therefore, with the gradual loosening of reins that the previous governor preferred with no long-term or strategic basis for change other than changes in the level of bureaucratic ignorance.

As the first comprehensive credit policy after the massive foreign exchange crunch that affected the country from December 1990 onwards, its major stated concern is, correctly, to conserve foreign exchange. Yet there is not a single measure in the credit policy that seeks to do so. The RBI could, for example, have moved towards a convertible rupee by creating an organised market for REP licences. Instead it chose to further raise margins on letters of credit for import after the announcement of the credit policy, a decision that has created fresh panic and uncertainly among importers — quite unnecessarily, given that there are no great uncertainties in international events these days; the size and pattern of imports and exports over

the next six months is fairly predictable. There is, therefore, every reason for a medium-term policy.

The other major concern of the policy is the control of inflation. Here, it admits failure: despite bringing down the growth of money supply in 1990, its targeted fallout — a fall in the inflation rate — did not occur. Instead, inflation soared last year. While in 1989-90, money supply had grown by 19.6 per cent and consumer prices by 4.8 per cent, money supply growth was down to 14.9 per cent and consumer prices rose by a whopping 14.1 per cent in 1990-91.

RBI's strategy to control inflation this time around is to continue to restrict money supply growth. To this end, it has raised the floor on short-term borrowing rates by one per cent to a minimum of 17 per cent. This strategy marks a shift from quantity-rationing to the use of the price mechanism.



This sounds like a sensible shift because, with a history of excess liquidity in the economy, stiff reserve requirements have never acted as a meaningful brake on the supply of money. Nevertheless, there are good reasons to suspect that the chosen measures will not work. The first is that expectations of rising inflation and still higher interest rates might defeat the purpose of restricting borrowing through higher interest rates.

Second, there is one large borrower from RBI for whom the price of money has been historically irrelevant in determining its liquidity needs. That borrower is, of course, the government of India. Given the ongoing credit crisis of the government and the size of government borrowing (52 per cent of money supply), this situation is unlikely to change.

The obvious solution is for government to have a lower deficit and to dovetail fiscal policy with credit policy. Such a system has worked effectively in Britain. In fact, RBI's credit policy—unlike last year's—has announced a definite monetary growth target (14 per cent) and has linked it to the targeted fiscal deficit of 6.5 per cent of GDP (equivalent to 11 per cent of money supply), real growth of 4 per cent and inflation of 7 per cent. This is a good beginning.

One thing is clear. Unless the role of RBI is at least integrated with government policy, the usefulness of credit policy will continue to be conditional on the whims of government. In its present role, RBI is useful, but not a strong force for change.

Electronics throttle

The two key features of the electronics hardware business in India are rapid product obsolescence and rampant smuggling of components (at least 40 per cent of the total, by one estimate). The first is common to the industry worldwide, the second an outcome of import restrictions. Both features have helped the industry to grow rapidly, although its honest members have made lower profits as a result.

In order to promote exports to hard currency areas, the Department of Electronics (DoE) has come up with an original idea called the "internalisation of foreign exchange" within the electronics sector. Under the proposal, all new electronics imports should be financed only by intra-sectorally tradeable electronic export earnings.

There is a fundamental level at which the proposal is absurd. The efficiency of a market depends on its liquidity. By proposing to restrict the market for REP licences from electronics exports to electronics importers, the market will become thinner and less efficient as a result. The beneficiaries will be the middlemen who can locate buyers and sellers and the loser will be the exporter without a wide enough market in which to sell his licences. Thus, while the government talks of moving towards a "super-REP" licence which is freely tradeable and usable across all imported commodities, DoE plans a move in the other direction.

Even given the peculiar features of the electronics industry, the proposal reminds one of the old saying that there are two ways to be original. The hard way is to be a genius, the easy way is to be wrong. DoE has opted for the easy path.

Consider product obsolescence. It means that it is increasingly difficult for a single international manufacturer to be at the leading edge for any electronic product on an on-going basis. Hence, there is usually a continuous interchange of products and processes among manufacturers. The flow of imports and exports occurs instantaneously and is complex. Manufacturers, depending on their state of technology, are at different times net exporters and net importers.

For Indian manufacturers who are largely behind world levels of technological development, it implies that there has to be a period of net import. Even more important, the need to import will precede the ability to export. After that, given the country's technical skills, there is the reasonable expectation that the sector as a whole will be a net exporter of electronics hardware. DoE's proposal, on the other hand, asks for exports to precede imports, based on which REP licences will be issued. It has put the cart before the horse.

The government had last year proposed the concept of "net foreign exchange" for exporters — via REP licences and actual remittances. This should be applied to electronics exporters but with a longer perspective in mind thanks to the nature of the industry. A proposal that allows credible exporters (perhaps those in excess of a certain asset size) to import hardware duty-free provided they pay for it with export earnings within 5 years would make more sense as an incentive for exports. It is obviously back to the drawing board for DoE.

Ignoble failure

On 14 June 1988, tax deduction at source (TDS) form no. 16 was introduced by the Central Bureau of Direct Tax (CBDT) with noble intentions, no doubt. But as happens with most of the government's noble intentions, it failed. The reason: the new forms were not available at income tax offices for months.

The outcome: the notification was cancelled and a fresh notification dated 10 October 1988 was issued, making the rule effective from April 1989. The form however was further delayed and made available only by the last week of June 1989.

Now, after more than one and a half years since form no. 16 was originally introduced, the bureaucrats have realised that the unified form was actually a disunified form and required revision. Subsequently, with effect from 28 February 1991, form no. 16 has been replaced by three new forms — 16 (relating to salaries), 16A (relating to interest on securities, dividends and insurance agent's fees), and 16B (relating to lotteries, horse races etc). Until 8 April 1991, however, the new form number 16B was not available at the IT office, Bombay. Similarly, the annual returns on salaries which has also been amended with effect from 1 April, was not available at the IT office, Bombay, till 8 April.

BA's second hub

From this summer on, anyone flying to London on British Airways (BA) will land not at well worn Heathrow, but at the spanking new north terminal at Gatwick, now the third largest international airport in the world. To reach central London, passengers need spend just 30 minutes on the Gatwick express monrail. And if they are outbound, they can check in any time on the day of departure at BA's Gatwick London terminal in Victoria station, leave their bags behind and continue last minute shopping or sight-seeing.

In order to develop Gatwick as the airline's second hub in London, BA has transferred three of its important routes there, viz, to Mauritius, the Seychelles, and Delhi (a daily service en route to Hong Kong and Manila).

BA was the first to operate out of this airport: its first flight took off from Gatwick on 17 May 1936. Today it is

the airport's largest scheduled airline, operating exclusively out of the spacious brightly lit north terminal, opened in March 1988. BA's weekly turnover at Gatwick is over 60,000, with 1,000 flights per week — the third highest flight movement in the world.

MBA for agriculture

Until now an MBA degree could be acquired only by those aspiring for a corporate job. But G. D. Naidu Agricultural University of Coimbatore has found a new application for the degree — a two-year MBA programme for those holding a degree in agriculture, horticulture, forestry and fishery. This course will be conducted as per the guidelines provided by the Indian Council for Agricultural Research, New Delhi.

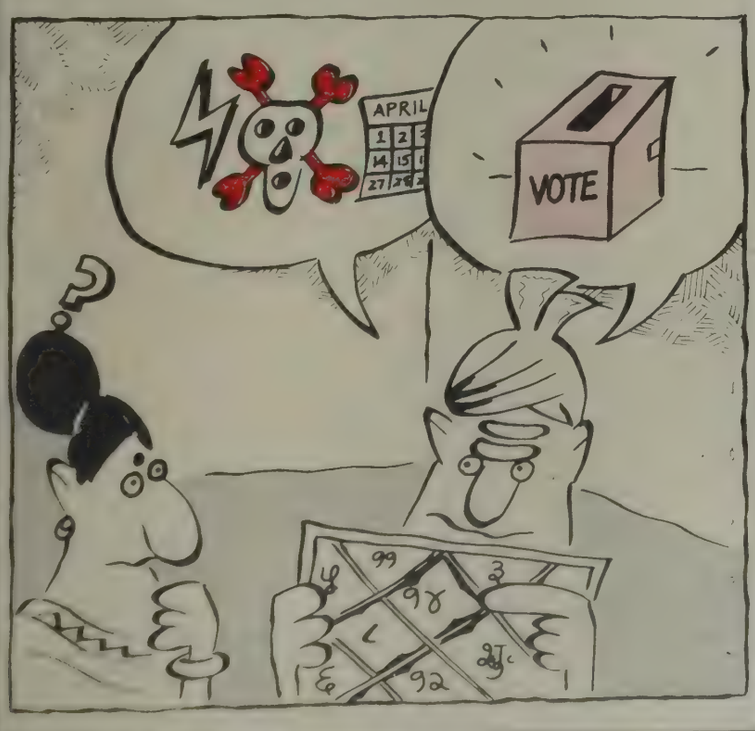
Business India invites readers to send original unpublished contributions to this page. The snippets can be humorous, insightful, outrageous or simply informative. Each snippet must carry this coupon.

Rs.50 paid for each published contribution.

Corporate security

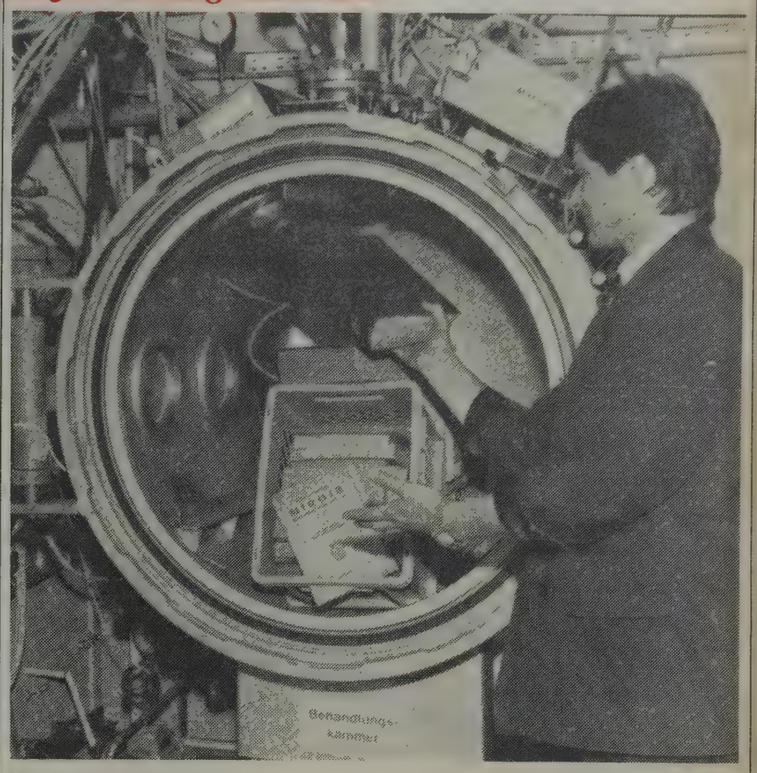
Security is a big issue these days and more and more companies are installing complex security devices. To enter auto teller machines (ATM) banks you have to use your ATM card. At Hindustan Levers, and American Centre you have to punch in a code number to enter. And Societe Internationate de Telecommunication Aeronautiques has a steel door with an electronic lock, and to enter you have to first seek permission over the intercom.

Recently Mitsubishi also constructed a similar door. The reason however was very original — as Japan was America's ally in the Gulf War Mitsubishi being a Japanese firm was in danger.



Kowtowing to the stars

Astrology may not be a science but its popularity cannot be undermined. Leave alone the layman, even politicians turn to the stars for advice. So now that it's election time, what do the stars have to say? According to the Tamil press, Jayalalitha's astrologer has told her that she would win provided the elections are held before 14 April. *Mathrabhoomi*, Thiruvananathapuram, quotes C.K. Ramachandran, president of the Kerala Jyotishtra Parishad, saying that the nation is headed for disaster.

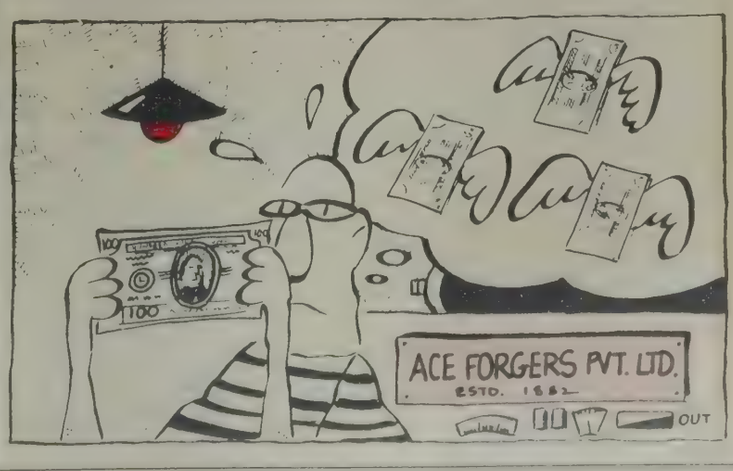


The new prime minister and his government will be in deep trouble before 21 December, as tragedy has struck the nation and its prime minister two months before and after every solar eclipse.

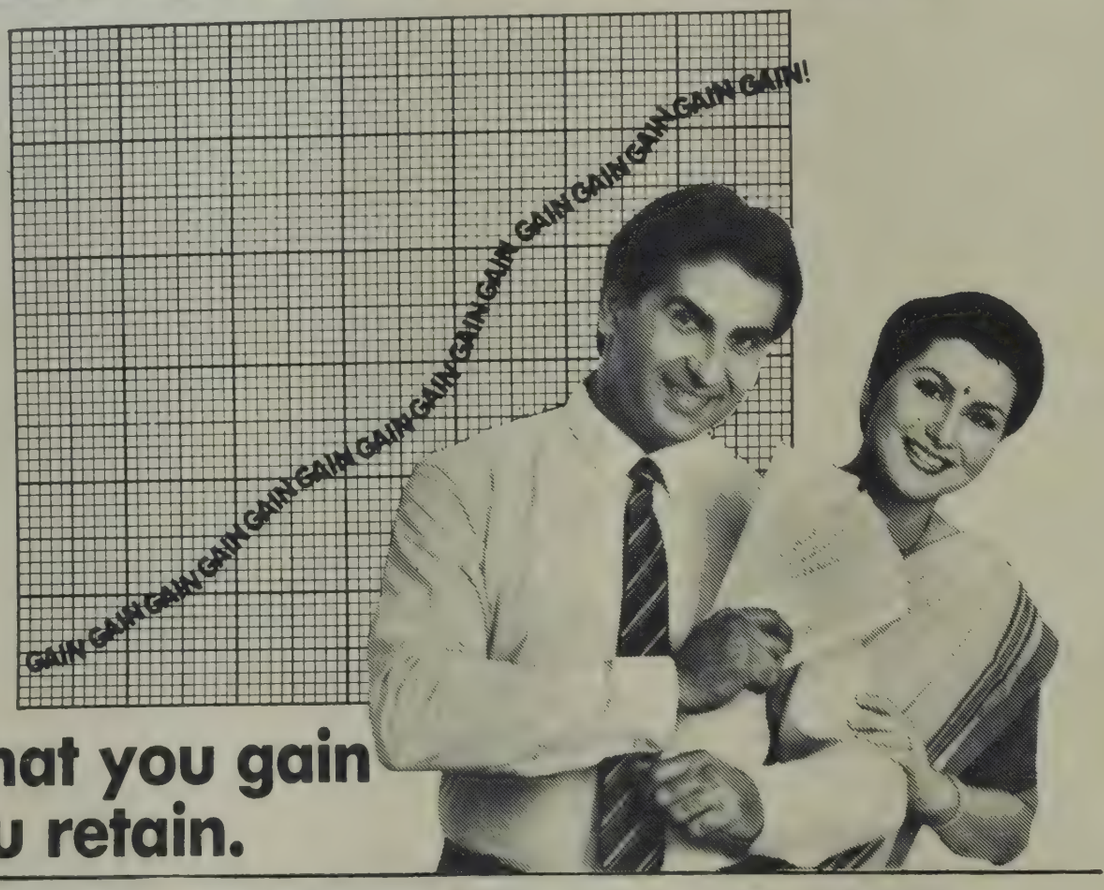
The renowned star gazer's calendar of mishap begins with 19 September 1962 when the Chinese attacked the country and ends with 6 March 1991 when Chandra Shekhar resigned as prime minister.

Aaj (UP), reports that the Congress (I) president, having taken serious note of all these predictions, has already started wooing the stars by holding a *mahayagna* in Amethi last week.

Rejuvenating old tomes



Old books that would otherwise turn yellow and flake apart can now be preserved thanks to a new technique developed by the Frankfurt Batelle Institute. The technique involves 'bathing' a hundred books at a time in a special chemical solution. The books are then subjected to microwave radiation.



Foxing the forger

Five per cent of the world's trade is in counterfeit goods, according to the International Chamber of Commerce. And 82 per cent of $100 notes used in Europe in 1989 were forged. Forgery detection therefore has had to keep pace.

Australian scientists have developed an improved antiforgery optical device which uses pixelgram technology. This technology is unique because unlike holograms that can be forged, the pixelgram image cannot be compiled photographically or holographically. One of the pixelgram's most valuable features is its ability to reproduce a realistic human portrait on flexible plastic or paper, something beyond the capacity of current holography technology.

GAIN WITH MASTERGAIN

Yet another unique scheme from UTI!

...and what you gain you retain.

Mastergain is a unique scheme with opportunities for high returns from investments in equities — with Capital Gains distributed over a period of time so what you gain, you can retain. It has excellent tax saving and tax planning features.

HIGHLIGHTS

1. Mastergain funds will be invested in high-growth oriented equities by a seasoned team of financial experts.
2. At the end of the 3rd year, through a prudent plan, your Capital will be redeemed along with Capital Gains @ 20% per annum over the next five years.
3. Under Section 48(2) of the Income Tax Act, Capital Gains amounting to Rs. 10,000/- are totally exempt from tax. Additional Gains are eligible for 60% exemption.
4. The fund will cease after 7 years when all Capital and Capital Gains will be distributed.
5. You get the option to encash full investment anytime after 3 years, at NAV based re-purchase price.
6. Units are transferable.
7. Full allotment assured.

APPLICATIONS ACCEPTED BETWEEN APRIL 15 & JUNE 15, 1991.

UNIT TRUST OF INDIA

Trust of 90 lakh Unit-holders.

Interpub/UTI-MG/026/91

All Securities Investments carry market risk. You are requested to consult your investment adviser or agent before making any investment.

Application Forms accepted at:

• All UTI Offices. • All Branches of Corporation Bank. • Northern and Western regions: Selected branches of Bank of Baroda and Union Bank of India. • Southern and Eastern regions: Selected branches of SBI and its associate banks. • Spot Collection Vans on specified days and timings.
• For further details and clarifications please contact UTI offices, Chief Representatives or Agents.

Dave again

SLM-Maneklal, the Bombay-based sick textile machinery manufacturing company, may soon change hands again. Navinbhai Dave, always clad in white *khadi* and an industrialist from Ahmedabad, is trying to buy 28 per cent of the company's equity held by Habir Munshaw. Munshaw bought the same stake about five years ago from the original promoter Yogesh Maneklal who was them embroiled in a spying case. Dave is negotiating with ICICI, to buy Munshaw's stake surrendered to them a few months ago.

SLM-Maneklal, once a leading textile machinery manufacturer, has been losing heavily for the last few years. At the end of 1990-91, the company's accumulated loss was estimated to be Rs.25 crore against its equity capital of Rs.2.99 crore.

If Dave succeeds, this will be his second large acquisition. Earlier, he took over the controlling interest in Swan Mills, a sick textile mill in Bombay. After two-and-a-half years, the mill was restarted about a fortnight ago. Dave is now hoping to achieve a turnover of about Rs.25 crore and make a small profit too.

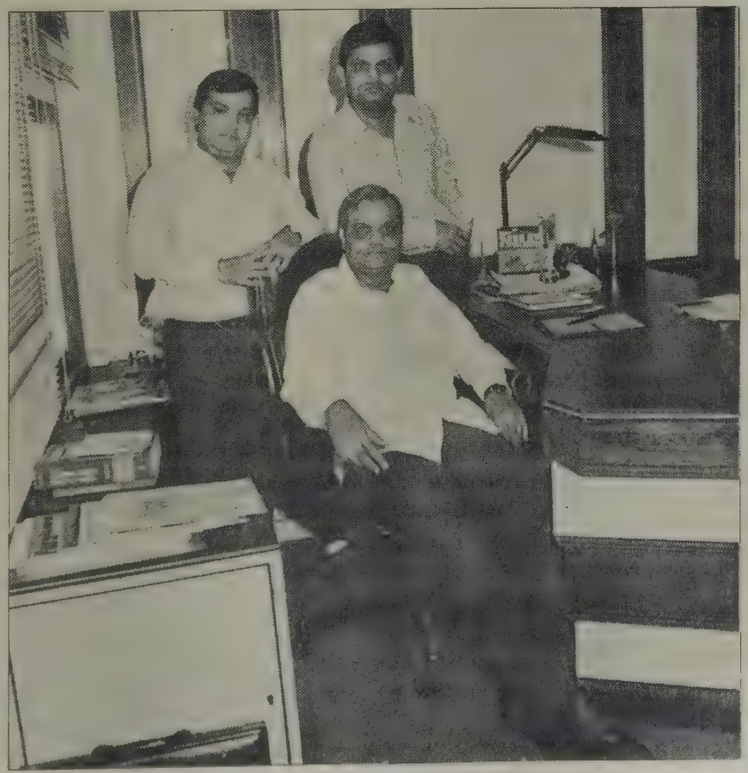
More Sumeet washing machines

The *mixie* king, Power Control and Appliances (makers of Sumeet mixers), is planning to be a major player in the washing machine market too. They already have two models of washing machines in the market and are now planning to introduce two more sophisticated models. Sumeet is also planning to start making roller irons soon. Thus, the company which used to be identified primarily as a mixer manufacturer may soon become a household name for a diversified range of home appliances.

Into housing finance

Tata Housing Development Co, a half-a-century old closely held company, may go public soon. The plan is to move from property development to housing finance in a big way. For this purpose, the company plans to raise funds through a public issue. Although the size of the issue is not known, it is understood that the present equity capital of Rs.2 crore will increase substantially. Moreover, the company may also change its name of Tata Housing Finance Ltd.

However, F.A. Pancha, the managing director of the company maintained that the company has no such plans for the moment.



One more for south Bombay

South Bombay will soon have a new luxury hotel. The famous Bombay builders, Makers, have been working on a hotel project for years. After many false starts, they bagged the hotel site at the World Trade Centre at the very southern tip of Bombay. The construction has already started next to the IDBI tower which has established itself as a Bombay landmark.

But what is not known is that Makers have recently tied up with Regent hotels, the super-luxury chain from Hong Kong. Earlier Regent had been negotiating with Rahul Bajaj to bid for a site in Delhi. With Regent's reputation for attracting top-flight travellers, the business community in Bombay will welcome the new hotel.

Doshi brothers' new ventures

Not satisfied with their success in decorative laminates, the Doshi brothers of Neoluxe India Ltd are continuing to diversify into unrelated areas. Last year, they set-up a 100-per-cent export-oriented unit at SEEPZ in Bombay for manufacturing of jewellery. Now they are planning to tie up with the Gujarat government to manufacture drugs like Vitamin A and C. But the biggest deal struck by the Doshis is a proposed joint venture with the Russian government to manufacture decorative laminates in Russia. Meanwhile, with a turnover of Rs.120 crore, the three brothers continue to run their business as a joint family concern. The Doshis will be worth watching in the future.

The Doshi trio: to Russia with laminates

Ambani making rounds

What was Mukesh Ambani doing last fortnight at ICI Ltd's Thane plant? According to information available, Ambani was looking carefully at every section of the 30,000 tonne polyester staple fibre (PSF) plant. Ambani's visit, according to sources, is a prelude to Reliance finally making up its mind to buy the plant (ICI had put the plant on the block to stop its recurring losses).

The price ICI is believed to be asking for is Rs.80 crore. Considering the current cost of a new 15,000 tonne PSF plant at Rs.150 crore, Reliance will certainly have a good bargain for a plant which is twice as big. Curiously, with this acquisition, Reliance's PSF capacity will jump from the existing 60,000 tonnes to 90,000 tonnes, or more than a third of the industry's capacity. Reliance's other advantage is that it makes PTA, the basic raw material for PSF and will soon make MEG, another important input.

No one perhaps can be in a more enviable position specially when there is a big glut in the PSF market. Meanwhile, the talks between Reliance and the RPG group to take over the latter's PSF company India Polyfibres Ltd, is believed to have fallen through.

HINDUSTAN TELEPRINTERS

Smart moves

There is a resurgence of activity at Hindustan Teleprinters Ltd (HTL), the Madras-based manufacturer of electronic teleprinters. Last week, the company signalled its return to good health by introducing a chip card called a "smart card". Made in denominations of Rs.500 (which can be expanded to Rs.2,000), the smart cards contain micro thin integrated circuits (ICs) and can be used at unmanned pay phones.

HTL was on the brink of disaster by late 1989 (see *Business India*, 6 February 1989). Electromechanical teleprinters — a major product line — had just been discontinued and its electronic teleprinter capacity was severely under-utilised. Then, Lakshmi Menon, taking charge as chairman and managing director, succeeded in steering the company out of trouble. Turnover from sales and service increased to Rs.46.25 crore (unaudited figures) in 1990-91, as against Rs.34.74 crore in the previous year. And before-tax profit margins have increased from 6.4 per cent last year to 14 per cent this year.

A core team. Menon created a core R&D team of 30, headed by a general manager, to develop products for use in the tele-

Menon: back from the brink

communications field. Among the first products developed and produced were main distribution frames (MDFs) used in telephone exchanges and rural automatic exchanges (RAX). HTL executed a bulk order for 1650 MDFs during 1990-91 worth Rs.10 crore.

The R&D team's next success was the smart card. Initially HTL will make 150,000 cards which will be marketed by DoT (the department of telecommunications). The company will make a profit of one rupee per card, and at the end of the third year the turnover generated will be Rs.12 crore.

The chip card has opened other doors too. HTL's R&D team got it ready for production within 100 days of receiving the technology from Aplab, Bombay, impressing the powers that be so much that HTL will soon be allowed to manufacture faxes too. Menon explains that the project is in

the final stage of clearance.

HTL's proposal involves a technology tie-up with the French company Sagem, already its technical collaborator for the electronic teleprinter project. With the company's existing infrastructure, the fax project will need only a minimal investment of Rs.1.5 to Rs.2 crore. HTL plans to produce 5,000 fax machines in the first year and 50,000 by the fifth.

Until the fax project is implemented, the company's main profit source would be its electronic teleprinters. A bilingual teleprinter has been developed and an upgraded model with a gist card (for language transliteration), a video display unit and floppy disc drives is currently available.

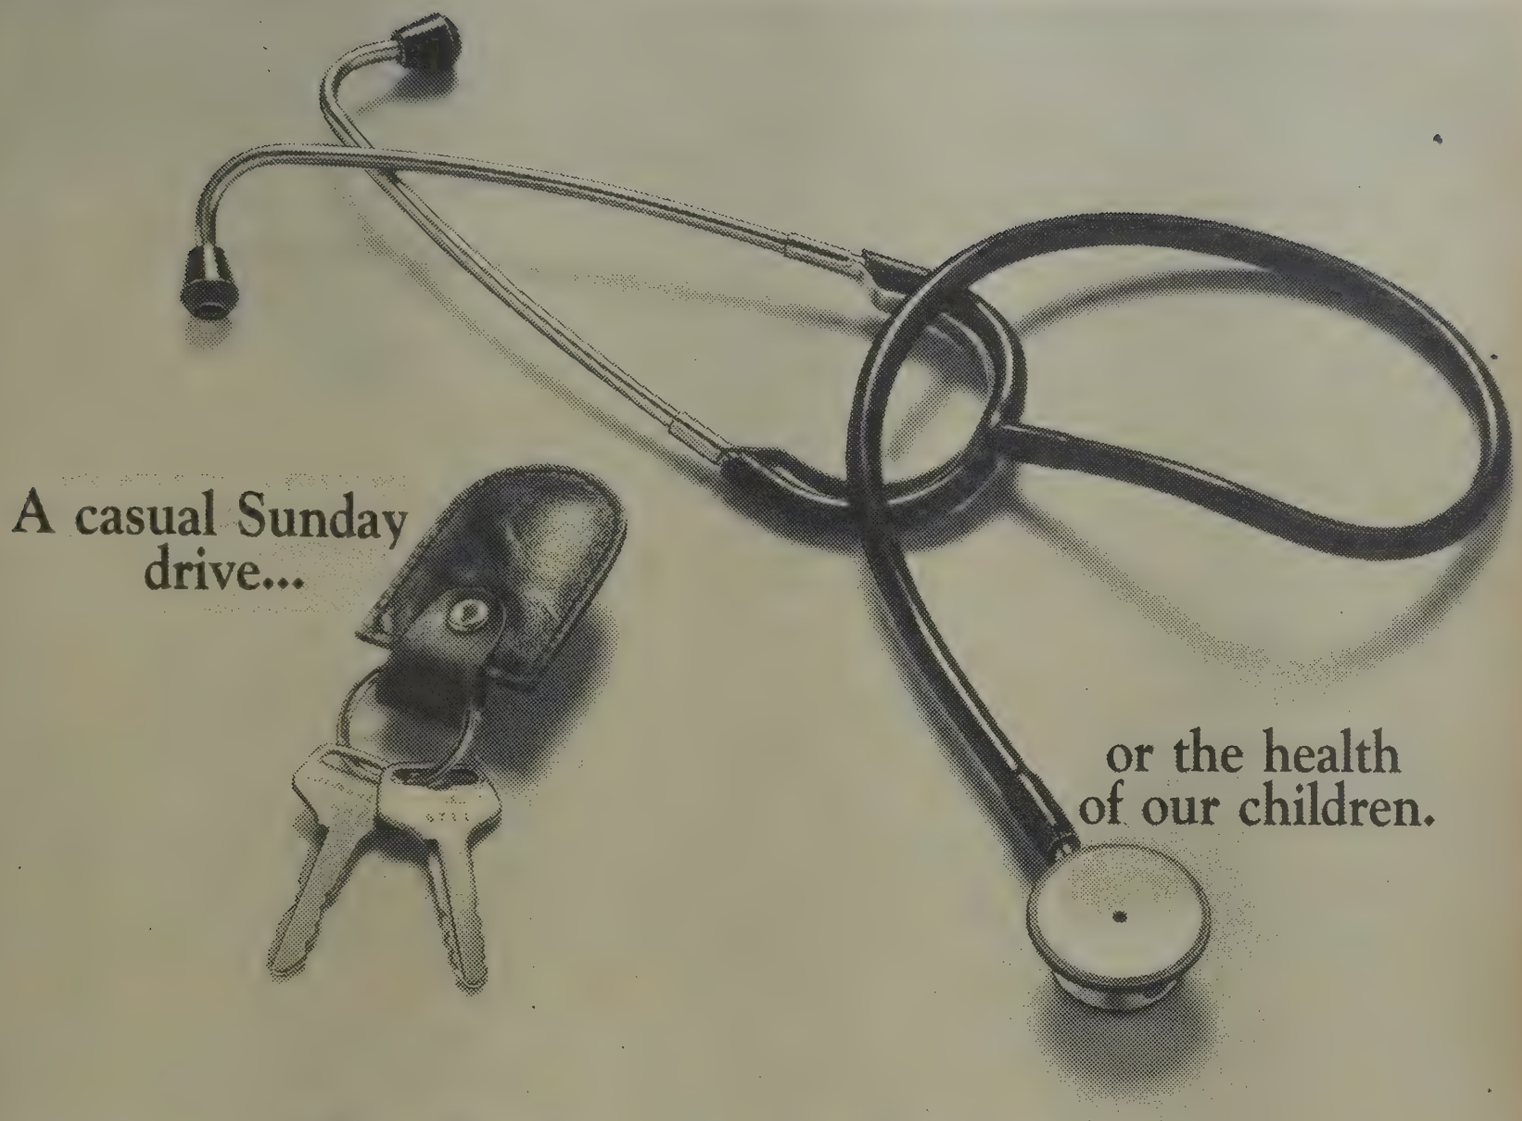
Simultaneously, other products of a lower unit value, which have been developed by the R&D team, are being subjected to field trials. These include rural messaging terminals, audio conferencing units, a charge indicator (which measures the duration of a call and its cost to the subscriber), telecommunication components, and a range of modern software packages for ET & T's personal computer.

Except for the fax machines, all the other products will be sold through DoT. "We might sell faxes through agents. And also work towards building up a marketing setup," says Menon. Given these prospects, the mood at HTL is definitely upbeat.

■ DHARANI K. PANI

LARSEN & TOUBRO

Mega issue cleared



On 16 April this year, the Supreme Court ruled that the Rs. 820 crore mega debenture issue pushed through by the Ambanis — after their bitterly contentious acquisition of a controlling stake in Larsen & Toubro — was legal. The court pointed out that the proposal for the issue went up before the Controller of Capital Issues (CCI), only after the L&T shareholders had approved it. And that subsequently, the CCI followed the process set down by law.

The court also clarified that the L&T shareholders had also approved the preferential allotment of some of the debentures to Reliance shareholders and the use of a substantial part of the monies thus raised as supplier's credit to Reliance. So, any subsequent change in the terms of the issue by the company was not permissible.

Already subscribed. Finally, the court pointed out that a part of the debenture issue had already been subscribed. And that third parties had consequently obtained the rights due to them as L&T shareholders. Given this, the debenture issue could not be revised. So, now as far as L&T is concerned, the Ambanis are firmly entrenched; their holdings will go up to a comfortable 34 per cent.

By upholding the legality of the issue in the manner in which it did, the court left unanswered the question whether the CCI's consent to an issue must be held valid or invalid as a whole; or whether a part of it could be held valid and the rest struck down.

However, the court was scathing in its remarks about the manner in which the Ambanis engineered their takeover of L&T. What has always been at issue is the manner in which the financial institutions chose to unload their L&T shares and not the right of the institutions to divest any of their holdings. However, the new rules announced last year will enforce greater transparency in any takeover deals in future. To that extent then, what happened with the Ambani takeover will not happen again.

That's the choice before us.

A seemingly harmless joy ride could actually be working against the future of our children. Some startling facts will drive home the truth...

This year, India will be paying over Rs. 10,000 crores, just for its fuel imports. Which is more than 1½ times the amount spent on Health and Family Welfare during the Seventh Plan (1985-90).

Moreover, petroleum imports are costing us dearly in precious foreign exchange. It's time we got our priorities right. Surely, the well-being of our children merits more concern than a week-end drive. Austerity and efficient utilisation of fuel is the need of the hour.

Here's some fuel for thought...

For a start, let's keep all vehicles off the road, once every week. Even this small sacrifice will enable the country to make a fuel saving of several crores a year.

Let's drive only if it's a must. Where distances are short, let's walk. There's no better way of conserving fuel. We can also shed a few "pounds" without paying a rupee!

Even while driving, we can get more miles to the litre. That's if we keep our vehicle ship-shape. And drive methodically.

Sharing taxis. Starting car pools. Travelling by bus and train... simple and practical ways of cutting down fuel consumption.

The fuel saving habit can in fact begin right at home. Switch the cooking gas on, only after lighting the match. Also, keep the flame low.

If you run a business that uses petroleum products — introduce energy-efficient technology, equipment, operations, maintenance and periodic energy audits.

Our country needs our small sacrifices to surmount the fuel crisis. But let's not wait to be asked. Now's the time to work jointly in the nation's interest. For its economic independence and self reliance.

It's in our own interest too!

इंडियनऑयल **Indian Oil Corporation Limited**

Sista's-10C-218/90

To make sure everything goes start by thinking of everything

Nobody knows better than you how vital a document your company's Annual Report is. Perhaps no other print job reflects, as closely, the standing of your company. Apart from your shareholders, it goes into the hands of so many equally important people like your bankers, collaborators and business associates. **W**hile you realise how critical quality is for your Annual Report, you also know that it is absolutely imperative that you keep the schedule ... come what may. **T**his is one job on which you can't take any risks. So, think of all the things that could go wrong. **A**nd let us tell you why Tata Press is so right for you.

We get our positives done outside. We have no control ...

Let's start with the basics. Can you be sure of accuracy? It is absolutely essential for a job of this nature. **W**hat does Tata Press offer you here? We have the Linotronic 330 Laser Image Setter – the only one of its kind in India. So you can make your corrections and get proofs and revised proofs in no time at all. **W**hat if yours is a complicated job requiring, for instance, 20 transparencies on a single page? That's no problem at all. Tata Press puts the magic of the Scitex System at your command. So it's possible to combine several transparencies in one picture ... to brighten up colours or even change them completely. **W**hen it

My machine isn't free. There's nothing I can do.

right with your Annual Report... that could go wrong.

comes to speed, Tata Press has the incredible Harris web offset machine which can print off a staggering 36,000 impressions an hour. With computerised controls that make it possible to ensure perfect inking. With Tata Press, there's no fear of hold ups anywhere. No worrying that paper may not be available when the job goes to print. No delays at the cutting, binding, addressing or despatch stages either. Because even these jobs are handled in-house. What's more, there are strict quality checks at every single step. It's no wonder that the best companies come to Tata Press. Last year, we handled over 250 Annual Reports. The orders came from far corners of the country. The job requirements varied widely. But one need was common every time ... The need for a quality job done strictly within schedule.

Sorry, sir. But the paper isn't available now.

We are happy to say that none of our clients was disappointed. Even when the job involved getting 5½ lakh copies processed, printed and despatched in 10 days! It's almost Annual Report time once again. Time to ensure that you don't have any problems. Time to contact Tata Press.

Er ... I agree we are a little short of the total order.

ECONOMY

Lending rate raised

The Reserve Bank of India has raised the minimum lending rate for loans above Rs.2 lakh

from 16 to 17 per cent. This has increased the interest rate on long-term deposits by one percentage point and further opened up the money market.

Jewellery exports down

Exports of finished diamonds, gems and jewellery have fallen by 3 per cent to Rs.5,310 crore. This is despite the fact that value-addition during the year was a record Rs.1,455 crore. The decline attributed to recessionary trends in the US and the change in demand pattern in countries like Japan and West Europe.

Sugar subsidy to end

In another major effort to cut non-plan expenditure, the Centre has decided to stop subsidising levy sugar supplied through the public distribution system from May 1. This will save around Rs.40 crore a month. The heavy subsidies had begun when the V.P. Singh government was in power.

Sweeping powers for SEBI

The Securities and Exchange Board of India (SEBI) has been granted sweeping powers by the Union finance ministry to suspend operations of any mutual fund violating ministry guidelines. The draft guidelines also strip the Reserve Bank of its powers over the mutual fund business.

RBI refinance rate

The Reserve Bank of India will provide refinance to nationalised banks and the State Bank of India worth over Rs.1,000 crore at the rate of 18 per cent. This step is being taken in order to stabilise soaring interbank call money rates. The sharp increase in rates was apparently due to the general impression that the RBI would not provide sufficient refinance funds.

Merchant vessel norms

The government has relaxed the norms for merchant shipping

vessels in order to fully utilise the ships' economic life and postpone capital investment on new acquisitions. However, the existing norms have not been changed for drill ships and offshore supply vessels.

The current norms will now allow bulk carriers and liners to stay in service for 20 years as against 18 years. Also, the service life of tankers, edible oil carriers and chemical carriers has been extended from 16 to 20 years. The decision to make optimal use of existing tonnage stems from the government's inability to raise the Rs.15,000 crore needed to replace scrapped tonnage and acquire new vessels.

Boost for steel sector

The government has decided to import around 5.5 million tonnes of coking coal during 1991-92 to ensure that steel plants do not suffer from shortage of raw material. The government has also proposed to allow the private sector to manufacture steel items which has so far been the domain of the public sector. The objective of the measures is to boost steel production, which has been stagnating at the 1988-89 level.

NHPC outlay slashed

The government has slashed the proposed plan outlay of the National Hydel Power Corporation (NHPC) by more than 50 per cent. As against NHPC's demand for an outlay of Rs.9 crore, the finance ministry has sanctioned only Rs.4.5 crore. Moreover, the government might not be able to provide the promised support of Rs.1.05 crore and has urged the corporation to raise atleast Rs.61 crore by floating bonds. The reduction in the outlay is likely to make power generation costlier owing to the additional interest burden.

CORPORATE

First cordless telephone

Weston Electronics, one of the thirteen licencees for the manufacture of cordless telephones in the country, has launched the country's first cordless telephone.

According to Kamal Vachani, director, Weston Electronics, the instrument conforms to stringent quality standards and has also been 'tropicalised' to make it adaptable to the wide voltage fluctuations. The instrument is a product of Weston's R&D department that works in collaboration with Winfair, Hong Kong.

The telephones are being manufactured at a wireless plant at Parwanoo in Himachal Pradesh. Set up with the participation of the Himachal Pradesh Electronics Development Corporation, the plant has an annual capacity of 70,000 units This domestic manufacture will help conserve foreign exchange.

First overseas issue

The UB group is planning to float a stock issue of McDowell & Company Ltd (London) of over £ 20 million. For the first time, an Indian company will float a public issue of this size overseas.

According to company officials, the overseas issue forms part of McDowell's plan (being worked out by its merchant bankers, Grindlays) to acquire 'legal' ownership of UB International. The money raised will be utilised to make an equity investment in UB International (formerly Jenson & Nicholson, UK) which will make McDowells a major shareholder in the company.

On the domestic front, the group also plans to introduce five major public issues in the current financial year.

Oracle comes to India

US-based Oracle Corporation, the world's largest supplier of database management systems and applications software, has opened its India liaison office in New Delhi.

Tata Consultancy Services is its distributors in India. According to Oracle's vice-president, Peter Liljegren, the liaison office will not only tap the large potential market but also extend more support to TCS' operations and other users. According to Hirendra Gupta, country manager, Oracle will try to extend support to Hindi and other regional languages which will open up a big market in government and other local bodies.

Oracle has 33 per cent of the worldwide relational data base management (RDBMS) market with an annual turnover of $1 billion, 65 per cent of which comes from international sales.

KCL to make vehicles

Kirloskar Cummins Ltd (KCL) has signed an MoU with a Hungarian company to set up an export-oriented joint venture company to produce 10,000 commercial vehicles of capacities of 1.5 tonnes and above.

The Hungarian Railway Carriage & Machine Works with the trade name Raba, will have 40 per cent equity stake in the company which is expected to have a capital outlay of Rs.100 crore. According to vice-president S.S. Patil, the venture is to be located in Maharashtra. Chasis production is expected to begin within two years.

Ban lifted

The government has lifted the 13-month-old ban on dealings with five Japanese companies — Sumitomo, Mitsui, Mitsubishi, Marubeni, and C.Itoh. This was decided hurriedly prior to the finance minister Yashwant Sinha's trip to Tokyo to seek Japanese assistance for tiding over the balance of payment crisis.

The ban had been imposed by the National Front government in December 1989 after it was learnt that a Japanese consortium led by Sumitomo had paid kickbacks worth Rs. 6.5 crore to a Delhi-based company in a pipeline deal with the ONGC.

Monotype takeover bid

Jalan Industries Private Ltd and Associates are planning to take over Monotype India Ltd, a Rs.4.3 crore company. The Jalans have agreed to acquire 198,294 equity shares which constitutes 18 per cent of the company's equity. At a negotiated price of Rs.17 per share, this represents the entire Indian holding in the company. Monotype Plc UK holds 30 per cent and financial institutions hold 20 per cent stake.

Monotype manufactures and distributes phototypesetting systems, graphic production systems and printing machines. For the Rs.40-crore Jalan group, this is the first diversification from its tea business.

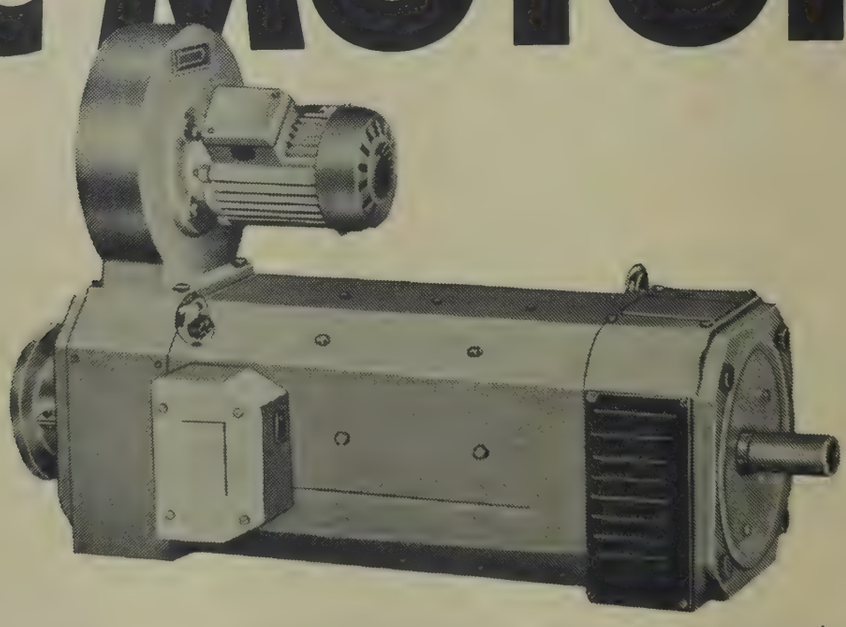
Dunlop's shoe unit

Dunlop India Ltd plans to set up a sports shoe manufacturing unit with a projected investment of Rs.5 crore. Tennis racquets and tennis balls are already being manufactured. Dunlop expects to earn Rs.15 crore worth of foreign exchange by the end of 1992-93, by export of sports goods.

Takeover of Rayalaseema Paper

The G.P.Goenka group is to take over the Sree Rayalaseema Paper Mills Ltd, which has a carryover loss of Rs. 100 crore for 1990-1991. The group intends to extend the installed capacity eventually. Having earlier taken over Star Paper, the group will acquire the 42.84 per cent stake of the original promoter, and also add Rs.45 crore over the next two years.

Balmer Lawrie, BP sign MoU



Balmer Lawrie and Co Ltd, and British Petroleum (BP) have signed a memorandum of understanding (MoU) for setting up a project to manufacture telecommunication cable jellies.

The project, to be based in Madras, is worth Rs.4 crore and BP will possibly have an equity stake in it. They are also considering the possibility of a joint venture to produce chemicals useful in the petroleum industry.

No Nelco-Peico tie-up

Peico Electronics and Electricals Ltd has decided against a tie-up with National Radio and Electronics Co Ltd (Nelco) as

BIODATA OF THE LEADER IN DC MOTORS

* Widest range in the country:
- 0.5 kW to 5000 kW
- Frame sizes 80 to 1000
- Choice of armature, field voltage and base speed
- Range of field weakening to offer full power at high speeds
- Various enclosures to suit different environments
- Insulation upto class 'H'
* Highly suitable for thyristor convertors with its high dynamic response
* Suitable for all applications in steel, cement, rubber, sugar and other core sector industries
* Special high speed motors for machine tool applications
* Special design low voltage motors for forklift trucks and similar material handling equipment
* Several other specially designed motors
* Dedicated plant for DC Motors with modern manufacturing facilities, full test facilities; staffed with trained engineers ensuring the highest quality standards
* Nationwide distribution and service network
* Shortest delivery time possible

Kirloskar Electric Laminated Yoke DC Motors - the only choice

KIRLOSKAR ELECTRIC COMPANY LTD.

far as sharing the former's colour television capacity is concerned. The Peico board's decision came in the light of the company's improved working this year.

INDUSTRY

Drug industry

The drug industry is likely to renege on its export commitments to the Soviet Union this year following the sharp increase in the value-addition

norm from 33.33 per cent to 233 per cent at the beginning of this month.

The directive in this regard, by the chief controller for imports and exports in this regard has come as a shock to the industry which contracted Soviet orders worth Rs.360 crore in December-January and had been anticipating a sharp rise export orders after M.S. Gill, secretary, department of chemicals and petrochemicals, had led a delegation to that country last year.

Coffee co-operative

Coffee growers' associations have decided to float an inter-state co-operative outfit along the lines of Campco to create an alternate marketing system for their produce.

Varanasi Bhat, who launched Campco, has been entrusted with the task of creating a new co-operative. The United Planters' Association of South India, the Karnataka Planters' Association, the Karnataka Growers' Federation and the Coorg Action Committee of Coffee Growers have decided to pool their talent and funds to launch a new co-operative.

RBI probe

The Reserve Bank of India is conducting an inquiry into the growth of bank deposits at the end of the previous financial year. Commercial banks had reportedly inflated their deposits by flouting rules while garnering deposits. Despite the uproar over falling profits in the banking sector, the banks had scrambled to lure term deposits by paying depositors higher income on a lower maturity period. This was done by not stating the maturity period in the term loan contracts.

Closures in jute industry

A fresh round of closures and lockouts is imminent in the jute industry with a demand slump predicted from May onwards in both the domestic and export markets. At present, six jute mills are either closed or locked out and the number is likely to rise before June.

Besides, other jute mills may cut back production due to the reduced offtake of gunny sacks. Consequently, the industry's production could decline to an estimated 70,000 tonnes from the existing level of 110,000 tonnes a month. The demand glut is evident from the falling gunny prices in the local market with both sacking and hessian down by over Rs.2,000 a tonne.

Cement price up

All leading cement manufacturers have raised their prices by Rs.40 to Rs.60 per tonne recently. In central India, the immediate impact has been an increase of Rs.2-Rs.3 per 50 kg bag. But in north-eastern India the increase will be to the extent of Rs.6 per bag or Rs.2,200 to Rs.2,700 per tonne depending upon the transport cost.

According to manufacturers, though demand is rising, output has not been increasing. This year, the industry produced only 48 million tonnes against the target of 49.5 million tonnes.

NFY output slashed

Nylon filament yarn (NFY) producers have begun cutting back production and have threatened to further lower output over the next four months. Several spinners have already cut production by 50 per cent due to escalating production costs and falling demand. With caprolactum producers, FACT and Gujarat State Fertiliser Corporation (GSFC) closing the plants for maintenance from April to July, NFY makers have no option but to reduce output further.

FACT, which has been supplying around 6,000 tonnes of caprolactum since January, closed down its plant for two months from 12 March, while GSFC, which supplies around 10,000 tonnes, stopped production from 1 April. RBI's cash margin needs have placed the import of caprolactum beyond reach.

Ship age norms relaxed

The government has relaxed the norms for merchant shipping vessels to make full use of their economic life and postpone capital investments for new acquisitions. However, the existing norms have not been changed

DIARY

EVENT/VENUE/DATE	ORGANISER

for drillships and offshore supply vessels.

Now bulk carriers and liners can stay in service for 20 years against 18 years earlier. The service life of tankers, edible oil carriers and chemical carriers has been extended from 16 to 20 years. For coastal ships, it has been stretched from 20 to 24 years.

The limits for other chemical and phosphoric acid carriers have remained unchanged at 15 years. The age limit for liquified petroleum carriers has been extended by five years to 25 years.

LABOUR

Court order on salaries

The Madras High Court directed Binny Limited to disburse salaries for the month of March to the workers of the closed Buckingham and Carnatic (B&C) mills. Justice J Kanakaraj in his order on two writ petitions filed by the Madras Labour Union and the B&C Mills Staff Union, also directed the union to cooperate with the management staff and allow them to enter the mills and work out the pay bills. He also directed the company to distribute monthly provisions to the workers.

Relief for UP workers

Workers employed in the paper cardboard and board industry in Uttar Pradesh will get an interim relief of Rs. 80 per month with effect from January this year. The payment of this interim relief will be made to the workers in these industries till the revised minimum wages come into effect.

DA increase sanctioned

The Maharashtra government has decided to sanction to its employees the increased dearness allowance granted by the Central government, with effect from January 1991. The burden on the exchequer on account of this increase will be about Rs. 114.16 crore during the current financial year. The state government has also decided to sanction to its pensioners and family pensioners increased dearness relief with effect from January 1991. Zilla Parishad employees and retired teaching and non-teaching employees in aided educational institutions will also benefit from the increase.

Raise for construction workers

The ministry of labour has sanctioned a special allowance for workers engaged in construction or maintenance of roads, buildings and runways, as also stone breaking. The raise will range between Rs.4.55 and 7.57 per day, depending on the area and the category of worker. The wages for the lowest category of workers will increase from Rs.11.90 to Rs.15.45 with effect from April 1991.

The revised wages for semi-skilled and unskilled supervisory staff will range between Rs.19.55 and Rs.27.44. Similarly, the wages for skilled and clerical workers will be between Rs.24.81 and Rs.38.69 and for highly skilled workers between Rs.31.67 and Rs.43.81 per day. The consumer price index has gone up by 73 points during the period from July to December 1990.

Rural workers' seminar

The International Labour Organisation (ILO) is organising a regional Asia-Pacific seminar of rural workers. The regional workshop will focus on the identification of organisational, economic and cultural factors that affect the establishment and operations of special service programmes in agriculture, plantations and allied fields. It will also identify policy and legal requirements pertaining to the development of the special services programmes and suggest action programmes to strengthen special services for rural women.

LANDMARKS

Awarded, to Unilever director and former chairman of Hindustan Lever Ashok Ganguly, the Bombay Management Association's 'Man of the Year' award for 1991 for his service in the field of management. The panel of judges who did the selection was headed by chairman of State Bank of India, M.N. Goiporia and included E. Baltin, managing director of Hoechst India, S.A. Dave, chairman of Unit Trust of India, N.M. Duldhoya, managing director, PIL, and S.D. Karnik, provice chancellor, University of Bombay.

Awarded, the B.M. Birla National Science Awards to R. Balasubramanian of the Institute of Mathematical Sciences, Madras and N. Mohan Kumar of TIFR, Bombay for Mathematics; to S. Ramaseshan of the Indian Institute of Science, Bangalore, Ganesh Pandy of the Indian Institute of Chemical Technology, Hyderabad and K.N. Ganesh of the National Chemical Laboratory, Pune for chemistry.

Appointed, Krishna Joshi, director of the National Physical Laboratory as director general of the Council of Scientific and Industrial Research and also as secretary in the department of scientific and industrial research. Joshi, who will be the eleventh director of the CSIR, succeeds A.P. Mitra.

Weighed, Rajiv Gandhi against blood on the occasion of B.R. Ambedkar's birth centenary last fortnight at Mhow, the birth place of the author of India's Constitution. The exercise took up 72 kg of blood in 121 bottles, donated by 31 Congress workers. The government hospital at Mhow in this BJP-run state refused to accept the blood, and it was eventually handed over to the local branch of the Indian Red Cross Society.

Died, Rajendra Mathur, editor-in-chief of India's most respected Hindi daily, *Navbharat Times*. Mathur, 55, had a long stint as head of the department of English at Indore's Gujarati College before starting his career in 1970 with *Nai Duniya* in the same city. He took over as editor of *Navbharat Times* in 1981.

Swissair Customer Portrait: Harry Singh and family, Industrialist.

Holidaying in Europe, the Singhs are happy to discover that memories are made on the wings of Swissair. Harry Singh's family vacation gets off to a flying start with Swissair. Opening up the picturesque Europe via Zurich. Quite naturally, even when business demands, Harry insists on Swissair. With prompt connections to over fifty European business centres, seven gateways to the U.S.A. and two to Canada. As the Singhs would tell you, business or holiday, Swissair is the finest way to get carried away.

everest/90/SW/36 R1

RUSSI MODY

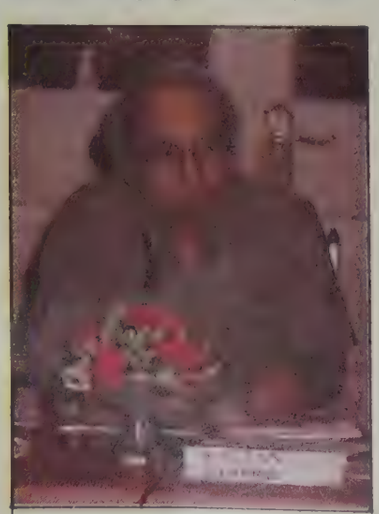
One CEO who does not mince words when it comes to attacking the government is Russi Mody, chairman and managing director of Tata Steel, India's largest private-sector company.

And this, despite the fact that he works in a sector which is in the stranglehold of government controls. Speaking at his annual press conference in Calcutta last fortnight, Mody came down heavily on the government's rather capricious decision to shift the public sector Indian Iron & Steel Company (IISCO) out of the ambit of controls.

Said a caustic Mody, "First they said that the mini steel plant sector should be kept out of controls. We agreed and so did our big brother SAIL, because integrated steel plants were much larger. Now we find that they have begun to make distinctions within integrated steel plants, by allowing IISCO to sell under its own terms. This is not fair. We will go to the courts if necessary."

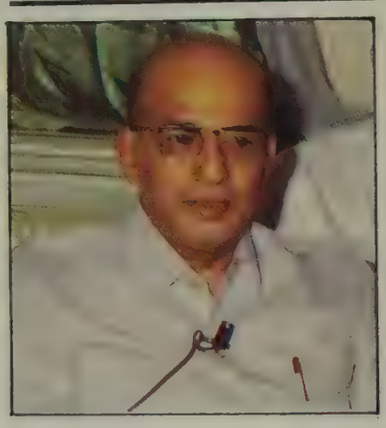
AJIT MOHAPATRA

Not wanting to be a part of the 'rat race', Ajit Mohapatra manufactures only special purpose machines at his Kalinga Engineers Ltd (KEL) in Orissa. Among them are molten aluminium and zinc metal pumps, high-speed metal cutting machines and special galvanising machines. These and other



products are the outcome of KEL's R&D division which the Union government has recognised as a 'technology incubator'.

Says Mohapatra, "KEL aims at vertical growth through technology development, employee training and the manufacture of machines from newer concepts rather than through horizontal growth by acquiring assets and expanding the standard product range, which is rather easy." Recently, the entrepreneur was appointed on the state's planning board and entrusted with the task of studying the viability of new small-scale units in Orissa.



KALYAN BANERJI

It has been another year of good performance for the Export-Import Bank of India (EXIM). Says Kalyan Banerji, chairman and managing director, "Despite the Gulf crisis, this year's results have been better than what we expected." Net profit increased to Rs.31 crore from Rs. 27 crore in the previous year. Loan sanctions too, have registered an increase of 7 per cent over the previous year's level of Rs. 955 crore.

"In terms of multilaterally funded projects, especially those funded by the ADB, this has been an exceptionally good year," says Banerji. The bank was able to contract 95 export orders, valued at Rs.900 crore across 30 countries. This represents a near 109 per cent increase over the previous year.

JAGDISH SHETH

The Shipping Corporation of India (SCI), owner of 127 ships (which makes up 50 per cent of the total tonnage for the country) has not prepared or released its balance sheets and other financial statements for the last two years. But, according to Jagdish Sheth, acting chairman and managing director, the company has ended March 1991 with a net profit of Rs.95 crore on a turnover of Rs.1,100 crore.

Sheth is confident of maintaining profit levels and outlines SCI's game plan: rapid diversification into specialised high-tech areas in the shipping business. Hence the move to acquire carriers for liquid ammonia, liquefied petroleum gas and phosphoric acid. The acquisition of 129 ships in the Eighth Five Year Plan at an investment of Rs.6,694 crore is also part of the plans.

HASMUKH SHAH

One of the most prominent builders and real estate developers of Gujarat, Hasmukh Shah, recently tied up with the US-based Quality Inn International chain of hotels for setting up a four star hotel called Shalin in Ahmedabad. The proposed hotel with 72 rooms on eight floors is expected to be ready for occupancy after July 1991.

Shah, who perceives a tremendous surge in tourism in Gujarat, plans to set up a number of three star hotels, especially along the state's long coastline. A qualified civil engineer, his future plans also include diversification into the manufacture of sanitary tiles.

F.J. DESOUZA

Last month, Patel On Board Couriers (POBC) entered the international arena when they carried a packet from Delhi to London. According to F.J. De-Souza, managing director, POBC, the courier industry has

grown rapidly in the last two years. POBC, which began operations two years ago, today has a network of 22 branches all over the country and has crossed the Rs.10 crore turnover mark this March. Says De-Souza, "To start with, in the international sector POBC will operate six flights from London to Delhi per week. In two weeks' time, we plan to extend our service to New York. This should see our turnover double by the next financial year."

JIM DUNCAN

The nascent Indian computer-aided design (CAD) segment has been attracting big names to Indian shores. The latest such visitor was Jim Duncan, general manager (technical markets) at Mcdonnell Douglas. Says he, "The Indian industrial community cannot compete in the export market unless it uses the latest tools for manufacturing. These tools are expensive but you cannot ignore them." One such tool, Unigraphics II, is marketed here by Tata Consultancy Services (TCS), Mcdonnell's local representative.

ARUN KIRLOSKAR and FERENC KARPATI

Kirloskar Cummins Ltd (KCL) and the Hungarian Carriage and Machine Works recently signed an MoU. The aim: to set up an EOU for the production of 10,000 commercial vehicles in the 1.5 tonne to 25 tonne range. Arun Kirloskar, chairman of KCL and Ferenc Karpati, director general of Hungarian Carriage, signed this agreement at Pune.

The Hungarian company, a leading manufacturer of axles with sales of $35 crore decided to launch commercial vehicles. Says Karpati, "These vehicles have been designed to conform to international standards for fuel economy, emission control, operating and maintenance costs." Pune-based KCL, of course, manufactures diesel engines which are now storming international markets. Adds Kirloskar, "The two companies have decided to pool their R&D efforts for the continuous upgradation of the vehicle."

H.W. UNGER

At a time when many foreign lenders are turning away from the Indian sub-continent, the representatives of Dutch bank NMB Postbank Groep N.V. are both 'optimistic and bullish' about investments in India.

NMB opened its first representative office in Bombay last fortnight and hopes to get a licence for a branch by the year end. With its experience in third world asset trading, innovative trade finance, liberalisation and privatisation, this Dutch bank can help "India bring in foreign investments", assured H.W. Unger, a member on its board of directors.

The bank has an asset base of $150 billion after the recent merger with the Netherland's largest insurance company Nationale Nederlanden.

G. EHRNROOTH

G. Ehrnrooth, president and chief executive officer of Metra Corporation, hailing from Finland, started his career in Wartsila Diesel as a technocrat. He shifted to Lohja Constructions and went on to become its CEO. In 1989, Lohja and Wartsila Diesel International merged to form the Rs.50 billion Metra Corporation. For Ehrnrooth, this deal took him full circle... to where he started from.

Ehrnrooth was in the country last fortnight to inaugurate Wartsila Diesel India's (WDI) technology school at Khopoli where WDI's (1990-91 sales: Rs.50 crore) employees as well as outsiders will be trained in power planning operations.

EIKE MARKAU

He spent 26 years marketing food and electronics before taking over as chairman of the board of Messe Frankfurt. His special skills have helped transform this German company into one of the largest trade fair organisers in the world where 32,500 exhibitors put on show their products. These are spread over 140 industries and attract more than 2.6 million visitors every year.

Markau was in India last fortnight to promote his trade fair in which 430 Indian textile companies participated last year. "The major increase in the participation of Indian companies in our textile fairs is reflected in the fact that in just two years, export of textiles to the European Community has increased by more than half to around half a billion German marks," he says.

Kotak Mahindra Finance Limited, 36-38A, Nariman Bhavan, 227 Nariman Point, Bombay 400 021. Tel: 2029933, 2024833.

THERE GOES ANOTHER INNOVATIVE LEASING SCHEME FROM KOTAK MAHINDRA.

When you're trying to get an unusual idea off the ground, you need all the financial support you can get.

For instance, we recently leased an aeroplane to one client, and a bridge to another.

Naturally, we structured the schemes exactly as our clients wanted them. With the length of the lease, the repayments and every other detail designed to fit their schedules.

It's an approach that has helped us take off in leasing and hire purchase. And in everything else we do.

Whether it's corporate finance, consumer finance, securities or portfolio management.

So we're not surprised that today, we're one of the premier finance houses in India. It was always in the air.

EXPORTS

Risk-taking imperative

The recently-held annual convention of the Madras Management Association (MMA) covered a topic of current interest: Indian exports in the changing international scenario.

The convention was addressed by eminent captains of industry such as J.N. Sapru, chairman of ITC, S.M. Datta, chairman of Hindustan Lever Ltd (HLL), V. Srinivasan, vice-chairman of W.S. Industries and also chairman of CEI, V.L. Dutt of KCP Ltd (vice-president, FICCI), N. Sankar of the Sanmar group (alternate president, Assocham), and N. Vittal, secretary, department of electronics (DoE).

MMA president Malika Srinivasan (vice-president of Tafe) stressed that the single European market was going to present the greatest challenge to Indian exporters. She also emphasised the need to set up institutions to enable Indian companies to get accredition similar to ISO 9000 to make it easier for them to compete in the European market.

Need for devotion. Sapru who discussed ITC's experience in exports explained that the company chose to do so as an integral part of its corporate strategy. ITC's export target is Rs.1,000 crore by the turn of the century, a major portion of which will consist of merchandise exports. "It is only single-minded devotion which can finally help one succeed in exports," said Sapru.

If ITC was under no compulsion to export, the multinational HLL, being a FERA company, was. Dutta took the audience through the pitfalls and successes the company faced in its export effort. Today HLL's exports are around Rs.250 crore out of which it makes a post tax profit of Rs.20 crore. How was this possible? According to Dutta, it was due to the organisation's commitment, its dedicated resource base, specialised skills and the good work environment. The decline of the rupee trade, emergence of east Europe as a competitor, the changed equation in the Middle East and the dominance of the Triad consisting of North America, Europe and Japan will be the challenges India will have to face in the nineties.

A team from ICICI made a presentation from the study they conducted on export possibilities. They made the rather depressing point that India is an unknown entity in global markets. Japan recognises China but not India. The lack of continuity of policies and changing of procedures have stood in the way of our exports. The team concluded that winning strategies and opportunities are present before India — it is up to us to make use of them. V. Srinivasan expressed regret that the ill-fated Bharat Business International Limited (BBIL) died even before it was born. He strongly felt that counter trade is a critical instrument for hard currency earnings and that the BBIL would have made all the difference.

N. Vittal (DoE) captured the attention of the audience with his witty and lucid presentation. He accepted the fact that at policy-making levels there have been wrong perceptions regarding the electronics industry; for example, it is an import guzzler catering to the luxury sector. Vittal imparted the good news that the DoE was all geared to move from competence to competitiveness: "It is up to industry now," he said, throwing the challenge to the industry.

N. Sankar who spoke on new avenues for foreign exchange earnings, conceded that there are in fact, no new avenues left for foreign exchange generation. What is needed is new approaches to better utilisation of already identified paths. He listed several areas such as export of culture and tourism. Human resources, projects, entrepreneurship (Indian investment overseas), Indian business opportunities (inviting direct foreign investment in India) and merchandise which should be positively exploited in the years to come.

Captains of industry: winning strategies and opportunities are present before India

Vigorous competition. There was unanimity among speakers that an effective global presence for Indian exports would depend critically upon vigorous internal competition. Every speaker stressed the need for making strategic international alliances and co-operative marketing. A visible and positive Indian image abroad is a dire necessity for successful Indian exports. Interestingly, none of the speakers wanted further incentives. But their collective anguish was over infrastructure inadequacy and bottlenecks as also government policies which prevent them from operating freely abroad.

N. Kumar, chairman of Indchem Electronics and convenor of the convention, concluded that one essential ingredient in the export strategy for the nineties would be to accept taking risks. Industry has to risk its resources for exports and the government has to risk formulating well-targeted schemes. And the other ingredients would consist of the relentless pursuit of productivity, quality and concepts like just in time inventory and zero defect manufacturing.

■ SUSHILA RAVINDRANATH

BOMBAY CUSTOMS

Getting tough

A recent notification by the Bombay customs collectorate cancelled all bills of entry (BEs) noted on six holidays in the last fortnight of March but on which duty had not been paid until 31 March. This has raised a severe protest from importers based in the port city. They now face a reassessment of the values of their consignments at new rates of exchange fixed for the quarter beginning 1 April. Most will now have to pay 10 to 30 per cent more duty.

Importers outraged. Outraged importers describe this as a surprise move that is "grossly unfair" if not an open attempt at "extortion" on the part of the revenue department. While the All India Importers Association (AIIA) has written to the Central Board of Excise and Customs (CBEC) seeking its intervention in the matter, a couple of individual importers have challenged the notice in the Bombay high court.

AIIA president Mohan Nihilani says a formal request to withdraw the notice has been placed before the customs collector, V.K. Gupta. The next stop is at CBEC Delhi where an importers' delegation will plead the case. If this fails, the matter will be taken to court. "We have serious doubts about the legality of this notice as also the authority of an individual bureaucrat to issue it," says Nihilani, himself a member of the Customs Advisory Board.

Gupta has his own point of view. According to him, the facility of keeping custom houses open on those six holidays in March was given for the specific purpose of enabling importers to clear their consignments and pay the duty before 31 March. However, says Gupta, "We noticed that many importers were misusing this facility and getting their BEs noted only to ensure that their consignments were assessed at the then prevailing exchange rate. This defeated the very purpose of the facility." According to him, this was the primary reason the impugned notice (No.49) was issued on 1 April.

The Bombay customs collectorate: unfair to importers?

However, importers dismiss Gupta's contention and deny that they had been taking any undue advantage of the holiday. As a leading importer who preferred annonymity says, "It cuts both ways. Some major currencies like the yen, sterling and the DM have depreciated while the dollar and a few others have appreciated."

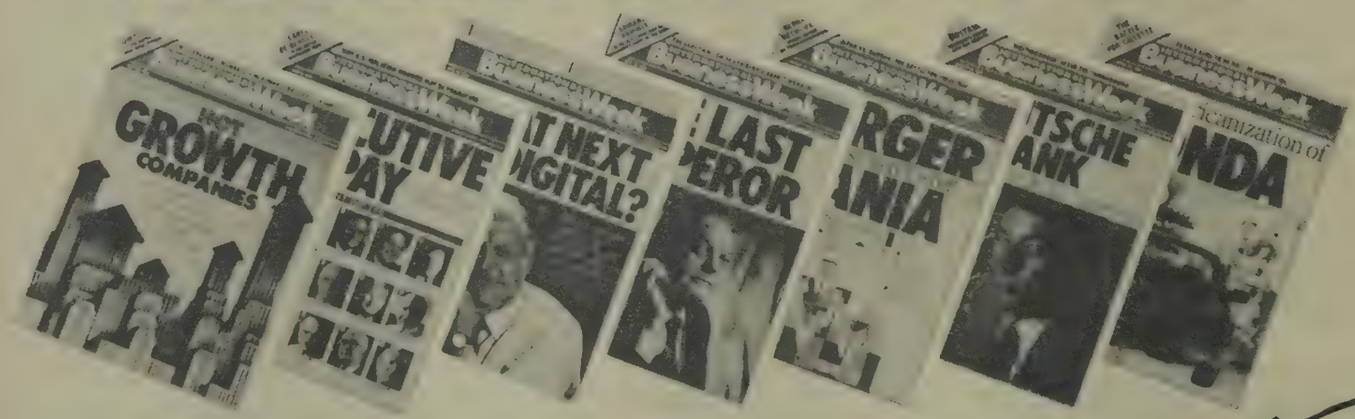
However, since over 50 per cent of imports are in dollars, it is clear that the importers' loss is the revenue department's gain. At the same time, the 20 to 25 per cent importers, who have to pay duty on yen and deutschmark values, have certainly benefited as these currencies have fallen in the current quarter.

Significantly, say importers, the earlier notice (No.39 dated 19 March) keeping custom houses open on these holidays was applicable all over the country, whereas, this one (No.49 dated 1 April) is only for the Bombay collectorate. It is not applicable even in the neighbouring collectorate at the Jawaharlal Nehru port. In fact, a number of import consignments noted on these holidays have been cleared without a hitch from the hi-tech port.

Ambiguous notice. The problem lies in the ambiguous wording in these notices. They merely state that the custom houses will remain open on these holidays to enable importers to clear their goods and pay duty before 31 March. There is no specific mention of the fact that the purpose of keeping the offices open was solely to collect duty and not for any other procedural work.

Gupta maintains that the notices are very clear — only duty was to be collected. But importers and clearing agents point out that BEs were accepted by customs for noting on these days and if the purpose was solely to collect duty no other work should have been done. They insist that for valuation purposes the pre 31 March rate should be applied.

In all this confusion, importers are also suffering heavy losses by way of port demurrage on uncleared consignments, delayed as a result of re-filing BEs and going through the assessment procedure all over again.



Despite all protests, Gupta refused to budge. "The notification will remain in force unless the high court (which is hearing the appeal filed against it) issues orders otherwise," he asserts.

Nihilani too has taken a similar aggressive stance. No matter what the outcome of the parleys in Delhi or the courts, he vows to table a protest before the Public Accounts Committee and the Comptroller and Auditor General. Meanwhile, with the meter on port charges ticking relentlessly, the importers stand to lose.

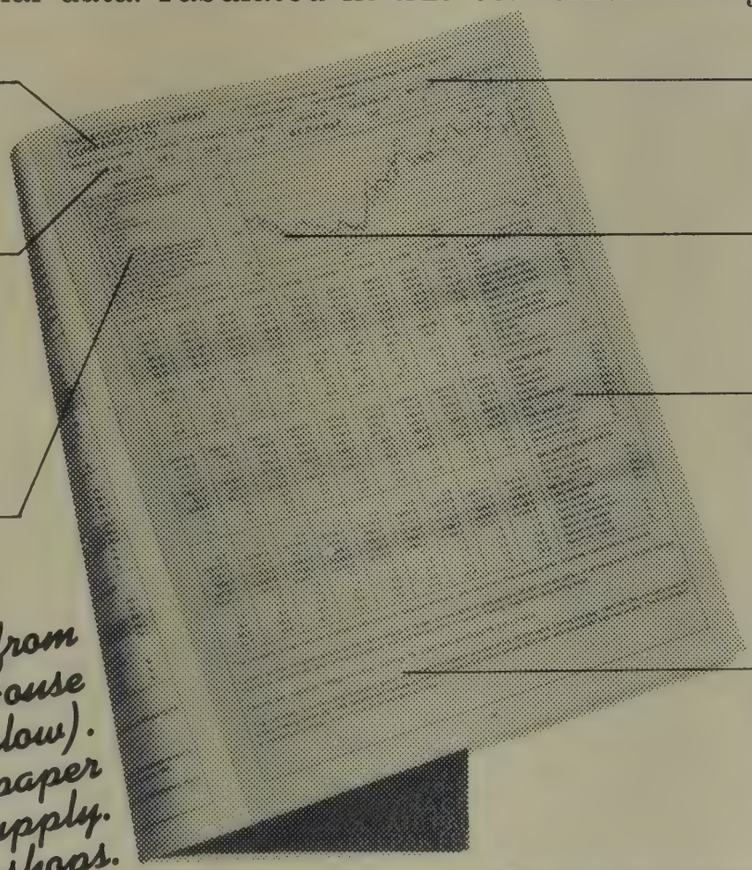
Money-earning knowledge on shares of 250 companies

The Stock Market Yearbook



Pick profitable shares the way top stockbrokers and CAs do: by carefully analysing company financial reports. Now, The Yearbook gives you this analysis *readymade!*

For each company, The Yearbook gives one full page of computer-analysed, authentic financial data. Tabulated in this convenient ready-reckoner form:

Company & its industry
The 250 companies are grouped into 26 industries, so you can easily compare a particular company with its competitors.

Quick-Decision Data Digest
Sometimes you have to make a snap decision to buy, sell or hold. These are the most crucial figures to help you decide : Price At Year-End; P/E and P/CF Ratios; Dividend Yield; Exchanges Where Listed; Face Value; Market Lot Size; Approx. Daily Traded Volume.

Board of Directors
A good indication of the quality and integrity of a company's management.

Useful addresses
Of Registered Office and Transfer Agents – handy when you are transferring shares.

Graph of Share Price v/s BSE Index
Over the last 3 years, has the share outperformed the rest of the market? This graph tells you at a glance.

Data on Company's Equity Shares, Income & Balance Sheet
The company's financial performance over the past several years is analysed under 34 different heads. This is the kind of data that professional investors rely on : Annual High/Low; EPS; Yield; Dividend Payout, etc.

Company's Products, Policies & Plans
While the financial data tells you a company's past, this description-in-a-nutshell reveals its present. And gives a glimpse of the future.

COPRA

Kerafed's initiative

With a 60 to 70 per cent oil content, copra (dried coconut kernel) is a prized commodity in the oilseeds market — a happy fact Kerala's coconut farmers have always known. It is also something that a clutch of upcountry big business houses have been cashing in on for long. By controlling Kerala's copra market (annual production: 360,000 tonnes from 4,000 million nuts), these large manufacturers of household brands like 'Parachute' of Bombay Oil and 'A1' of Ahmed Mills, were dictating the price of copra and coconut oil. But not any more.

Now, these companies are finding the going a lot tougher. A three-year old state agency, the Kerala Sahakarana Federation Ltd or 'Kerafed', an apex body of around 900 primary agricultural cooperative societies, has entered the market to buy copra at the floor price fixed by the Central government. Last year, Kerafed bought 43,000 tonnes during the January-September season at the floor price of Rs.1,600 per quintal. According to managing director, Vinod Rai, but for Kerafed's intervention, the price would have crashed to Rs.1,200.

Now, with the commissioning of its new processing plant at Karunagapally in south Kerala, Kerafed is all set to secure for its farmers better prices and a surer market. The plant, with a capacity to process 200 tonnes of copra per day, has been commissioned about five months ahead of schedule — incredible for a public sector company. But sound business acumen prompted this early commissioning. Had Kerafed waited until October, the month originally scheduled for the commissioning, it would have missed the current copra season. And so, even as much of the infrastruture is being put in place at Karunagapally, Kerafed has started procuring and processing copra.

Shortfall expected. The floor price has been set at Rs.1,700 per quintal this time. Since this year's crop has been poor, farmers expect a 20 per cent shortfall in coconut production. Nevertheless, with more of its members participating actively this time (500 compared to 343 last year), Kerafed expects to procure about 60,000 tonnes this season. Production of coconut oil has already begun at Karunagapally, at the rate of 70 tonnes per day and the plant is expected to reach full capacity by mid May. By March 1992, Kerafed plans to set up a similar mill in north Kerala, to be followed by one more at Kochi which will be a solvent extraction plant.

These plans form part of Kerafed's integrated coconut development project which will cost Rs.94 crore, 78 per cent of which will come as a grant from the European Economic Community (EEC). Kerafed has reason to be happy. Its 'Kera' brand coconut oil has been enthusiastically received in the local Kerala market, and it soon plans to enter the Bombay and Calcutta markets with new packs.

Marketing outside the state, however, is not easy. To make some headway, Kerafed is trying to activate the national network of state oil federations and work out mutually beneficial marketing tie-ups. Its long-term plans include production of baby oil, and coconut oil-based hair tonics with herbal perfumes.

Morale booster. It's too early to say whether these new ventures will help Kerafed's bottomline or not, but last year Kerafed did post a minor profit of Rs.36 lakh on a turnover of Rs.33 crore. Profit or loss notwithstanding, these plans, if they do not veer off course, will boost the morale of the nearly five million individual farmer members of Kerafed. As such, the raw material they have is still India's best: 6,850 coconuts of Kerala will produce one tonne copra, as against 7,000 in neighbouring Tamil Nadu and Karnataka, 8,820 in Andhra Pradesh and 12,000 in the Lakshadweep. Further, the oil content in Kerala's copra is minimum 65 per cent — at least 13 per cent higher than the neighbouring states.

But increasing competition from other oilseeds and the greater integration of markets mean that quality raw materials alone will not be enough. What Kerala's copra farmers need is business prowess. By grabbing the intiative and taking care of the larger role of business management, Kerafed might well give copra a better chance in the oilseeds sweepstakes. ■

K.G. KUMAR

Copra: waiting for a better chance

TYAGI MARKET

The heat is on

Twenty years ago it was mere farm land. Now, it has become a major fan market in north India, doing a whopping business of Rs.2 crore every summer. The Tyagis, an agricultural community, have become traders and manufacturers.

As people get ready to beat the summer heat, Tyagi Market begins to buzz with activity. Located in west Delhi, near what is now called the Kirti Nagar industrial area, this is the unorganised sector's threat to established fan companies. Interestingly, most Delhi residents are not even aware of the existence of this market, which sells a range of fans not only within the capital but also to neighbouring states like Rajasthan, Madhya Pradesh and Haryana. Small manufacturers offer approximately 200 different brand names, priced at Rs.250 to Rs.600, to essentially middle and lower middle class customers.

More than 400 small-scale units employing from four to 40 workers each in Tyagi Market, not only provide direct and indirect subsistence to over 100,000 people, but manufacture exhaust fans, pedestal fans and ceiling fans. Table fans are not usually touched since the main market, in the unorganised sector, is in Amritsar, Punjab.

Gradual change. The market has undergone a gradual change in recent years. While earlier established brand names like Polar, Usha, Rallifan etc, were openly stamped on the fans manufactured here, these days it is common to find brands like Railway, Rajan, Chand, Taj, Shahenshah. The small-time manufacturer has decided to use his own branding, more because of the strict counter measures taken by the organised sector than a marketing compulsion.

"We are vigilant and with the help of the police, our special department of trade mark enforcement raided about 150 small manufacturers last season who were duplicating our Usha brand," says S.K. Wadhwa, executive director of Usha International Ltd.

Though the profit margins at Tyagi Market have shrunk considerably, the manufacturer still earns a 5 per cent profit after deducting all expenses and the wholesaler about Rs.5 per piece. A retailer can pocket Rs.40 to Rs.60 depending on the customer, though earlier the figure was anything between Rs.100 and Rs.175.

People are attracted mainly by the bargain prices. "We cannot afford company fans. They are beyond our reach and moreover we also get a two-year guarantee and a five-year servicing facility," says Ramlal, a clerk in a government department who bought fans for his daughter's wedding. Rajpal Tyagi, president of the market association, says, "The only difference between our brands and big names like Polar, Usha, Khaitan, Rallifan, etc, is that they overplay their products and incur more expenses on advertisements. To meet this additional production cost, they increase the cost of their fans."

But Wadhwa disagrees. "Advertisement expenses is not the issue at all," he says. "The real issue is that they don't pay all their taxes and their quality is poor. For example, we use high quality copper wire, which they don't. We in the organised sector are feeling threatened by these small-scale units because their growth rate is about 20 per cent with a broad consumer base, while we are growing at a rate of less than 10 per cent."

Quality, as Wadhwa says, is a major issue since Tyagi Market manufacturers do not always use good components. Wadhwa's fears are justified, since a less discerning customer is attracted by the poor quality, and is not concerned with the poor manufacturing facilities.

Sleepless nights. Established manufacturers are spending sleepless nights over the fact that Tyagi Market falls under the purview of small-scale industries. The market does not pay excise, cuts on its provident fund expenditure by hiring daily wage labourers, does not boast of an advertising budget. One small-scale manufacturer claimed that the only difference between their product and that of bigger companies is that the latter pay more taxes. "The growth of the unorganised sector is due to the government policy of taxation. If the government increases the tax on raw materials instead of excise duty etc, these small-timers will fade away and we will have healthy competition," claim Usha officials.

Since Tyagi Market has now decided to sell its own brands, manufacturers have begun to be a little more quality-conscious. They realise they cannot hold their customers with low prices alone. Moreover, they will have to get out of their cocoon and take the organised sector head-on. This is already beginning to happen.

The future of these small-scale manufacturers will depend on their marketing strategy and the consumers they will attract. It will also depend on the heat generated in their war with established manufacturers.

Subash Bhardwaj

Unknown brands of fans: low prices, but what quality?

SBI CAPITAL MARKETS

In the lead

A total of 264 companies raised an aggregate of Rs.3,384 crore through capital issues during 1990-91 as against 330 companies which raised Rs.5,868 crore in 1989-90, according to a study conducted by SBI Capital Markets Ltd (SBI Caps) recently. The study attributes the fall in the capital raised to the lower incidence of mega issues of Rs.500 crore plus. SBI Caps worked as lead managers or co-managers on 128 issues, aggregating Rs.2,611.37 crore during the year. This puts it at the top of the list of lead managers of capital issues.

Varying figures. According to the records of the Bombay Stock Exchange (BSE), however, a total of 291 companies entered the capital market with public or rights issues to raise a total of Rs.3,934.58 crore. S.M. Parande, executive director, SBI Caps, explains the variance in the SBI and the BSE figures. "When two merchant bankers are managing an issue, both are given 100 per cent credit for the same." This brings in an element of double count and accounts for the BSE total he says.

That there is keen competition between merchant bankers is evident from the sheer number of organisations in the fray vying for the lead manager/co-manager to the issue slot. In the public sector, the major players are SBI Capital Markets, ICICI, Canbank Financial Services Ltd (Canfina) while prominent merchant bankers/stock brokers like J.M. Financial Services, D.S.P. Financial Consultants are toppers in the private sector. The competition has kept the players on their toes and the public sector organisations are as, or even more, professional than those in the private sector.

Foreign banks have also established their own merchant banking divisions. In fact many companies and the investing public too, believe that if a Citibank or an ANZ Grindlays is managing an issue, the issue will prove to be profitable in the future.

This is because as, B.K. Achan, manager, merchant banking in Deustche Bank says, "We do not handle many issues but when we associate with a company it is for good. We would not like to get out once the public issue has been subscribed to." Achan prefers to call his bank's association with its corporate clients relationship-oriented rather than deal-oriented.

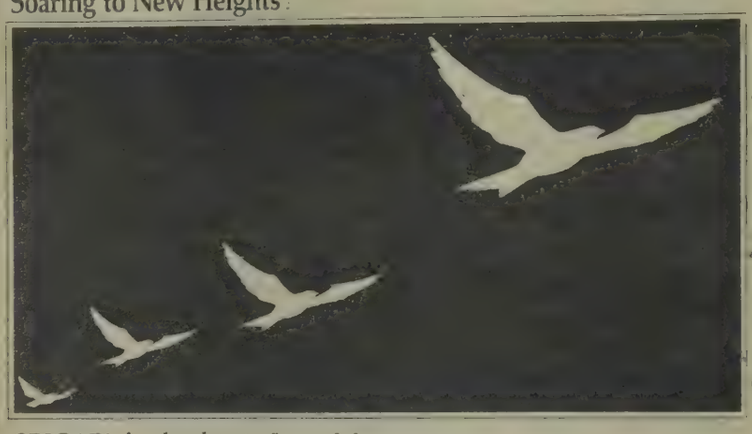
Most merchant bankers believe that good relations with customers is the key to continuous business. D.K. Dhagat, general manager, SBI Caps, lists their relationship with the customer as one of the strengths that have enabled SBI Caps reach the top in the buisness. The same sentiments are echoed by Canfina's S.C. Shetty and M.R. Mondkar, vice-president, J.M. Financial and Investment Consultancy Services Ltd, SBI Caps' nearest competitor.

Details of public issues

(Rs in crores)

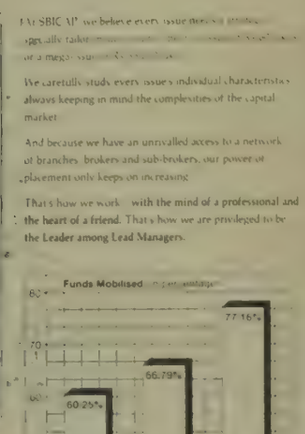
Year ended	Shares	Debentures	Total
March 1987	1001.1	1559.7	2560.8
March 1988	1109.7	664.2	1773.9
March 1989	1010.3	2124.9	3135.2

Key questions. Buzz words aside, the key question is whether public sector issue managers use their lending muscle to elbow out the competition. SBI Caps and Canfina deny that they exploit their parent banks' connections to gather clients. Dhagat acknowledges only a tenuous link — many of SBI Caps' top men having been drawn from the bank's ranks, the contacts they developed earlier with customers obviously help a little.



Parande says that since SBI Caps' formation in 1986, it has developed a culture very different from that prevalent in the parent banks. Apart from getting the best people in the bank to work for them, young talent from the IIM's was also recruited. According to Parande, SBI Caps has been selective in taking up assignments. This strategy has paid handsomely. Of 79 recent issues managed by SBI Caps, 75 were quoting above par.

However, SBI Caps also tops in the Securities and Exchange Board of India's (SEBI's) list of investor complaints. Parande acknowledges the dubious distinction while explaining that earlier the merchant banker's role was only to provide a financial structure for the client. But now, with the new stringent guidelines announced by SEBI, he expects SBI Caps' service will become streamlined. He also added that in the future, even registrars to issues will be licensed and this will reduce investor complaints.



The financial institutions are facing an acute shortage of funds due to the foreign exchange crunch and the critical balance of payments position. In this situation, it will ease matters if money can be tapped from the public. Says Mondkar of J.M. Financial, "We have had three consecutively good monsoons and corporate performance on the industrial as well as agricultural fronts has been very good. The capital market should, therefore, continue to remain strong."

An Electronics Insurance Policy. For The Price Of A Box Of Diskettes.

Yes, it costs so little to insure your valuable electronic equipment. Sophisticated medical equipment like CAT Scanners, ECG and X-ray Machines, Industrial Electronic Instruments and Computers can all be covered by this policy. Against sudden, accidental loss or damage. The policy also offers similar cover to external data media like disks, tapes and printers. And just in case the unforeseen happens, it even covers the extra expenses you have to pay to get your work done. With electronic equipment becoming a high value investment, their protection becomes more important. UI's insurance cover makes it easier, and the premium is affordable. Quite a small price to pay for an assured future. Just get in touch with any of UI's 1120 offices for more details.

B Baskaran
Chairman :

Beating the budget deficit

A serious problem with the Indian economy is the budgetary deficit. Over the years the deficit has increased, mainly due to burgeoning government expenditure. Subsidies form a considerable part of this expenditure and curbing or reducing these subsidies would go a long way in reducing the budget deficit.

The subsidies are primarily on fertilisers, food and exports, all vital segments of the Indian economy. Of the three, fertiliser subsidies account for around 50 per cent of the total subsidy amount and it has experienced the maximum growth in the decade to 1989-90. From only Rs.505 crore in 1980-81, the fertiliser subsidy has increased to Rs.4,601 crore in 1989-90, an increase of nearly 28 per cent per annum.

The government introduced the fertiliser retention price and subsidy scheme in 1977 so that fertilisers would be available to farmers at reasonable prices. This in turn would boost agricultural production. There are incentives and disincentives built into the scheme whereby profitability will increase if the performance of units is higher than the normative capacity utilisation and the production levels assumed in the calculation of the retention prices. The reverse would be the case if the production levels were lower than targeted and if consumption of inputs was higher than the level assumed.

Rise in costs

Subsidy is also paid on imported fertilisers and is the difference between the expenditure incurred on import and the net realisation at the prices statutorily notified by the department of agriculture.

In absolute terms, indigenous subsidy has increased over the years from Rs.25 crore in 1977-78 to an estimated Rs.3,771 crore in 1988-89. The subsidy on imported fertilisers has fluctuated over the years from a low of Rs.55 crore in 1982-83 to a high of Rs.830 crore in 1989-90.

The substantial increase in the subsidy over the years is because the selling price of fertilisers has remained the same over the past ten years, while the cost of inputs — coal, gas, naphtha, rock phosphate, sulphur, ammonia, electricity, among other things — have gone up manifold. Also, the cost of setting up a fertiliser plant has gone up considerably. The capital costs of urea plants have increased from Rs.1,400 per tonne of installed capacity in the late sixties to nearly Rs.13,000 today.

If government expenditure has to be curbed to bring down the budget deficit, then the fertiliser subsidy will need to be seriously looked at. Of course, given the current socio-economic and political situation, no drastic cuts in fertiliser subsidy can be effected. A study by I.Z. Bhatty and S.P. Pal (reported in *The Economic Times*) shows how the fertiliser subsidy can be reduced by as much as 35 per cent. All it would take is an increase in fertiliser prices by 15 per cent, with a compensating increase in the procurement price of rice and wheat by 2.5 per cent and 2.6 per cent respectively. Further, it would require the transfer of 2 million tonnes of rice and wheat from the public distribution system to the open market and an increase of 1 per cent in the issue prices of rice and wheat. This in turn would reduce the budget deficit by as much as 20 per cent.

Improve efficiency

Another factor that could help in reducing the fertiliser subsidy is improving the efficiency of the fertiliser plants. It has been estimated that, on an average, the Indian fertiliser industry uses one-third more energy than the world industry average. One of the reasons for this is the low capacity utilisation.

Given the precarious balance of payments position and the declining foreign exchange reserves, there is an urgent need to conserve foreign exchange by restricting imports. In 1989-90, India imported nearly 31 lakh tonnes of fertiliser costing the exchequer anything between Rs.1,800 to Rs.2,000 crore. If domestic fertiliser production is to meet internal demand, then a radically new approach to farming will have to be brought about. Clearly, the economic situation in the country is now so critical that unless a more radical approach is adopted, there is always the possibility that the gains made over the last few years could well be reversed.

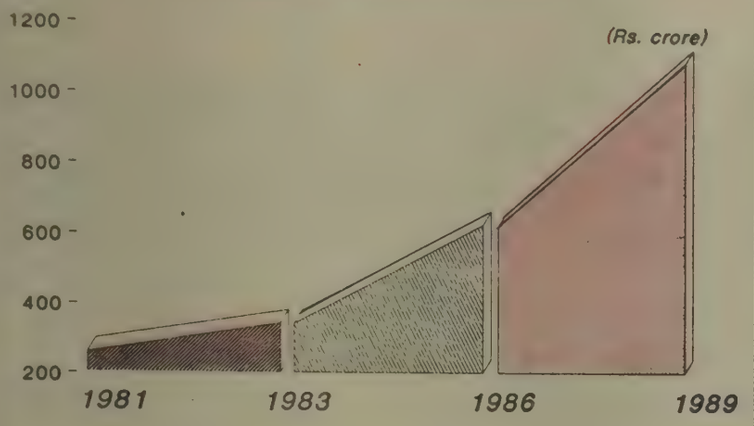
A NEW CLASS IN CARS

ENGINEERED TO PERFORM

SOON, A new driving sensation will hit the Indian roads.

The SIPANI D-1. Sleek and versatile with a rare blend of sporty elegance.

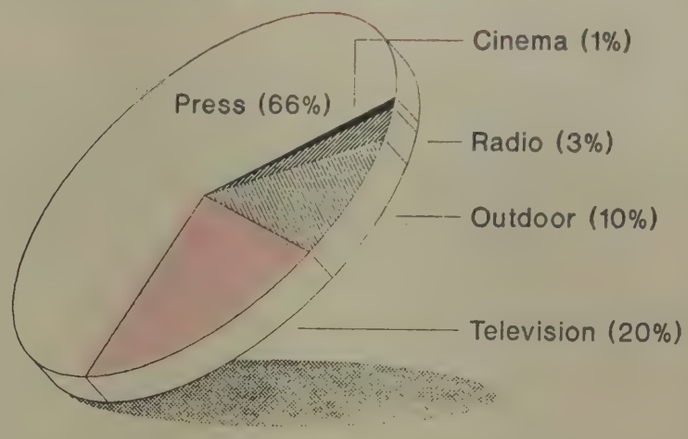
- Large four door hatch back family car.
- Smooth aerodynamic styling with that extra special, high gloss colours.
- Plush, Spacious interiors.
- Superb handling and manoeuvrability.
- A Powerful 1500 cc Diesel engine (British Leyland design) with a 50,000 km warranty. Achieving remarkably low levels of vibration and sound.
- Also available a Petrol version with a 48 BHP high performance engine, designed by Reliant Motor Co. U.K.



And all this at a lot less than you expect to pay....

AWAIT THE D-1. Its been engineered to perform.

Call on your nearest dealer or write to
SIPANI AUTOMOBILES LIMITED.
Tumkur Road, Bangalore 560 022.



SIPANI D-1

Advertising Expenditure

The advertising industry has grown significantly in the 1980s, largely because of the growth of the middle class that has led to a consumer boom. Advertising expenditure between the period 1981-1989 grew at 20.2 per cent per annum. It is estimated that advertising expenditure in 1990 will be around Rs.1,700 crore, and rise to Rs.3,000 crore by the end of this decade.

Media shares

Media shares of advertising revenues: Share of TV advertising to total expenditure has gone up from 5 per cent in 1981 to 20 per cent in 1989, an increase of 44.3 per cent per annum. Nevertheless, press advertising still accounts for 66 per cent of total advertising.

Wholesale price index: The wholesale price index for all commodities was up 0.42 per cent during the month under review. The index for primary articles was up only marginally but fibres was up 11.5 per cent. For manufactured products, the index for basic heavy inorganic chemicals and metal products has increased by 3.8 per cent.

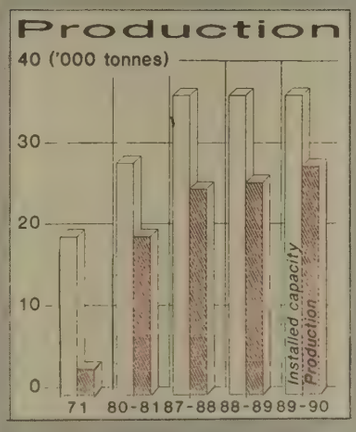
(1981-82 = 100)

	30 Mar '91	2 Mar '91	3 Mar '90	% change over month	% change over year
All commodities	191.2	190.4	171.1	0.42	11.74
Primary articles	196.4	195.9	166.9	0.25	17.67
Manufactured products	188.7	187.8	174.7	0.47	8.01

Money and banking (scheduled commercial banks): While aggregate deposits are up by 1.2 per cent during the month under review, bank credit has increased by a hefty 3.6 per cent. Food credit on the other hand is down 2.3 per cent.

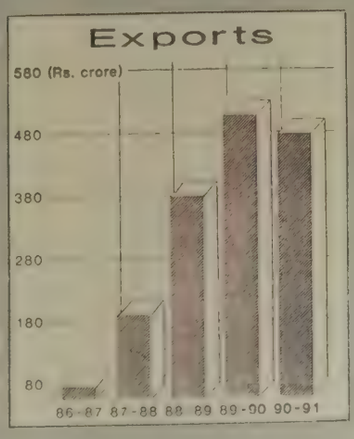
(Rs crore)

	22 Mar '91	22 Feb '91	23 Mar '90	% change over month	% change over year
Broad money (M3)	2,63,954	2,60,597	2,29,654	1.28	14.93
Aggregate deposits	1,91,189	1,88,920	1,66,959	1.20	14.50
Bank credit	1,16,184	1,12,191	1,01,453	3.55	14.52
Food credit	4,506	4,613	2,006	−2.31	124.6
Credit/Deposit ratio	60.77	59.39	60.77		



Bullion prices and stockmarket index: There is a continuing decline in the price of silver in recent months while that of gold has steadied. The Bombay stock exchange index is up 9.5 per cent in the month to 19 April 1991 reflecting good institutional support.

	19 April '91	20 Mar '91	23 April '90	% change over month	% change over year
Gold (Bombay)	3,598	3,540	3,425	1.63	5.05
Silver (Bombay)	6,683	6,703	6,767	−0.29	−1.24
BSE index (1978-79 = 100)	1,283.9	1,171.9	759.2	9.5	69.11



(Price of gold is in rupees per 10 gms and silver in rupees per kg)

Dyestuff industry

The dyestuff industry which went through a difficult patch in the early eighties is now doing brisk business. There are seven large companies producing dyestuffs in the private sector. The small-scale sector accounts for around 40 per cent of the total dyestuff production. The number of small-scale units has grown to more than 900 from around 150 a decade ago.

Production of dyestuffs has reached 28,000 tonnes in 1989-90, up 7.7 per cent over the previous year. Capacity utilisation is around 76 per cent and is expected to go up with increased production. It has been estimated that by the year 2000, domestic demand would be 61,110 tonnes and export demand 3,000 tonnes.

Exports have increased rapidly over the years and in 1989-90 crossed Rs.500 crore. Due to the Gulf crisis the target of Rs.850 crore for 1990-91 will not be realised. The major buyers are the US, the USSR, Germany and Italy. It has been estimated that by 1993 exports should cross Rs.1,000 crore.

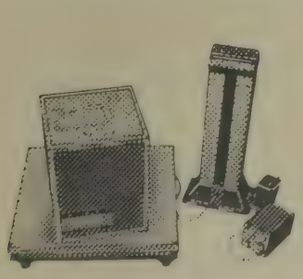
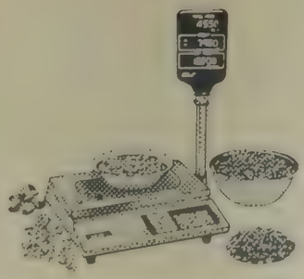
the Impossible



ATCO's accurate electronic weighing can differentiate an immense man from an immense man with a gold chain.



That's the difference that makes ATCO unique. Because ATCO knows that inaccuracies in weighing can cost you money. And repeated weighing errors can cause continuous losses without you realizing it.

That's why ATCO Electronic Weighing Machines have been built to give accuracy levels unheard of earlier. So when anything is weighed on ATCO it has to be true. Precisely why reputed companies like Glaxo, Bajaj, Colgate, Cadbury, Reliance, Tribhuvandas Bhimji Zaveri, Glenmark Pharma, Ankur Udyog, Gharda Chemicals and others trust ATCO.

So if you need accurate weighing, irrespective of your field of operation or size, choose ATCO. ATCO has the widest range of electronic weighing machines to weigh anything from a micron to 60 tons.

It is the high precision accuracy at exceptional value that has made ATCO the No. 1 Electronic Weighing Machine Company.

If it is weighed on ATCO, it has to be true.

ARTIG-532-91

Reason for optimism

AMIT MITRA

It seems obvious that communism has collapsed in practice. It is also becoming increasingly clear that the scraping of the barrel for remnants of (neo) Marxist theories in the University of Massachusetts at Amherst and The New School of Social Research, New York (yes, believe it or not, these *are* the remaining centres of Marxism in the world!), has yielded nothing of substance. The now famous young scholar Francis Fukuyama of the US may almost be right in saying that the history of the clash of ideologies which began in the 19th century has come to an end with the collapse of communism. Almost, because world attention has now shifted to another exciting debate, and one in which India may become the testing ground over this decade.

This debate involves a clash between two competing models of economic development. The first model is the one pioneered and followed by India since 1948 — the regime of licences, quotas, permits, price controls, highly graduated taxes, import substitution and an over valued currency. The second is the market based, export led, globally connected, private-ownership and private enterprise promoting model of development. Though this clash may appear less dramatic than that between communism and capitalism, it involves the lives of over 3 billion people living in the developing countries, that is, more than 60 per cent of the world's population. Furthermore, these models have many of the ingredients which characterise communism and capitalism.

Competing theories

For example, both models rely on competing bodies of economic theory, they extol different value patterns and they rely on different ethoses in society. Even more importantly, the supposed beneficiaries of the two models happen to come from two different groups in society — the bureaucrats and politicians for the government-driven alternative and business enterprises of all sizes for the market-driven option.

These competing systems have already locked horns in different parts of Asia and Latin America. Countries like Malaysia, Thailand, Indonesia, Brazil, Mexico are not merely debating policy questions, they are actively and frantically liberalising, privatising, exporting and attracting significant amounts of international capital to their countries. They have been rapidly shifting to the market alternative from the government-driven model they had followed earlier. And now comes Pakistan! Nawaz Sharif has just initiated a shift in the same direction.

However, India, in comparison, has been merely feeling the ripples of this clash of ideas and action. We are still talking our heads off on liberalisation and privatisation without doing much in reality. This luxury of "all talk and little action" will end by the mid-nineties and India may have no choice but to become the key testing ground for this international shift in the paradigm of economic development.

It is within this holistic perspective alone that we should debate economic policy changes in India. In other words, if we prescribe liberalisation and the like, we must also understand that we are taking on an entire socio-economic system that had been carefully nurtured over the last forty years. This nurturing took place through government propaganda, through our educational curriculum, through extolling of "nationalism" and "anti-Westernism", and even through our social and religious values. After all, many of our political leaders invoked the high "moral" ground of "a-materialism" and collective (as against private) interests; not to forget that the preamble to our Constitution defines India as a "..... sovereign, *Socialist*... republic".

Beneficiaries of the system

There is also the question of vested interests which may resist switching to the market alternative. We must recognise that such a switch would mean the loss of a vast amount of privileges currently enjoyed by the bureaucracy. Furthermore, it will mean the loss of the potential for raising money by our politicians who do so today primarily through their acquired right to offer or deny licences, permits and quotas to private businesses. Since our politicians privately justify their money raising activity by pointing to the faulty and unrealistic laws on electoral funding, we, as a nation, may have to find legitimate ways of raising funds for political campaigns before taking away the 'right' of politicians to arbi-

We are still talking our heads off on liberalisation and privatisation without doing much in reality. This luxury of "all talk and little action" will end by the mid-nineties and India may have no choice but to become the key testing ground for this international shift in the paradigm of economic development

The author is director, policy unit, of Business India *and former director, Centre for Asian Studies, Franklin & Marshal College, US*

trate over licences, quotas and permits. In any case, the powerful beneficiaries of the current system of government ownership and controls cannot be expected to give up their privileges very easily.

Another reality that we must keep in view while prescribing liberalisation is the *depth* to which the government owns and runs India's economy today. Baldev Raj Nayar of McGill University has organised the data on this issue effectively in his recent book *The Political Economy of India's Public Sector*. The data reveals that 48 of the 100 largest companies in India (by sales or income) are owned by the government and most shockingly, these 48 have cornered 93 per cent of the total paid up capital of the 100 top companies of the country. Furthermore, "the paid up capital of just one public sector enterprise (PSE) — Steel Authority of India Ltd (SAIL) — is more than three and half times that of the entire private sector put together among these 100 companies".

The hold of the government is almost striking in the area of employment in one of the key sectors of the economy. As much as 70 per cent of the jobs in the organised sector of India is in the hands of the government and it is this very sector which is expected to bring modernisation and technological innovation to India. Therefore, loosening the stranglehold of the government in the vital areas of capital and skilled labour employment will not be an easy task when we attempt to change course to the market alternatives.

The only alternative

Despite the difficulties and complexities of this task, there is concrete basis to presume that irrespective of who comes to political power in the Central and state governments of India, India will have no choice but to move towards a liberal economic regime by the mid-nineties. Preliminary evidence of this surfaced recently when the same Chandra Shekhar who had sworn all his life by the thoughts of Acharya Narendra Deva (the doctrinaire Left democratic socialist), pleasantly surprised his critics by actively promoting liberalisation once he occupied the Prime Minister's chair. Interestingly, it was the Chandra Shekhar government which proposed the partial divestment of the public sector holdings.

The story is no different at the state level either. The fire-eating Lohia Socialists like Laloo Prasad Yadav of Bihar and Mulayam Singh Yadav of UP came into office and within months began to speak of privatisation of PSEs. Of course, not to mention Jyoti Basu, the vociferous communist, who still speaks sympathetically of Stalin, but invites Indian big business and Western capital to West Bengal.

The reasoning behind the hypothesis that India will have no choice but to move to the market alternative by the mid-nineties is fourfold. The first relates to the long list of failures in the area of government ownership and government controls. These failures are now compounding at a fast pace and will begin to strain the system beyond manageable proportions. The second relates to the *collapse of the theoretical underpinnings* of the model of development followed by India since 1956. No system can survive for long without a viable body of supportive theory.

Major re-thinking required

The third argument relates to the international environment in which the India model took birth in the 1950s and sought inspiration and sustenance from other nations. We know that many of the ingredients of our five-year plans came from the Soviet Union. But Soviet communism has now collapsed and Soviet planning is being partly blamed for the economic failures of the Soviet system. Even more importantly, major rethinking has occurred in Western welfare states such as Britain and Sweden. These systems were once the main source of inspiration for the Indian model. And of course, a wave of liberalisation is sweeping through some of the very nations which had adopted India's model of development in the past. These major international changes just cannot leave our thinking unchanged.

Loosening the stranglehold of the government in the vital areas of capital and skilled labour employment will not be an easy task when we attempt to change course to the market alternatives

The fourth argument deals with the domestic scene, within India's private sector. There is a tremendous amount of commercial and entrepreneurial energy among the middle, small and even the tiny (slum level) business enterprises of India today. This rather new and multilayered drive to trade, produce, market and even innovate, could snow ball into a subtle but powerful socio-political force in the near future. Such a force, in turn, could become an important instrument in breaking the shackles of the pervasive controls over private enterprise.

Without denying the enormity of the task of shifting to a market-based model of development for India, we must now recognise that there are major forces at work nationally and internationally which are pushing our system to move to the liberal economic alternative. Yes, there is cause for optimism over the long run.

SUDHIR MULJI

Exchange rates, manifestoes

There is a delicious flavour of irony in the way the government alters the exchange rate between the rupee and other currencies. On 20 April, the Reserve Bank announced two changes: first, the Russian rouble has been upvalued to Rs.24.13 from the earlier rate of Rs.23.40 and second, on the same day the pound sterling has been downvalued from Rs.35.03 to Rs.34.84. If the value of a currency is meant to reflect the relative strength of its economy, these changes are not what one might expect.

Take the Soviet Union for example, according to Goskomstat, its official statistical agency, Gross National Product has declined by eight per cent and foreign trade has dropped by a massive 38 per cent. Nor is the future very much more hopeful. Investment has declined by 16 per cent and labour productivity by an astonishing nine per cent. According to The *Financial Times* of London "The agency blamed the drops on disruption to centrally planned links between enterprises, on unspecified 'imbalances' in the economy and on industrial unrest." With these statistics and the terrifying industrial problems that the Russians face, one might have thought that the currency of that country could not be upvalued against any other currency, not even a relatively weak currency like the Indian rupee. But to do it at the same time as an upvaluation against the pound which has recently been the strongest major currency in Europe, can only fill one with amazement.

According to protocol

Of course, once one looks into the details of these changes, one's worst suspicions are confirmed. The rupee-rouble rate is altered in accordance with a protocol that the Soviet and Indian governments signed in 1978, while the exchange rate against the pound is the application of a formula that I think was worked out at about the same time. No doubt both the protocol and the formula had an internal logic of their own at that time but what their relevance to the present circumstances is, requires more than an ordinary explanation.

The fact is that we have a rupee that is probably still grossly overvalued against the free currencies of the world, and I would suspect, probably undervalued against the currencies of Eastern Europe. I say probably because frankly there is no way of knowing what the true value of our currency is. However, the consequence of an overvaluation against the free currencies is that it pays everyone to increase imports from the West and use these commodities for exports to the Soviet Union. It is no surprise that our shrewd new commerce secretary has decided to monitor Soviet exports on a month-by-month basis rather than the quarterly basis his predecessors were accustomed to.

The true test of our political will to deregulate will depend on three or four specific steps: first, scrap FERA; second, disband the Planning Commission, a harmless enough body but still a symbol of things that have gone wrong; third, float the rupee and finally, abolish the system of administered prices

It is these sorts of weird outcomes of our present economic regime that convince me of the dangers of continuing to administer key prices rather than leave them to market forces, and as I have said previously, this must begin by floating the rupee. Unfortunately this rather simple naive solution will not appeal to the subtle minds that make these momentous decisions; so for them I have a devious solution; what we should do is to link the rupee to both the dollar and to the pound sterling, whichever is weaker for the day. Thus, if the pound drops against the dollar keep the rupee stable with the pound, and if the dollar drops against the pound, then keep the rupee stable with the dollar. In this way, we will achieve the rapid devaluation that our authorities are apparently seeking.

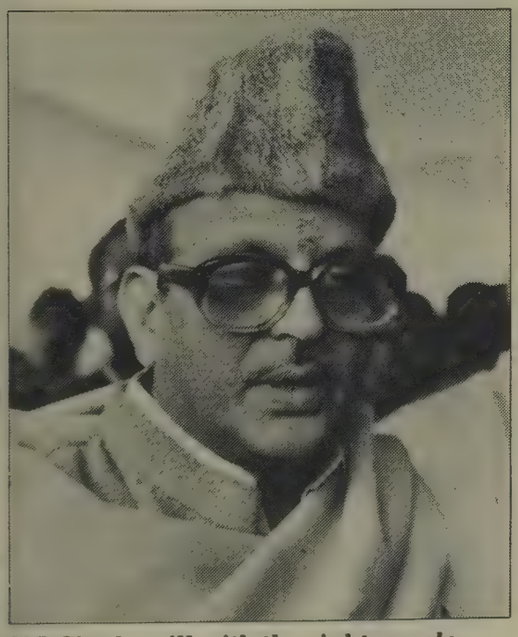
However, enough about exchange rates and all that, a liberaliser really should not complain about what is happening in India. It really looks as though the message about free markets is beginning to sink in. Who would have thought that both the Congress and the BJP would come out in their manifesto with promises of decontrol? Just a few years, or perhaps, even a few months ago, this would have been unthinkable.

No real conviction

But, perhaps, one should not be carried away; there is much to beware of in the promises of princes; for even a cursory reading of the manifestoes suggests that there is no real conviction among the writers of the manifestoes in the efficacy of markets; so far there is nothing more than just an acknowledgement that the present system does not work. The danger is therefore that when the time comes to take concrete steps to deregulate the economy, there will be those who will say 'not yet'.

There will be plenty of excuses for saying not yet; for instance, statistically it is about time we had a bad monsoon, and this would provide everyone with an opportunity to say not yet. The argument will run on the familiar grounds that the poor have to be protected, the public distribution system has to be improved and so on and so forth. India will lose another three or four years in this sort of nonsense.

The true test of our political will to deregulate will depend on three or four specific steps: first, scrap FERA; second, disband the Planning Commission, a harmless enough body but still a symbol of things that have gone wrong; third, float the rupee and finally, abolish the system of administered prices.



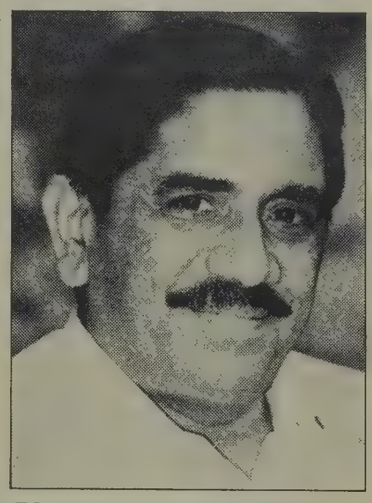
Perhaps my four tests will indicate how far we still have to go for a genuinely free economy, but the real problem is that a solution from the difficulties of a heavily regulated economy is not a partially regulated one but a totally free one. The danger, as many countries in Eastern Europe have discovered, lies in partial deregulation because that simply prolongs the agony without any hope of resolution. It should be noted that I have said nothing about taxes or even subsidies. These instruments are essential if the government is to control the change, but it is better by far that we know what we are paying for, rather than pay for it through a complex maze of administered prices.

Sloganing it out

The battle of slogans has begun. The political parties are so bankrupt intellectually that they have even resorted to stealing slogans. First, prime minister Chandra Shekhar got wind of the Congress (I) slogan on the integrity of India and preempted it by circulating thousands of posters with the caption 'Vote for India' under his picture. Then the Congress (I) borrowed the Communists' slogan aimed against BJP — *Ram nam japana, inko kursi ka hai sapna*. And now, the Janata Dal has picked up from BJP, their sworn enemy, a diatribe against the Congress (I) which they are using verbatim at all their speeches: "First they offered *garibi hatao*, then 'the government that works', and now 'stability'. But even the British had offered stability for 200 years."

Price of vacillation

An IAS officer of the 1957 batch, his name was being seriously considered for the position of cabinet secretary a few months



V.P.Singh: still with the right people

ago, when V.P. Singh was still the prime minister. Senior enough to fill the bill, he was competent, and what is more, a member of a backward community. He was already the chief secretary of Tamil Nadu and had a couple of years left to retire.

M.M. Rajendran, the chosen one, was not too keen to come to Delhi then. But now, probably because his benefactor, Karunanidhi is no longer chief minister of Tamil Nadu, he reconsidered his decision. Though, by then, the chance was lost. All he could manage now was the not much sought after post of secretary, social welfare.

Minister emboldened

As the industry portfolio is held by prime minister Chandra Shekhar, Udyog Bhavan is practically run by the minister of state in the PMO, Kamal Morarka, who advises the prime minister on the affairs of the department. Dasai Chaudhary, the Union deputy minister for industry is not very well known, nor is his presence felt outside Parliament. His role has been limited to answering questions there, which he has been doing without any protest for the last three months.

Dhawan: not an example

Now, suddenly, he seems to have shrugged off his docility. Last fortnight, when some files, sent to the prime minister, were returned to Udyog Bhavan without the PM's signature but the legend that the PM had agreed to the proposals contained in the files, Chaudhary became furious. He told senior officers of the ministry that they were welcome to implement the proposals in the files, but only at their own risk. Bureaucrats were quick to take the hint and immediately sent all the files back to the PMO for Chandra Shekhar's signature.

Visible embarrassment

A recent statement by prime minister, Chandra Shekhar, which has gone practically unnoticed is causing embarrassing moments for some public sector chiefs. The PM had observed recently that incompetent IAS officers are normally shunted off to public sector corporations.

Industrialist Hari Shankar Singhania, quoted this at a seminar on privatisation, this fortnight. But while making this observation, he did not realise that, with him on the dais, was Moosa Raza, chairman of Scope and the Trade Fair Authority of India. Raza happens to be an IAS officer and his embarrassment was clearly visible.

Saying the good word

What do former private secretaries to the prime minister do? Enter politics? Or so it would seem, from the example of Indira Gandhi's man Friday, R.K. Dhawan. But this is not always true. Vishwanath Pratap Singh's former private secretary H.P. Sharma, for example, is in Delhi these days, trying hard for a foreign posting.

Sharma, a promotee IAS officer from UP was actually abroad doing a stint when V.P. Singh summoned him to Delhi for assistance at the PMO. Apparently, he would like this dispensation back. V.P. Singh who still has friends in the government is putting in a good word for his erstwhile secretary.

Problems of passing

It can be called a problem of smooth transition. The finance ministry's budget department faces problems with several veteran budget makers making way for the new appointees. Several discrepancies that have crept into the budget documents went unnoticed in 1990-91 and, were consequently repeated this year.

The figures for income tax collections in the budget-at-a-glance document do not tally with those given in the annual financial statements of the Central government. The budget-at-a-glance has gross collection figures inclusive of the states' share of both income tax and customs duty.

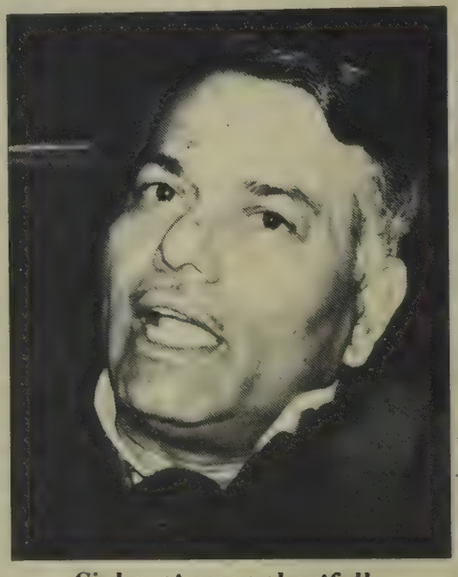
The annual financial statements, on the other hand, have income tax presented net of states' share while customs duty remains inclusive of states' share. Either both ought to have state's share netted from them or both ought to have remained gross figures.

TAX COLLECTIONS

Lower than estimates

A fresh problem was added last week to the finance ministry's already lengthy list. Direct tax collections of the Central government were less by 18 per cent and total collections by 6 per cent than even the revised estimates presented by finance minister Yashwant Sinha, in March this year. Usually, the reverse occurs: actual collections finishing marginally ahead of the revised estimates (made in December).

Collections under each major head, customs (Rs.235 crore) and excise (Rs.67 crore), have been less than revised estimates but this was most remarkably noticed under corporate income where collections were short by Rs.1,149 crore. "Unexplainably so, for corporate performance has been reasonably healthy this year, corporate profits having grown by a good 30 per cent," says a finance ministry official.



Expectations not realised

"Admittedly, certain expectations contained in the 1990-91 budget have not been realised," says revenue secretary P.K. Lahiri. And, in retrospect, the expectations that the finance ministry held were substantial, that direct tax collections would grow at 24 per cent in fiscal 1990-91. They (both income and corporation tax) finally did, but only by 10 per cent. "So we have merely witnessed a deceleration in the growth rate of revenue collection and not a decline in the quantum. Rather, collections this year have been the highest ever contrary to media reports," says Lahiri.

Total tax collections for fiscal 1990-91 finished at Rs.55,598 crore, down by Rs.3,318 crore from the revised estimates of Rs.58,916 crore (1989-90 — Rs.51,636 crore). Corporate tax finished at Rs.5,201 crore versus the revised estimates of Rs.6,350 crore (1989-90 — Rs.4,728.92 crore). "This is what is most puzzling," says an economist. Revised estimates of corporate tax were raised from the budget estimates of Rs.6,089 crore to Rs.6,350 crore.

And this is in spite of the finance ministry having the benefit of possessing figures of actual collections over 11 months. Says the economist, "Even in December 1990 there was a shortfall of Rs.1,000 crore in collections. Even if the finance ministry expected collections to improve over the next three months, an addition of Rs.1,000 crore was extremely optimistic." The finance ministry, in turn, says that its anticipations were built around the expected growth rates of Indian industry and the buoyant trend in corporate tax returns.

When Madhu Dandavate presented the 1990-91 budget he had made three alterations in the direct tax laws pertaining to corporations — suspending the investment allowance reserve as well as the investment deposit account, suspending the provisions of Section 115 J of the Income Tax Act on minimum profits and reducing tax rates by 10 per cent for all categories of companies (50 to 40 per cent for widely held public companies). The first two provisions were aimed at preventing large and profitable companies from entirely escaping the tax net (the zero tax companies) and the last to improve tax compliance.

Sinha: strange shortfall

Investment rebate is available to companies who invest in new projects or apportion funds for future investments up to a maximum of 20 per cent of gross profits. Using these provisions companies were reducing tax liabilities substantially, some even escaping the tax net entirely. By suspending the investment allowance reserve and the investment deposit account, the government blocked this escape route while simultaneously expecting to add Rs.800 crore to collections. This would only partially be offset by reduced liability from a reduction in tax rates.

Primarily, it is this that did not happen. "Even in February 1990, during the presentation of the budget, the Rs.800 crore figure seemed dubious," says a chartered accountant. This figure was not arrived at by any scientific method. Besides, it was the first occasion when the government was doing away with several provisions of the Income Tax Act and making it virtually impossible to predict with any certainty the effect of these on tax liability of companies, or, how they would plan to reduce future tax liability. "That would have involved a company by company analysis of accounts and it is unlikely that the finance ministry did this," says the same chartered accountant.

The finance ministry grossly overestimated the use of these provisions by companies. "Not many Indian companies rely on internal generation of funds for fresh investments, but rather on borrowed funds," says ASSOCHAM secretary general B.P. Gunaji. "So the number of companies using this provision is not as substantial as the finance ministry anticipated," he says.

The other major miscalculation, it appears, was the suspension of 115J of the Income Tax Act. "Advance payments under 115J are substantial," says FICCI secretary general, D.H. Pai Panandikar, "so the government must have lost substantial revenue by repealing this section."

Other notable contributors to the decline this year, the finance ministry claims, have been the returns of nationalised banks who contribute a good 40 per cent of corporate taxes. Their decline in profits has been substantial this year owing, partly to sickness, and partly to significant changes in accounting practices.

Otherwise, quite remarkably, collections for both excise and customs kept pace with targets even after some slowdown in industrial activity in the latter half of the year. This is despite the fuel crunch, Mandal, *mandir* and the forex squeeze. According to V. Sriram, ASSOCHAM's assistant secretary general, there is not much reason for cheer. "Consumer goods and the automobile industry that has been hurt significantly will affect excise collections in the following year as also customs collections," he says. That will, in all certainty, strain the fiscal deficit further compounding the problems for the finance ministry. ■

ARIF SHARIF

Waterproof Division

Latest from STP...
ThermoLay waterproofing system

Hi-tech protection with comprehensive one-source guarantee on product and application

STP's polymeric torch-on waterproofing system is all weather proof. More, it absorbs high degrees of differential movement, thermal and tensile stress, withstands deformation and cracking for years.

STP manufactures *ThermoLay* in collaboration with Marley Waterproofing Limited, U.K., and provides advice and service through its 35-office network all over India.

For more information please mail the coupon to Mr B Chakravarty, STP Limited
16 NGN Vaidya Marg (Bank Street)
Fort Bombay 400023.

I wish to know more about *ThermoLay*.
Would you rush me full details, please.

THAPAR GROUP

Growing stronger

Lalit Mohan Thapar presides over one of the largest industrial houses in the country. Recently, he has embarked on an acquisition and modernisation drive that will make his empire even bigger and stronger

On 27 October 1995, Lalit Mohan Thapar will celebrate his 65th birthday by stepping down as chairman of the Thapar group's core holding company, KCT Brothers Ltd. As is well known in corporate circles, his father — Karam Chand Thapar — elevated him to the helm of KCT in 1962 ahead of his two elder brothers, Indar Mohan and Brij Mohan. But he also stipulated that on reaching the age of 65, he should make way for Indar Mohan's eldest son Vikram.

L.M. and M.M. Thapar: brothers in arms

Even after that happens, it is clear that Lalit Mohan Thapar will continue to play a key role in the Rs.2,500-crore group. When he took over as the head of the house of Thapar, it did not even figure in the top 15 industrial houses in the country; today it is rated at number five.

Lalit Thapar claims that top class professional managers have made this kind of growth possible. His two seniormost professional managers — Shekhar Datta, managing director of Greaves Cotton and Kewal Nohria, managing director of Crompton Greaves — point out that Thapar's presence is only required when the annual budget is being decided at their companies. Even at Ballarpur Industries, where he is directly in charge, Thapar says he lets the divisional heads make the routine, day-to-day decisions.

Thapar's practice vs theory

But talk of a purely professional approach is only good theory. In practice, it is clear that Thapar is closely involved with all the group companies, including Greaves Cotton and Crompton Greaves. Both Nohria and Datta are in Delhi at least once a month. And Thapar holds a quarterly meeting with other executives of these companies down to the level of general managers. Only Manni Mohan, the youngest Thapar brother, runs the extremely successful JCT Textiles and his other two ventures, JCT Fibre and JCT Electronics, independently, much like a sub-group within the group.

Lalit Thapar's nine-to-five schedule, the many hours he spends playing bridge and golf, his easy sense of humour, and his reputation of being something of a ladies' man sometimes tend to obscure the fact that he has a firm grip on the affairs of all group companies. But he closely tracks all developments and his managers are clear that he and only he sets the group's goals and policies.

In fact, Lalit Thapar knows Greaves Cotton and Crompton Greaves rather well. When he returned from the US with a degree in mechanical engineering, he began what would be a seven-year apprenticeship under N.M. Wagle, who had resigned from the ICS to run the two Bombay-based engineering and electricals companies.

So, by the time his father called him to Delhi to look after Ballarpur Industries — after Brij Mohan lost interest in the company and joined a moral rearmament group — Lalit Thapar had grasped the nature of the companies in Bombay. His education and his varied experience, as also his undoubted competence and interest, proved crucial when it was time for his father to decide on an heir.

After Karam Chand's death the brothers got different companies to look after. But there was no divisive split. They remained together and even today their companies function like those of one group, though of course the group is now much larger than it ever was before.

A damaging mantra

Nationalisation, the economic mantra of the government in the late sixties and early seventies, had a serious effect on the group. Lalit Thapar was able to retain Ballarpur, Greaves Cotton and Crompton. But Indar Mohan lost all his coal mining companies — they had been the backbone of the group in Lala Karam Chand's days. (Brij Mohan also lost his sugar companies to the state governments of Bihar and Uttar Pradesh. But

that was later, during the mid-eighties, after he had run them into the red.)

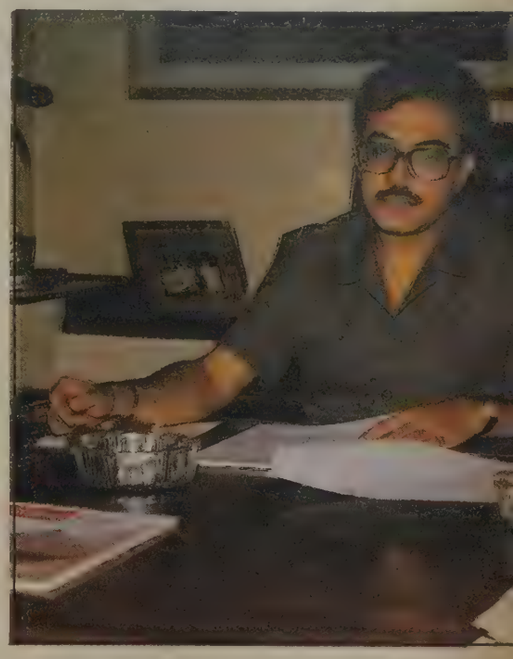
The group dealt with this setback well. Today Lalit Mohan's companies contribute about Rs.1,800 crore to the Rs.2,500 crore turnover of the entire group. Ballarpur, Greaves Cotton and Crompton Greaves are three of the four most important companies in the group. JCT, run by Manni Mohan, is the fourth. These four companies account for over 80 per cent of the group's turnover. Interestingly, though JCT, Crompton and Ballarpur together account for over 80 per cent of the group's gross profits, JCT has shown even greater growth in profitability than the flagship Ballarpur in the recent past. Corporate analysts are clear that much more will be heard from JCT in the near future.

Ballarpur Industries is a good indicator of Lalit Thapar's many successes as also his few, quite notable, failures. A well-diversified company, Ballarpur's two important divisions — the paper division and the chemicals division — are both clear examples of Lalit's business savvy. He set up the chemicals division in Karwar, Karnataka, a few years after he became Ballarpur's managing director. Currently, that division, a big producer of caustic soda, contributes over a fourth of the company's entire turnover. Similarly, he expanded the paper division's capacity from 7,000 tonnes per annum (tpa) to 1.5 lakh tpa, and at present this division contributes over half of the company's entire turnover.

With both the caustic soda and the paper industries doing well, the performance of these two divisions will, obviously, boost Ballarpur's performance for the year ended March 1991, as also for the next financial year.

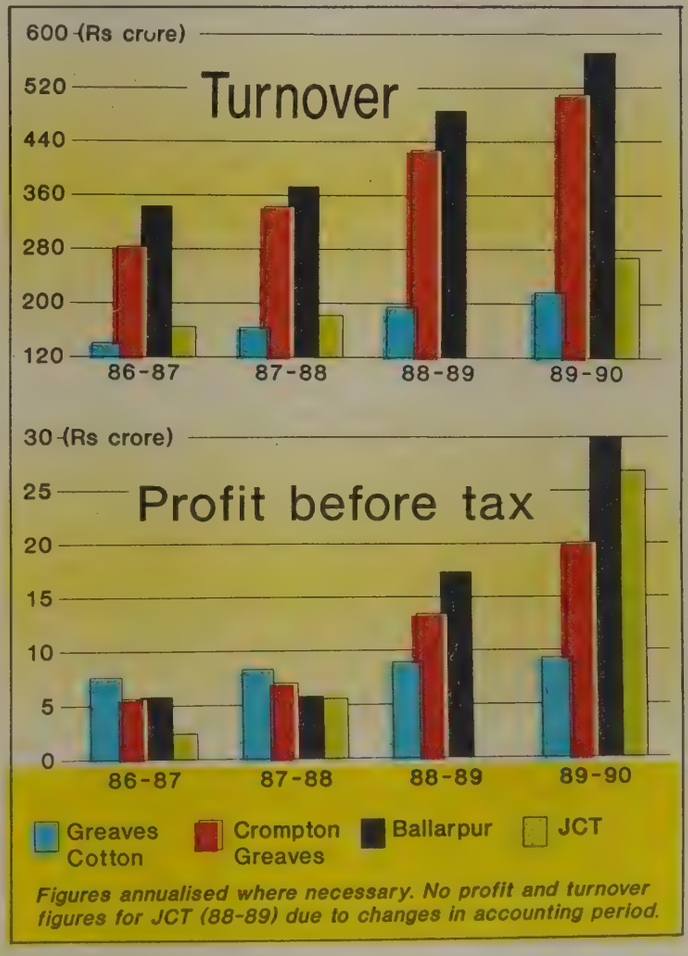
Revival and profit

In fact, business in these two industries has been so good in the past three years (1988-1991), that Ballarpur has posted smart increases in turnover and net profit. For the year ended March 1990, turnover touched Rs.572.74 crore — an over Rs.200 crore increase over the turnover in 1987-88. And net profit, at Rs.40.79 crore, was eight times as much as it was three years ago.



Price hikes in paper have contributed substantially to the bottomline, but so has the firming up of demand that has revived the entire industry. Though net profit increased by a factor of eight, earnings per share increased only six-fold to Rs.19.35 in 1990-91, because of a 1:2 bonus issue that increased equity to Rs.20.97 crore.

The company's performance in this financial year is expected to be even better. Turnover for the first six months of 1990-91 was Rs.310 crore and net profits were a mind-boggling Rs.28.79 crore.



Cordial labour relations in the paper and chemicals divisions have played a role in this strong performance. These have been possible because Thapar has always been fair but tough with labour. In early 1988, he didn't hesitate to declare a lock-out at the Ballarpur Paper Mill that lasted for over a month after rivalry for the leadership of the workers union had made it impossible for the local management to negotiate a new wage agreement.

And in August 1987, when workers at the chemicals division in Karwar struck work he didn't buckle under the pressure. Well over a month passed before the strike was settled in October that year. (Even at Crompton Greaves, where the militant Datta Samant is the union leader, Thapar has had little trouble in the past four-five years. In fact, Thapar has been able to push Samant into delivering productivity increases years after year.)

Much of the strong performance, of course, is due to an aggressive acquisition and modernisation drive that has been especially strong in the past few years. The paper division has clearly benefited from this drive. Lalit Thapar has un-

Vikram Thapar: the heir apparent

Figures annualised where necessary. No profit and turnover figures for JCT (88-89) due to changes in accounting period.

dertaken the modernisation and expansion of his two oldest paper units — Ballarpur Paper and Shree Gopal Paper — that will increase their combined capacities from Rs.1.2 lakh tpa to Rs.1.6 lakh tpa by the end of this year. When this is done, there will also be considerable savings in raw material consumption.

Like the Lala

As far as his acquisition of sick paper units is concerned, Thapar seems to have taken a leaf out of his father's book. Lala Karam Chand, who began life as a coal dealer, built almost all of his empire by acquiring troubled companies. Lalit Thapar's acquisitions of Sewa Paper, Choudhar and Titagurh Paper Mill No.3, which are all based in Orissa; the Calcutta-based BCR Limited (which has a paper plant in Faridabad, Haryana); along with the extensible sack paper plant being set up in Ashti, Maharashtra, will increase the paper division's capacity by nearly 67,000 tpa once they all commence production.

As a consequence, the paper division will have about 10 per cent of the total functional capacity of the entire paper industry in the country. In fact, BIFR cited Ballarpur's control of such a large capacity as one of the reasons why it awarded the sick Rayalaseema Paper Mill to G.P. Goenka recently.

Another major reason was undoubtedly the tax benefits that would have accrued to Ballarpur Industries had the original Thapar proposal to merge Rayalaseema with Ballarpur been accepted. These benefits can be substantial. For example, the acquisition of the sick Sewa Paper will bring the tax liability of Ballarpur Industries as a whole down to almost zero for the financial year 1990-91.

The sick-growth route

The acquisition of sick paper units will obtain several other benefits for the paper division. Its capacity will be raised quickly at a much lower cost than what would have been incurred had new plants been set up. Also, the paper division will have assured sources of forest-based raw material for this additional capacity; something that is almost impossible for new paper units to arrange. Given all this, it is still clear that this route to growth is more a case of making a virtue out of necessity than a matter of choice. Stopped from growing rapidly because of MRTP provisions, this is the only way in which Thapar could make the best of a bad deal.

However, the tax breaks from the acquisitions and the substantial bargaining power the cash-rich Ballarpur possesses with the banks, mean that the acquisitions have little chance of damaging the company's financial position. In fact, Lalit Thapar has usually structured these deals so well that often just the money Ballarpur would have paid in taxes (had it not made the acquisition), is used to rehabilitate a unit. This increases the company's assets base and earning power at no real cost.

The acquisition of BCR Limited is a particularly apt example. The company had accumulated losses of Rs.2.61 crore as of 31 March 1989 against a paid-up capital of Rs.45 lakh. Lalit Thapar amalgamated the company with Ballarpur (at a conversion ratio of 20:1), and Ballarpur became eligible for income tax benefits to the tune of Rs.2 crore. Against this, Thapar proposed to modernise the acquired paper and technical gelatine units at a cost of Rs.1.11 crore. And he also derived additional benefits — a waiver of penal interest till 31 March 1991 — from the banks.

The chemicals division, unlike the paper division, has not seen a spate of acquisitions. But its caustic soda facilities are being modernised in an effort to save power and to increase productivity. And a 10,000 tpa aniline plant is planned to be set up in Andhra Pradesh in the next few years.

It's chemistry

Though the paper division has been unable to export its output, the chemicals division has managed to do so. Last year, this division began bulk exports of sulphuric acid to Thailand and its senior vice president, S.N. Tandon, is confident that the volume of these exports will double this year.

The division also converted its idle sodium tripolyphosphate tower to make detergents; 30,000 tpa will be made from next year, entirely for foreign markets. Though the division currently has orders only from the USSR, it is planning to sell the detergent to other buyers, including multinationals like Procter and Gamble.

The glass division of Ballarpur Industries is the other division — besides paper and chemicals — that is currently a focal point of Lalit Thapar's interest. He says he would like to specialise in paper, chemicals and glass because "these have unlimited possibilities". This view clearly prompted him to merge J.G. Glass, till recently an ailing subsidiary, with Ballarpur Industries.

By April 1987, J.G. Glass had accumulated losses of Rs.11 crore which had eroded almost the entire net worth. Thapar proposed an amalgamation with Ballarpur and pushed it through in 1989 (the conversion ratio was one Ballarpur share for every 20 J.G. Glass shares), but with effect from 1 July 1988.

Since then, the two old units in Pune and Rishikesh have been modernised with the technical assistance of Owens Illinois Inc, USA. And a new 200 tpa plant in Pondicherry (with Owens assistance) is scheduled to begin operations towards the end of this year. These three plants along with the fourth plant proposed to be set up at Banda in Uttar Pradesh will take the total turnover of the glass division to over Rs.100 crore in the next two-three years.

Pharmaceutical companies like Indian Drugs and Pharmaceuticals and Hindusthan Antibiotics have been J.G. Glass's biggest customers. The glass division stands to pick up more business from other pharmaceutical companies given this experience. And the growing soft drinks industry will also provide many opportunities. For example, the Pondicherry plant already has major orders from two Pepsi franchises though it has yet to commence production.

Just as J.G. Glass was in trouble, domestically, its joint venture company in

Bamboo stockyard at Ballarpur Paper: the

Malaysia, J.G. Containers (Malaysia), was also in the red for many years. It turned around only in 1989-90 and posted a modest net profit. But inadequate working capital affected its operations, and Ballarpur has been forced to consider injecting into it fresh equity capital to the tune of Malaysian $ 6 million.

Overstretched overseas

In fact, the great difficulties he has faced in exporting capital have affected most of Lalit Thapar's ventures abroad. But in the case of the Malaysian glass company, more trouble was caused because of the company's inability to repatriate money to India. The Enforcement Directorate slapped a Rs.25 lakh penalty on J.G. Glass and a Rs.1.5 lakh fine on one of the company's directors for alleged FERA violations. And Thapar's loss-making hotel in the Seychelles got him personally into trouble for the same reason. V.P. Singh, then finance minister in Rajiv Gandhi's cabinet, ordered his arrest for an alleged FERA violation.

Barring the Phoenix Paper Mill in Thailand, Thapar's ventures abroad — all made through Ballarpur Industries — have, in fact, been miserable failures. A paper mill in Indonesia, a glass company in Nigeria and a palm oil project in Malaysia are among these. Thapar candidly admits he made a mess of these ventures because he did not realise that he couldn't do business abroad in just the same way as he did in India. The Phoenix

heart of the business

Pulp and Paper Company Ltd — its full name — is a joint venture company where Thapar first got in as a minority shareholder. The upward trend in world pulp prices over the past five years have in fact caused it to maintain very high levels of production; capacity utilisation was a stupendous 160 per cent this year. While exact valuations maybe difficult, corporate analysts believe Thapar has multiplied his original stake in Phoenix well over ten times.

Shipping: high and dry

But Thapar's misreading of the ground realities abroad and at home caused him to make what even he considers to be the biggest mistake of his career: Ballarpur's foray into shipping. In the early eighties, with the shipping industry booming, he decided to acquire two ships; a bulk carrier and an edible oil carrier. He got the edible oil carrier because he thought the government's plans to import palm oil offered a profitable long-term business opportunity. Also, he had just then been given a licence by the Malaysian government to set up a palm oil refinery in Malaysia.

But both these factors which had seemed to adequately justify the oil carrier's acquisition turned out to be unrealistic. The Malaysian project failed to take off. And the entry of the State Trading Corporation into palm oil imports left no opportunities for the Thapar carrier.

Thapar then sold the oil carrier and resigned from the Indian National Shipowners Association. And the bulk carrier was pressed into service ferrying salt from Ballarpur's salt works in Singach to its caustic soda unit in Karwar.

Another more recent setback to Ballarpur Industries has been Kamal Morarka's decision to turn down its proposal to set up a joint venture with Dupont for the production of nylon 66. The project almost got the nod after Thapar had intensely lobbied members of the National Front government. However, before the cabinet committee on economic affairs could approve the proposal, the government toppled. Chandra Shekhar's government had initially decided to put all such decisions by the previous government on hold but eventually Morarka, who handles industrial affairs in the PMO, said no.

Corporate observers say there were several reasons why this happened. First, domestic manufacturers of nylon 6 fought hard to protect their market from

Karan Thapar: "Crompton and Greaves Cotton will be his babies"

being swamped — their average capacity of around 6000 tpa was less than half of the proposed plant's capacity of 14,000 tpa. Second, there were some objections to the plant because it would have been a second-hand one. Third, there was a serious concern that Thapar would be unable to meet his export commitments and hence the foreign exchange neutrality of the plant was perhaps more notional than actual. Finally, Lalit Thapar's supposed funding of the BJP could hardly have endeared him to the JD(S)!

What contacts?

But this setback showed up an embarrassing lack of viable political contacts. When questioned about this, Thapar says that unstable governments in the recent past have completely changed the rules of the game and he finds it increasingly difficult to play by them. (He was once reputed to have had very close links with the Congress(I), but he denies that this was ever the case.)

E.F. Kreuzberger, president, DuPont Far East Inc., doesn't appear overly concerned by this. "We picked the Thapars because of the compatibility of our corporate cultures," he says, "and that has not changed." He denies the rumours that Dupont is considering a more politically savvy collaborator for the nylon project. In fact, he claims several other joint projects with the Thapars are currently being considered.

Lalit Thapar, in fact, says that he has pursued the nylon 66 venture doggedly because he would eventually like access to Dupont's vast reservoir of technolo-

gies. And Dupont as well as several other large US Corporations have made it clear that they view the nylon 66 project as a test case.

Unlike some prominent Indian businessmen, Thapar feels foreign collaborations can be extremely beneficial if they are chosen carefully. However, he points out that the 40 per cent limit on the equity participation of foreign companies under present FERA regulations makes it next to impossible for Indian companies to get the technology tie-ups they need.

A portrait of paper

Ballarpur Industries thus paints a very human portrait of Lalit Thapar. Clearly, he understands the paper, chemicals and glass industries well; perhaps paper the best of them all. He feels the future of the paper industry is bright. He says, "There will be cyclical booms and slumps but overall the rise in literacy and the level of industrialisation will ensure a good future for paper. One major problem, however, will be that of raw materials. Captive plantations should be allowed as imported pulp is very expensive."

Just as clearly, his foreign ventures show up his inability to function in a different economic environment, given the constraints the Indian system places on all economic activities. Conversely, his ability to pick up sick units and revive them shows an uncanny grasp of the opportunities afforded by that very system.

This knack has increasingly been recognised by his peers. In 1987, Thapar became the alternate chairman of ASSOCHAM. In the next year, he became the president. During his tenure, ASSOCHAM became a high-profile organisation and the government began to hold it in much higher esteem than it had ever before. Also, during his tenure, ASSOCHAM and FICCI resolved a year-long dispute and signed an MoU in which they agreed to take a joint approach to joint business councils. Thapar thus presided over ASSOCHAM at a very crucial juncture. Some association officials claim Thapar did little to initiate the events that took place. But he would probably argue that by taking a hands-off approach he made the greatest contribution; he allowed competent people to make things happen.

That is certainly what he feels about his contribution to Greaves Cotton and Crompton Greaves. These two Bombay-based companies have also performed well, especially in the past four-five years.

Greaves and Greaves' growth

Under Kewal Nohria, Crompton's turnover has grown by 18 per cent a year for the past five years while net profits have grown at an average annual rate of 25 per cent. For 1989-90, turnover stood at Rs.510 crore while net profit was Rs.13.06 crore, giving an EPS of Rs.67. For 1990-91, the turnover is expected to be around Rs.600 crore with a net profit of around Rs.25 crore.

Greaves Cotton, under Shekhar Datta, has grown too but at half the rate of Crompton. For 1989-90 it posted a turnover of Rs.217 crore and a profit before tax of Rs.9.3 crore. For 1990-91 the pre-tax profit is expected to be Rs.11 crore. Greaves Cotton is the older of these two companies but it has remained smaller in size because for years it worked as a managing agency. Today its original investment of Rs.1.27 crore in Crompton Greaves, its associate company, is worth nearly Rs.70 crore. Greaves Cotton is also a manufacturer of engineering items but Crompton is the largest private electricals engineering company in the country today.

The nature of their activities however causes their margins to be very low; their gross margins, for example, have been around 5 per cent in the recent past, at a time when they have been doing quite well. Given this, control strategies are important for both consolidation and growth of these companies.

Nohria has consolidated Crompton's main electricals product-line — transformers, circuit-breakers, load-break switches, motors, alternators and electric fans — and diversified into electronics with careful and modest levels of investment. Some of these forays have been much less than successful. His attempt to enter the consumer durables market — with televisions, for example — was disastrous. And his push button telephones have not done well enough to push Crompton into the top three players in the market.

But electronics products accounted for 6 per cent of the turnover in 1989-90 and are expected to account for a fourth of

"There is more than enough"

Lalit Mohan Thapar, *head of the Rs.2,500 crore Thapar group, talks to* Business India's *Feroz Ahmed about how his empire has grown and about what succession plans he has for his nephews*

Since KCT Brothers is the core holding company of the group, how will your retirement from it affect your status?

Not at all. Our strength is in the fact that we Thapar brothers have never looked at the shareholding pattern as the basis for control.

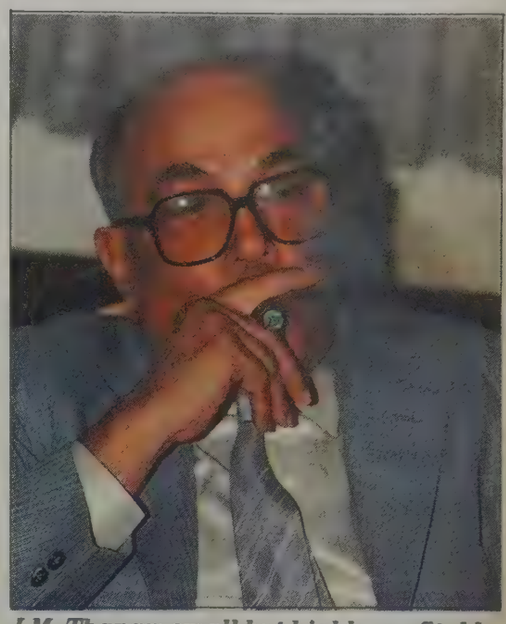
Despite what you say, control of KCT is surely crucial from the point of view of succession...

I and my three brothers hold equal number of KCT shares, which amounts to slightly more than half of the total equity. The rest is held by our sisters. How my brothers eventually divide their shares among their sons is up to them.

But I always tell my nephews that the day they start looking at the shareholdings of the companies they are responsible for, the group will head for disaster.

Will your status in Ballarpur — which controls Greaves Cotton which in turn controls Crompton Greaves — change after you retire from KCT?

Well, I suppose if my nephew Vikram, who will then be managing director of



the company's targeted Rs.2,000 crore turnover by the year 2000. For the present, good labour relations, increased levels of training and effective cost-control measures will help the company maintain a 18 per cent growth rate in turnover per year.

Group ethos

Datta has attempted to consolidate Greaves Cotton's activities too, by consciously trying to bring a sense of cohesion between the many associate companies and subsidiaries. Many of these have long been poor performers, but some have now begun to turn around. However, Greaves Semiconductors and Greaves Chitaram — two sick units Greaves took over about eight years ago — posted significant losses in 1989-90. As of 31 March 1990, Greaves Cotton's loans and advances to its subsidiaries totalled Rs.15 crore — of these Rs.9.3 crore arose in the past five years.

Datta has also added new products to his product-line. Portable diesel gensets which will compete with the petrol sets made by Shriram Honda and Birla Honda have just been launched. Plans are also afoot to develop a diesel engine for three-wheelers.

By far the most important project on Datta's plate is the proposed Paradip naphtha cracker for which Greaves Cotton is the lead company in the Thapar group. The Thapars have revived a low-interest, rupee-denominated financial and technical assistance package they first worked out with the Soviets in 1988 when they bid (unsuccessfully) for the Saleempur Aromatics project. Datta points out that Technochim, the Soviet collaborator, will accept most payments in rupees. And the cost of capital goods imported from the West will be made good by exports of petrogoods from the cracker.

I.M. Thapar: small but highly profitable holdings.

These three companies — Ballarpur Industries, Crompton Greaves and Greaves Cotton — are the three major companies under Lalit Thapar's control. Their greatly improved performance in the past few years has contributed significantly to the rise in the overall performance of the Thapar group. So has their emphasis on modernisation and diversification. But if there is at all an overall strategy for the group it is this: consolidation of core products and a thrust into new areas whereas the margins are not so tight; where there is scope for quick growth; and where relatively high value-addition is possible.

Shoes and tuna?

However, the overall strategy of integration with diversification is marred by some seemingly bizarre diversifications. Ballarpur's venture into shoes and leather for example, and Greaves Cotton's proposed move into deep-sea tuna fishing! But these moves have been forced on to the group by its need to earn foreign exchange at least to the extent of matching its exports and its imports. Sadly, for various reasons most of its core products

KCT, got the shareholders together and decided to kick me out, he could do so (chuckles). But I don't think he would quite want to do that.

What about the other young Thapars; what will they do?

There is more than enough for each of them. In fact, my complaint against my brothers is that they have not produced enough young Thapars!

What were the reasons behind your companies growing so large?

I think this happened because we professionalised our managements quite rapidly.

How hopeful are you of bagging the Paradip naphtha cracker, given your cordial relations with the Orissa chief minister Biju Patnaik?

Biju Patnaik said to me the other day, "Now, your problem is getting the licence from Delhi." (laughs)

Have licences always been a problem? What difference did the MRTP Act make, for example, to the group's growth?

It delayed things. But, MRTP is only one hurdle. There are a host of others from the government's side. Doing business here is like running in the biggest obstacle race in the world.

Have you taken over Pioneer (the newspaper group) to gain some 'leverage' with politicians?

Not consciously (grins).

What kind of control are you going to have over the editorial policy of your paper?

Let me tell you what Vinod Mehta (the new editor of *Pioneer*) told me: "I know it's your paper and I've no illusions about it. The newspaper should and will reflect the owner's policy."

On the whole, why have you not been able to duplicate your domestic success abroad?

We made a fundamental mistake in our foreign projects in the beginning: we thought that we could do business much the same way as we did in India. In Indonesia, for example, we put up a 40 tonne per day paper mill when there was no paper industry in that country. But later, several international-size paper mills sprang up there and we got into hot water.

Why didn't you expand your capacity?

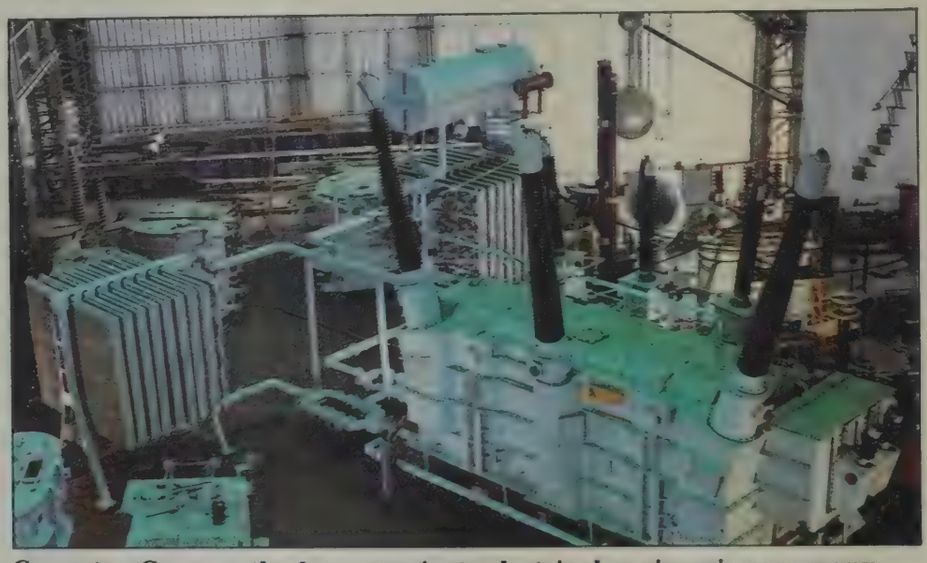
Well, you can't export money from here, you can only export plant and machinery and so on... so we have not been able to do what we would have liked to do.

What are your plans for Ballarpur?

If I had the choice, and if there were no government interference and barriers, I would like to specialise in two or three areas: paper, chemicals and glass. These have unlimited opportunities. Right now, I am being forced to diversify into unrelated areas where I have no business to be in, only because I must match my imports with my exports. Still, I hope that Ballarpur will be a Rs.2,000 crore company by the turn of the century. We can rely on inflation to contribute substantially to that.

are not really excellent export candidates. Given this, the group appears to have had no option but to enter areas where, as Lalit Thapar acknowledges, it has no business to be in.

The group's growth has perhaps also been affected by Lalit Thapar's insistence on holding at least 40 per cent of the equity in each of his companies. The fairly low equity bases of the companies have also meant that much of the recent spurt in turnover was only made possible by adding on debt; a situation that could be dangerous in an economic downturn. The low amounts of floating stock — Ballarpur, the most actively traded share, has a floating stock of only 20 per cent — along with the stable holding patterns has meant that the spur of shareholders' expectations has not been a significant issue in galvanising the companies into action.



Thus, many factors have conspired to keep these companies from attaining really high rates of growth. But this does not detract from what they have achieved so far, especially recently.

Of the four brothers, Lalit Mohan is without any doubt the most successful. He has built such an abiding reputation for takeovers, albeit on a smaller scale than those by some other businessmen, that almost every merchant bank takes deals to him. Those who haven't done so, would clearly like to. Says A.P. Rao, managing director, Canbank Financial Services, "We have not specifically approached the Thapars for mergers and acquisitions, but we have done other business with them and we would be happy to be associated with them in future." In fact, Lalit Thapar has a full-fledged mergers and acquisitions department, that continually scans the environment for suitable opportunities.

Manni Mohan's inheritance

Indar Mohan runs KCT (Coal Sales) Ltd, a small but extremely profitable company (1989-90 turnover Rs.150 crore, before-tax profit Rs.35 crore) and has several other interests. But the youngest brother, Manni Mohan is the most successful after Lalit Mohan. He has turned his inheritance, Jagatjit Cotton Textile Mills, into one of India's outstanding integrated textile mills (1990-91 turnover Rs.254 crore). And in the recent past he has launched JCT Electronics and JCT Fibre which together have a turnover of Rs.250 crore.

JCT Textiles was one of the few composite mills that was unaffected by the most recent recession in the country. This was possible because Manni Mohan had been continually upgrading his plant and machinery. In the past four years, he has spent nearly Rs.20 crore on modernisation and the upturn in the industry has caused it to post the highest improvement in profitability of all the companies in the Thapar group.

Crompton Greaves: the largest private electrical engineering company

Manni Mohan's venture into nylon filament yarn came later than that of others in the industry. But in recent years, turnover from these operations has almost equalled that from textiles. And even the polyester staple fibre subsidiary has not been affected by the general slump, because 40 per cent of its output is used in-house and 20 per cent is exported to JCT's joint venture company in Malaysia, Chempka Negri Textile Mills.

Manni Mohan's other venture, JCT Electronics, makes colour television tubes. It is currently the largest exporter of all the companies in the group. Its exports stood at Rs.55 crore for the year 1989-90 and comprised about half of the total group exports for that year.

Its import-intensive nature — it imports 70-80 per cent of its components — has however put the company under some pressure recently. But it is still in very good shape compared to other units in the consumer electronics industry. Manni Mohan's ventures, in fact, deserve individual discussion. Both because they are so successful and because he runs them independently though he has not split from the family.

The nephews also rise

Interestingly, the Thapar group is one group in which the next generation has been accommodated successfully. Manni's two sons, Arjun and Samir, will continue to do what they are already doing — Arjun runs JCT Electronics and Samir is a director of JCT Textiles. Indar Mohan's son Vikram will not only become chairman of KCT Brothers but he will also look after Ballarpur and KCT (Coal Sales) Ltd. Brij Mohan's two sons, Karan and Gautam, will also be given plum slots. Karan, who has been Lalit Thapar's understudy for years, will handle both Greaves Cotton and Crompton Greaves. And Gautam will be given Ballarpur's fibre operations to look after.

Perhaps few business groups in India have made such a smooth transition. It is well known that most splits that have occurred in the Indian corporate world did so when it was time for the next generation to take over. The Thapar group did not split after the death of its founder, Lala Karam Chand. It remained a cohesive whole and was run as a group. With the present transition having been more than trouble free, prospects of the group staying together in future are bright. Even the nephews must know by now that staying together gives them all more resources and strengths to command than other fractured groups are able to. Perhaps in all this an important element has been the fact that Lalit Thapar is a bachelor and has no sons to favour.

Lalit Mohan, the playboy turned patriarch, has been more than fair to all his nephews. However, how they will shape up remains to be seen. But, as N.M. Wagle puts it, with a teacher's obvious pride in a brilliant former pupil, they couldn't do better than learn it all from Lalit Mohan Thapar, chapter and verse.

■ FEROZ AHMED

Into South Africa

India's political and economic problems, the war in the Gulf and the events that led to it, have all occupied our attention. We have perhaps not given due consideration to major changes that have been taking place in a country with which good relations could be mutually beneficial, namely South Africa.

India has very justifiably and proudly led the charge all these years against the abominable system — apartheid. Yet, as we have been unmoved by the rejection of an imported economic model — socialist central planning — by the very countries that created that model, when apartheid has started crumbling India has merely stopped grumbling. It can do much more. If we are not to be the last country in the world to do so, India must immediately step forward and publicly recognise the revolutionary changes sweeping across South Africa, of which the release of Nelson Mandela and the scrapping of desegregation acts are just two.

Apartheid abandoned

The plain truth is that South Africa is no longer a leper to the rest of the world. It has all but abandoned its "grotesque experiment in social engineering", as the *Financial Times* of London put it. The South African government has just tabled five draft legislations, the most important of which aims at scrapping all laws enforcing racial discrimination in residential areas and land ownership.

This effectively repeals the notorious Group Areas Act (which segregates urban suburbs); the Land Acts of 1913 and 1936 (that restrict black farming to 13 per cent of the country); and the Black Communities Development Act, which provided for the establishment of segregated black townships.

In fact, on 20 February this year, the South African government issued instructions that pending the passing of these legislations before the Parliament session ends in May this year, no further action will be taken against offenses registered under these laws and no further offenses will be registered.

Impressed by South Africa's stunning moves to tear down barriers of hate, the European Community is considering lifting sanctions before this summer is out. "The British and the Australians say they will press their colleagues in the Commonwealth to abandon sanctions, especially on sport" reported *The Economist* in early February. A French parliamentary delegation, after meeting leaders of various communities in South Africa this February, reported that France will probably lift sanctions in June.

Back among nations

In the first two months of this year, delegations from at least 21 nations entered South Africa. These included Zaire, Nigeria, Morocco and Angola from Africa; the Soviet Union, Hungary, Yugoslavia, Czechoslovakia, Poland and Bulgaria from Eastern Europe and South Korea, Japan, Malaysia, and China from Asia.

State president F. W. de Klerk has made changes in a year which would have been unthinkable even two years ago. If we recognise these to be positive, then India too should give encouragement so that a good rapport — for purely economic reasons — can be built.

The plain truth is that South Africa is no longer a leper to the rest of the world. It has all but abandoned its "grotesque experiment in social engineering"

South Africa's economy accounts for almost 20 per cent of Africa's GNP and 40 per cent of its industrial production. It is a first world country in a third world continent. South Africa's economy has suffered inflation and stagnation during recent years due to the depressed world price of gold and the more severe of the sanctions. Still, with its enormous technological and infrastructural base it remains the only hope for salvaging the economies of the rest of Africa.

Recognising this, talks are already under way between southern African nations such as Namibia, Zimbabwe, Mozambique, Botswana and Angola (now that the Cubans are leaving it) to join together with South Africa into an economic confederation of Southern African states. There is no doubt which country will be the leader of such a confederation of more than 100 million people.

The African National Congress has not officially given up armed struggle against white rule and some of its senior members still claim they will impose communism in an ANC-ruled South Africa. However, the leaders reveal that this is their public stand: privately the leadership of the ANC is deeply concerned about maintaining the economic growth of South Africa.

Towards a strong economy

They do not desire creating conditions leading to political instability and would like to encourage foreign investment and see the generation of enough wealth to redress the social wrongs of centuries. Neither the ANC nor any other black political party want South Africa to go the way of some other African nations that have seen their economies ruined in the last 15 years.

Indian companies working in partnership with South African companies could gain new access to the rest of Africa, not only for exports of our goods and services but also for investment. Further opportunities will arise in South Africa itself as it strives to raise the living standards of its black people in areas such as low-cost housing. India could benefit from the mining and mineral technologies developed by South Africa, as it could from South Africa's immense resources of raw materials if special trading relationships are established.

It is more than likely that a post-sanctions South Africa will enjoy special ties with the EEC and North America. Even so, India and the southern African states, separated by only the Indian Ocean, could be natural economic allies.

As South Africa relegates the evil of apartheid to history books, so should we place our just abhorrence of it firmly in the past and begin building our bridges with the diverse political groups in South Africa while further strengthening our very cordial relationship with the ANC. Let this be done through positive statements from our leaders, cultural exchanges, exchange visits of businessmen and free travel between the two countries. The spontaneous chemistry among the peoples, catalysed by common interest, will do the rest.

$ 18m DEC contract for Indian company

By a staff reporter

Khaleej Times

INDIA'S National Thermal Power Corporation (NTPC), has been awarded a $ 18 million contract by the Dubai Electricity Company (DEC), for erecting a 400k V transmission line.

The proposed transmission line is from DEC's 'G' station at Jebel Ali to Najma and Al Mushrif. The project will also include uprating the existing line between Al Mushrif and Najma, from 132k V double circuit to 400k V single circuit and other associated works.

The consultants for the project are Kennedy and Donkins of UK under whose supervision the job will be executed. Additional optional works, valued at about $ 1.5 million, will be confirmed subsequently during the course of the contract.

KEC International of India will be the principal sub-contractor to NTPC for the supply and erection of [illegible] stringing of lines and

The company is the second largest transmission line tower manufacturer in the world, having its own in-house tower testing facility up to 1,000k V.

NTPC (which is fully owned by the Government of India and has a paid-up capital equivalent to Dh 16 billion) will depute its project management team to Dubai shortly, to commence the job immediately.

The first line has to be commissioned by June 1992, to cater to the summer load. The entire project is contracted till the summer of 1993.

The $ 18 million contract is the first major Indian involvement in a Dubai project in recent months and, according to Indian sources, underlies the growing ties between the two countries. It also reflects the confidence that India has in Dubai's future growth.

The consultancy division of NTPC — which will be executing the project — was established

Why did Dubai Electricity Company choose NTPC out of 11 international giants for its 400 kV transmission line project?

When it comes to consultancy on power projects and power systems, National Thermal Power Corporation provides a comprehensive range of services that expand from preliminary ideas to the final implementation. Encompassing feasibility reports, cost engineering, environmental impact studies, detailed engineering, procurement, quality assurance and inspection, erection, commissioning, plant O&M and power evacuation.

A predominant entity on India's power scene, NTPC has bagged the challenging assignment of a 400 kV transmission line project from Dubai Electricity Company, Dubai, with a total contract value of US $ 17.7 million. It is NTPC's major breakthrough in the international market against stiff competition from 11 international giants who applied for the work. KEC International of India will be the principal sub-contractor to NTPC for the supply and erection of the towers, stringing of lines and accessories.

The long list of prestigious organisations that have reposed confidence in NTPC includes Bombay Suburban Electricity Supply Co. for its 2 x 250 MW plant at Dahanu, EGAT (Thailand) for its 230 kV transmission line, ASEA (Sweden) for design services to Hydro-Quebec (Canada), DESU for its 400 kV transmission system, Maharashtra State Electricity Board for its HVDC system, DVC for its 4 x 210 MW Maithon Project, BALCO for its 4 x 67.5 MW Captive Power Plant, Hydro Electric Commission, Tasmania, Australia for inspection of auto transformers, SAIL for combined cycle 60 MW Captive Power Plant and many more.

NTPC received full cooperation from prime financial institutions like EXIM Bank of India, Export Credit Guarantee Corporation of India and Canara Bank, India in the form of expert advice and support.

NTPC over the years has accumulated a reservoir of experience, which it seeks to share in the form of turnkey execution of projects as well as consultancy services in specific areas.

FIFTEEN YEARS OF EXCELLENCE

The East India Company legacy

J. RAO

In Britain, the liberal Whigs were always suspicious of "John Company". It stood for a monolithic monopoly and mercantilism. By its very nature, the East India Company abhorred free trade, preferring to reserve for itself the profits accruing to the India and China trades. Tragically, this absence of faith in liberal economic policies was carried forth into the management of domestic government finances in India. The company obtained large chunks of revenue from the opium and salt monopolies — a quaint intrusion of government into commerce, that the liberals viewed with disdain and suspicion. It is in this approach to governance practised by the East India Company that we need to search for the seeds of modern India's statism and ever-widening public sector octopus.

Worst variety

When the British government took over direct rule of India, this tradition got strengthened. The leading lights of the ICS and even most viceroys turned out to be paternalistic Tories of the worst variety. This happened even when there were liberal governments in Westminster. This set of rulers believed that they knew what was best for ordinary Indians. They also viewed ordinary infrastructural or commercial development through the prism of political strategy.

The propaganda of today is no different. The Indian railways, going from their PR material, have more to do with national integration than with the movement of people or goods. The imperial government's backing and control of the London to Bombay telegraph was justified with a vocabulary that sounds similar to the "self-reliant, control of commanding heights" variety that is echoed a century later!

Many are not aware that the nationalisation of the railways took place in pre-independent India as part of the manifest destiny of the viceroy's government to do good to its loyal subjects, besides protecting and defending them. We just need to alter a word or two and the claim can be reproduced as coming from the experts who plan for the welfare of Indian citizens from the distant paradise of Delhi today!

Paternalistic Toryism (be it the imperial or the patriotic *desi* variety) assumes that the government, or to be precise, elite functionaries of the government know what is best for people. Private ownership and market mechanisms are not good for people. Government ownership and official control and direction are the only sure guides to happiness. One can understand this attitude from imperial masters — it's part of their ideological creed that they know what's good for their helpless and backward subjects much better than the subjects themselves. It is to the eternal credit of the strength of the institutions and ideas that the British bequeathed to us, that independent India has adopted and enhanced this supercilious and positively contemptuous attitude towards the people of India!

Contempt for commerce

Another characteristic of Toryism is its contempt for commerce and business. 'Tradesman' was an insulting epithet applied to one's adversaries. There's presumably something seamy and dirty about the act of buying and selling goods to customers who want them. This contempt for trade and money-making has become another religious legacy left behind by our erstwhile masters. Like good converts, we have become far more zealous in the defence of this holy dogma than its original proponents probably ever imagined.

Oddly enough, this distaste for trade and business does not prevent government mandarins from making their foray into this world. The government can and should set up organisations to trade; an activity which is otherwise despicable now becomes noble, patriotic and what not. One wonders if the monopoly trading houses in the public sector today realise that they can trace their intellectual ancestry to the opium monopoly of the East India Company!

It is in the nature of things that inheritors of the imperial mantle imitate their erstwhile rulers while decrying them in public. Such a strategy can even have many plus points. However, as time passes and as our national self-confidence builds up, we need to shed counter-productive and burdensome inheritances while leveraging the useful ones.

Condescending *ma-baap* paternalism, be it from an imperial or a national government, claims to benevolent omniscience and antagonism to trade and business (the sections of society which, in fact, are the builders of the economic basis of society itself) — all these are dubious legacies of the East India Company taken by us to extremes of caricature as is usual with imitators. Let us jettison them and evolve a more constructive paradigm that can deal with the realities of our country's immense needs and unrealised potential in the contemporary context.

As a first step, maybe we can celebrate the 391st anniversary of the founding of the Honourable John Company Bahadur by getting the government completely out of all trading activities and leaving them to individuals and private firms where they rightfully belong!

HCL-HP JOINT VENTURE

A significant move

The tie-up, which caught everyone unawares, promises to infuse not only funds and the latest technology into the country's computer industry, but also enhance its global competitiveness

On 12 April 1991 when the directors of Hindustan Computers Ltd (HCL), the largest Indian computer company met for an extraordinary meeting, only three of them had any inkling about the momentous announcement that chairman Shiv Nadar was going to make. Only a week earlier Nadar had received a missive from the Hongkong regional office of Hewlett Packard (HP), the $13.2 billion US computer and electronics giant, that its headquarters had agreed to get into a joint venture with HCL in India.

Like in October last year when the two companies had announced a marketing tie-up, this time too the Indian computer industry was caught unawares by the new development. In fact, so were the employees of both HCL and Hewlett Packard India. To be fair, the earlier plan was for both the managements to inform their employees first before making press statement on April 22. But because of a newspaper leak the two companies had to make their announcement at a hurriedly called press conference on April 17 itself.

According to Nadar, the tie-up has its roots in the 1989 HP takeover of Apollo Inc., the leading US workstation manufacturer, with whom HCL had a manufacturing agreement. In September 1989 HCL and HP first began talking of a 'complementary alliance'. However, it was only last year that HP proposed teaming up to manufacture CAD/CAM workstations in India. Toward this end, HCL made its first presentation at HP's Palo Alto, California headquarters. But the idea did not develop into anything concrete immediately.

In October last year, however, the two manufacturers decided to go in for a marketing agreement. Soon after, in December, the two began negotiating the joint venture and, as Suresh Rajpal, president, HP India, says, "a handshake on an approximate price took place". An informal MoU was eventually signed towards the end of January 1991.

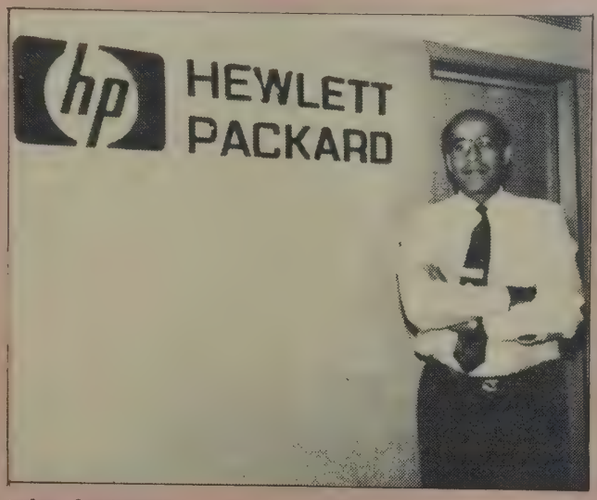
Rajpal and Nadar with HP's Asia Pacific president Alan Bickell: mutual benefit

Under the joint venture proposal, drawn up by HCL's auditors, Price Waterhouse, the Delhi-based HCL Ltd will be broken up into two companies: HCL-HP and HCL Ltd. While the former will get about Rs.10 crore of HCL's current equity of around Rs.15 crore and will be exclusively a computer manufacturer, the latter will get the rest of the equity and will retain HCL's present reprographics and communication business. HCL Ltd will also inherit the overseas operations like HCL America Inc, and the Singapore-based Far East Computers Pte Ltd.

The American company will pick up a 26 per cent stake in HCL-HP, while the balance 74 per cent will remain with the present HCL shareholders

But what is interesting is that for the first time there could be a large infusion of funds into an Indian computer company. In fact, HP's proposed investment will be among the largest by an American corporation in the country in recent times and will far exceed the entire American investment in India in the last one year.

HCL's turnover last year was to the tune of Rs.229.96 crore, of which almost Rs.175 crore came from the computer division, the rest being from the communication and reprographics business. This year (1990-91) Nadar expects to touch Rs.280 crore even though the first six months were bad, with the company posting a loss of around Rs.5 crore. A recent *Business India* study, though, indicates that the company will probably end up with a net profit of around Rs.7 crore for the entire year as against Rs.6.1 crore last year.



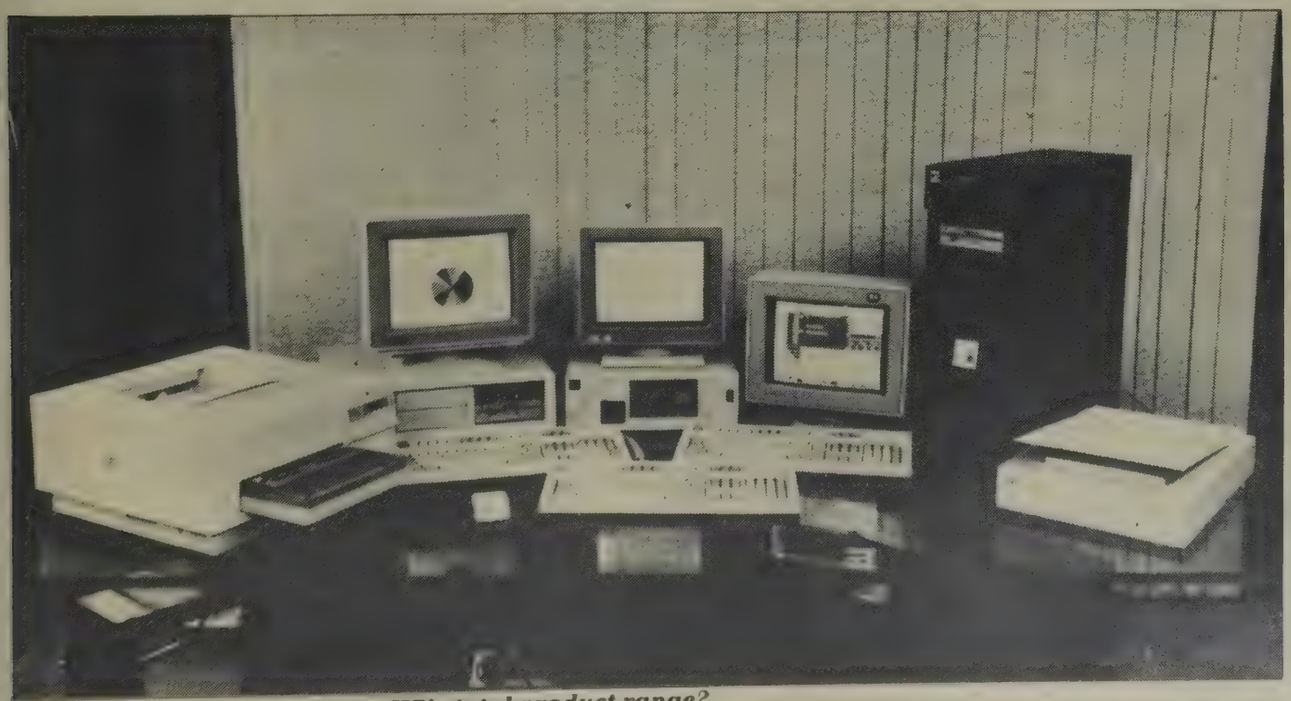
HP proposes to invest as much as $23 million (Rs.46.30 crore) in the new company, HCL-HP, picking up HCL Ltd's Rs.10 shares for Rs.178 each. The current market price (at the time of writing this article) is Rs.63. It shot up from Rs.40 to Rs.82 in a week's time, before settling when the deal became public. The American company will pick up a 26 per cent stake in HCL-HP, while the balance 74 per cent will remain with the present HCL

Hewlett Packard in India

The Palo Alto, California-based $13.2 billion Hewlett Packard company needs no introduction. With over 10,000 products in areas like test and measuring instruments (T&M), medical electronics, other electronic equipment and computer hardware and software, it is today one of the 50 largest industrial corporations in the US. More than half its business comes from international sales.

HP's association with India began almost two decades ago when Blue Star, the Bombay-based multi-product company was appointed their agent in India. Blue Star was vending most of HP products here through its own HP division. However in 1989, after much thought and time the company decided to cement its relationship with India in the form of a joint venture with Blue Star in Bangalore, at a cost of Rs.33 crore.

HP (India), in which Blue Star has a 20 per cent stake, manufactures a range of T&M instruments and medical electronics items. It was also to manufacture computers in the years to come, before HP decided to join up with HCL, with which it already had a marketing tie-up for its computer range since October last year.



Under its agreement with HCL, HP (India) will restrict its operations to only T&M and medical electronics. However, it will manufacture, in a big way, its much acclaimed range of computer peripherals, an area which will not be touched by HCL-HP. But a part of the manufacturing facility, worth about Rs.3 crore, will be transferred to HCL-HP. But HP's export-oriented software facility at Bangalore remains untouched by the new alignment. In September this year HP (India) plans to come out with a public issue of Rs.5 crore.

Its venture with HCL brings HP in a big way into the Indian market. By buying into HCL's stake, HP has become a partner in what is the largest information technology company in India. Furthermore, it has also strengthened its position in the Asia-Pacific region where it has already gone in for two other joint ventures in China and Thailand, apart from the one in Bangalore. At present, its Asia-Pacific operations are headquartered in Hongkong. There is speculation that India could well become HP's headquarters for this region once Hongkong is absorbed into mainland China in 1997. However, indications are that this might not transpire, even though HP is looking for a lasting relationship with India. HP cannot expect a very easy time as its competitors in the international market, Sun Systems, DEC and IBM, which are present in the Indian market in one way or the other, could well provide some threat. On the whole, though, things look promising as HP will not restrict itself to just the middle or upper range machines, but also tap the lower end — which is the largest market, in terms of volumes, in this country. Apart, of course from exports.

shareholders. Under the proposal, the Rs.14.8 crore equity of the HCL Ltd as it is now will be divided in such a manner that a shareholder having 100 HCL shares will end up having 68 shares of HCL-HP and 32 shares of HCL Ltd. After the new company is incorporated, says Nadar, there will be a rights issue of Rs.28 crore and Rs.15 crore for HCL-HP and HCL Ltd respectively.

Presently Nadar and his associates have a tight control over HCL Ltd, holding as much as 78 per cent of its equity. The public holding is around 18 per cent. Once the rights issue is offered, Nadar and his associates will dilute their holding to less than 50 per cent in the new company. But even while diluting they will come out clear winners — especially since HP plans to pay Rs.178 for a Rs.10 share.

What is also interesting is that with one rights issue enhancing the equity capital of the new company, it would greatly enhance its ability to raise funds from the market. And this will be a distinct advantage considering that – the

Can the Indian market absorb HP's total product range?

major problem with Indian computer companies is that they are usually strapped for cash, leading to heavy borrowings and a huge interest burden. The initial investment to augment HCL-HP's manufacturing facility alone is expected to be in the region of Rs.8 crore.

Meanwhile the communication and reprographics division, which will be called HCL Ltd, will also augment its share capital by a fresh inflow of funds. This business, which fetched HCL nearly Rs.60 crore in revenues last year, is also expected to grow. However, Nadar denies that anybody else might be coming into this part of the company as a partner. On its part, HP will retain its existing tie-up with Blue Star for the manufacture of testing and measuring instruments, and medical electronics (*see box*).

was an obvious market, but one we had not focused on in the past. Our earlier marketing agreement was only the thin edge of the wedge. We needed to work together." Adds HCL's competitor Hemant Sonawala of Hinditron rather admiringly, "Looking at the country's point of view it is a significant move since the tie-up allows India to become globally competitive."

Key contributions

Apart from infusing funds, HP's contribution in the joint venture will be in four key areas — manufacturing, reliability engineering, customer support and quality assurance. The secondary area where HCL will be putting in its bit is sales and marketing. With an installed base of nearly 50,000 machines in the country, a

Areas that are complementary to HP's long-term plan are UNIX networks and object-oriented programming — assets that HCL had been looking for

What brought about the marriage between the two parties as far as HCL-HP goes? For Nadar this has been a long held dream and for Rajpal the deal made perfect sense in his role as the man responsible for expanding HP's operations in India. And both stand to benefit: while HP gets to become the largest computer company in the country, HCL gains access to technology and the inbuilt HP strengths like quality and manufacturing engineering which are required to become a world player. Says Rajpal, "Realistically, we are looking at a 10-year time period. India

country-wide sales network and a strong sales team, HCL has enough to tom-tom about. Also HP gets the R&D team of HCL (nearly 300 strong) to add to its own stable of highly skilled staff. Both Nadar and Rajpal do not rule out joint development projects in various areas. On the technology front, the areas that are complementary to HP's long-term plan are UNIX networks and object-oriented programming — all of which are also assets that HCL had been looking for.

But can the Indian market absorb the total product range that HP might be offering? It seems unlikely, though Nadar thinks differently. "There was a limited market because there were no players", he says with typical marketing zeal. Rajpal, on the other hand, says HP's upper end range will be missing from the Indian market. There are no plans to introduce HP's latest Snake range of workstation into India as yet. "We are only going to get the right range".

With the information technology market fast turning into a global phenomenon, interdependence has become necessary. No company, says Nadar, can go it alone, especially in India. The aim is not only to take HCL-HP to the top of the ladder (turnover in the first year of operations alone is targetted at Rs.300 crore, moving to Rs.500 crore at the end of the third year), but also provide the customer a range of products by the same corporate entity.

Exports will receive special attention. Presently computer exports from the country (both software and hardware) are abysmally low. In the case of hardware, quality is a problem. The joint venture might just set this right. "We will surely be exporting in the next two years", says Rajpal, "The industry here will have to upgrade the quality of their products if they want to stay in the game." Nadar concurs, "We are fanatic about quality. It is good to be obsessed with it".

Winning wicket

With access to the latest technology, a world beating range of products from microcomputers to upper-end large machines, a wide marketing network and the backing of an internationally reputed company, the new joint venture seems to be on a winning wicket. But how much of a say HP will have in the management of the company still remains a mystery. While Nadar will continue to be the chairman and CEO of both HCL-HP and HCL Ltd, HP, according to the charter, cannot increase its stake from any further than 26 per cent. Nadar was from the beginning not keen on giving away any more. While Rajpal feels HP, with its present stake, will have enough of a say in the operations, Nadar feels that with the original promoters of HCL keeping almost 50 per cent "no decision can be imposed". But what actually will happen remains to be seen once the hurdles like shareholders' permission, government clearances and the required court orders are obtained.

■ RAHUL SHARMA

BENGAL LAMPS

Contenders galore

Infighting and labour troubles have pushed this company to the brink and the BIFR is scouting around for someone to take it over. A number of contenders have lined up, of which Peico's chances appear to be the best

Controversy and Bengal Lamps seem to go hand-in-hand. Remember the infamous Chandan Basu-Bengal Lamps-Jyoti Basu scandal of the mid-eighties? Or later, corporate raider Manohar Chhabria's aborted attempt at taking over the company? Last month, the company, which is now sick, was back in the news, as the likes of Peico displayed keen interest in a BIFR proposed revival package.

The company was established in 1932 as a *swadeshi* enterprise by the late Professor S.K. Ray, uncle of the present managing directors, Tapan and Tapas Ray. And for over 40 years, it was a front runner among Indian companies making electric lamps, tubelights and other lighting appliances.

Bengal Lamps dealer:* swadeshi *gives way to controversy

But later, a militant workforce, several workers' agitations during the eighties, bickering between the Ray brothers, and the state government's decision to allow seven small-scale units to enter the field damaged the company's fortunes grievously. The company has been on a downward slide since then. Today, it has accumulated losses exceeding Rs.11.5 crore. More than 50 per cent of its net worth has been eroded. It collectively owes Bank of Baroda, United Bank of India and State Bank of Mysore around Rs.7 crore. There are several other creditors, like the Bangalore-based Metal Lamp Cap (I) Ltd. In August 1989, following a lock-out, Bengal Lamps had approached the BIFR and was declared a "sick" company.

Revival stalled

The Industrial Reconstruction Bank of India (IRBI) prepared a feasibility study for consideration of the BIFR. The report envisaged an immediate additional infusion of Rs.5.94 crore towards meeting the accrued wage bill of almost 1,200 workers, clearing capital equipment lying with the customs and working capital requirements. Of this amount, the promoter's contribution was estimated at around Rs.1.2 crore. Tapas Ray was confident of being able to bring this money in by selling a part of the company's land in Calcutta. But several shareholders, who blame the present managing directors for the company's ills, objected to the continuance of the management and the revival was stalled.

And now, in the fray to take over the ailing company, apart from Peico, are the Delhi-based Prakash Tubes (which owns Surya Lamps), an anonymous Bombay-based industrialist represented by lawyer Amit Bhowmik, and Anoop Saha, an entrepreneur from Calcutta.

As can be expected, Bhowmik's bid is clothed in secrecy. But, some IRBI officials reckon he is acting in his own interests. Their logic: Bhowmik's family owns UK Agencies, distributors of Bengal Lamps' products in Maharashtra for the last 40 years, and that there is a Rs.75 lakh dispute between Bhowmik and the company. Similarly, Saha's family has also had a long association with Bengal Lamps, having been its dealer for a long time.

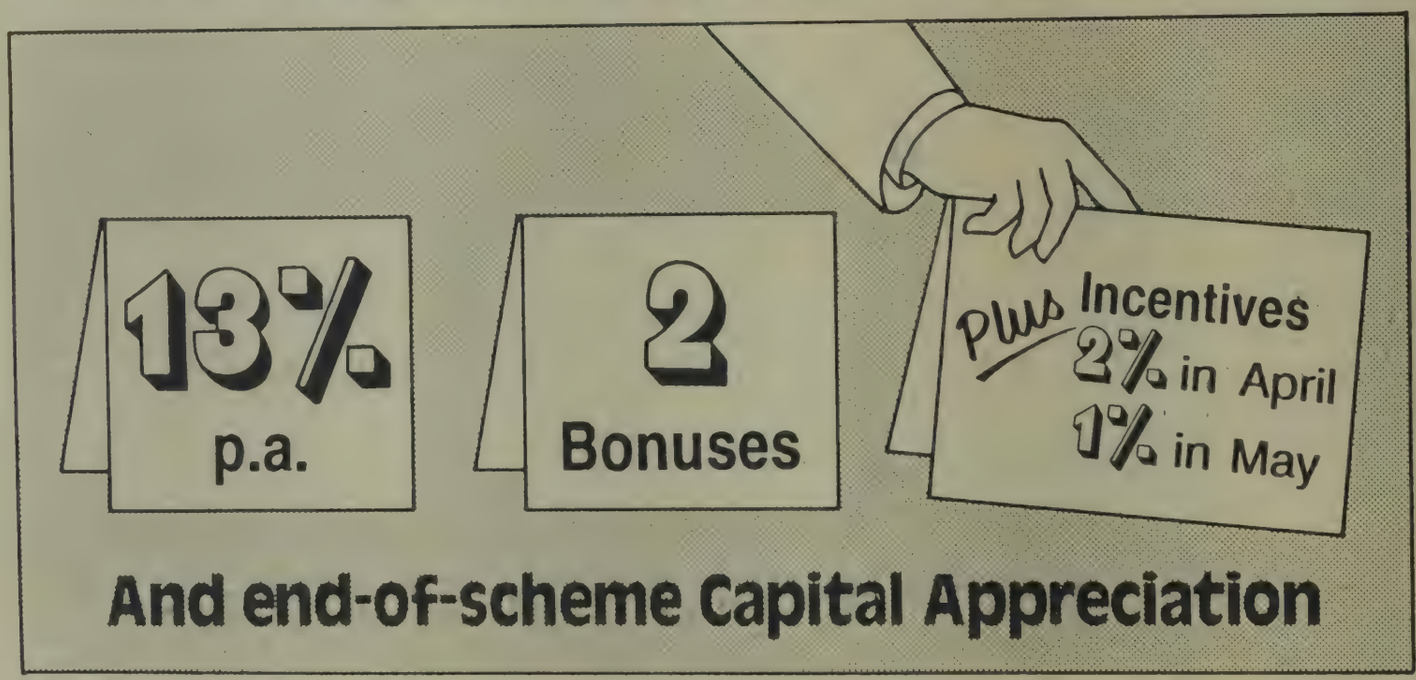
Why should so many people be interested in a loss-making unit that has been a BIFR case for the last year-and-a-half? The carrots are: an established brand name, and land and fixed assets at three locations — Calcutta, Jadhavpur and Bangalore. But on the flipside is the fact that anyone who takes over will have to contend with the 1,200-strong workforce. While the word is that the Bengal Lamps trade union favours a takeover by Saha, it is also possible that he may ultimately support Tapan Ray.

Professional contender

Chances, however, are that Peico may get into the driver's seat. Atanu Bose, a Peico director says, "The West Bengal government has asked us to look into the Bengal Lamps issue." Apart from the fact it is in the same line of business, Peico's management is entirely professional, unlike the other bidders. The only blot on its record is Elmi, Peico's Calcutta-based wholly-owned lamp manufacturing subsidiary, which had to close shop on account of non-profitability. Asks Bhowmik, "Why should they get the company when they botched up a lamp unit earlier?"

Tapan Ray is determined to retrieve the company from its financial morass, BIFR's determination to hand it over to a new bidder notwithstanding. "I would do anything to prevent the company from falling into the hands of my competitors. And handing it over to Peico would be at considerable variance with the nationalist image of Bengal Lamps," he says.

As a first step, he claims he has patched up with his brother Tapas Ray in order to save the company. According to him, the two had refused to see eye to eye on the future of the company. While Tapas was in favour of selling out and dividing the proceeds, Tapan wanted to revive the company.



The brothers will have to patch up and show that they are serious about reviving the company. Otherwise, the BIFR will show them the door. Whatever the revival institution decides, its actions will be closely watched since they will decide the future of a legendary company in West Bengal, its 1,200 workers and their families. The BIFR is expected to take a decision in a month or two. In the meanwhile, lobbying is on at full swing.

THE SOUTHERN SHRIRAMS

Riding on success

After scoring enviable successes with its chit fund and hire purchase operations, the group is now paying serious attention to manufacturing — in a bid to increase its profitability and networth

The Madras-based Shriram group of companies has an image problem. It has a turnover exceeding Rs.250 crore and employs over 2,000 people and, yet, is very little known outside its sphere of operations. In the south it is identified with the highly successful chit fund operation it runs. In the last few years, it has emerged as a large financier of commercial vehicles in the country but this fact is not too well known outside the transport industry. And in recent years, the group has also ventured into manufacturing activities in diverse areas. But would it be as successful in this venture as in financing remains to be seen.

Thyagarajan: fast and aggressive growth

The privately-owned Shriram Chits and Investments Pvt Ltd, which looks after the chit fund operations, is probably the largest chit fund company in the country. It has grown spectacularly in the last decade. The auction turnover (the prize money disbursed) for the current year ended March 1991 is expected to be in the region of Rs.200 crore (*see box*).

Investing in manufacturing

The public limited companies in the group are the hire purchase companies Shriram Investments Ltd (SIL) and Shriram Transport Finance Company Limited (STFL). Its private hire purchase companies are Shriram City Union Finance Company Ltd and Shriram Finance (P) Ltd. SIL and STFL have, over the past few years, invested in manufacturing, through companies like Hightech Ancillaries Pvt Ltd (auto components), Madras Spindle Company Ltd (textile machinery), and Shriram Agro Industries Ltd (edible oil and consumer products). The group's most recent acquisition is the Hyderabad-based Super Shock Absorbers for which it had to compete with market leader Gabriel.

The group has gone all out to build up its hire purchase business in the last few years. It has so far provided advance for the purchase of more than 20,000 trucks, both old and new. Between April 1990 and March 1991 alone, the number of trucks it has helped finance is in the region of 2,000. Its reputation as a premier truck financier was further enhanced when both Telco and Ashok Leyland invested in its debenture issue last year. Both the companies have representatives on the SIL and STFL board.

SIL's stock on hire which stood at Rs.3.96 crore in 1986 reached Rs.25.71 crore in March 1990. The funds employed increased from Rs.5.14 crore in 1986 to Rs.31.82 crore in 1990. Similarly, STFL increased its stock on hire from Rs.4.92 crore in 1987 to Rs.15.47 in 1990. The funds employed also jumped from Rs.5.58 crore to Rs.18.76 crore in 1990. The two companies together had received Rs.36 crore in fixed deposits from the public in 1990, while in 1989 the figure was Rs.26 crore.

Vaidyanathan: spearheading the diversification

According to R. Thyagarajan, the rather self-effacing but dynamic chairman of the group, the successful deposit mobilisation drive made it imperative for both companies to raise their capital rather steeply in 1990. The combined capital of the two companies was Rs.3.55 crore in 1990. Both the companies had been promoted around 1974 as private operations and went public later. Last year SIL and STFL came out with fully convertible debenture issues amounting to Rs.7.5 crore and Rs.4.5 crore respectively.

Why did the group consider such large issues (by Madras standards) necessary? Explains Thyagarajan, "In the middle of last year in a matter of 15 months the public deposits of the two companies increased by about Rs.20 crore. Reserve Bank regulations require that our share capital plus reserves should be in excess of 10 per cent of the total public deposits that we have at any point of time. Considering our pace of growth we felt it was necessary to increase our capital base substantially in order to avoid going to the public very often, which is time consuming and expensive."

The issue was successfully subscribed and will take the company's share capital to Rs.20 crore after conversion. The group's executives feel that with this kind of capital base they are now ready to take off. The last three to four years were spent in setting up branches in the northern eastern and western parts of the country. And, also in expanding and strengthening the branches in the group's stronghold, the south. The group now has more than 40 branches. "We went all out to build up the infrastructure and to train youngsters. And we sent them to our branches to develop our business at a micro level." says Thyagarajan.

Clear direction

The direction for the hire purchase companies is very clear. They will not use their funds for financing anything other than trucks (old and new). Thyagarajan is convinced about the future of the road transport industry. The projected road traffic of goods is 600 billion tonne/km in the year 2000 compared to 197 billion tonne/km in 1990. This is expected to raise demand of truck utilisation as well as the number of trucks plying.

The Shriram group now feels that it has

The cash cow

On 14 April, the Tamil New Year Day — one of the days on which Shriram launches its massive mobilisation drives — Shriram Chits and Investments, acquired about 70,000 new members and a fresh deposit of nearly Rs.1 crore. "In the three southern states (Tamil Nadu, Karnataka and Andhra) the company spends Rs.46 to 50 lakh a year on advertising its chits. This brings us business of Rs.10 crore," says R. Kannan, executive director, Shriram Chitfunds.

Southern popularity. Chit funds are quite popular in south India, despite many unscrupulous operators having taken gullible depositors for a ride. Properly used, they are an effective tool to meet unplanned, unforeseen and unexpected expenditure, especially for the middle class and small businessmen. Shriram offers several groups of chit funds. Auctions are conducted every month. The member who bids for the highest discount wins. The dividend at every auction is distributed to the subscribers out of the discount (the difference between the chit amount and the amount bid), less the group foreman's commission of six per cent of the chit value.

Given the stringent RBI rules, it is not an easy matter running a profitable chit fund business. For instance, under the central chit fund acts, before commencing a chit group of, say, Rs.1 lakh face value, the company has to deposit in a bank Rs.1 lakh for the duration of the chit, hand over the deposit receipt to the registrar of chit funds and obtain a certificate for commencement of the group. Collection of the first instalment from subscribers can commence only thereafter.

Shriram, with its tight network and well-tuned collection mechanism, will probably make Rs.2 to Rs.3 crore profits this year. "Today over 2.5 lakh people have placed their trust in Shriram chits as subscribers. We have 51 branches and a committed agency force of over 5,000. Over the years we have disbursed about Rs.500 crore in prize money," says Kannan.

accumulated enough experience in the business. "The recovery rate on advances to both new and used truck owners has been excellent with a prompt recovery rate of more than 95 per cent and a sticky debt record of less than .01 per cent," says a senior company official.

Aggressive development

The feeling among the established financiers of the road transport industry is that the group has done quite well in the hire purchase business. Contrary to the experience of other established hire purchase companies in the south, the Shriram operations have developed rather fast and aggressively. The question is, can the group sustain this type of growth over the long term, given the fact that a lot of funds from the hire purchase companies is being directed towards diversifications into industry? In the last four years the group has been plunging deeper into manufacturing activity, taking over sick companies and putting money into new projects. Observers, however, feel that in moving into manufacturing Shriram is venturing into areas where it does not have enough expertise.

R. Vaidyanathan, managing director, SIL, who is spearheading the diversification, feels that it is necessary for the group to make the foray into industry. "We need to improve the overall yield on the funds employed by the finance companies. The profitability of manufacturing companies can be better than the margins on hire purchase once production and brand names are established. The intrinsic networth of the hire purchase companies will also increase as the funds employed in manufacturing operations increase over a period of time, in terms of the value of equipment, land, building, and goodwill. And this increase, of course, will be much more than the increase in the intrinsic networth from hire purchase operations alone," he explains.

Small investments

Much depends on how well the manufacturing activity does. The group has not made massive investments as yet. So far, it has invested sums of around Rs.1-2 crore or less in its projects. Super Shock Absorbers is its major investment, where it has to put in Rs.3 crore. From its manufacturing ventures in the auto ancillaries field the group expects to earn a turnover of around Rs.16 crore this year. Shriram Agro is moving into consumer oil packs this year and expects to touch a turnover of Rs.23 crore. The company is also getting into some other consumer products.

The group has also made forays into pharmaceuticals, construction, and road transport, with profits from the chit fund company. All these ventures (in the shape of private companies) are around four years old, and are at various stages of development.

Thyagarajan hastens to add that these are not risky ventures as risk taking is not in the Shriram culture. The group will not betray the trust of its depositors, but will not let down its shareholders either. Thyagarajan describes the group as supporters of 'entrepreneurial activity'.

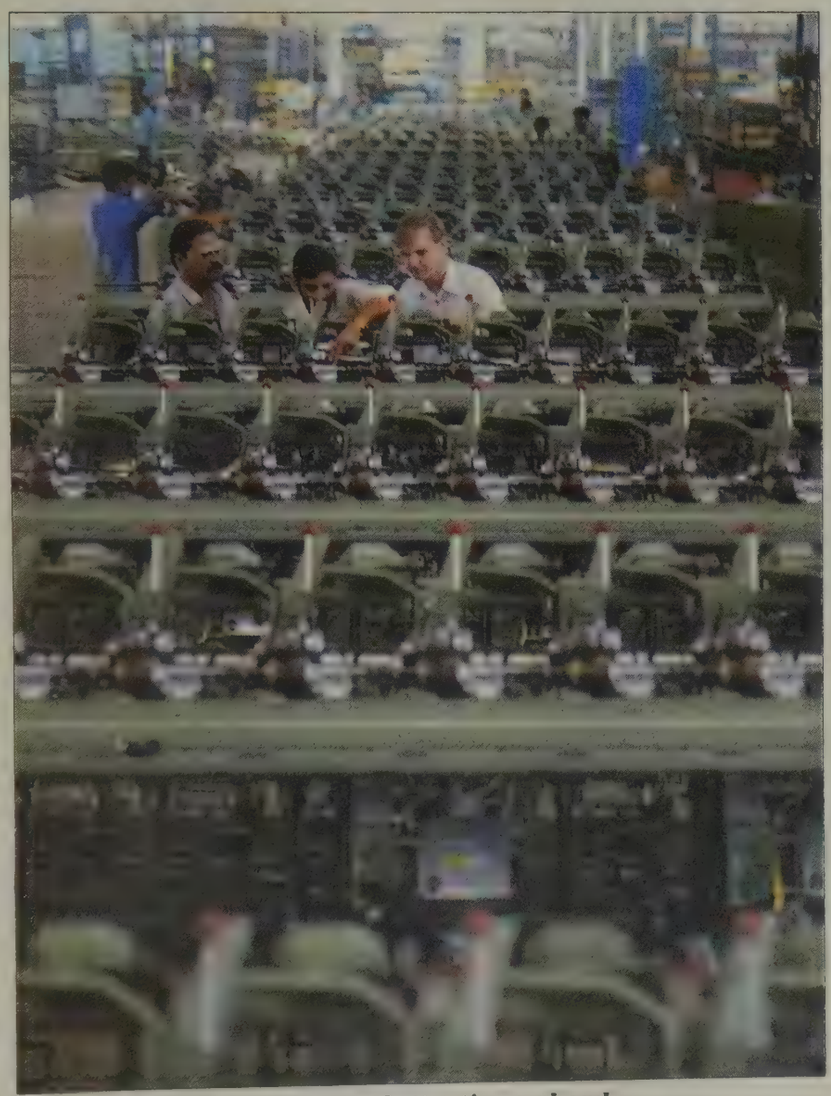
According to Thyagarajan, the group enters areas with which its senior executives have had some personal experience. In fact, the Shriram group became an entity on the basis of the associations its promoters acquired over the years. In 1974, Thyagarajan who had a background in insurance and banking and who was financing truck operators in a private capacity, A.V.S. Raja, an officer in the Railways and T. Jayaraman, a private hire purchase financier, came together to form the Shriram group. They, and some friends put in Rs. one lakh each in the chit fund and the hire purchase companies. Somewhere along the way, Thyagarajan started hiring people who either had a particular expertise or could rise above their given jobs.

Professional approach

For instance, Vatsala Ranganathan, an academic who joined the group some years ago, showed a great talent for mobilising resources. Today she is the president of SIL and STFL. R. Kannan, a senior manager from Vysya Bank who came into Shriram in 1982, helped build up the chit funds operation and bring it to its present level. Vaidyanathan, former financial controller of Lucas TVS (the TVS group company which makes auto electricals), could dream up diversification projects. "We do not employ our family members," says Thyagarajan. "We hire professionals to head our new ventures."

The Shriram group is confident that it is headed toward the big league. The hire purchase companies will spearhead the growth. In terms of funds employed, Thyagarajan hopes to do Rs.160 crore in 1991 and Rs.250 crore in 1992. "And," he predicts, "from 1983 there will be an explosion!"

■ SUSHILA RAVINDRANATH



PADMATEX ENGINEERING

In search of stability

The recent resurgence in the textile industry is expected to ensure this company, which manufactures highly specialised textile machinery, its place in the sun. And the company too is doing its own bit to get there

An exclusive niche is not always synonymous with success, as Padmatex Engineering Ltd, an Arvind Mafatlal group company, has learnt over the years. Though it is the only company in India and the fifth in the world that manufactures sophisticated, hi-tech autoconers, that provide fault and knot free yarn for textile mills, the going has been rough for Padmatex. The reason: the company's fortunes were too closely linked to the ups and downs of the textile industry.

But with the industry on a much firmer footing than at any time in the last ten years, Padmatex might see better times from now on. Higher output and increased price realisation, combined with exports to Russia have already transformed the company's bottomline. Turnover for the year ending March 1990 jumped 75 per cent to Rs.60 crore, while net profits more than doubled to Rs.1.51 crore. And this year it is expected to be even better, with sales recording a figure of close to Rs.72 crore. However, not wanting to hedge its bets exclusively on the textile industry any longer, the company is now planning to move into plastic processing machinery in a big way.

Higher output of autoconers: better times ahead

German knowhow

Promoted in 1981, Padmatex has been making only two machines — autoconers and drawframes, both for the textile industry. The drawframes are being made with technical knowhow from Zinser Textilmaschinen, a German company. The autoconers, which account for nearly 90 per cent of the company's turnover, are also being manufactured with German technology — this time from W. Schlafhorst and Company. The latter is the world's largest maker of autoconers, with a 60 per cent share of the international market.

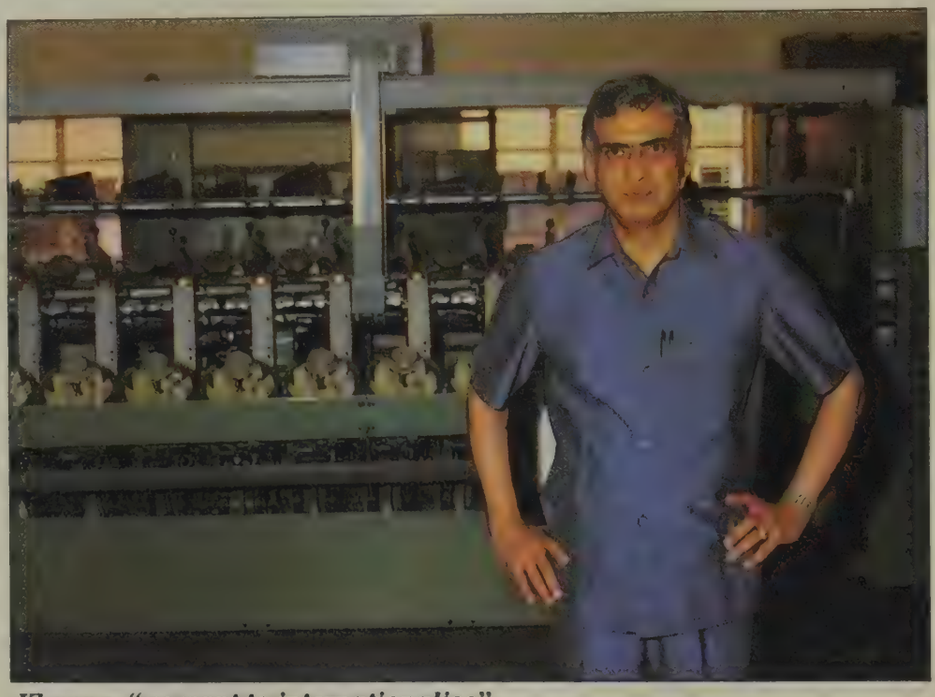
Schlafhorst, through its subsidiary Reiners Verwaltungs Gesellschaft (RVG), has a 21 per cent equity stake in Padmatex, while Arvind Mafatlal has 14 per cent. Other shareholders include the financial institutions (14 per cent) and another West German company, Reifenhauser GmbH (10 per cent). Reifenhauser is a plastic processing machinery manufacturer, which recently entered into a collaboration with Padmatex. The Germany company has swapped its Rs. 58.4 lakh technical knowhow fee for the equity stake, whereupon Padmatex's capital base has expanded from Rs.5.2 crore to Rs.5.8 crore.

Autoconers are primarily bought by quality-conscious mills and exporters of yarn, and since mills were ailing and exports of yarn and textiles had slumped, it was not surprising that there were few takers. There were operational problems too. Says former managing director V. Datar who retired just last month, "The production volumes were low as we were unable to manufacture to full capacity. The cost of imported components too was very high. Our prices were unremunerative, and the domestic market was not big enough for volume sales." Instead of six, only two or three machines rolled off the production lines every month. As a result, Padmatex's losses mounted from Rs.9.65 lakh in 1983-84 to Rs.1.94 crore in 1985-86.

Impressive clients list

With the recent revival of the textile industry, Padmatex is on its way back. It has added on 25 to 30 new mills to its clientele, which now includes textile heavy weights like the Soundaraja and Vijaykumar Mills and Madura Coats in the south and Mafatlal Fine, Arvind, JCT and DCM among others elsewhere.

In the domestic market, however, the company has also been facing competition from imported autoconers. Ironically, one competitor is Schlafhorst. How come? Explains Datar: "The Schlafhorst philosophy is that if they refuse to sell, the other companies like Murata of Japan and Savio of Italy will get the orders."



Competition began in 1988 when autoconers were put under OGL with 40 per cent duty with an export obligation equalling the machine's value in five years. Then, in March 1990, duty was reduced to 25 per cent and the export obligation was slashed to three years. As a result of the last duty revision,

Schlafhorst's new autoconer being imported by mills, the Model 238, at around Rs.55 lakhs is cheaper than the older 138 version being sold by Padmatex for about Rs.60 lakh. The Murata and Savio machines are even cheaper.

The tide turns

Not surprisingly then, 1990 also proved difficult for Padmatex. Says P. Sharma, vice-president, marketing, "Imported machines hurt us badly. We had to reduce our prices to match theirs." In fact, between April and November last year, volume sales dropped by 50 per cent. Fortunately, the tide turned in December when the forex crunch caused the government to curb imports.

Besides this, says Sharma, "All the mills that need autoconers cannot import them because they can't meet the export commitment." Besides, adds K.C. Sethia, general manager, marketing, Padmatex managed to get an edge, because "price is not the deciding factor in industrial machinery. Quick after-sales service and easy availability of spare parts is also very important." Points out managing director O.P. Khanna, who took charge this month, "Century Textiles, the largest exporter of textiles from India, already has eight autoconers. Having a 100 per cent export-oriented unit, Century can import the machines at a very concessional duty, but they have ordered another 22 from Padmatex."

Khanna: "we want to internationalise"

The company's drawframes are also doing well. Says Sharma, "We have order bookings for the next 20 months." This is a far cry from 1986 when 40 drawframes stood ready for despatch, but there were no buyers. Texmaco, New Standard Engineering and Textool — part of the Madras-based Lakshmi Machine Works (LMW) group — are Padmatex's main competitors in drawframes. Sharma claims that Padmatex's drawframes are market leaders, despite their high selling price of Rs.5 lakh plus because their operational costs are low.

However, more than the buoyancy in domestic demand, the company's fortunes changed when it began exporting in a big way to Russia. In 1987-89, 24 autoconers and drawframes were exported. In 1989-90, this increased to 82 autoconers and 58 drawframes. And in 1990-91, the figures are 61 and 18, respectively. Admits S.C. Misra, general manager manufacturing, "If it hadn't been for the Russian orders, we would still have been in the red."

Soviets happy

The Russians are happy too. Says V. Pushkin, inspector of Technoprom Exports, the Soviet buying agency for light industrial machinery, "We are happy with Padmatex machines. Besides we can buy them through the rupee-rouble agreement."

On an average, Russian exports have been responsible for over 50 per cent of Padmatex's turnover in the last couple of years. But this dependence is considered dangerous, given the uncertain economic climate in Russia. Says an industry observer: "Padmatex will choke if its Russian orders dry up." The company knows this, but is also confident that the large demand, and the Indo-Soviet trade protocol that is valid upto 1995 will ensure business as the Russians can get the latest machines without spending hard currency. For 1991-92, orders for 92 autoconers and 100 drawframes are already being executed. Datar, however, does admit: "The next two years will be tricky. But we hope the Russian business continues till the rest of the expansion programme falls in place."

It is also not easy for Padmatex to look for new export markets for autoconers. As with most companies with foreign partners, Padmatex's exports are controlled by Schlafhorst, with permission granted on a case-by-case basis. "We were allowed to export to Russia," says Khanna, "because Schlafhorst machines were not there. And now that they are allowed, the market has been divided — Schlafhorst handles turnkey projects while Padmatex supplies to the Russian mills that are modernising."

For the future, however, an effort is being made to sidestep export restrictions in all the new collaboration agreements being signed, says Khanna. For example, with Reifenhauser, a buy-back arrangement and more freedom to export autoconers to different markets has been negotiated. With Zinser giving the green signal, the south east Asian, west Asian and African markets for drawframes are going to be tapped. "We," says Khanna, "want to internationalise our business."

These plans to increase exports, however, are just one part of Padmatex's multi-pronged strategy to spread its risks, to broadbase its product mix and markets. Over the next four years, Padmatex plans to spend Rs.40 crore on diversification and modernisation, financed by internal accruals and term loans. But the company will not be venturing too far afield. Says Khanna: "Essentially we will remain in engineering, in machinery manufacture."

Confident of a good market

Plastic processing machinery, more specifically extrusion systems in the blow film line, made with Reifenhauser, will be the new additions at Padmatex. The market size is estimated at 50 extruders per annum, with the likelihood of quadrupling in the next five years. PVC and other material availability is also not expected to be a problem as the Finolex, Reliance and IPCL polymer units are slated for

commissioning by next year.

Padmatex is therefore confident that the machines will have a good market. It will, however, not be large as these machines cost between a high Rs.1.5 and 4 crore, unaffordable for the dominant small scale sector in the industry.

The production of extruders will start next year. But by having become the sales agent for Reifenhauser since late 1989, to set up extrusion plants on a turnkey basis, Padmatex is already familiarising itself with this market. In the first year of operations, Rs.3 crore have been contributed to the turnover by the sales agency. The latter is in fact, now slated to become another independent profit centre in the company.

At the paint shop: doing things to Russian specifications

There are major plans for the textile machinery division as well. As Schlafhorst is being supportive, Padmatex will soon phase out the 138 autoconer and start making the latest 238 model "Unlike other collaborators," says Misra, "Schlafhorst has given us the latest design within four years of being introduced." Meanwhile, Gujarat Textronics, a subsidiary company — of which Padmatex owns 75 per and Loepfe, a Swiss company, the balance — which makes yarn clearers, an electronic accessory for autconers, is now busy developing a new set for the new model.

The 238 is scheduled for marketing by end 1992. So is an equivalent autoconer FLMW's Textool, which is going to manufacture them in collaboration with Savio. Finally, Padmatex will face competition in autoconers from a local company. However, this intrusion is not considered a threat. Says Datar: "The market will initially get divided. But with more players the market will also grow faster." But competitors have a different opinion. "One can't say all their products are excellent," says one. "Their drawframes are better than LMW's. But unlike LMW, Padmatex's quality of manufacturing is not consistent."

Import level to be controlled

To be price competitive right from the start for the 238, Padmatex wants to keep the level of imported components on which a 40 per cent duty is levied, as low as possible. This is required since Padmatex's past record in this regard has been dismal. Says an industry observer critically: "Padmatex has just not bothered to indigenise rapidly." Says one south-based competitor, "More than 50 per cent of the components are imported. So even if they are exporting to a rupee trade country, there are net foreign exchange outgoings." Indeed, in 1983-84, the imported component content was 99.23 per cent and, up to 1989-90, was still 77 per cent.

"Earlier," explains Datar, "due to unsure demand and the company's poor performance, indigenisation was neglected. And recently, the large Russian orders necessitated higher imports as our factories could not keep pace with our delivery schedules." In 1990-91, however, Khanna says 50 per cent indigenisation has been achieved, and efforts are underway to reach 30 per cent. For the new machines, though, says Khanna, the import content will initially be 60 per cent and then progressively reduced.

Once the company indigenises, the potential to export spare parts also improves, especially for the 138, which Schlafhorst has stopped manufacturing. The margins at 40 per cent are good. In 1990-91, spare parts contributed Rs.3.5 crore to the turnover, and Khanna subsequently sees this figure multiplying to Rs.10 crore in another two to three years.

Rejection rate slashed

Khanna, who has wide ranging experience in engineering, having worked at Hindustan Motors, Telco and Ruston Hornsby, is determined to attain German efficiency within the company. Major attention is being paid to quality control and the optimisation of resources. The reject rate of components manufactured in-house, says Khanna, has plummetted from between 15 and 20 per cent to 1 per cent in the last one year. "It should soon reduce to decimal figures," says Khanna, who also plans to get quality accredition from some international agency for Padmatex soon.

Helping Khanna to monitor quality is M. Krippendorf, a German, who is a representative of Schlafhorst and is also in charge of industrial engineering and investments. He says, "With more or less existing manpower and machines, we have nearly doubled productivity in the last two years. But there's a lot more scope for improvement and the pace must be faster."

In 1990-91, Padmatex expects to announce a turnover of Rs.72 crore. But Khanna maintained a cryptic silence on profits and a maiden dividend. Once quoting below par, the Padmatex scrip is currently priced at Rs.54 (19 April). As for the future, growing at the rate of 30 per cent, Padmatex plans to cross the Rs.100-crore mark in 1991-92 and Rs.150 crore by 1995. Thereafter, once the new projects fall into place, an annual growth rate of 20 per cent is projected. Then, the share of autoconers is expected to be 70 per cent of turnover, with the rest contributed by the other products. Khanna's ambition is to introduce one new product every year. The foundation for rapid growth is being meticulously laid, so the targets should not be difficult to achieve for Padmatex.

■ INDIRA KHANNA

KEVENTER AGRO LTD

Road to revival

A Calcutta-based businessman has managed to rope in the West Bengal government, NDDB and Viren Shah into the revival of this famed 100-year-old company

On a pleasant Sunday recently, Barasat, a small town 40 kms outside Calcutta in the North 24 Parganas district of West Bengal, was the destination for a big convoy of VIP cars carrying the likes of the noted industrialist and MP Viren J. Shah, and his son Sukumar, the National Dairy Development Board (NDDB) chairman V. Kurien and West Bengal chief minister Jyoti Basu. The occasion: the formal inauguration of the Dhara oil packaging plant that Keventer Agro Ltd, a Viren Shah company, was setting up in collaboration with NDDB. Soon after that, the chief minister also laid the foundation stone at the same site for a milk dairy that was being set up jointly by the West Bengal Cooperative Milk Producers' Federation Limited, NDDB and Keventer Agro Ltd.

The event is significant for three reasons. First, the milk dairy, which will cater to Calcutta's needs, is the first in the joint sector in the country; second, this is Viren Shah's first foray into West Bengal, something that he had been working on for some time; third, and most important, it symbolises the rejuvenation of the Keventer brand name. For over a 100 years, till recently, Keventer had been synonymous with quality milk and meat products in the eastern part of the country.

Royal history

The company was originally promoted by one Edward Keventer around the eighteen seventies and was eventually sold to the King of Nepal. The latter, in turn, gifted it to the royal family's English teacher Animesh Chandra Chowdhury. Chowdhury, a good teacher, turned out to be a poor businessman. The company gradually fell sick and by 1973 its operations came to a standstill.

And then came Mahindra Kumar Jalan, a Calcutta-based steel trader, who saw a lot, not only in Keventer's century-old goodwill but also in its vast real estate holdings in and around Calcutta. Jalan bought the company over for around Rs.1 crore in 1985 and then asked his friend Viren Shah to pick up a 50 per cent stake in the rechristened Keventer Agro Ltd. Says Sukumar Shah, now a director of the company, "We invested in the venture because we were keen to get into the food processing business. And more importantly, it is very difficult to start new ideas in food — very few of the new brands launched recently have succeeded. What we have here is an established brand name."

Photos by Goutam Chatterjee

Dhara edible oil: unique tetrahedron packs and* (inset) *Sukumar Shah

Keventer Agro's first project was to acquire the manufacturing, packaging, and marketing franchise for Frooti, the mango drink, for the eastern part of the country. In technical collaboration with Tetrapak Sweden, Keventer set up the aseptic packaging plant in 1989 of 16 million litres or 1.7 million cases a year. The total investment was Rs.8 crore, of which Rs.2.5 crore came as a long-term loan from financial institutions. Frooti's total turnover in 1991 has reached almost Rs.10 crore and this is an increase from last year's Rs.8 crore.

The Dhara oil packaging station with a capacity of 50,000 tonnes a year, was set up at a cost of Rs.80 lakh in collaboration with NDDB's Hyderabad-based packaging subsidiary company, Hindustan Packaging Company Ltd. It also uses the Tetrapak technology and packages the oil in tetrahedrons. "This is the first time in the world that edible oils are being packed in tetrahedrons, which is comparatively inexpensive," says Sukumar Shah.

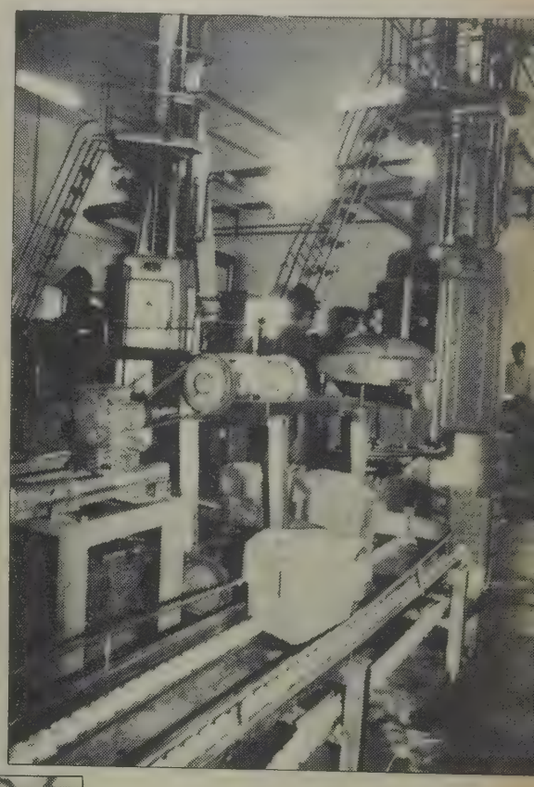
Record time

Shah takes pride in the fact that the oil packaging project was completed in a record time. "We started work towards the end of May 1988 and it was completed by June 1990. Operations began in December 1990, though the formal inauguration was in March 1991," he says. By August or September this year, the plant's capacity will be doubled to 100,000 tonnes a year, at a cost of Rs.1 crore.

In a sense, Keventer's Calcutta metro dairy project will be a throwback to old times when milk was the company's main

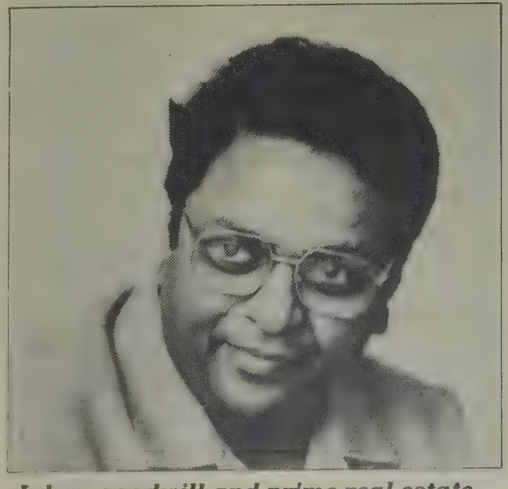
line of business. The Rs.3-crore equity of a new company that has been formed, called Mother Dairy Ben Milk Keventer Ltd, is divided between Keventer Agro (43 per cent), West Bengal Milk Producers' Federation Ltd (47 per cent) and NDDB (10 per cent). The dairy, which will become operational in two years, will cost Rs. 30 crore to set up. With a capacity of 400,000 litres a day, it will be as large as Mother Dairy, which now supplies milk to metro Calcutta.

This is the first time that NDDB has agreed to set up a dairy in the joint sector in the country. And R.S. Gill, NDDB's eastern regional director, does not see anything special in selecting Keventer. He says, "We are tying up with Keventer because the West Bengal government wants us to."



Keventer is now also involved in setting up a tomato processing unit at Purulia, also in West Bengal, for which the Jyoti Basu government has provided a 10-acre plot of land. "Here we will produce tomatoes and process them into pastes meant for exports", says Mahindra Jalan. Agrocultivation will gradually be expanded to Barasat as well, where Keventer owns a sprawling 100-acre property.

Farmers' co-operatives



"We have already launched pilot horticultural projects in this place at a cost of Rs. 5 or 6 lakh. We have produced tomatoes, capsicum, potatoes and even strawberries, among others. If this proves successful we will start intensive agrocultivation," says S.C. Ghosh, Keventer's consultant for agricultural projects. Keventer will gradually promote farmers' co-operatives — in and around Barasat — from whom it will be assured a steady supply of vegetables for food processing ventures.

Says Jalan, "Keventer plans to use the latest farming techniques to grow, pick, sort, process, preserve, pack and distribute fruits and vegetables. Our farm will form the nucleus for developing and supporting the farmers' co-operatives — sharing technology, supplying seeds, imparting training, and also buying back their produce." Adds Shah, "The future lies in food processing.... Before it became fashionable to talk about food processing we were talking of getting into the area and had identified food packaging and processing as a major growth area... I think I will be proved right."

Frooti being despatched; **(inset)** ***Dhara oil plant: set up in record time***

Jalan: goodwill and prime real estate

And Keventer, no doubt, will not be strapped for cash when it seeks to implement its promoter's ideas. The company's real estate holdings would be anyone's envy. It owns 100 acres of land just outside Calcutta, has a 30,000 sq-feet godown on Marquis Street, bang next to Calcutta's prime New Market area. On the adjoining Lindsay Street, is another godown of area around 3,500 sq-feet. In the northern part of the city on Gopal Mukherjee Road, the company owns another 50,000 sq-feet of land. And Jalan clearly states that the plan is "to sell some of the properties to generate funds for upcoming projects" On the block currently are the Marquis Street and the Gopal Mukherjee Road properties, which are said to be collectively worth around Rs.4 to 5 crore.

With Viren Shah as his partner and the solid backing of the West Bengal government, there is no doubt that Jalan will go very far with the 100-year-old Keventer Agro.

RBI CREDIT POLICY

Another damp squib

The announcement of credit policy every six months has become routine. This time, for the Reserve Bank of India (RBI) the conservation of foreign exchange reserves weighed on it as gravely. The balance of payments position being highly volatile, the credit policy had to necessarily "manage short term" as the RBI says in the policy announced on 12 April. Though the policy is seemingly for the next six months, mid-term measures can well be expected.

Over the last decade, the emphasis of RBI's credit policy has been on "controlled expansion" or mopping up excessive liquidity and curbing inflationary pressures without hampering economic growth. Yet, the liquidity overhang and the consequent inflationary pressures have always persisted, thanks to the government's continued borrowing from RBI.

Last year's experience confirms this again. Net RBI credit to the government increased from Rs.13,031 crore in 1989-90 to Rs.13,594 crore in 1990-91. This, together with factors such as the Gulf war, have almost negated the RBI's efforts to control inflation. Despite contained growth in M3 expansion (from 19.6 to 14.9 per cent), even this year inflation in terms of WPI shot up from 8.7 to 11.6 per cent.

New mechanisms

What is refreshing in the new credit policy, however, is that the RBI has resorted to non-traditional measures to curbing liquidity. Instead of CRR and SLR it is using other mechanisms such as interest rates, credit deposit ratio and restricted refinance facilities. The shift could perhaps be for the reason that any further increase in CRR/SLR would have strained banks' profitability and attracted IMF/World Bank wrath. The question is: how far will these measures succeed?

"To contain very high inflation through moderation of demand" the RBI raised the rate for deposits of over three years and above from 11 to 12 per cent. By giving bank deposits near parity with other savings instruments, the measure is expected to bring more funds to the banking channel and mop up liquidity. Yet, in the long run, it is unlikely that banks will be able to attract more funds as the other savings instruments with their higher yields and fiscal benefits still keep their advantage over bank deposits. Confirms a senior banker, "This will result only in some shift of deposits within the banking system."

Nevertheless, bankers welcome the reversal in RBI's stand on medium term deposits. It may be recalled that in 1987 the RBI had abolished this category of deposits arguing that to grant cash credits banks do not need such long term funds.

On the other hand, to curb the demand for credit the minimum lending rate has been raised from 16 to 17 per cent on limits of over Rs.2 lakh. As was expected, the industry has resented the hike. Yet, says an observer, the 1 per cent hike is "more symbolic, as most of the corporate borrowers are in a position to bear an additional 1 per cent cost". Besides, given the developing stage of the Indian economy, borrowers at any cost will need credit. Adds a banker, "Most of them may pass on the cost to the final consumer" which will result in higher inflation.

Curbing credit

Another attempt to curb credit in the new policy is by way of reducing the incremental non-food credit deposit ratio from 60 per cent last year to 45 per cent, which means for every fresh Rs.100 deposit, banks will be able to loan out only Rs.45.

RBI headquarters: a routine exercise

Says a banker, "Given the 53.5 per cent pre-emption through CRR and SLR, banks were anyway not lending more that 45 per cent of their resources." In fact, non-food credit (credit to the industry) expansion was considerably lower during 1990-91, both in absolute and relative terms, because of the slow growth of the economy and industry. The RBI too admits that the "increase in non-food credit is misleading" on account of the debt writeoffs by commercial banks.

As against this, food-credit rose sharply by Rs.2,500 crore as compared with Rs.1,237 crore last year. Says an observer, "It is high time we took some bold steps on the food supply side." To keep food prices under check, the RBI has so far kept the cost of food credit low.

On the BoP front, the credit policy has two measures to boost export credit. First, export credit has been kept out of the non-food credit-deposit ratio. Along with the introduction of the two-tier export refinance formula which will give additional refinance to banks for export credit, this measure is hoped to make export credit attractive. Under the two-tier export refinance formula, banks will get 100 per cent refinance against the fresh export credit and 50 per cent of the existing export credit.

The RBI hopes that this will enable banks to cater to the increased credit requirements of the export sector without facing any short term resource constraints, while at the same time building up a long-term resource base of its own. But bankers doubt this. Pre- and post-shipment credit rates are 7.5 and 8 per cent respectively. When the lending rate is 17 per cent, export credit is unattractive to them except for the ancillary business that it brings in — letters of credit or foreign exchange earnings.

Yet, as one banker suggests, attractions such as tax exemptions for banks' income from export credit or redefining priority sectors to include exports, yield much better results on this front. There are also the routine announcements on selective credit control; of restricting credit for speculative purposes in the new credit policy.

Perhaps realising it can't do much on these fronts except for minor tinkering, the RBI too has dwelt more on liberalisation in the money market.

NEW CREDIT POLICY

Moving the right way

The latest credit policy contains two pleasant surprises for those who have short time investible surpluses. They can now directly lend these surpluses through the Discount and Finance House of India (DFHI) in the money market or be part of the money market mutual funds (MMMFs) and reap the benefits from it. Even though the Reserve Bank of India (RBI) is yet to come out with detailed operative guidelines on the MMMFs, the broad framework as given in the new credit policy is indicative of the RBI's willingness to ultimately let the demand and supply forces determine the interest rates in the money market.

The RBI seeks to achieve this objective by permitting more players in the market who will naturally bring in more liquidity and thus help soften the rates and quicken turnover of the money market instruments.

Not that MMMFs never existed in India prior to this. Cangilt, started by Canbank Mutual Fund in the late eighties, is a scheme which is meant for investing in government securities and public sector bonds. The SBI Mutual Fund too had, in the recent past, approached the RBI with a request to allow it to operate a money market mutual fund. The RBI, at that time, had put the scheme on hold, and SBIMF is happy that the concept has now got RBI clearance.

Give more flexibility

The latest measures allow an entity with minimum lendable funds of Rs. 20 crore per transaction to participate in the call/notice and bills rediscounting markets, through the DFHI. Secondly, to bring money market instruments within the reach of individuals and corporate bodies in the private and public sectors, scheduled commercial banks and their subsidiaries will be allowed to set up MMMFs. These funds can, in turn, invest in short-term money market instruments like certificates of deposit (CDs), commercial paper (CP), 182-day treasury bills, rediscounting of commercial bills and call/notice money. However, in order to achieve the objective of these measures, the RBI will have to be more "flexible" in its guidelines for MMMFs, say the market players.

The policy has made it mandatory that lending entities have no outstanding bank borrowings before they enter the money market. The RBI's rationale here is understandable. In tight money conditions, the central bank does not want lenders to borrow cheap money from banks, to re-lend to banks again later through the call money market at higher rates. For, in a financial crunch, call money rates are known to have shot up to 100 per cent.

But then, will the RBI restrictions stop the corporate sector from entering this market? Even earlier, when the corporate sector was not allowed to participate in this market directly, it did make its presence felt in this closed market by entering through the backdoor — euphemistically known as portfolio management. The Unit Trust of India's 1964 scheme was used for cash management by companies. Hopefully, the strictures issued by RBI in January on portfolio management — of minimum one year lock-in period and banks maintaining a separate company account for this — will reduce the possibility of using this avenue for money market entry.

Kotak: "Private companies are denied access to money market"

A.S. Thiyagarajan, vice-president and area head (investment bank), Citibank N.A., points out, "The corporate treasury managers are so savvy today, they hardly keep any funds idle." And if they can directly lend in the market, through DFHI or portfolio management, why would they invest in MMMFs? Thiyagarajan also points out that the negotiating ability of a lender depends on the tenure and the amount of his lendable resources, which gets diluted if he is a part of MMMFs in which the returns are shared 'mutually'.

Access denied

The nil bank borrowing condition also indirectly denies private sector companies an access to the money market. Says Uday Kotak, managing director, Kotak Mahindra Finance Ltd, "There are hardly any entities in the private sector without outstanding borrowings from the banking system." Concurs A.A. Trivedi, finance manager of the cash rich CEAT Tyres Limited, "Even though this is largely true, consumer products manufacturers with quick sales realisation and consequent cash accruals may be able to invest through the DFHI." The cash rich public sector undertakings will in any case be DFHI's big customers. Though this is largely true, companies like Bajaj Auto or CEAT which are extremely cash rich or companies, which have mopped up money in a public issue using the call money market for a short-term parking slot, cannot be ruled out if the companies find a way to circumvent the CCI guidelines on this subject. Warns an investment banker, "While forming the guidelines, the RBI should dilute the stipulation about bank borrowings but be clear about who does it want to enter the market."

Under the broad framework of the scheme for MMMFs, lenders can invest resources in the funds in the form of negotiable/transferable instruments and MMMF deposit account. Repurchase is subject to a minimum lock-in period of three months and the size of investment is at least Rs. 1 lakh. Though as Rm. Venkatachalam, chief executive, Canbank Mutual Fund says, "High networth investors will get a good parking slot once the MMMFs take off."

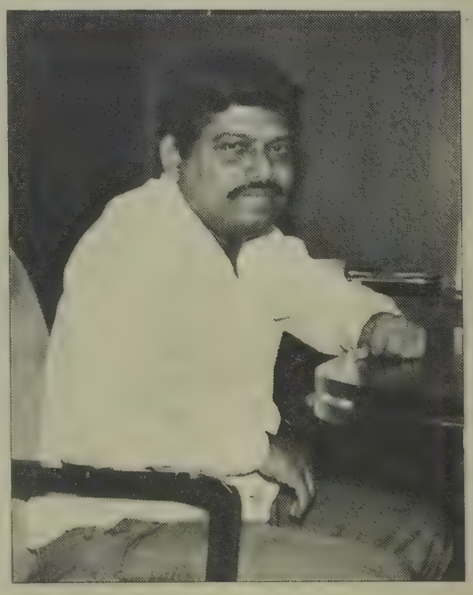
Not all favour the three-month lock-in period. M.S. Verma, executive director (Mutual Fund), SBI Capital Markets, feels that this period must be gradually brought down to one month. In India the culture of trading short-term instruments is yet to take firm roots. It is generally seen that after investing in short-term instruments, funds managers prefer to hold them till maturity. And if repurchases are subject to a three-month lock-in period, tradeability of these in-

struments is bound to stagnate. This will reduce the velocity of funds.

On the other hand, if the lock-in period is one month — some bankers moot one day — secondary markets will become more active. This is so as the MMMFs will have to sell its instruments for financing repurchases. Of course, the three-month lock-in period will have its advantages too. As B.R. Acharya, general manager, Canbank Mutual Fund points out, "Knowing definitely how long funds are likely to stay with us, we will be in a better position to plan our investments and assure better returns to investors."

Market makers

Even if the guidelines retain the lock-in period at three months, bankers suggest the funds must be open ended so that there is a constant inflow of funds too. This, they say, will not dull secondary markets. Since in open ended funds, the lock-in period for certain amounts will expire on a daily basis, instruments will be traded to finance those repurchases. And as Verma puts it, "MMMFs will be the market makers and repurchasers."



As investment in MMMFs would be in the form of negotiable/transferable instruments, it would mean that they can be traded and not necessarily be repurchased. This will then create a market for MMMFs' liabilities. On the other hand, the necessity for liquidity will force the mutual funds to trade in the assets (money market instruments) thus activating this so far dormant market. To enable the mutual funds to perform the role of market makers, however, the question of stamp duty will have to be sorted out first. Also, the presence of more instruments in the market will widen the scope of MMMFs to earn a better yield by spreading their portfolio. The present framework is silent about government securities and public sector bonds. Funds managers hope that in the final guidelines, the RBI will include these too.

Thiyagarajan: "Corporate funds do not remain idle"

To earn better yields, another funds manager points out, it is necessary to give freedom to mutual funds. The present framework specifies 20 per cent minimum investment in treasury bills and 20 per cent maximum investment in call money to ensure safety for the small investors. Says an experienced funds manager, "Call money is the highest earner among the various instruments. By limiting the MMMFs' investments in this area, the RBI has reduced their yield earning capacity." He adds that MMMFs should be allowed to freely invest as per their choice except for the treasury bills part.

The different instruments in this market have varying rates of interest and varying degrees of security. Treasury bills, for example, fetch only 9 per cent interest but are most secure. Call money is a high yielding investment but very volatile, the other instruments falling in between. The mutual funds will undoubtedly have a mixed portfolio of assets for safety and returns. The mutual funds thus expect the MMMFs to earn a return in the range of 10 to 12 per cent. Therefore, points out a funds manager in a foreign bank, "Units of different MMMFs will have different values, depending on where their funds are invested." Adds an investment banker, "The ratings of units of various MMMFs will have to be arrived at separately and for this disclosure of investments will be necessary." Or if units are traded on a regular basis, their price will have to be decided depending on the net asset value of the MMMFs' investments.

Dharmapal: "MMMF schemes do have an advantage"

Again, it is not very clear whether even those banks which do not have a mutual fund subsidiary will be able to operate an MMMF; and if they are allowed to, the manner in which they will operate. It is obvious though, that all banks and even all bank subsidiaries may not be able to operate MMMFs very efficiently. Says Verma, "Being very technical and needing day-to-day management, everybody will not be able to run MMMFs successfully." Also, as the RBI has fixed a ceiling on mobilisation of funds through MMMFs, (a bank or a subsidiary could mobilise funds equivalent to 1 per cent of its aggregate deposits), small deposit base banks will be prevented from entering the market. Says a funds manager of a small bank, "It will not be viable for us to operate on a small liability portfolio."

The new concept of MMMFs is likely to compete with the Unit Trust of India's 1964 scheme. Although competition is always welcome, funds managers argue that the competition here may not be realistic. Says K. Dharmapal, managing director, Fairgrowth Financial Services Limited, "Unit Trust's scheme has a minimum lock-in period of three years. If an investor liquidates his investment before this time he has to bear capital loss. In this sense, the MMMFs' schemes will definitely have an advantage." On the other hand, the fiscal benefits that go with UTI schemes will give it an edge over the MMMFs' scheme unless the government extends this benefit to MMMFs too.

The credit policy only gives a broad framework and specific guidelines have yet to be worked out. But the move of widening markets is a step in the right direction. Banks are optimistic and foresee in the near future the concept of floating interest rates emerging. That is, tenure and amount of funds will decide the rate. Of course, the money managers still see only the money market instruments getting a fillip, whereas the call money rates will take some more time to stabilise. ■

The selling of politics

Politics and money make strange bedfellows. Yet, some of the country's advertising agencies seem entirely comfortable with this mix. About half a dozen of them are vying to help political parties carry their messages to the people for the general election 1991, each yearning for a share of the Rs.100 crore that the political parties are expected to spend. But it won't be a cakewalk. As an ad executive puts it, "Election 1991 may be the toughest product that we may have sold yet."

And advertising will play a crucial part in influencing that section of the electorate that is still undecided about their vote. "The three main competing parties have approximately the same level of influence and there is every possibility of a close finish. Good advertising in such a situation can easily swing fortunes," says a political analyst. Advertising also helps to create greater electoral awareness among the masses. "We hope to educate people about the need to be cautious with their votes," says Harish Kapur of Impact Advertising, the agency which handles the Janata Dal campaign.

More sensitive

Designing a political campaign is not very different from introducing a consumer product. "Just that the common denominator of communication is lower down among the masses," says Megacorp's Sudhir Lal who is pitching for the Congress (I) account. Also, all campaigns are visualised in Hindi and later translated into English. Advertising for elections does demand more sensitivity. Especially when handling the religious issues one has to tread very carefully, "antagonise neither the Muslims nor the Hindus and yet get the message across," says Ved Paul, chief executive, Graphisads.

Audio-visuals are expected to replace print as the primary medium to carry the political message, as the scramble for mobile display vans indicates. The Congress (I) will use, for instance, Simi Garewal's film on Rajiv Gandhi and another that is being made by a Bombay agency. The Janata Dal is shooting two, one on secularism and the other on equality and social justice, while the Bharatiya Janata Party (BJP) already possesses footage of Ayodhya.

Leading the advertising hype will undoubtedly be the Congress (I), apparently influenced by its American returned advisers — Sam Pitroda and Rajiv Desai of Indian Public Affairs Network (Ipan), Hindustan Thompson Associates' public relations unit. It has bypassed Rediffusion, the agency that designed its 1989 election campaign this time, preferring a consortium of four agencies — Megacorp, Graphisads, Basic 4 and Aaj — to manage its publicity. "Pooling ideas seems the safer strategy," explains a Congress (I) spokesman. The chosen four are supposed to share a campaign budget of Rs.28 crore though party insiders say it could go up to Rs.50 crore.

The campaign strategy will be slick but subdued. No aggressive selling, no catchy slogans, no big promises and no attempts to raise controversial issues. The emphasis will be on the need for stability and the ability of the Congress (I) to fulfil that need.

The inspiration of this strategy comes from the American Presidential election (Kennedy vs Nixon), 1960. Kennedy had swept the polls with a slogan that had a positive appeal — vote for the government that will get America on the move again.

Graphisads will re-run Congress (I)'s 'onion' campaign that was successful in 1979. According to chief executive Ved Paul, "We've refrained from a negative campaign because there really is no combined opposition to discredit, like in 1979. All that we will do is emphasise the positive aspects of voting the Congress (I) back to power."

Not far behind

If the Congress (I) is leading the advertising blitz, BJP and Janata Dal are not far behind. Madras- based R.K. Swamy Advertising is designing the BJP's publicity. Rashtriya, a small advertising company, will prepare its hoardings.

Rajmohan Gandhi, who is managing the publicity for the Janata Dal, however thinks that advertising will not significantly influence voting. "The issues are fairly clear: we stand for Mandal, the BJP for the *mandir* and the Congress (I) for really nothing. Their stability is merely a slogan, not really an issue," he says. The Dal has a modest advertising budget — less than Rs.10 crore. Three agencies are handling their account — Sanmarg Publications, Impact Advertising, and Associated Ads. Much of the work is done by volunteers like cartoonist R.K. Laxman and documentary film-makers, Vijay Borker and Suhasini Muley. And their film will be as powerful as BJP's on Ayodhya, says a Dal spokesman.

Most agencies exhibit some aggression, and are gearing up to 'take them on headlong'; but many in the ad world feel that all this is too much hype. Political campaigns is a good way to sell the agency itself, get mileage, make money and get out. "It's a short-term activity and other clients tend to suffer," feels Ishan Raina, executive director, Contract Advertising. It is precisely for this reason, says Mike Khanna, chief executive, HTA, that "We don't take on political accounts as a policy. We believe in long-term relationships." And, in this field, though the bucks are big, they can disappear as quickly as they're made. ■

ARIF SHARIF with
REENA PATNAIK RAO in Delhi
and NEERU NANDA in Bombay

FORGINGS

Government's wet blanket

Exports of forgings, which had shown an unprecedented growth rate of almost 200 per cent during the last five years, are likely to face a setback this year. In all likelihood, there will be a decline this year of about 35 per cent from last year's figures. Says Yogiraj Makar, managing director of Amforge Industries, the second largest exporter of forgings, "As against last year's (1989-90) exports worth almost Rs.14 crore, we won't even reach Rs.5 crore this year." Adds Vinod Doshi of Eckjay Industries Pvt Ltd (annual turnover: Rs.40 crore), "Last year, we exported forgings worth Rs.6 crore. This year, we'll be lucky if this figure touches even Rs.2 crore."

Exports of forgings, which was declared a thrust area by the government, have shown an almost eight-fold rise between 1985-86 and 1989-90 from Rs.5 crore to Rs.39 crore. But now, at a time when the country faces its worst foreign exchange crisis, the export earnings is expected to fall far short of the $60 million achieved last year.

The reason, according to exporters, is the lop-sided policy of the government that was introduced early last year. In a circular dated 26 February 1990, the government modified the International Price Reimbursement Scheme (IPRS) for engineering exports by fixing a minimum value addition ranging between 25 and 33 per cent over and above the value of iron and steel content at international prices.

As the domestic steel price is higher than the international price, IPRS was introduced to improve the international competitive ability of Indian engineering exporters. This meant that a company wishing to export engineering goods would get the difference between the international and domestic prices of steel — which is the raw material — reimbursed by the government, so that their price could be made internationally more competitive.

Prior to the introduction of IPRS, exporters were entitled to REP licences which were worth 40 per cent the FOB value of the exports and 15 per cent cash assistance. But, to avail of IPRS, the exporter had to forego the right for REP licence. "So now we not only have to forgo our right to REP licences, we also have to put up with 33 per cent value addition," complains Doshi.

It is this 33 per cent value addition that has drastically reduced the export potential of the forging manufacturers. Says K.N. Nairi, manager of Eckjay Industries, "For other engineering goods, where raw materials are used to make a different product, achieving a 33 per cent addition in value is extremely easy. In forgings, however, it is almost the raw material itself that becomes the final product. With countries like Italy and Korea (where the value added could be as low as 3 per cent) in the market, how can we ever compete internationally with this 33 per cent mandatory value addition?"

Most Indian firms cater to the lower end of the forging export market where sales realisation is less than a dollar per kg. Says Makar, "Over a period, we develop some long term clients who place orders with us in hundreds of thousands extended over a period of time. Sometimes, we may even have a negative value addition. But it is at the end of the year when one should take stock of the total realisation. Now every item that we export has to have a 33 per cent addition. It has become impossible to compete."

Some not affected

However, not all exporters are left with the short end of the stick. Bharat Forge, the country's biggest forging giant seems unfazed by the new regulation. Says Baba Kalyani, managing director of Bharat Forge, "The 33 per cent regulation is not going to affect us at all. We were already adding 50 per cent and more value to our forgings export. It is only those making smaller forgings who may be adversely hit."

Industry sources confirm that Bharat Forge, which is making crank shafts and other bigger forgings, will not be badly affected. In fact, Makar of Amforge was recently on a ten-day trip abroad to explore the market for crank shafts and other higher value added forgings.

Meanwhile, in November 1990, ostensibly to encourage exports to hard currency areas, the government had asked for a 230 per cent value addition for exports to the USSR. While it is true that the country needs as much foreign exchange as it can garner, it is also true that not much thought has been given to individual companies. As Vinod Doshi says, "Along with the dry, the green also burns." As a prescriptive measure, exporters suggest reimbursement of the difference in prices of steel in proportion to the value added for exports. "Then everyone will be happy," quips Makar.

■ SHEKHAR GHOSH

Most forgings units are left holding the short end of the stick

In the name of God

The series of judgements in the Bombay High Court under the Representation of the Peoples' Act — culminating recently in the setting aside of the election of the Shiv Sena Bombay MLA, Suryakant Mahadik — have had considerable political repercussions, even though the judgements may not have too much significance in a legal sense.

The law on this subject is well settled by several leading Supreme Court judgements on the interpretations of the relevant section (Section 123 (3) and (3A)). The two leading judgements on this section are Kultar Singh vs Mukhtiar Singh (AIR 1965, Supreme Court, Page 141) and Z.B. Bukhari vs B.K. Mehra (AIR 1975, Supreme Court, Page 1788). The first judgement deals with the conduct of an Akali Sikh candidate who advertised in posters that every Sikh vote should go to the representative of the Akali Dal to preserve the honour of the Panth.

Chief Justice Gajendragadkar in his judgement had to deal with the fact that the candidate was a member of the Akali Dal party..... "This party is recognised as a political party by the Election Commission notwithstanding the fact that all of its members are only Sikhs.....So long as law does not prohibit the formation of such parties and in fact recognises them for the purpose of election and parliamentary life, it would be necessary to remember that an appeal made by candidates of such parties for votes may, if successful, lead to their election and in an indirect way, may conceivably be influenced by consideration of religion, race, caste, community or language. This infirmity cannot perhaps be avoided so long as parties are allowed to function and are recognised though their composition may be predominently based on membership of particular communities or religions".

The judge felt it important that in such cases the court should be careful in reading the impugned appeal and not attributing any more than was warranted in the circumstances.

The other leading judgement concerns the extremely bitter assembly election campaign between the Muslim League candidate Ziauddin Bukhari and the late Shaukat Chagla, the Congress candidate in South Central Bombay in the late sixties. In that election Bukhari had made a number of inflammatory speeches, asserting that Islam was in danger, and that Chagla was a proto-Hindu who had married a Hindu and believed in cremation. Justice M.H. Beg cited Maitland to the effect that a secular state had to ensure, through its laws, that the existence or exercise of a political or civil right or capacity to occupy any office or position under it.....does not depend upon the profession or practice of any particular religion. Therefore, candidates at an election to a legislature, which is a part of the state, cannot be allowed to tell electors that their rivals are unfit to act as their representatives on grounds of their religious professions or practices.

The significant fact about both these judgements is that they dealt with the alleged communalism of two minority communities, Sikhs and Muslims. The significant feature of these judgements is not just that they deal with the communalism of the majority community but that the particular campaigns appear not to be an isolated campaign by a particular candidate but a policy by a political party, the Shiv Sena, to encourage communal strife and enmity. The campaign is no longer directed against a rival candidate but a particular community for the purpose of consolidating its electorate. The BJP have been more circumspect in their campaigning, leaving the inflammatory speeches to the VHP representatives.

The real question is whether this section, 123(3) and (3A) of the Representation of the Peoples' Act, serves any purpose? The Bharatiya Janata Party leader, L.K. Advani, would argue that this is a vestige of pseudo-secularism, that if minorities can organise parties around their particular religion or ethnic character why can't the majority? The Shiv Sena supremo, Bal Thackeray, has already suggested that the Sena cannot expect to get justice in the court and that his party would go all out to defy this restriction.

Pradeep Chandra/I. Weekly

Thackeray and aides: defying the code

A more sophisticated argument would be that this defiance should be seen in the context of all acts of political corruption. Why should a communal campaign, for example, attract legal penalties when all manner of monetary corruption goes on undisturbed? This argument can be answered by saying that the fact that monetary corruption goes on unchecked is no reason for not enforcing the restriction on inciting caste and communal hatred.

Unstable situation

In any case, the issue is not just whether we believe in a secular state — though such is the mandate of the constitution — it is whether we want public order at the time of elections. For very sound reasons, it has been decided that given the highly charged atmosphere in which our politics are conducted it would only serve to excerbate a highly unstable situation to permit politicians to bring religion into electioneering, particularly to denigrate and abuse a particular community. Ultimately, for those votaries of *Hindutva*, pride in religion and culture need not necessarily amount to wholesale denigration of another religion or cultural tradition.

Perhaps, in view of the trail of bloodshed provoked by L.K. Advani's *Rathyatra*, it may be pertinent to consider applying the restrictions imposed under the Representations of the Peoples' Act to public order situations in the normal course, maybe even banning politicians from standing for elections who seek to vitiate the communal situation through inflammatory speeches. While there are sufficient provisions for using the various public order legislations against politicians bent on communalising a situation, these laws are selectively enforced, owing to political factors. Given the disturbing communal situation in the country, there is, perhaps, warrant for seriously examining the somewhat artificial distinction between election times and normal times.

■ JAVED GAYA

WORKSTATIONS

Muscling into the market

The demand for technical workstations — high performance microcomputers — has surged despite the conditions of slack demand in the computer industry. At a conservative estimate, the total sales for workstations during 1990-91 is about Rs.80 crore, a growth of almost 45 per cent over the previous year. Individual companies have reported mixed results with growth rates ranging from 82 per cent to none. As a result, vendors have started entering this niche and existing ones have beefed up their products. All plan to enlarge their share of the market.

Technical workstations have hardware and software components. Vendors provide software that adhere to industry standards: the operating system is Unix from AT&T. The graphics systems software used to control graphics processing and create graphics applications are called the graphics kernel systems. The software is used to design integrated circuits, for mechanical CAD, electronic design automation, architectural engineering and construction. Vendors who provide only software solutions include McDonnell Douglas (with TCS — Tata Consultancy Services), Computer Vision (with International Data Management) and Mento Graphics (with HCL Ltd) and the ubiquitous AutoCAD (from Hinditron).

Mainframe power

The hardware is specially designed to handle these demanding and complex applications, including their intensive graphic nature. The hardware incorporates special features. These machines provide a single user the computing power of a mainframe without his having to share his resources. Fredrick Moni of the TCS CAD/CAM department says, "All these machines have a computing power of 15 million instructions per second." In addition, they have a special graphics processor and very high resolution monitors. They use an operating system which provides an environment in which to develop new software applications.

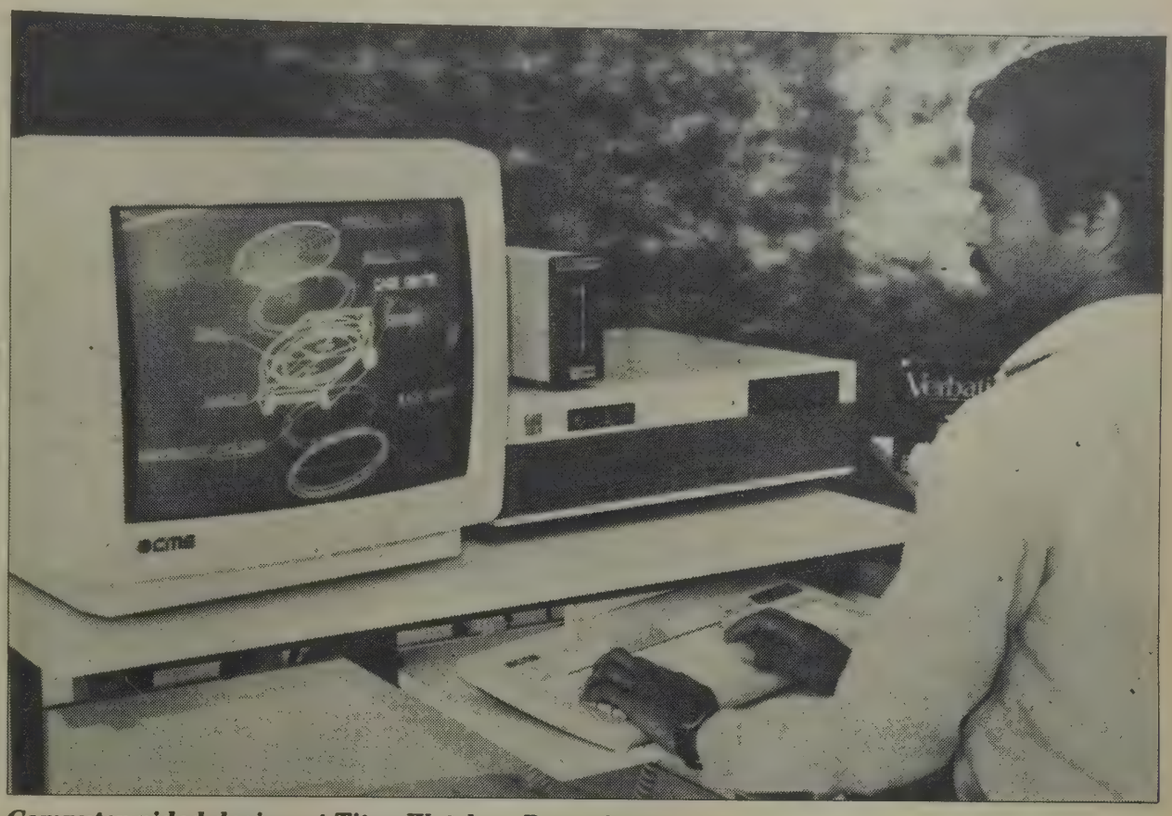
Major international workstation vendors loom over the Indian market. Sun Microsystems has a manufacturing arrangement with Wipro Infotech; Hewlett Packard-Apollo with HCL Ltd and Hewlett Packard India; Silicon Graphics with OMC and Tata-ELXSI; and Digital Equipment with Digital Equipment India Ltd. As a result India is able to receive products which have just been released abroad.

Today, this segment is still nascent; a wide range of new applications exist. These include emerging markets such as computer aided software engineering, scientific research, management science, financial security portfolio management, econometrics, artificial intelligence and laboratory automation. Most vendors are busy drawing up plans to target these segments. Says Ashok Soota, president of Wipro Infotech, "Only a fraction of the solutions required by end-users are catered to. We plan to service the entire market with the large number of solutions available on the Sun workstations. Our strategy will involve value added resellers (VAR) to focus on these hundreds of segments."

The silver lining

Workstation sales proved to be the silver lining for the industry this year. HCL Ltd shipped Rs.35 crore worth of workstations during the year, 24 per cent over the previous year's figure of Rs.28.3 crore. PC-based workstations sold were worth Rs.9 crore and high-end workstations worth Rs.26 crore constituted the total. The other major vendor — Wipro Infotech — shipped Rs.23 crore worth of workstations, 82 per cent more than the previous year's figure of Rs.12.59 crore. Of this 175 were engineering workstations and 200 were personal computer-based workstations.

On the other hand, vendors who focus exclusively on the workstation market had a mixed year. OMC Computers, a pioneer in this segment, has reported sales of Rs.20 crore — 9 per cent over the previous year. It is rumoured that Tata-ELXSI will pick up a stake in the company in a bid to regain lost ground.



For Godrej & Boyce, the indigenous workstations manufacturer, the year has been static. Manu Parpia, vice-president of the computer aided design and manufacturing division, says, "Apart from a slowdown in demand we face a unique situation: we manufacture all the software ourselves whereas most buyers prefer the international brand names. We have not converted them." Rolta

Soota with his VP of CAD/CAM: "The market is young"

Computers ended their annual year on September 1990 with a billing of Rs.11.5 crore. Pertech Computers, a major PC vendor, launched their workstation in early 1990 but have apparently withdrawn it to reassess their strategy.

"The growth in this segment is higher than that of the industry's because the market is young and the base is very small," says Soota. The workstation segment has traditionally addressed the computer aided design, manufacturing and engineering (CAD/CAM/CAE) applications. The first serious attempt to create this segment started about four years ago. With most vendors entering about two years ago, Soota believes the current growth of 45 per cent is much lower than the potential of this segment.

Computer aided design at Titan Watches, Bangalore

Another reason for the growth, according to P.A. Vaidyanathan, vice-president of Rolta is that certain requirements are project oriented. Sanctions are made and these have not been affected. "But there is a slump in the normal market buying," he says.

Routes to the market

HCL Ltd's deputy general manager for the workstation segment, Yuvraj Bahadur, says, "In the year prior to 1990-91, people postponed decisions anticipating the arrival of new technology. Although this technology took a little longer in coming, orders which were postponed were placed during the year." For HCL Ltd the defence sector is sizeable and the company has received many orders from them.

Major vendors are taking different paths towards the same market. Wipro Infotech has gained considerable experience and knowledge in using VARs to address tasks like imaging, process control and specialised applications for foundries. It plans to add specialists in different fields to their growing ranks of value added resellers. The company's range starts from the lower end monochrome monitor workstations to the mid-range colour workstations and the powerful desktop SPARCSTATION and servicers.

HCL Ltd's foray into the workstation market hinges on the Hewlett Packard plan in the country. "When HP bought out Apollo in the US, they agreed to honour our arrangement for four years," Bahadur says. "This tie-up has helped us introduce the latest products into the country." The company provides specialised software on their range of workstations for such segments as shipbuilding, electronics and terrain mapping. Currently, HCL Ltd has decided to split and form a separate company with HP called HCL Hewlett-Packard which will manage the workstation business.

OMC's fortunes will be based on Silicon Graphics' plan for the country. If the tie-up between the American company and Tata ELXSI bears fruit, the high-end power series will be manufactured by them and the entire range of Silicon workstations in the country. Finally the Rolta Intergraph manufacturing facility is scheduled to go on stream in another month. The entire range of workstations and servers will be manufactured at this facility.

In addition to these companies, vendors who have not addressed this segment until this year have begun manufacturing these products. DCM Data Products has launched a SPARC (scalable processor architecture-based) workstation. Sterling Computers has announced its intention to enter this segment too. It won't be long before others announce similar plans.

The current year will see much action in the marketplace. More vendors in the fray will result in fierce competition and a drop in prices. B.V.R. Mohan Reddy, the managing director of OMC Computers, says, "The future for the workstation market is very bright. More powerful workstations will be available at very attractive prices." Rapidly advancing technology will result in a lot of changes such as the trend today towards personal workstations with the computing power of mainframes.

The demand for technical workstations is expected to grow. India's export thrust in the fiercely competitive world computer markets makes this tool indispensable. Jim Durcan, general manager (technical markets) for McDonnell Douglas, says, "The time to market and quality are two important criteria in the market. The time to market has collapsed tremendously in the international market. Workstations drastically reduce the time from the point an idea is created till the product reaches the markets. It also improves the consistency in the product."

The segment is widely expected to cross Rs.100 crore this year. The advantages workstations provide to automate the production process, improve the consistency of the product and reduce the time to market makes this an expensive but necessary tool for organisations.

GET A PIECE OF THE ACTION!

GET INTO COMPUTER EDUCATION!

Every forward looking businessman with adequate resources should consider diversification to this exciting new field of Nation-building namely Computer Education. The rewards can be highly satisfying both to the entrepreneur and the Community.

THE NEED OF THE TIMES

The Nation's Youth has got to be transformed. Every school going child has got to be computer literate. Every young man and woman has to be initiated to the spreading Computer Culture, if India is to keep in step with the family of nations.

ROLE OF PRIVATE ENTERPRISE

It is truly a phenomenal task readying the astronomical numbers of the Indian population for the 21st Century. Slow-grinding Governments can't do the job unaided. There is prodigious scope for private enterprise in this unimaginably vast area of national preparedness for the demands of the future.

MINIMUM WAGES

Hasty decision proves costly

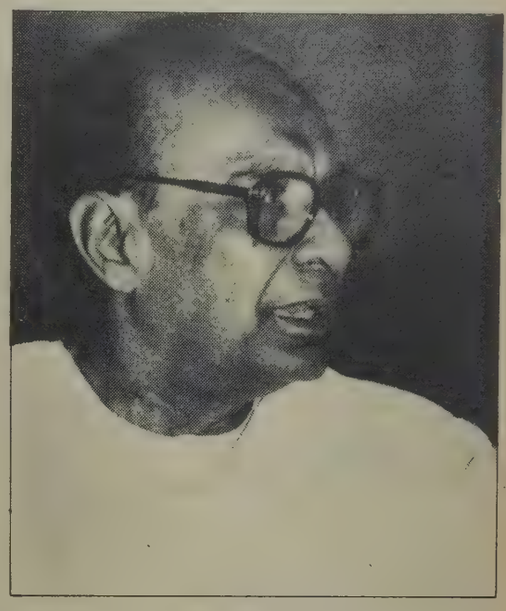
When the Biju Patnaik government decided to raise the minimum daily wage for an unskilled labourer in Orissa from Rs.11 to Rs.25 with effect from 1 July 1989, it was alleged that this was an exercise in absurdity. This makes Orissa the third highest wage-paying state after Punjab where the statutory minimum wage is fixed at Rs.33.30 and Haryana, Rs.31.65.

Such a hike was really uncalled for, especially when the last wage revision came in February 1989, during the tenure of previous chief minister, Janaki Ballav Patnaik. Also, there has been no pressure from labour organisations. Besides, the Janata Dal had made no such election-eve promises. Warned Ananta Narayan Singhdeo, the Janata Dal MP from Aska, "We are removing ourselves from the reality of the situation. Our backward economy cannot afford such a hefty hike in production costs."

Output poor

Though the state accounts for 10.76 per cent of the total land area under rice cultivation and 5.54 per cent of the area under foodgrains, it produces only about 1.85 per cent and 4.63 per cent of the total rice and foodgrains production. In comparison Punjab and Haryana, the two high-wage states, contributed about 10 and 5.5 per cent respectively of the total foodgrains production. These two states are well irrigated, have high yielding agricultural land, and can adopt multi-cropping systems. Orissa lacks all these facilities.

In a primarily paddy-producing state like Orissa where cultivation is highly labour intensive, the growth in wages has to be accommodated along with an increase in the procurement price. The government has fixed the support price of coarse paddy at Rs.185 per quintal. The president of the Orissa Krushak Mahasangh and a Janata Dal leader, Banka Behary Das, want the procurement price to be increased to Rs.307.50 in order to make paddy sales more competitive. However, the answer is not all that simple. In fact, jute cultivation in the state has virtually stopped because the support price has not been adequate. Further, if paddy prices rise, then cotton and jute prices will go up by about 50 per cent. This, in turn, will hit exports.



The government has been unrelenting in its determination to raise wages. Even the report of the Commission for Agricultural Costs and Prices, which had flayed the state government's decision on minimum wages and asked for its review so as to avoid "unintended distortions in the structure of agricultural commodity prices", was brushed aside. In its report to the Union government, the Commission had stated that if a daily wage of Rs.25 was to be paid, this might, by raising the production cost, escalate the procurement minimum support prices of all *kharif* crops by 50 per cent for the 1990-91 season.

"Whimsical decision"

Said Bhartruhari Mahtab, president of the state Krishak Sabha and editor of the second largest circulated Oriya daily, *Prajatantra*, "It has been a whimsical decision of the chief minister, Biju Patnaik. There was no cabinet discussion. The rural economy is heading for a collapse." In contrast, the government believes that a wage hike can encourage production while simultaneously providing relief to the landless labourers. Asks Prafulla Samal, minister of labour, "We had a minimum wage of Rs.11, or less, for so many years. Can we turn Orissa into another Punjab? Can that guarantee be given?"

Yet there is no evidence that the government's latest decision will galvanise the economy. The farmers can only pay more if the yield is more. It is important for the government to commercialise agriculture by "increasing irrigation facility, changing the cropping pattern, and diversifying the rural economy". The government should also increase marketing, credit facilities and rural investment in transport.

In the absence of such changes, the relationship between farmers and agricultural labourers has deteriorated due to what Banka Behary Das describes as "the deliberate and divisive tactics of the government". Meanwhile, as agricultural inactivity spread, farmers have started improvising. For instance, the villagers of Tainsi, 40 km from Angul town, have taken to community farming so as to avoid paying a minimum of Rs.25 as demanded by agricultural labourers.

Biju Patnaik: impulsive decisions

On the industrial front, the implementation of minimum wages, by the unnecessary boosting of the cost of production, made it difficult for local manufacturers to compete in the market. In fact, industrialists have been quick to take up the challenge and act in a collective manner. In a joint petition to the high court, the Utkal Chamber of Commerce and Industry, the Hotel and Restaurant Association of Orissa, and other small industries associations, have challenged the government order. The president of the Orissa Small Scale Industries Association, Nikunja Chhotrai, said that the association would neither be able to prevent small scale entrepreneurs from closing down their units nor restrain them from "stopping payment of loans and other government dues".

Artificial inflation

It will be foolish to assume that the migration of labour from Orissa to Punjab and other states will stop because minimum wages are no longer low. In Punjab, the green revolution created an increased demand for labour. This has not happened in Orissa. Rather, by artificially inflating wages, internal employment in the state has come down.

Simultaneously, a reverse migration could take place from neighbouring states where wages are low. Labourers in Orissa will then have to compete with the migrant labour that may move in from Andhra Pradesh where the minimum wages are Rs.11, Madhya Pradesh (Rs.11), Bihar (Rs.10), and even West Bengal (Rs.19.25).

■ SIBRABRATA DAS

Do you qualify for

Is your project innovative? Profitable? Does it have high-growth prospects?

Are you capable of managing it, nurturing it from infancy to adolescence to adulthood?

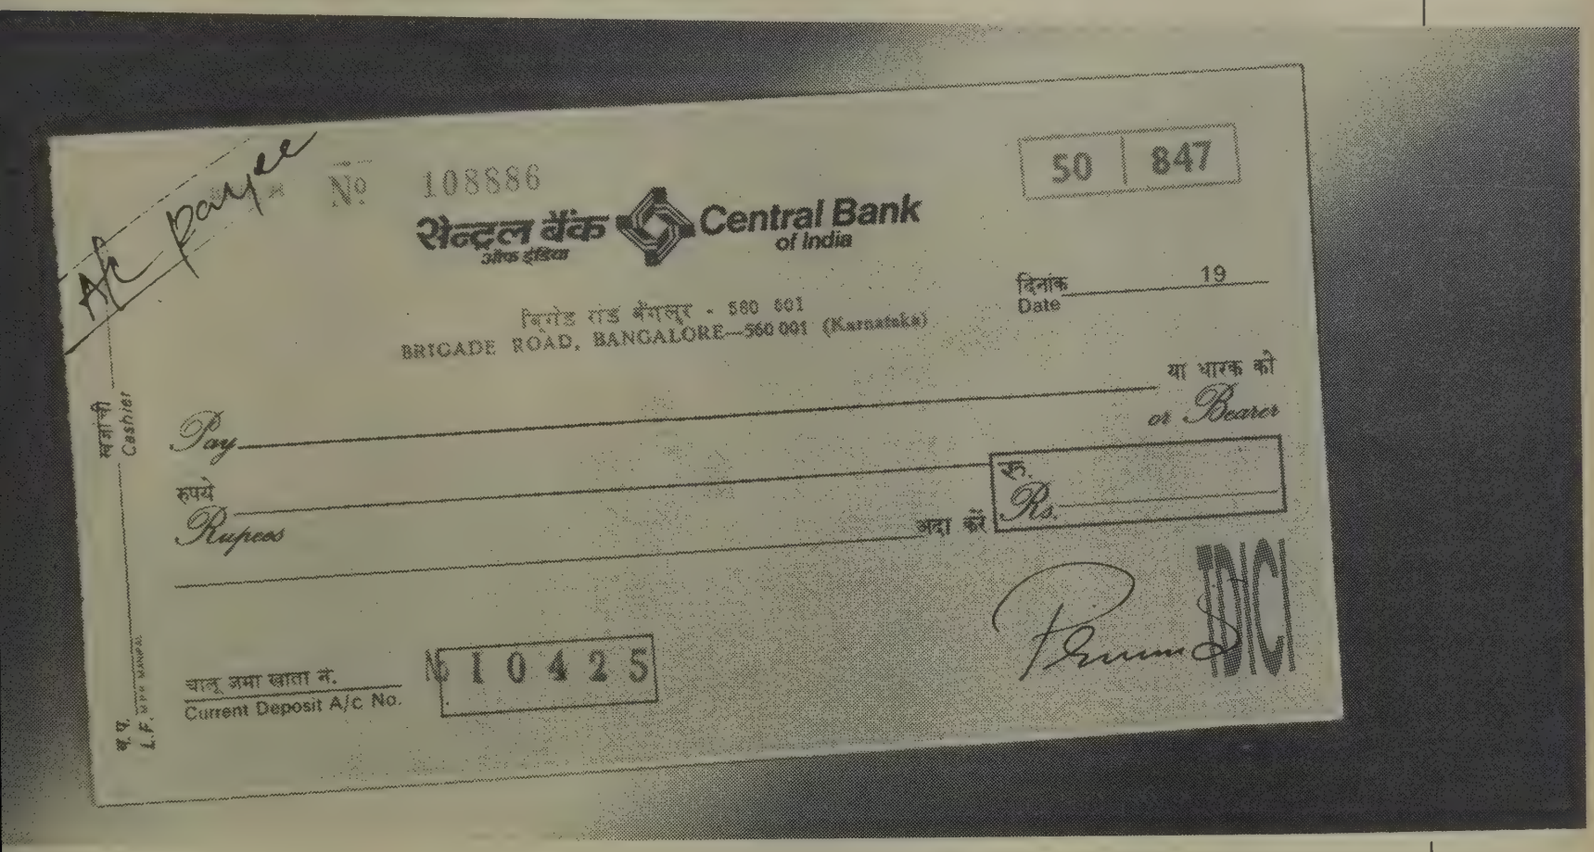
If the answer is 'yes' to all of these questions, TDICI will provide the necessary venture capital to convert your business idea into a commercial venture.

In the US, venture capital has propelled new ideas to major commercial successes. Some prominent examples: Apple, Lotus, DEC, Federal Express, Domino Pizza.

Who is TDICI?

TDICI is India's first venture capital company. Its promoters are the country's premier development bank, ICICI and the country's largest mutual fund, UTI.

See if you pass TDICI's test for the big idea in enterprise.



What is venture capital?

Venture capital is "equity support to fund new concepts that involve a high risk and, at the same time, have high growth and profit potential."

The objective of TDICI is to help professionals and small and medium enterprises.

Since 1988, TDICI has injected Rs. 40 crores into the ninety companies that have qualified so far for venture capital.

this cheque?

Almost all the companies assisted by TDICI have one of two things in common: a spectacular track record or a promising one.

If you think you have a winning formula, get in touch with TDICI in Bangalore or in Bombay.

You'll be glad that you did.

■ **BANGALORE:** TDICI, 5th Floor, Leo Complex, 44 & 45 Residency Cross Road, Bangalore 560 025. Phone: 543681, 544471/2/3 Fax: (0812) 540741 Telex: 0845-2947 TDIC IN. Grams: TECHDICI

■ **BOMBAY:** TDICI, 163, Backbay Reclamation, Bombay 400 020. Phone: 2022535 Fax: (022) 2046582. Telex: 011-83062/86410 ICIC IN Grams: CREDCORP.

TDICI

TDICI. Big money for big business ideas.

Trying hard but.....

The process of industrialisation is a long tortuous one, even in the best of times. And for a state like West Bengal, where the process has regressed in the last two decades, it is twice as difficult. Especially with a state government which is virtually clueless about how to go about the process.

In the last two years, the Left Front government ruling the once troubled state has shed its ideological predilections and is now welcoming big business with open hands. This was amply demonstrated last year when, in the wake of the installation of the National Front government in the centre, the massive petrochemical project at Haldia was cleared. The project involves a partnership between the Tatas and the state government.

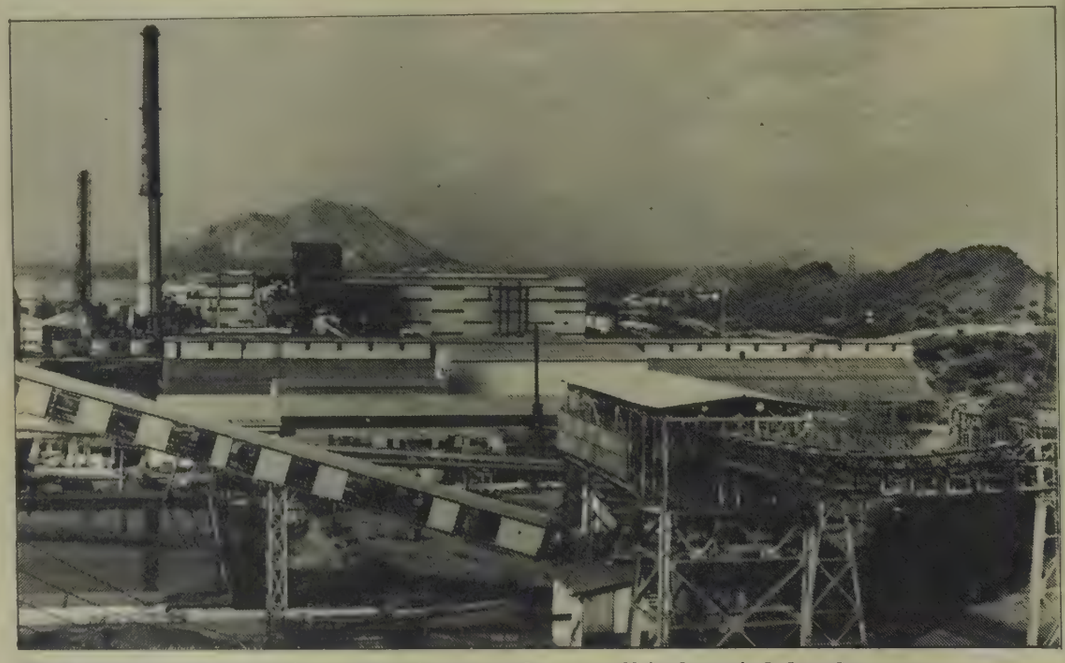
A few more large houses are venturing into the state like the Ambanis who are collaborating with the state government for a 25,000 tpa polyester filament yarn project. Viren Shah is setting up a milk dairy business and Ratan Tata has recently written to chief minister Jyoti Basu indicating his willingness to consider a proposal to set up a power plant, an export-oriented leather project and a telecom equipment manufacturing facility in the state. However, apart from these, nothing more is happening.

Nothing definitive

The state's industry secretary, Bikram Sarkar, when queried about his government's plans for industrialisation in the next five years said that the Eighth Plan was not finalised and therefore nothing was definitive. Though it is a fact that the Eighth Plan is not final, Sarkar's statements are at variance with industry secretaries of different states with whom *Business India* has spoken to in the last few months. Even in a trouble torn state like Punjab, the state government has already chalked out a clear plan for the next few years, not to mention states like Gujarat and Maharashtra.

Talks with Sarkar and other senior officials at Writers Building reveal that the state government has practically put all its eggs in one basket, Haldia. There is a feeling in government circles that the Haldia project — which envisages an investment of Rs.3,000 crore and promises to raise employment, directly and indirectly by 250,000 will trigger off a major process of industrialisation. The process will also be helped by the massive modernisation programmes for the steel plants at Durgapur and Burnpur which are now on the anvil.

But this perception is far removed from reality, a fact well recognised by the state's industrialists. Says Abhijit Sen, president of the Bengal Chamber of Commerce and Industry, "Haldia is being thought of as a be-all and end-all of everything. That is not true, it is not going to lead to *Ram Rajya*. Spending the kind of money that will be spent on Haldia will not *per se* create economic spinoffs, as is being envisaged. In fact, projects not properly conceived or planned can lead to negative spinoffs." However, Sadhan Dutta, chairman of Development Consultants Private Limited, and reputedly very close to Basu, says: "Haldia will certainly be a catalyst for many units."



Very confident

In fact so confident is the state government of an industrial revival, courtesy Haldia and a few other projects which are not in the works (*see table*) and account for barely Rs.3,634 crore, that it is not even willing to consider seriously any more joint sector projects. Says S.N. Menon, managing director, West Bengal Industrial Development Corporation (WBIDC), "Till our existing investments roll back we are not thinking of going in for any other major projects."

In states like Maharashtra and Gujarat which have seen rapid industrialisation in the last decade, a major motive force for this has been the state industrial development corporations (SIDCs) like SICOM in Maharashtra. These SIDCs have at all times several licences for projects ready and are constantly looking for private sector partners (SICOM has now consciously minimised the number of its joint sector projects). But in West Bengal, the opposite is the case.

Says Sanjeev Goenka, president of the Indian Chambers of Commerce (ICC), "A major factor behind West Bengal's currently dismal industrial scene is that the state government in general is apathetic towards overall industrial development. Whenever the chief minister holds parleys with the Centre, the only two projects mentioned are Haldia and Bakreshwar. There is no attempt to highlight other projects. Any other chief minister has at least 15 projects lined up for clearance.

What is worse is that the incentives being given to investors is much less in West Bengal than in other states. Says Goenka, "In states such as Maharashtra and Gujarat, an investor can recoup almost 50 per cent of his costs, over a period of five years — through various tax holiday schemes and other incentives. But in West

The state government is apathetic towards overall industrial development

Bengal it is difficult to recover even 10 per cent." The term lending operations of the WBIDC barely total Rs.18 crore annually, compared to SICOM's Rs.65 crore.

These days the growth of the small and medium sector play a vital role in the process of industrialisation in Bengal. In the last two years, the state government may have made some haphazard attempts to woo large industrialists to the state, but there is not a thought spared for the development of the small and medium sectors. The thinking of the state government is that if large scale units come up, small and medium units would automatically follow as ancilliaries. But this perception may again not be fully true.

No small-scale *wallahs*

The number of small scale units in the state, typically set up by local entrepreneurs, is insignificant. Says Abhijit Sen: "You can woo large business from outside, but not these small scale *wallahs* from, say Gujarat. They have to come up locally." Sarkar however says: "It is not true that we are not giving impetus to small and medium industries. It is our objective to create conditions for setting up a number of medium and small scale units in sunrise areas like electronics and petrochemicals." But this could be a vain hope, considering that medium local entrepreneurs in the state are looking for opportunities outside. A good example is Bijon Nag, a first-generation entrepreneur who successfully set up India Fine Blanks. Reportedly fed up with the unhelpful attitude of the state government, he is now setting up a washing machine manufacturing facility in Goa.

Though the state government is yet to prepare a detailed plan for industrialisation for the next five years, it has done some thinking on the matter. But an analysis of this thinking shows how unrealistic it is. Obviously taking a cue from Punjab, the state government is intending to set up agro-processing units on barren land in northern Bengal to process horticultural produce, like pineapple etc. Though there is not much horticultural activity in these areas, the state government thinks that it can motivate farmers to think along those lines.

There is also a plan to extend the area under tea plantations in the state, especially in the slightly hilly west Dinajpur district. The state government is also thinking in terms of setting up R&D oriented units in the area of bio-technology, chemicals and pesticides and also engineering consultancy and software units. It also wants to develop Calcutta as a centre for international exports of leatherware.

Export-oriented units

The state government is also talking in terms of setting up export oriented units in the state. But the state's experience in this area so far has been far from satisfactory. S.K. Hazra, development commissioner, Falta export promotion zone (FEPZ), reveals that exports from Falta are barely Rs.25 crore, the least among all EPZs. Since FEPZ's inception in 1986, some 70 licences have been issued, though 34 have been cancelled, with more licensees backing out. As of date there are merely nine units. Interestingly, Falta, though on the river front, has no jetty or provision for riverine transport.

List of large projects being implemented by WBIDC

Project	Private sector partner	Investment (Rs crore)	Location
Petrochemicals	Tata Tea	3,000	Haldia
Polyester filament yarn	Reliance	350	Barjora
Acrylic fibre	G.P. Goenka	130	Barjora
Carbon black	Dunlop	67	Haldia
BOPP films	S.K. Birla	40	Barjora
Soaps and detergents	Tomco	25	Kalyani, Dist. Nadia
ONCB/PNCB	Burroughs Wellcome	22	Haldia
	Total	3,634	

The major contribution of the state in promoting industrialisation these days comes in the form of establishing the infrastructure which attracts investments. But not enough has been done here, though some beginnings are being made. Says Goenka: "One of the major reasons for lack of investors is that the state suffers from infrastructural bottlenecks, the WBIDC having done precious little to provide any infrastructure for major investors." Whatever investment has been made is also lopsided. Most of the infrasturcture in the state is near Calcutta with barely 6 per cent investment in the five districts of north Bengal.

Growth centres

However, C.D.Gautama, executive director, WBIDC says: "Things will be different in two years. Following the example of Gujarat, whose policy is to set up growth centres, we have established 12 growth centres across the length and breadth of the state."

The growth centres may well become functional over the course of time, but the power situation (which has been the major bottleneck in the state) continues to be as dismal as ever. There is a feeling in some circles that with the Central government's new policy to allow the private sector to set up power projects, things might change in the next few years. But, says a state official, "The situation is likely to continue as it is. Though the total generation in the state is around 2,700 MW, the shortfall is going to persist in view of the load growth (expected to go upto 500 MW annually in the next three to four years) outstripping supply."

In the otherwise not very bright scenario, where the state government has no idea about how to go about the task of industrialisation, the only ray of hope is the changed attitude of the Left Front government towards labour. The government is not backing labour to the hilt any more and is tacitly siding with industrialists in order to maintain industrial peace.

Says a production manager at ITC's factory in Calcutta, "The troubled days of the sixties and early seventies will never come back again. Labour here is very scared of lockouts and strikes. They know from experience that the state government will not support it and every strike has the potential threat of a lockout from the owners who can close shop and shift to another state."

There is another factor which might help West Bengal — the progressive deterioration in conditions in many states which were hitherto peaceful. Says Abhijit Sen: " In that sense it is not the greening of West Bengal as much as the browning of the other states." But that by itself can hardly propel the process of industrialisation.

CORPORATE FINANCE

Visible trends in South East Asia

Corporate finance is changing all over the world. In India as anywhere else in the world, there have been changes from the family-controlled accounting systems run by trusted accountants to the professionally run organisations employing qualified accountants. The banking sector has also witnessed a shift away from the emphasis of merely lending money to developing more attractive money management instruments giving greater yields to corporate treasures. Gone are the days when a smart banker could borrow from one cheap source and lend at high margins to a corporation. With the gradual maturity of stockmarkets, corporations are now able to source funds through a large number of means, directly from investors.

Dilip Maitra

Bangkok: unprecedented boom in south-east Asia

Rapid funds movement

As the world apparently shrinks in size with improved communications and better political relations between nations, there is increased movement of funds across geographical boundaries in Asia. The experience of the south-east Asian nations is very similar to that of any developing economy but with a difference. The south-east Asian corporations, with admirable support from their respective governments, are becoming aggressive investors in each others' countries. These countries are witnessing an unprecedented boom and their governments are encouraging formation of new financial institutions and instruments.

The growth of the Asian financial institutions in other parts of the developed world, coupled with the entry of American and European financial institutions into Asia and the exponential growth of non-banking financial institutions within these countries are significant pointers to the trends in Asian corporate finance. The result is that Asian corporations have new opportunities for profitable activities. Some of the distinct trends that are visible in corporate finance in Asia are:

• A greater stress on equity as compared to debt-financing. This is the result of more American and European investors wanting to put their money into Asian companies. This helps Asian corporations raise funds more easily and the greater demand for equity shares helps fuel growth in Asian stockmarket indices. This trend is evidenced from the fact that debt-equity ratios of companies in south-east Asian markets have been steadily improving.

• As the equity cult comes of age in Asian economies, the second trend is the mushroom growth of non-banking financial institutions such as merchant bankers, investment bankers and stock brokers. Such skills, as they develop, are able to identify interesting and innovative tools for corporate finance. Most major banks in South East Asia have committed substantial resources to their stockbroking subsidiaries.

• A third trend is the gradual movement of financing options from the short term to the long term. The maturity period of debt is gradually being lengthened. While long term bank debt is being seen as a major source of corporate finance, there is increasing reliance being placed upon the emerging corporate bond market.

Bond markets, virtually non-existent ten years ago, have been attracting the attention of merchant bankers. Such bonds are in different currencies and can be raised in different countries depending upon the credibility of the offering company and the country risk of the company's country of origin. Bond trading in secondary markets has been very limited though it is expected to grow in the foreseeable future.

• Another significant development is the movement towards wider dispersion of financial instruments. This distribution encompasses securitisation of assets as well as a broader distribution of traditional financial products.

Banks and other financial institutions Especially the larger ones, are now syndicating and sharing loans. Such syndication helps not only in spreading the risk but also in information sharing and increasing the size of the cake through greater knowledge of the people involved.

• Private placement of debts by larger non-banking financial institutions is a trend noticed over the past few years. A wide variety of instruments are being placed in the markets encompassing equity features such as convertible (either fully or partly) bonds and debentures.

• The establishment of venture capital associations in Asian markets recently creates a new mechanism for dispersion of investments. These venture capital associations ascribe a broader meaning to the term "Venture capital" in Asia as compared to the West in established companies rather than start-ups. Venture capital associations have been formed in most Asian countries. In Hong Kong, the association which is barely three years old has over forty members.

• The trends relating to the entry of a greater number of western banks is significant in South East Asia. As these countries become safer and offer lucrative and growing markets to the western banks, corporate finance is gradually experiencing a transition from the "family owned" to "professional run" organisations. Further, non-banking financial companies and financial services companies are being granted licences to operate as "full service banks". The leading banks in these countries are also active in the corporate finance and securities markets.

• Securitisation of assets, a well developed skill in the American and European markets, is being imported into the south-east Asian markets. While these are not fully mature, the trend towards

introduction of mortgage-backed securities will provide the corporate finance managers yet another powerful tool to leverage higher and raise more funds for the growth of their companies.

• Some of the trends in the development of new financial instruments are fairly well developed in India as well. Some financial instruments popularly used by corporate finance managers are: convertible bonds, subordinated debt, floating rate products, interest and currency swaps, leasing and hire purchase and commercial paper.

South East Asian markets have well developed primary markets for these instruments. However, with regard to secondary markets, the development is visible only in the financial markets of Hong Kong and Singapore.

Specialised services

Finally, the trend all over South East Asia is for a "boutique" model of financial service companies which offer highly specialised services. They are able to offer not only a high degree of knowledge of the product but also a very close interaction with the client leading to personalised service.

All the trends identified above clearly point towards a significant shift to more sophisticated financial instruments as also a shift towards non-banking financial institutions. Corporate banks are also launching their own non-banking companies to expand their range of services. While all financial markets are to a degree protectionist, protection does not always stifle innovation. Nor does protection mean completely curbing the free flow of foreign exchange into and out of a country.

Therefore, while foreign institutions may find it difficult to enter certain markets and compete in the traditional areas of corporate finance, they can certainly offer greater skills in new products. In many cases, both the competing local firms and regulatory bodies welcome innovation. New products are then quickly incorporated into the product line of the institutions.

Most of the trends elaborated are clearly visible in the Indian economy as well. However, Indian corporate finance managers, banking institutions, non-banking financial institutions and companies are not able to relate these powerful trends with world markets since the major element of foreign exchange is generally missing for transaction within India. Such expertise and skills are vital as India moves steadily towards liberalisation and eventually a fully convertible rupee.

In each country of South East Asia as well as India, the regulatory provisions that take into account the financial strength of the economy, social and political factors are different. However, the trends are undeniable and only those organisations which recognise these trends and react will be able to take full advantage of the new opportunities.

ASHUTOSH GARG

WORLD COMPETITIVENESS

Declining stars

Australia is the likeliest to face a recession in the next two years while the US, UK, Canada and much of continental Europe are in an economic slowdown. This was recently stated in the 11th joint annual survey of the World Economic Forum (WEC) and the International Institute for Management Development

YOU ARE LOOKING AT AN UNPAINTED

(IMD), the latter being among the leading business schools of Europe.

The survey, which is part of the institutions' World Competitiveness Report, also says business leaders everywhere believe that Japan and unified Germany are best prepared for rapid economic growth. Further, it describes Indonesia, Thailand, Hungary and Mexico as "hidden treasures" in world competitiveness.

Many criteria

These conclusions are based on the opinions of more than 1,500 business executives asked by WEC and IMD to rate their own country's assets in the context of world competitiveness. In the full report, still two months away, 326 different criteria will be utilised to assess and rank 33 key countries with regard to their ability to face global competition. Of these, 22 industrialised nations are examined separately while 10 others, namely, Brazil, Hongkong, India, Indonesia, Korea, Malaysia, Mexico, Singapore, Taiwan and Thailand are listed as "newly industrialised economies" (NIEs).

In this year's survey report, Indonesia is placed at the top of the table of Asian countries where Singapore was two years ago. Malaysia, Thailand and Mexico have also moved up the ladder while the optimistic view of Canada seems to have undergone a subtle change. In the 1989 report, Canada was believed to be one of the three most dynamic economies in the world and second best in human resources and natural endowments. Last year it was down to number five in "dynamism of the economy" even as Germany moved up a notch from fourth to third. This year it appears a close second to Australia in the list of countries facing the greatest chances of a recession in the coming two years. The UK, the US and Finland follow Canada, in that order, on the same list.

The WEC-IMD survey also makes some interesting points on why so many executives think the outlook is bleak for Australia and Canada while Mexico, Hungary and Malaysia are good places to do business with. Australia is third from the bottom when it comes to motivation of workers (scoring only above Italy and Spain), second last with regard to new business generation (better than Sweden) and touches the bottom in its adaptability of products for export markets.

Quite predictably Japan is the best in two of these areas, namely workers' motivation and adaptability to export markets, while Germany was the most effective in generating new business. The quality of Japanese products in general is widely believed to be the best, with Switzerland and Germany placed second and third. The only factor in which Japan does not figure in the top five is "management freedom" which is evaluated as the flexibility that managements have to adjust employment levels during difficult periods. This means Japanese employees still enjoy much greater job security than their counterparts in the US, Denmark and Canada.

Though the present report is something like a snapshot of the full report due later this year, it will be interesting to see if Korea, Thailand and Malaysia are moved up from the the list of NIEs to that of the industrialised nations. They certainly should, because most of the 1,500 executives who were asked which three countries they felt will "significantly improve their global competitiveness in 1991", listed them among the top five.

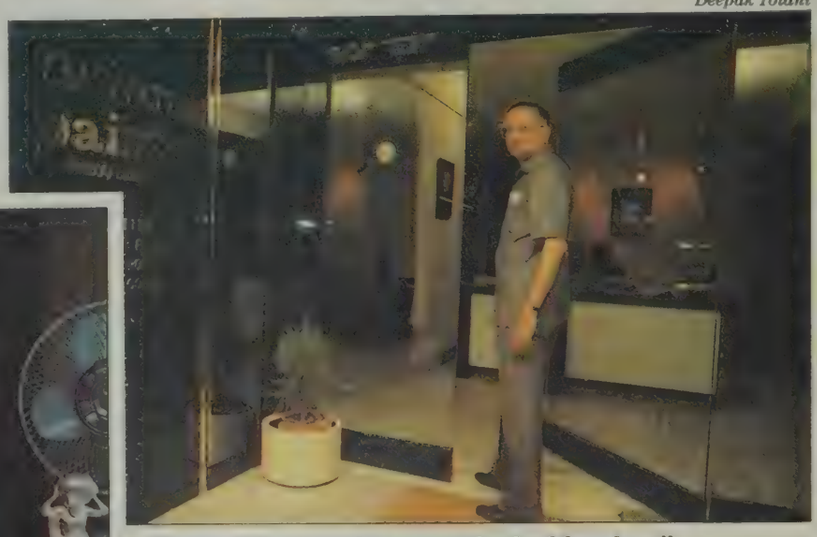
The old faithfuls

In this day and age, when switching jobs at the drop of a fatter pay cheque is the order, people who stay on are a bit of an oddity. But as any of these old timers will tell you, it's worth it — almost always

In January 1956, K.R. Ganapathy joined Parry & Co Ltd, Madras, as a management trainee. Last year, he took over as president of two companies — Parry & Co Ltd and Parry Confectionery Ltd. It has, no doubt been a slow climb up the corporate ladder, but Ganapathy would not have it any other way. In his view, he was upholding the family tradition of remaining committed to one particular organisation. His grand uncle, who was closely associated with C.P. Ramaswamy Iyer, the dewan of Travancore, had elicited a promise that he would.

Pankaj Desai



Poddar: over half a century with Century

R.P. Poddar, senior president of Century Textiles and Industries Ltd, Bombay, joined the company in 1936, after obtaining his BA degree. In those days, the Birlas and Tatas were the only major Indian corporate houses, and Poddar chose to work for the Birla-owned Century because he knew several members of the family. "Even after 55 years," he says, "the job still holds new challenges for me."

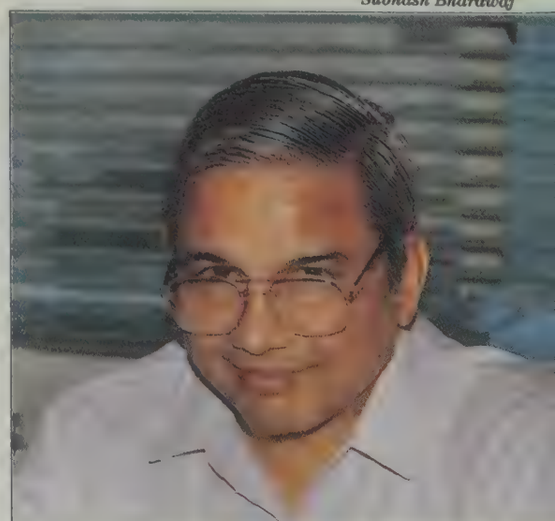
Rare breed

In today's fast paced job market, where loyalties change often at the drop of a fatter pay cheque, managers like Ganapathy and Poddar are a rare breed that faces extinction. The truly ambitious young type finds that the hop-switch-jump route is the quickest one to the top. As they move on, they gain varied experience and needless to say, higher salaries and better perks as well. In their view, staying on, spells stagnation. Now do the likes of Ganpathy and Poddar fit into this scenario? Very well, indeed. While it is true that they entered the corporate world long before it turned into a steeplechase, they consciously chose to pursue their single-track careers.

Deepak Tolani

Jhaveri: "enjoyed a great deal of freedom"

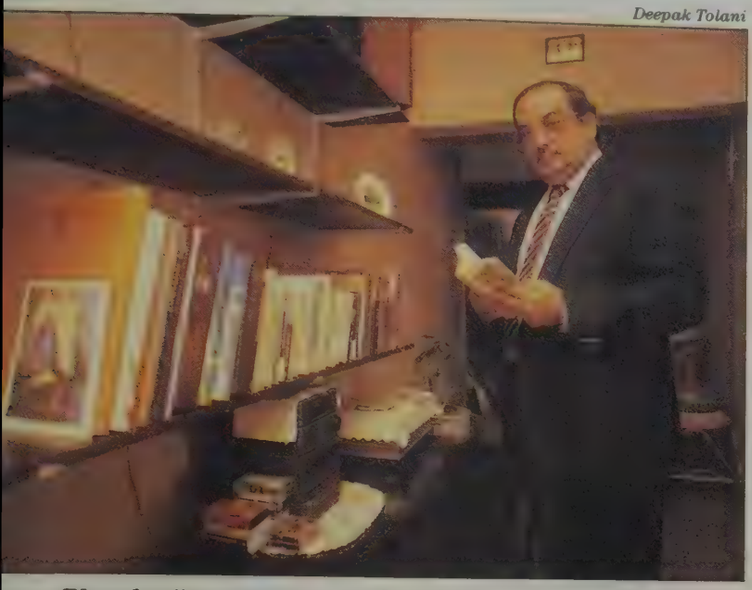
The single most important factor that has kept Ganpathy rooted to his company is the culture of the organisation; it has encouraged closeness between various levels in the organisation. Parrys is more than a century old, he points out, and is the kind of organisation where several generations of a family are known to have worked. "In addition to colleagues, I now find the children of former colleagues working with us." This does tend to occur more frequently in Indian business houses where the promoters conciously cultivate the 'family like culture'.



This indeed is the case in the J.K. Group as well. B.K. Kedia, president, joined the group 40 years ago, but his contact with the company goes back several years before that to the time when his father had business relations with the Singhanias. Today, Kedia's son, a qualified M.Tex engineer, has followed him in his footsteps.

Personal rapport and that strong feeling of familiarity were also partly responsible for keeping Bipin Jhaveri, now company secretary and senior general manager, at Asian Paints. He joined the organisation in 1954, working there for four years while completing his graduation. He rejoined the organisation as a junior officer in 1962, having taken a break in between to complete his chartered accountancy. Why didn't he go elsewhere? "I was familiar with the company and the people, and liked the place," he explains.

Many old timers stay on because they feel they are treated well and given the opportunity to grow. As Jhaveri puts it, "So long as an organisation permits you to develop, gives you financial and job satisfaction and you are climbing up the ladder, there is no reason to change." If you are not treated as a subordinate, he observes, the motivation is that much greater. Loyalty also develops if you feel the organisation will support you in adversity, he says.



Anand Rathi, who has been with Indian Rayon for 17 years and is now a senior president, feels the same way. "There are mainly two factors which make people stay," he says, "the kind of company and the kind of management." N.D. Joshi, director, R&D, at Thermax Ltd, "found the Thermax people very friendly". Having been with the company since 1972, he says, "One is familiar with the culture and history of the company. Over the years, you find your identity with the company. One also feels comfortable; since you

Subhash Bhardwaj

Agarwal: "personal touch of belonging"

Deepak Tolani

Bharda: "youngsters are loyal to opportunities"

know everyone, a family feeling is created."

V.P. Agarwal, executive director and secretary, DCM Shriram Consolidated Ltd, enjoys the "personal touch of belonging". Poddar of Century, who thinks personal relations with employers are crucial, says his company "has always treated employees as part of a family". Such bonds are rare now, points out Rakesh Dewan, vice-president, marketing, mining and construction, at Atlas Copco. He had joined the company in 1967 as a trainee sales engineer. "With the present level of competition, these bonds cannot exist," he says. "Today if someone is not delivering the goods, you wash your hands off. And employees do not feel the same kind of obligation to employers any more."

Personal ties apart, many long serving employees have found tremendous scope for growth. They may have been in the same company for years, but certainly their jobs within the organisations do not remain the same. "The idea that one gets stale by remaining in one company is entirely wrong," asserts Y.S. Joshi, general manager, marketing, power equipments, at Kirslokar Cummins Ltd. "There are always plenty of new and challenging assignments — with job rotation." R. Jagannath, executive director, projects, Ashok Leyland Ltd, says he is possibly "the most moved around guy in the company" but that it was "this job rotation which kept interest alive". P.B. Bharda, a commerce graduate from Bangalore, joined TOMCO in 1958 as assistant sales officer; in 1963, he became assistant manager, Indore, and later that year, manager, marketing. He rose to be zonal manager in 1978, general manager in 1985, CEO, sales and marketing, in 1987. Today, he is vice-president, sales and marketing.

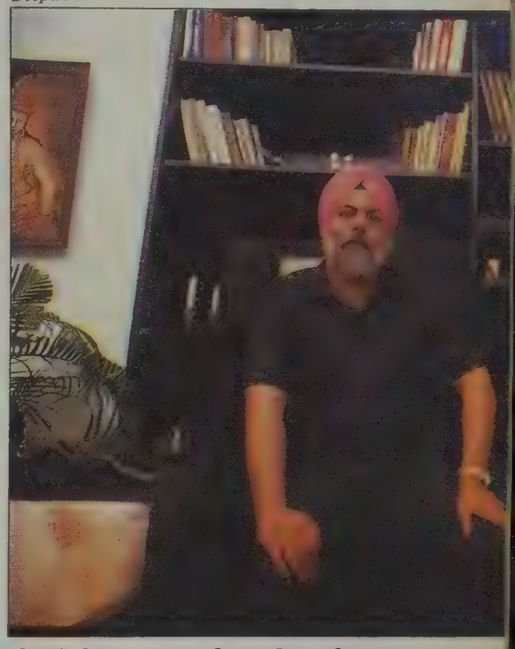
Then, there's Ranbir Sachdeva, who joined Siemens as junior assistant, and is currently general manager, commercial controls, automation and project division. V. Rajagopal's rise was more spectacular. He is today general manager of Vyasa Bank in Bangalore. Not bad at all, considering he joined the bank in 1955 as a clerk with no experience.

Long waiting-out periods

Such growth does not necessarily happen in a hurry. It can often mean a long waiting-out period. Rajagopal was promoted to officer in 1959 and posted to the accounts and statistics department at the central office. He was promoted to the special cadre in 1966 and made chief accountant. It took all of five years for him to rise further to be superintendent of advances, where he worked for six years. The post of assistant general manager came much later, in 1977, and it was only in 1985 that he became general manager.

The freedom and opportunities to take on new challenges is a major motivating factor with many, particularly those who started out in smaller companies and grew along with them. "In a large group, an individual is like a drop in the ocean," says Dewan of Atlas Copco. "In a smaller set up, your contribution becomes more significant. I felt that a small growing company would not have set ideas and there would be more scope for innovation."

Pankaj Desai



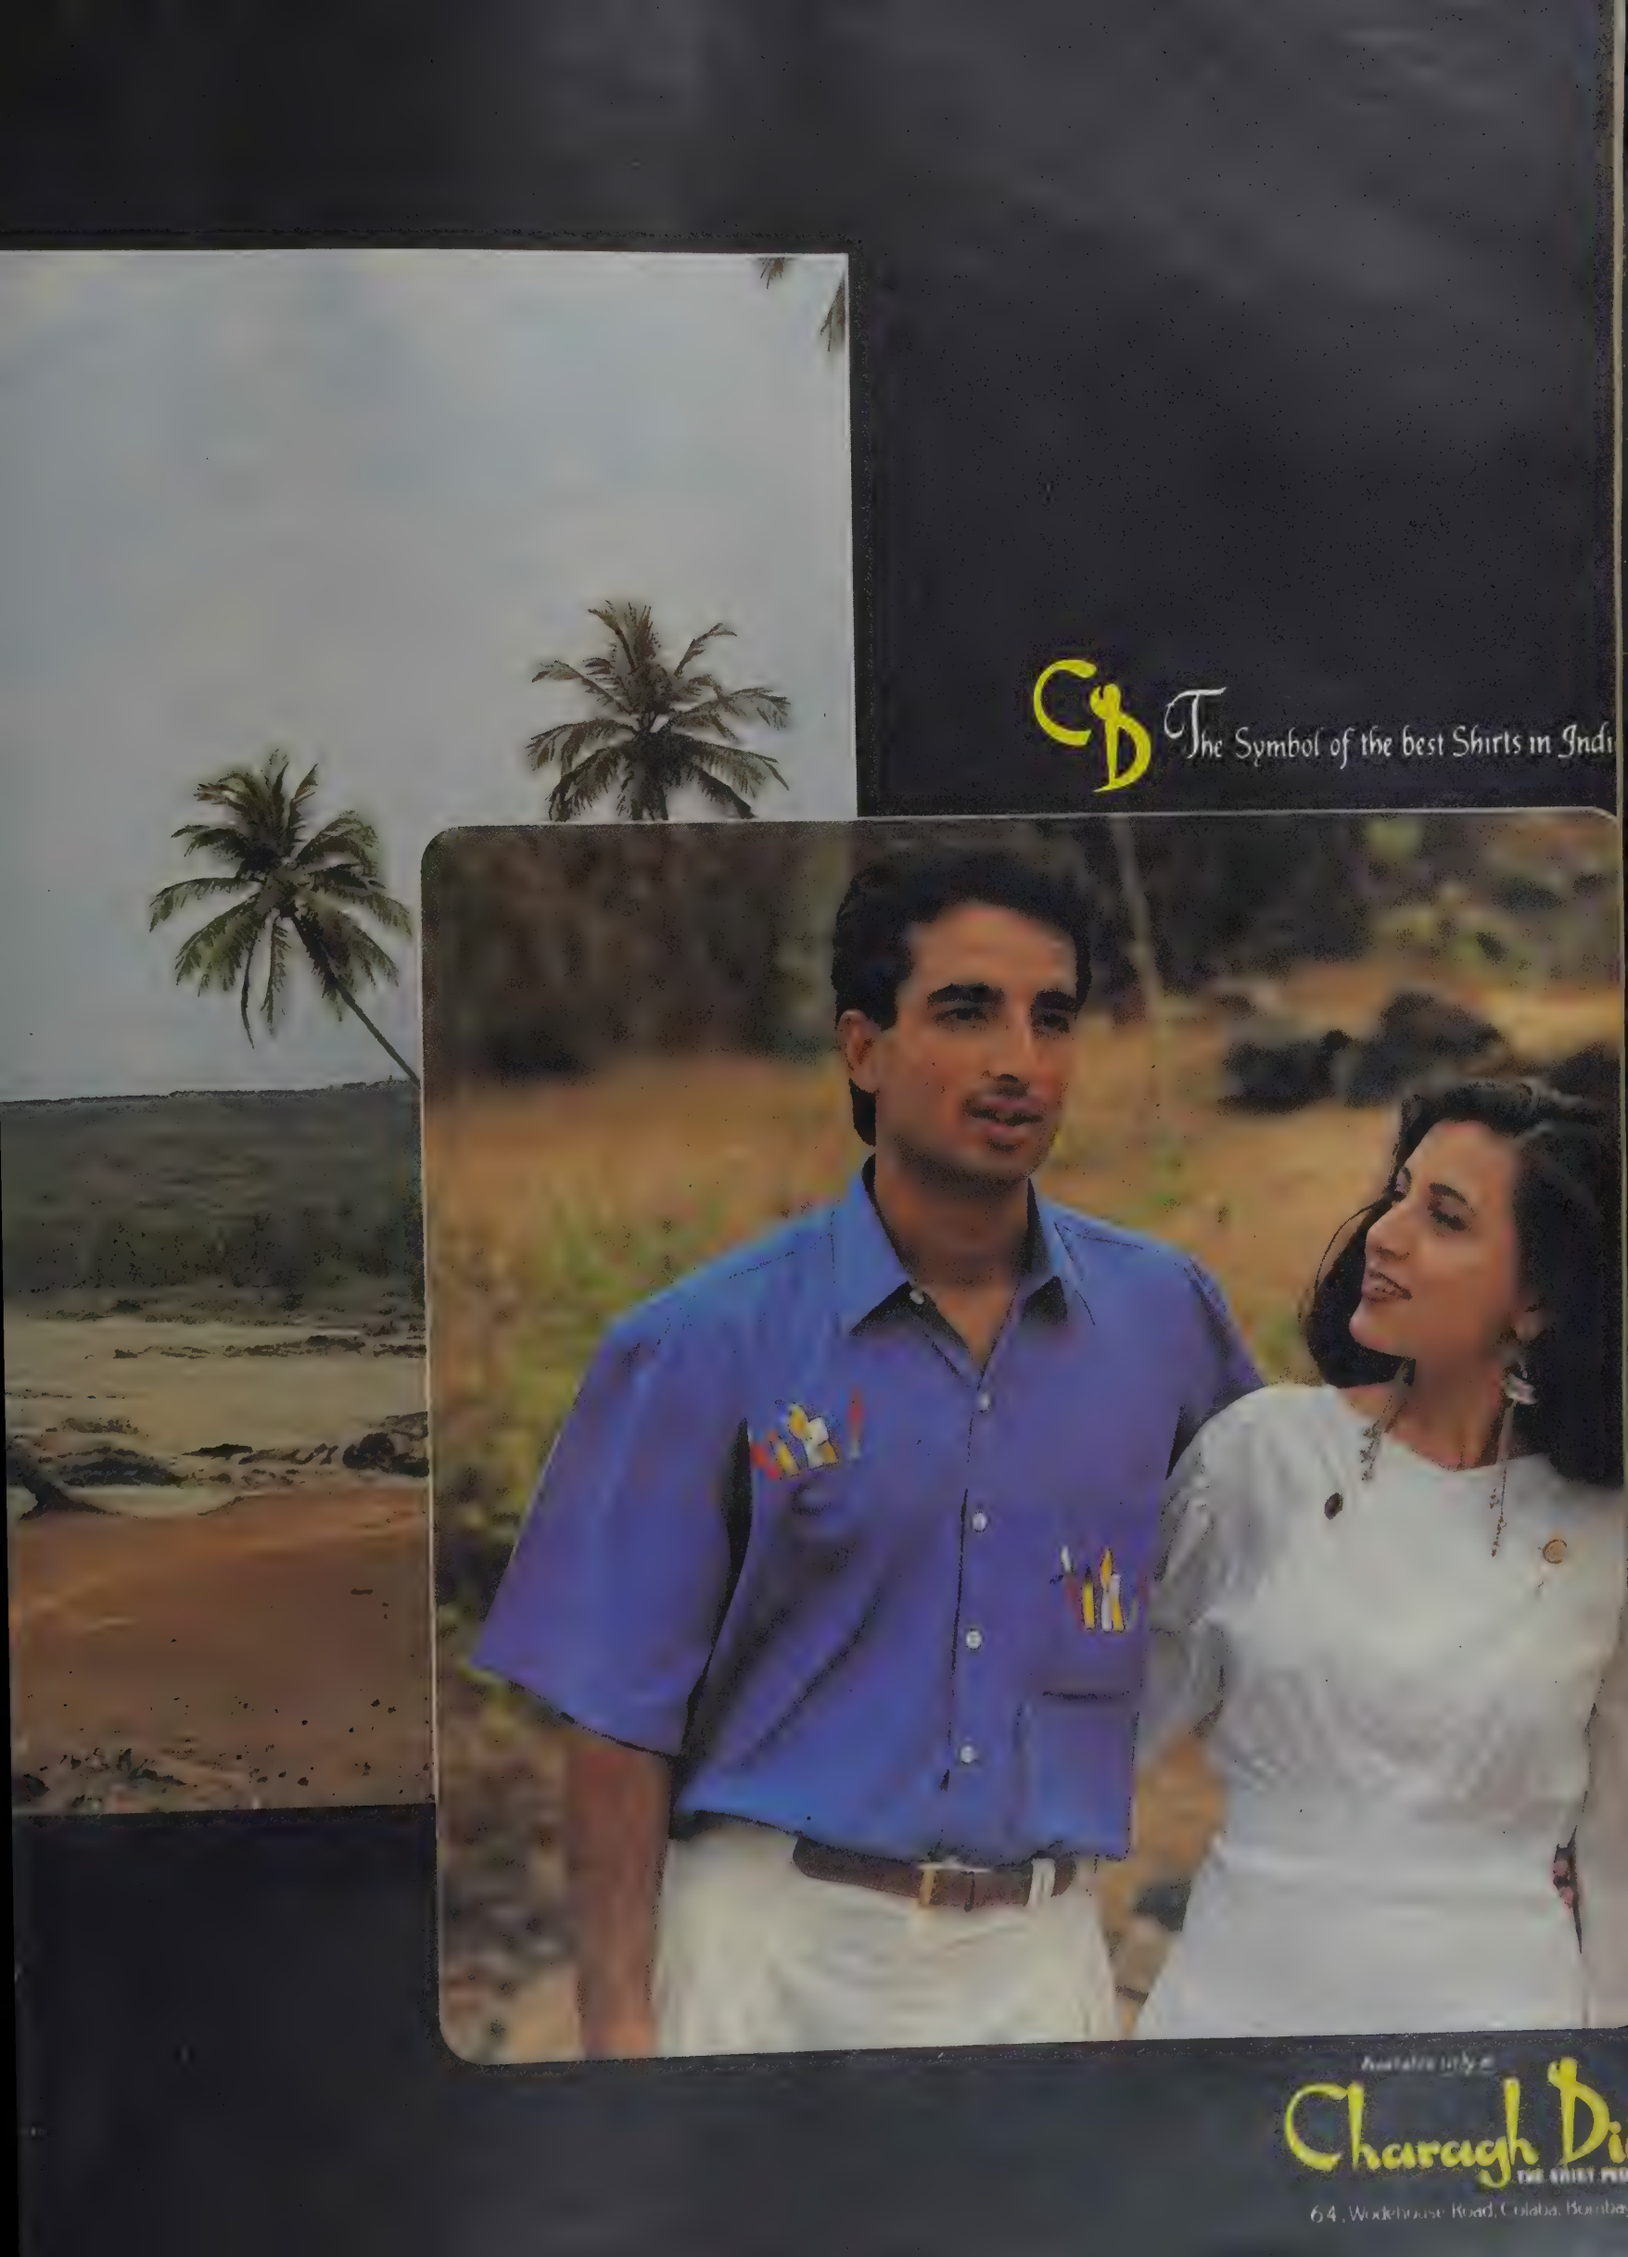
Parmeshwaran: might have wanted it differently

Asian Paints gave Jhaveri "a great deal of freedom even as a junior officer". He was allowed to do as much as he wanted to — reorganise the accounting system, appear before income tax officials, and learn more about finance. All these efforts, moreover, were recognised and rewarded. In a growing company, he feels, there is little chance of stagnating.

Bharda of TOMCO was also aware of a sense of independence as a newcomer, and it is this freedom and the recognition of his work that cemented his relationship. As Siemens' Sachdeva puts it, "If a person doesn't grow, it is not due to lack of opportunity, but because he hasn't put in the effort." In performance and people-oriented Siemens, he adds, the turnover is very low.

Deepak Tolani

Sachdeva: growth and performance are linked



Some reason to stay

Do other companies try to lure faithful employees during those long slow years up the ladder? Of course. Ganapathy received good job offers from organisations such as Britannia as far back as in 1965. He spurned them even through the stormy seventies and early eighties when Parrys went through a bad patch.

In 1969, Jagannath felt ready to leave Ashok Leyland, when he received other offers, but just then his company sent him to Europe for training. In 1974, he admits

From CD, the spray of colours and prints for the season

The Symbol of the best Shirts in Indi
Charagh Di
64, Wodehouse Road, Colaba, Bombay

the bug bit him again, when a few more offers came his way but this time, he was shifted to the exports division an "exciting new field". Jagannath admits to not starting out with loyalty to his company, but every time he wanted to leave, there was some reason to stay.

Dewan, in 1967, had offers from four other places, including Larsen and Toubro which offered more than the newly-started Atlas Copco did, but he decided that he would rather grow along with his organisation.

Ravi Patil

Kedia: 40 years with the JK group

Taken for granted

Certainly, old faithfuls are aware of the disadvantages of staying on for several years in one organisation. "It's like a billiards table," says Dewan. "If you are too close to the table, sometimes you can't see things clearly." Similarly, a new person can see some things better than someone who has been around for years. Also people who have been in the company for years tend to be taken for granted, and that it is harder for them to introduce new ideas since people tend to be more receptive to fresh ideas from youngsters. He is concerned, too, about the fact that when you grow within an organisation, it is at the cost of someone else in a competitive world.

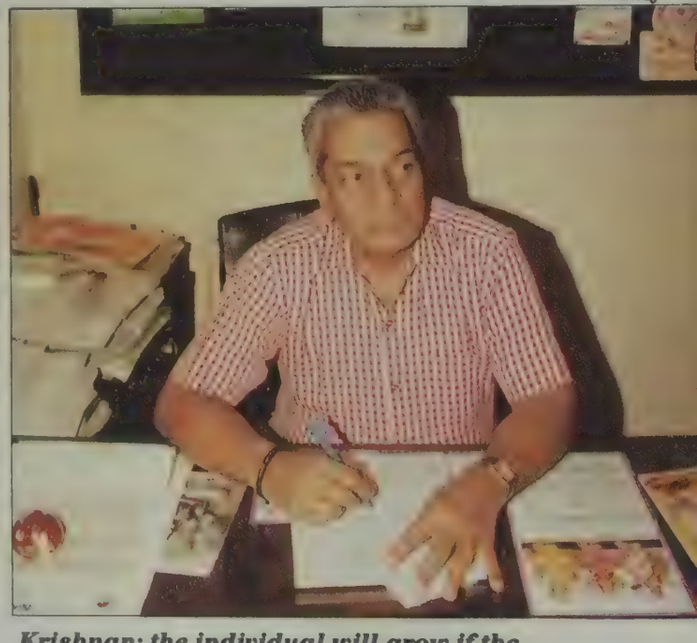
The scope for learning too, Dewan realises, can be limited. It then becomes necessary to broaden horizons by participating in management programmes and courses, and interacting with managers of other companies. Also at a senior level, he says, there could be a problem with promotions; in multinationals, top positions go to foreigners, and in family owned groups, it is family members who ride at the helm.

Despite the disadvantages, most old timers have stuck it out. "Job-hopping is like changing garages every time," declares Joshi. "If you stick to the same garage, it is good for the car, the garage and everyone. Changing the garage every time in search of a better one is funny, and a waste of time, money and energy. Why not be more careful and selective initially?" Dewan feels, "Job-hoppers switch because they don't have the courage to see their ideas through. In any company," he observes, "it takes some years for efforts to grow into visible results."

Never free of frustration

V.V. Parmeshwaran, who has been with ACC for 36 years, is one of the few who might have wanted it differently. One should quit jobs at least thrice, he feels, settling down in the fourth, with at least a 25 per cent salary hike each time. Changing jobs broadens one's perspectives and is more profitable financially, he says. Outsiders are always more appreciated and better rewarded than insiders, he opines. However, even Parmeshwaran warns MBAs that no job is free of frustration, and that they should realise they are bound to reach a plateau sometime.

"Today's environment has changed," says Jhaveri of Asian Paints, with MBAs coming into the picture. "Young people today feel that changing jobs is a quick way to rise. They are also more willing to take the risk. In any case, the risk of not getting another opening is much lower now because there are many more opportunities." TOMCO's Bharda believes youngsters are "more loyal to opportunities than to companies"; but one cannot take this as a flaw, since remuneration plays a crucial role in the first five years of a person's career.



Jagannath is not against job changes after 10-year intervals but does not approve of people switching sooner. "In such situations, the incumbent does not stay to see problems that he often creates, and is not there to solve them. The company does not derive any benefit because high fliers are propelled by the idea of self-advancement." Besides, he says, three to five years is too short a time to establish one's acceptability as a leader. One has to stay long enough to create a feeling of trust among subordinates and even peers, he feels. Dewan is more critical. "The new MBAs have higher expectations and want to grow fast without facing the grind," he says.

Two-way growth

S. Krishnan, commercial manager of Dabur India Ltd, feels individual gains should not be considered and that nothing should prevent the growth of an organisation. If an organisation grows, he reasons, the individual will grow along with it.

Most youngsters might be too impatient and ambitious to accept this point of view, preferring instead to leap up corporate ladders to reach the top in a hurry. "Most do not have a career plan," says Jagannath, "or they have plans whereby they will be burnt out within 10 years." For them, Jagannath has a word of advice. "The early years should be used to build knowledge and expertise," he says. "Learn and become acceptable." Acceptability, he says, is a quality that will always be required for success.

Subhash Bhardwaj

Krishnan: the individual will grow if the organisation grows

And if there is one thing an employee is truly confident of after a lifetime's service, it is his acceptability within the organisation and its accompanying benefits.

■ SHAMPA KAR with POONAM CHAWLA, ROOP KARNANI in Pune, DHARANI PANI in Madras and RAJESH PROTHI in Delhi

Helping Mr. Postman

If your share certificates have arrived with the folio numbers mixed up, or if they haven't arrived at all, contact the mailing agent. The agent takes care of the despatch of share certificates. And processing and sending of these certificates involves a lot of work. The hectic activities begin at the companies themselves, where the investor's name, among thousands, gets processed at a computer centre, first. These processed allotment letters and share certificates with their covering letters and folio numbers tallied, are then sent to the mailing agent, who, in turn, despatches it to the investor.

One of the agents who offers this service in Bombay is Prompt Services, Mailing Agents, who operate out of two rooms located strategically equidistant from Dalal Street, Nariman Point and the General Post Office (GPO). It is one of the few mass mailing companies catering to the financial investors' supermarket.

Alive and well

The investor's bazaar is alive and well, as the agents' laborious service indicates. One factor that has led to the emergence of this freelance despatch department is the objection raised by the postal authorities at having to segment and stamp the mountains of mail relating to public issue announcements into area divisions. And it affiliates itself temporarily to whoever is paying, be it share service departments of companies registrars or individual brokers and *dalals*.

Prompt Services, Mailing Agents was established in 1978 by Arun Ghag and Suresh Gandhi. Earlier, Ghag worked for a rolling press and Gandhi for Sharacks — Tata Consultancy Service's share consultancy division. In fact, Sharacks was their first client, when Prompt Services: Printers, Binders, Envelope Makers, (as it was then called), went into mailing. Now it has metamorphosed into an exclusive mass-mailing centre.

Prompt Services handles share certificates, interest and dividend warrants, annual reports and circulars, among other things. Among its clients are: Asian Paints, Mahindra & Mahindra, Voltas, ACC, UTI, 20th Century Finance Corporation and Champaklal Investments and Finance Corporation. The registrars they deal with include Sharacks, Datamatics and MCS Ltd. Prompt has undertaken prestigious assignments like the Tata Consultancy UGS Scheme and UTI's parents and children's gift growth schemes.

Today Prompt's maximum daily capacity is 100,000 ordinary and 20,000 registered envelopes. The business, predominantly labour-intensive, has low overheads. Prompt has four franking machines (one electric, three manual), one van, and 40 workers, the number of temporary workers increasing by 75 per cent depending on the job. "More often than not," says Navnit Parekh, general manager, "stringent traffic regulations compel us to hire other vehicles."

Accuracy and speed are required in this 'assembly line' job. Vigilance too, as folio numbers require cross checking and collating. The actual processing (whether it be certificates, dividend warrants or allotment letters) includes machine and manual cutting of computer-processed forms, sealing with a company seal, affixing revenue stamps, collating foliowise, attaching relevant forms and brochures, putting into envelopes, franking for ordinary and registered deliveries and finally delivery to the GPO.

The service has an assured market, as its business grows concurrently with the growth in the capital market. Issues worth Rs.5,716 crore were raised in 1989-90 (over Rs.1,750 crore in 1985-86). As Gandhi put it, "Our business is growing day by day, as new firms are licensed for market borrowings and new issues are floated virtually everyday."

Occasionally, the company's premises prove inadequate for this space-consuming business. Sometimes, a client provides space as Datamatics did in promoting Bank of India's Boinanza. Here 100 people worked round the clock at the MIDC premises. Time is of the essence, since public issue forms should reach potential buyers at least a week before the closing date.

Prompt's pricing structure depends on the volume, not value, of the public issue and the labour and time involved. The approximate rates per thousand are: Rs.60 for issue applications, Rs.70 for allotment letters and Rs.40 for affixing revenue stamps and a company seal. Prompt provides envelopes if required and free transport of documents. It does not provide address lists nor facilities for computerisation, though it may do so some time in future.

In Bombay alone, three mailing agents cater to the requirements of approximately 131 companies, 24 registrars and 45 merchant banks, the other two being Ganesh Book Binding Works and Mass Mailing Service. Certainly, the company has every reason to be cheerful. Its business has grown from a daily average of 10,000 envelopes (ordinary) and 1,000 registrations in 1978 to 60,000 ordinary and 12,000 registered envelopes today. Its monthly turnover, Rs.18,600 in 1978, has burgeoned to Rs.1,24,200 in 1990. And if the capital market trends continue, profits may go up even further in future.

■ MRIDULA MALUSTE

Gandhi (left) and Ghag: business growing day by day

THE MIKADO GROUP

Quietly does it

What started out as a cloth retail shop is, ten years later, five textile factories and a turnover grown fifty times. All it took was three families working together and a dash of caution

Last month, Bharat Kumar Modi of Kusum Ingots was looking for a buyer for his two Indore-based textile units, and his search ended with Mikado, a relatively unknown Bombay-based group of companies. Mikado acquired from Modi a weaving unit with 124 looms and a processing unit with a capacity to process 5 million metres of fabrics a year. With this acquisition, Mikado's total fabric production capacity will go up to 6.5 million metres from the present 4 million and the processing capacity will go up to 12 million metres from the present 7 million metres. "Our group turnover will go up to at least Rs.70 crore this year from Rs.50 crore in 1990-91," says Vinod Gadia, the 35-year-old managing director of the Mikado group. By textile industry standard, Mikado can now certainly be considered a medium-sized producer of textiles. Although, the suitings and sarees marketed under the "Mikado" brand are well-known in the lower and middle price category, the group and the people behind it are not much known to the non-textile world.

Closely knit

The group consists of three families, who have worked closely for nearly a decade now. The group's chairman, B.K. Modi (58) is Gadia's eldest sister's husband and based in Calcutta. P.D. Chamria (44), the finance director, is a chartered accountant by profession and is Gadia's wife's brother. The main driving force behind this group, however, is Gadia himself. Gadia, son of a grain merchant in Rajasthan, left his father's business at a young age to start something on his own. "Ever since I graduated at the age of 19, I was thinking of diversifying," he recalls. "The foodgrain business was too speculative and there was not much scope to grow." In 1977, Gadia left Rajasthan and set up a small fabric retail shop in Poddar court at Calcutta with an investment of about Rs.30,000. Gadia moved to Calcutta because his sister's husband, B.K. Modi, who was already based there, joined hands with him. "We sold fabric worth Rs.7 lakh in the first year itself," says Gadia. That was just the beginning. Two years later, Gadia took a shop in Calcutta's Barabazar and got into the wholesale business. By 1981, fabric sales touched 200,000 metres a year, worth about Rs.1 crore. But Gadia was not satisfied. "We were still buying and selling and nowhere near manufacturing." Gadia's ultimate aim was to set up a production base. To pursue this objective, Gadia moved to Bombay in 1981. Initially, he got his fabrics manufactured by third parties on a job-work basis as he did not have enough funds to set up his own unit. Around this time, the brand name "Mikado" was introduced and the fabrics were made with the design and yarn supplied by the group. In a matter of just three years, the procurement and sales of the fabrics had gone up to 600,000 metres. To keep pace with the growth in sales the group gradually set up its own marketing network with selling agents and dealers all over the country. A major turning point in Mikado's growth came in the year 1984 when the group went into manufacturing. That year, Amitex Fabrics, bought over a sick textile unit at Vapi (Gujarat) with eight looms, at a total investment of Rs.15 lakh. This unit now has 40 looms and produces 500,000 metres of fabrics every year.

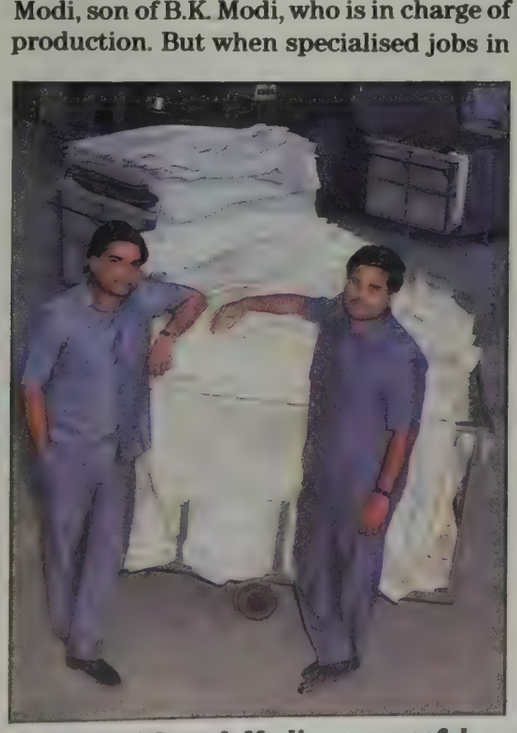
Rapid growth

Once in manufacturing, the group grew rapidly. Between 1984 and 1990 it set up five other manufacturing units with a total investment of about Rs.5 crore. Two large units to come up in this period were Mikado Suitings Pvt Ltd (in 1987) with a capacity to make 1.5 million metres of suitings and Mikado Fabrics Pvt Ltd (in 1990) with a capacity to make 1.8 million metres of suitings. With these two units, the group also became a major player in the textile industry. Today, the group has five manufacturing units (excluding the mills acquired at Indore last fortnight) — three in Tarapore (Maharashtra) and two in Vapi. Altogether, the group has 172 looms producing about 4 million metres of fabrics (it buys another two million from outside) and one processing house

Photos by Deepak Tolani

Gadia, Modi and Chamria (from left)*: three families one group*

with a capacity to process 7.2 million metres of fabrics per annum. The largest company in the group in terms of turn-over, is Shree Shyam Suitings, which produces 1,000 tonnes of high value fancy synthetic yarns every year. This company also markets the bulk of the fabrics produced by the other companies in the group and had total sales of Rs.30 crore last year. The estimated turnover of the group for the year 1990-91 was Rs.50 crore. The group's turnover has grown 50 times (from Rs.1 crore in 1980) in just ten years. Interestingly, the rapid growth has come about despite a very cautious approach by the group. Every time he ventured into a new project, Gadia first made sure he had something to fall back upon. The wholesale business, for example, was started when it was clear that at least a third of the sales could be routed through the retail shop. Similarly, when the wholesale sales figures reached 200,000 metres the group stepped up the procurement of fabrics to 600,000 metres. And, it was only when the marketing of fabrics stabilised at around 2.5 million metres in 1986, that the group's production was raised to four million.



The yarn plant at Tarapore: high value addition

Risk minimised

The same strategy continued with yarn production and processing of fabrics. "It was a deliberate policy," says B.K. Modi. "We made sure there was always a cushion in case anything went wrong." Adds Chamria, "This is the simplest way to reduce the risk element. If your own channel takes care of the cash break-even of any new venture, then the risk is minimised." In financial management too, Mikado's approach was conservative. It spaced out new projects in such a manner that the funds accrued from the profits kept borrowings at a very low level, although some of the group units were set up with financial assistance from the State Industrial and Investment Corporation of Maharashtra (SICOM). So far, the group has taken four loans from SICOM and is rated quite high on creditworthiness. "Their loan repayment is regular, implementation of the projects are on time and there are no cost overruns," says Dilip Patel, senior manager, SICOM, who has been dealing with the group for the last four years.

Now that the group has grown in size, the conservatism is making way to professionalism. Although at least half a dozen young members from the families are involved with the group, they have all received a formal education, at least up to graduation. They are also put through a rigorous seven years of on-the-job training and are treated like other employees. "We make them work in the plant, on the machines and in shifts," says Suresh Modi, son of B.K. Modi, who is in charge of production. But when specialised jobs in manufacturing and marketing are called for, the group hires professionals and gives them a free hand.

Gadia and Suresh Modi: a successful combination

Going public

The group is also likely to go public soon. The plan is to form a new company, to be named Mikado Industries, after transferring some existing units to it. The company will take up some new projects and, to raise the funds needed, offer at least half its equity to public. "It's not final yet. We may go public at the end of this year," says Gadia. The growth plan in the next three years is quite clear. On the anvil are a modern weaving plant at Tarapore with 48 rapier looms, a yarn texturising unit at Surat and a blended yarn spinning unit (location yet to be decided). The total cost of these three projects together is around Rs.38 crore. "Another Rs.5 crore will be spent in expanding other units," says Gadia. With these projects, the group's total turnover is projected to go up to Rs.160 crore over the next three years. Gadia's ambitions, however, don't end there. He plans to go in for high quality worsted fabrics for the upper end of the market and also to diversify into core sector industries like plastic raw material, steel and cement. These may seem like grandiose plans but given the way Mikado has evolved and grown over the years, the chances of their fructifying are quite high.

SUMMER TRAVELLER

When the pink in your cheeks is only because of the heat and your brain goes fuzzy, you know it's time to get away. Beaches and mountains, rivers and forests... India is full of them, whichever way you turn. So is the rest of the world, if you'd rather leave the country.

Business India *takes a look at some destinations that are perennial favourites and at other less well-known ones. All are guaranteed to bring back the sunshine in your life this summer.*

EUROPE BY RAIL

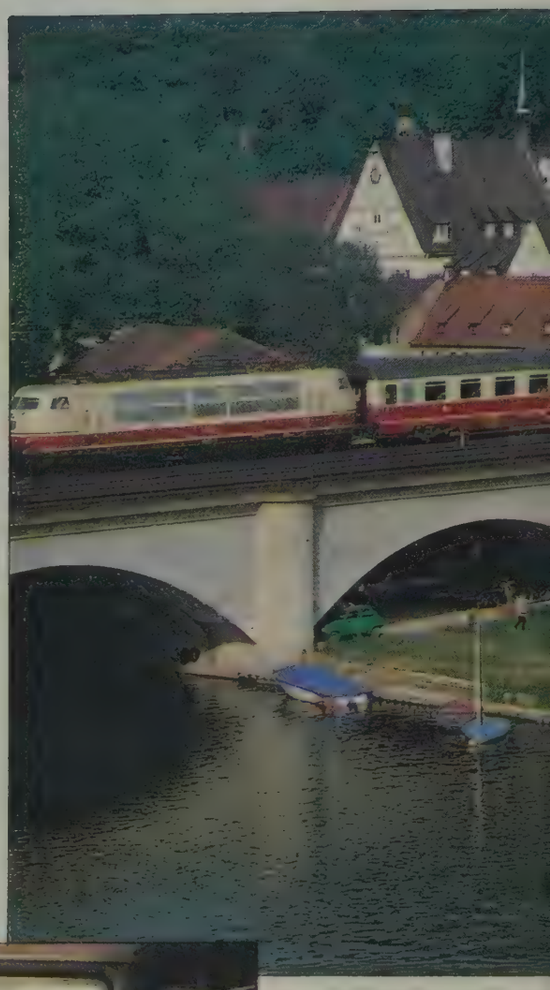
A single woman's sojourn

What happens when your darling daughter, just out of her teens, decides to shoot off to Europe all by herself? Especially if it is her first trip abroad? What happens is you get hot under the collar — and let her go.

Everyone thought I was mad when I bought a Eurail pass from my meagre savings. "She doesn't even know how to check in," observed an anxious relative at the airport in Bombay.

Most people get very protective when a girl travels alone. On the flight to London, my first stop before the train sojourn, a suave gentleman asked where I'd be staying. "I've no idea," I replied. Horrified, he introduced me to an Indian lady on the flight, who promptly invited me to her home in London. I was thrilled — until she threw me out of the house five minutes after we entered her door. "How dare you talk to the bus conductor?" she glowered, referring to my query on the London Transport bus about weekly passes.

You learn a few lessons about human nature when you travel, but what do you make of a woman who kicks you out, then sends you off with a warm hug and a five-pound note for a cab?



Travelling alone is a great way to meet people. The hostel in the middle of Holland Park was full of travellers on a budget, all young, all restless and all strangers in the night. The hostel itself — and perhaps the jet lag was partly to blame — felt cold and unwelcoming. But most people know someone — or of someone — in London and Lady Luck was smiling; a half-English cousin I'd never met before invited me to stay as soon as I rang her doorbell.

But getting comfortable in a home is hardly what travelling is all about and so, four days later, I was on a slow night boat to Amsterdam. From now, I would be truly on my own. Standing at Amsterdam's boat terminal surrounded by bags, I hadn't the faintest idea where to go. A young woman came up with an album of photographs. "That's our hotel," she said. "If you like it, we'll pay for your tram ticket." The Caravanserai, as it was called, was full of life — and had a gigantic portrait of Bhagwan Rajneesh at the entrance. Suddenly, Europe began to feel like home.

Except that home isn't always as beautiful — or as threatening — as Amsterdam can be. On a wine-and-cheese boat ride past gabled 17th century roofs along Amsterdam's canals, I met an Egyptian. "Indians and Egyptians have so much in common," he declared. "Shall we get together later to discuss our cultures?"

Nice, but it was European culture that interested me at that point, and the Eurail pass promised interesting opportunities. From Amsterdam, there was The Hague, 63 km away by train; Alkmaar, where weekly cheese auctions are held; Volendam and Marken, two traditional picture post-card Dutch towns.

Belgium, meeting point of Latin and Nordic cultures, was next. The train to Brussels, 150 miles from Amsterdam, was smooth and efficiently run, as are most other European trains. The station was well-equipped with food and drinks, baths and enquiry counters. The local transport was becoming easier to handle with time. What I hadn't bargained for was that French, German and Flemish were the official languages. Consequently, I got lost, trudging for one and a half hours with three bags, finding myself back every so often at the spectacular Grand Place with its medieval town hall. In no shape to appreciate beauty

Extensive network

The extensive Eurail network covers more than 100,000 miles of rail lines across 17 European countries. Trains are frequent, and you can save on hotel accommodation occasionally by travelling in sleepers or couchettes. Light meals and refreshments are available on most. Free or discounted fares are available on ferries, steamers and buses if you have a Eurail pass.

Some sample journey times: Amsterdam to Cologne — three hours; Brussels to Paris — two-and-a-half hours; Stockholm to Goteborg — four hours; Barcelona to Madrid — six and three-quarter.

There is a choice of five passes to suit individual needs, with validities ranging from 15 days to three months: the Eurail Saverpass, in which you get 15 consecutive days of unlimited first class travel between 1 October and 31 March. Between April and the end of September, you need three people in the group to get a discount. The Flexipass Saver is similar to Saverpass but you travel on fewer days over a longer period — seven days of travel over a two-month period. On the

Travellers' tips

Travellers' cheques, instead of money, of course, are invaluable, but safeguard your suitcases too. Buy a tough chain and a lock, and secure your bags to something firm, such as the leg of your seat or the luggage rack. This is particularly useful if you are travelling alone, and need to visit the rest room, or shut your eyes while on the move. Once, in Rome, after checking out of the hostel, I tied my bag to a lamp post for half an hour while making a call. It was still there when I returned.

The theory is that you can save on hotel accommodation by travelling nights on the train. In reality, distances are too short to do this. Do join a youth hostel association if you are on a budget. Alternatively, instead of checking into hotels, look for pensiones which are cheaper and more homely.

Varieties of bread and cheese are lifesavers and there are more than enough parks where these can be eaten. If you need a hot meal but don't want to spend a bomb, consider a soup which comes with a lot of bread and butter. Check, however, if the restaurant has a cover charge before you enter.

Pick up the local words for "Please" and "Thank you". With well-connected metros, another useful sentence to know is: "Where is the station?" "*Ou est le gare, s'il vous plait?*" in France came in very handy every time I got lost. And never mind if you don't necessarily understand the local language; once you've got your request across, the verbal answer is usually accompanied by gesticulation.

London Transport passes are now available in India through Raj Travels. The advantage is you can buy it in rupees.

After a wonderful trip, you quickly come down to earth, courtesy a customs officer. One way to handle this, a friend advises, is to smile sweetly and announce: "Of course I have something to declare." Then pause before you say: "Let's see. One nail polish, a lipstick, no maybe two lipsticks, and what else... er, a couple of colognes...."

If you can keep this up for five minutes, chances are, he'll tell you to stop wasting his time!

of any kind by then, I collapsed into a hotel room that burned a hole in my pocket.

Delicious Belgian chocolates made up partly for the misery, but I decided to leave for Germany within 24 hours. The Eurail pass made flexibility possible, and I was debating whether to get off at Cologne or Dusseldorf. Eurail travel is a wonderful way to make friends, with other travellers and with local people, and I got talking to an Italian called Tatiana. "You'll get to Cologne at 2 am," she exclaimed. I was aware of this and had vaguely thought I'd spend the rest of the night in the station's waiting room. Tatiana would not hear of it; she took me to her boyfriend's house in Dusseldorf, where she was to move in that night. The boyfriend, Maximilian, turned out to be half-Indian, complete with grandparents in Bombay. One night, in a pub, a drunken man refused to leave me alone; Maxi, huge as a wrestler, warned him to lay off. "Indian girls are very shy," he said, "so don't you trouble her."

It was on the train to Italy that real protection was required; think of Italy as Europe's India, with overcrowded transport and greedy eyes at every step. Getting seats on any other train was easy, but the one to Rome was jampacked with Italians. The only seat I found on this overnight train was in the smoker's compartment. For some reason, these compartments are always full of leery weirdos popping into corridors for a drink, with cigarettes in hand. Certainly your purse — and parts of your anatomy — would be pinched here.

Other journeys were much more pleasant. After Milan, Italy's centre of commerce, came Bologna, with Europe's oldest university, founded in 425 AD. By train, it was just an hour and 45 minutes away at a distance of 219 km. From Rome, it was a three-hour journey to the Leaning Tower of Pisa. From Munich, it was just two hours and ten minutes to Innsbruck, Austria, 172 km away. You could explore mountains from the comfort of a cable car here. From Vienna to Salzburg, Mozart's birthplace, it was three hours and 23 minutes. Plus, there was the pleasure of the extras that that come free with the Eurail pass — the Rhine Cruise, Lake Wolfgang in Vienna, Lake Geneva... Filigree Florence, scenic Switzerland, perky Paris... they made for beautiful memories.

Surprisingly, I was rarely asked for visas while crossing the borders. But several times on the same train, the ticket would be checked. When a uniformed young man woke me up at 3 am, I yelled, in what I hoped was admirable French: "My ticket's been checked thrice already. Get lost." He gave me a quizzical smile and said: "French National Police. Passport, s'il vous plait." The smiling gentleman also demanded to know how much money I had; he wouldn't have smiled if he'd had reason to believe I was going to stay beyond what the visa allowed.

Considering the way I'd yelled earlier, he could have arrested me anyway, or at least said a few rude things in return. But only a French official could step off the train — and then blow a kiss your way.

Europe, as I kept discovering, was full of surprises — and what better way to experience them than by rail?

■ MENKA SHIVDASANI

Eurail Flexipass you travel only on days you want within a specific period, with nine days to travel within 21 days. In India, a five-day pass within 15 days is also available. Then there's the Eurail Youthpass, for those below 26, with second class travel — which in Europe is very comfortable. Plus, available in our country alone, is the Youth Flexipass Saver, with low second class fares and 15 individual days of travel within a three-month period, provided there are at least three people in the group.

Travel Corporation of India is Eurail's special representative in India.

Say 'good morning' in Frankfurt.
Have a good day anywhere in Europe.

On Lufthansa you arrive in Frankfurt early in the morning. At just the right time to begin your day. Or catch your connecting flight to any major city in Europe or beyond. It's all part of Lufthansa's commitment to help you meet your growing business commitments. Swiftly, relaxed and on time.

Lufthansa

SWITZERLAND

In a class apart

This is a unique land of contrasts — from the snow-covered Alps to lush valleys, dangerous gorges and glaciers to tranquil streams and lakes, from Gothic cathedrals and castles and traditional chalets to chic shopping arcades. And the best part is, no matter where you are in Switzerland, you are never too far away from any of these diverse facets of this jewel among nations.

Switzerland, land of secretive bankers and superlative chocolates, is small — just 41,000 square km. The entire distance from the east end to the west can be covered by rail in 5 or 6 hours; likewise north to south. From Geneva, for example, Lausanne is 35 minutes away by rail, Berne about two hours, and Zurich, three hours. With a well-planned itinerary, the adventurous traveller can visit a city a day.

Though the distances are small, the fares are pretty steep. Consequently, the ideal, inexpensive, way to travel around is on a Swisspass (unless you are travelling by Eurail). An individual second class return train ticket from Geneva, for example, to Basel, Zurich, Lausanne and Berne, would total about Swiss Franc (SF) 250. But an eight-day Swisspass would cost just SF 195, allowing unlimited travel by rail, bus and boat. The 15-day and 30-day Swisspasses cost SF 235 and 325, respectively. The first class fares are SF 280, 335 and 465. The Swisspass includes travel into the Alps on well-known trains like the Glacier Express, Bernina Express and William Tell Express, the last named after the Swiss national hero.

Visit Geneva only if you want to buy a cuckoo clock, the traditional Swiss memento, as it's not as readily available elsewhere and is more expensive. However, once there, the visitor also cannot but stroll around the harbour of Lake Leman, amidst which rises a 460-feet high fountain and beyond which Mont Blanc can be seen on a clear day. Close by, near the Flower Clock on the promenade, is Geneva's banking district, with row upon row of well-known international banks. Of course, the United Nations' imposing European headquarters are also worth a visit.

Like Geneva, Lausanne too borders on Lake Leman. If there is time to spare, the visitor should stroll down the cobbled slopes of the city, past the Gothic cathedral, right in the middle of a busy street, to the quay at Ouchy, for a panoramic view of the harbour.

Just over an hour away from Lausanne is Montreux, where the chateaux du Chillon, immortalised by Lord Byron in his poem, *The Prisoner of Chillon*, is located on a ledge jutting into the lake which stretches for miles around. Though not very big, the turreted, brown stone chateau is definitely worth a visit, and the journey to Montreux itself is an experience. The train winds past terraced vineyards, rising above the lake on one side and the Alps on the other. Vevey, headquarters of chocolate giant Nestlé, also flashes past on the way.

From Montreux, the next halt could be Gruyeres, a typical alpine town, where the well-known cheese of the same name is made. The dairy is open to visitors.

Among standard tourist halts like Geneva, the Swiss capital, Berne, is often given the miss. It should not be. More picturesque than the other two cities, Berne has a distinct identity of its own. Built on the rock-face hewed by the river Aare, Berne is famous for its medieval shopping promenade, where street upon cobbled street is uniformly lined with sandstone buildings with red flowers on every window sill. The city has nearly 100 fountains, many of them at short intervals on the promenade, where an ancient clock tower is also a landmark. So is the bear (heraldic animal of Berne) pit and the houses of Parliament. Just about half an hour away, Fribourg, twin city to Berne and built like it on a ravine, also has a haunting character of its own.

Left: ***A breath-taking land of contrasts***

Below: ***Picturesque Zurich, full of secretive bankers***

Switzerland is not renowned for its museums and art galleries, but the National Museum in Zurich does house a good collection of old masters. Fraumunster, an ancient church in the old quarter, also has an unusual collection of stained glass windows designed by Marc Chagall.

A holiday, whether in summer or winter, would be incomplete without a trip into the Alps, especially on the innumerable ropeways and cableways that Switzerland is famous for. Perennial favourites, of course are jaunts to the fashionable ski resorts like St. Moritz and Gstaad or to Interlaken for its proximity to the Jungfrau, Zermatt and the Matterhorn. Also, from Engelberg, a 45-minute ropeway trip goes headlong into glacier country Titlis.

What better way to escape an Indian summer?

■ INDIRA KHANNA

This week-end on business, make memories together. At the Executive Club.

*We'll fly your wife out to join you.**

As a corporate leader, one tends to overlook some things.
And precious ones at that.
Like week-ends — spent away from home and out of town — on business.
Frankly, we think it need not be so.
And so, when you jet out to the Executive Club at Delhi, Bombay, Bangalore or Madras, we'll fly your wife out to join you.
At the finest business address in town. For the week-end. At our cost.*
So that the two of you can make memories...
...Together. At the Executive Club.

VISIT INDIA
TOURISM YEAR 1991

HTA 6927

LONDON

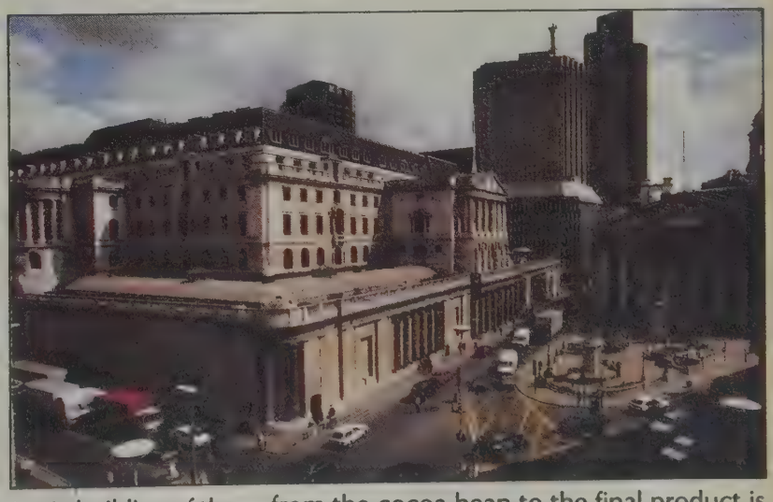
For work and play

Come summertime and it's suddenly the season for that all important overseas 'business trip'. Corporate managers and businessmen flock to London like so many homing pigeons. Beyond the usual shopping and sightseeing circuits there are places that even businessmen on the move may find it well worth their while to visit.

British industry is visitor-friendly and a number of companies and commercial establishments have sectors that are on public display. Some are closer at hand in Central London itself. Others could make for a rewarding day-out trip in the countryside. Depending on your field of interest, there is a wide variety from which you can take your pick. Most are open year round and no prior appointment is necessary unless it's for a group of 20 or more people. Here is a selection:

Lloyd's of London: The world's leading insurance market is housed in an architecturally awesome steel and glass structure that towers above Lime Street in the city of London. It bears no resemblance to Edward Lloyd's coffee house where the business had its origins over three centuries ago.

Almost anything can and has been insured at Lloyds, from Betty Grable's million dollar legs to Bruce Springsteen's vocal chords (for £3.5 million). A consignment of dead rats to Greece was covered for £110,000 and so was the Premier Rose diamond (for £5 million) whilst being shipped from South Africa to New York.



Such covers are possible primarily because of the unique characteristic of this institution whose members have unlimited liability extending to their personal wealth.

Each Lloyd member known as a 'Name' — and there are 28,700 of them — belongs to one of the 400 underwriting syndicates that are allowed to operate here. The Names do not deal directly with the insured but through brokers. (There are 260 brokerage firms accredited with the Lloyds Council.)

A glass lift outside the building takes the visitor up to the viewing gallery. The 93 metres high atrium is a breath-taking sight and looking downwards you can see the marble floored underwriting room. Even in the 21st century surroundings, history has been carefully preserved. A wooden rostrum houses the ancient Lutine bell that is still rung for an important announcement — two rings for good news, one for bad.

The Bank of England Museum: Most visitors to London are not aware that the central Bank has a museum that explains in fine detail its origins and activities. Most Londoners themselves are oblivious to this fact. Not too far from Lloyds is the majestic building of the 'Old Lady' of Thread Needle Street, as the Bank is commonly called.

Above: *The marble-floored underwriting room of Lloyd's seen from a 93-metre height*

Right: *Bank of England: a walk into history*

At the entrance, visitors are greeted by the Bank gatekeeper dressed imposingly in a salmon pink jacket and red waistcoat. Entrance is free but a £1 payment can get you a tape recorder and earphones for a guided tour commentary of the place. As you enter you step right into history — the reconstructed version of the eighteenth century banking hall, the bank stock office, originally built by architect Sir John Soane. A scene from the past is recreated here. Behind the mahogany counter are lifelike models of two bank clerks attending to a lady customer wearing the costume of those times.

Displays of memorabilia trace the history of this impregnable institution that presides over what is today a sophisticated financial centre. A silver tankard presented to Sir John Houblon, the bank's first governor in 1696, the various *avatars* of the pound note and, occupying pride of place in a glass show case, the gold bars that the Bank owns. The last stop on this journey is at an interactive video screen that offers a lowdown on the Old Lady's role today in monetary policy, managing the country's foreign exchange reserves, printing money and monitoring financial markets.

Cadbury World: The world's best known chocolate factory opened its doors to the public in the summer of 1990 when it set up a permanent exhibition on the chocolate experience. A trip to Bournville, just outside Birmingham, can be fascinating for the whole family, especially the kids. The chocolate story which uses three dimensional images and audio visuals starts with the Aztecs in Central America who worshipped the chocolate god and concocted a spicy chocolate drink — one cup of pure gold.(Visitors can sample this too!)

The exhibition also includes a demonstration area where the production process from the cocoa bean to the final product is shown. Since January this year, Cadbury's high speed packaging plant is on view too. The smell of chocolate has a high of its own. In any case, your head is reeling already with amazing chocolate facts such as: the amount of money consumers spend on Cadbury's Dairy Milk each year could buy 1,000 Rolls Royces!

■ NAAZNEEN KARMALI

NEPAL

More than a hippies' paradise

Unfortunately, or fortunately, Nepal is still a hippies' paradise in the minds of many. Unfortunate, because that makes most people bypass Nepal as a tourist spot. But, also fortunate because that means the crowds have yet to discover Nepal — a paradise for the adventurous, a trekker's dream, home of the Himalayas. Nepal has its glitzy attractions like the Casino Nepal at the Soaltee Oberoi, but for the discerning traveller looking for action or mystery, this country has it all. And the hippies are disappearing, like the values and times they stood for.

Right: *Tigers are rare,but rhino-watching has its excitement too*

Far right: *Tiger Tops Jungle Lodge: a natural version of five-star luxury*

Below: *Pleasure of another kind at Casino Nepal*

The country's name derives from Ne, the name of a wise *rishi* of some bygone age, and *pal*, a Newar word meaning "the land protected by". Nepal — the land protected by the wise Ne.

Located between India and China, this land-locked country looks like a humped rectangle measuring 845 km from west to east and between 120 and 200 km north to south. Wrapped in the mists of the Himalayas and time, Nepal sprang, according to myth, when the god of wisdom, Manjushri, saw the valley flooded and struck the Chhobar rock with his magic sword. Water flowed out through this, thus saving the population. To this day, the Chhobar Gorge is a place of worship and a magnificent tourist spot.

Most visitors from India take a Royal Nepal Airlines flight from Delhi, though mystical Varanasi makes a good stopover too. Kathmandu Valley, as you touch down at Tribhuvan International Airport, is surrounded by breath-taking snowcapped peaks. The valley has three cities of historic and cultural interest — the capital Kathmandu; Patan, 5 km from Kathmandu on the southern bank of the River Bagmati; and Bhaktapur, 14 km away from the capital and the home of medieval art and architecture.

Basantpur Square in Kathmandu houses the once famous Freak Street, which is now being abandoned by low budget tourists in favour of Thamel. Interesting souvenirs may be bought in Basantpur, such as the *kukhri*, which is used for everything from sharpening pencils to slaughtering goats. But be warned; astute vendors, it is said, buy junk and sell 'antiques'!

Further up is the Palace of the Living Goddess, a structure with intricately carved wooden windows from which the little girl *Kumari* peers out for the benefit of tourists every so often. "Entry for Hindus only," said a board at the foot of the staircase inside. I went upstairs for face-to-face contact with the carefully chosen child goddess from the Newar Buddhist clan, before whom even the king bows down.

There she was, this incarnation of Durga, *kajal* across her forehead, frowning, pencil in hand, over an exercise book. Seeing the unwanted visitor, she quickly sat in regal cross-legged pose, disdainfully refusing to answer questions. Further up, in a temple, eight decked-up little girls were being 'married' to a *bel* tree. This would prevent them from being considered widows even if their real husbands died in future, one mother said.

There is a sense of holiness everywhere. Six-and-a-half kilometres west of Kathmandu's centre, on the top of a hill, the Buddha's eyes watch you from Swayambunath. One of the oldest stupas in the world, its foundations are said to date back more than 2,000 years. The present structure, built during the seventh century, has a lofty conical spire with a copper gilt pinnacle set against a mountain backdrop. On all four sides of the bases are painted the Buddha's all-seeing eyes.

One of the oldest Buddhist cities in the world is Patan, "the city of the thousand golden roofs". Patan's Durbar Square is full of ancient palaces and shrines. It also houses the ancient royal palace, the oldest part of which was built during the rule of King Narsingha Malla, between 1620 and 1661. One temple, guarded by two non-descript statues of lions, is the stunning Golden Temple, said to be the most beautiful in the valley. *Patakas*, gilded metal banners hanging from the roof of the inner sanctuary, are supposed to guide prayers to the abode of the gods, or the gods themselves down to devotees.

The third city in the valley, Bhaktapur, is shaped like a conch shell and covers four square miles. At Bhaktapur's Durbar Square is the Palace of 55 Windows, a splendid example of 18th century architecture. Close to the nearby Vatsala Temple is a gigantic "dog barking" bell. Its sound was supposed to chase away the god of death, ensuring the king a long life.

On the right bank of the Bagmati is Pashupatinath, an important pilgrimage site. Non-Hindus are not allowed in the temple

kilometres west and a half-hour flight from Kathmandu.

Picturesque Pokhara has the lakes Phewa, Begnas and Rupa, and offers stunning views of the soaring Macchapuchare and Annapurna. At the charming Fishtail Lodge, accessible only by a wooden raft, they told us Prince Charles had stayed in the room we were in. We were sceptical but discovered that the room did offer the best view of Annapurna on a clear day. Across the Phewa lake, away from the five-star facilities of Fishtail Lodge, we were served *rakshi*, the barley-based Nepalese drink, in a tiny restaurant. It

came in what distinctly looked like some trekker's discarded plastic bath mug.

If you survive the *rakshi*, visit Dhulikhel, 30 km east of Kathmandu on the Kathmandu-Kodari highway. Suspended above terraced rice fields, this little township offers a panoramic view of the central and eastern Himalayas, from the Ganesh Massif on the left to Mount Everest towards the east. Consider a night — or at least an outdoor meal — at the Dhulikhel Mountain Resort overlooking the Panchkhal Valley.

If so inclined, thrill to the pleasure of trekking up towards a snow-capped peak. Actually, June to mid-October is "not too well suited" for trekking, according to Robert Rieffel's authoritative guide *Nepal Namaste*, because the clouds conceal the mountains and trails turn to rivulets in the rain. So if it's outdoor adventure you want anyway this season, take the other option (the one that gives you excitement the lazy way!). River rafting is one of the nicer experiences during a trip to Nepal, and the bonus is that you can tie it in with rhino-watching in the jungles.

Several agencies offer rafting and wildlife packages, but Tiger Tops, which has had distinguished visitors like former US President Jimmy Carter, is said to be the best. Truly a five-star holiday — they have just tied up with the Taj Group's Hotel De L'Annapurna in Kathmandu — the river trip costs Rs.2,650 for a night and two days, including meals, transport, equipment and the government permit. The raft takes you towards the jungle, and though they don't bait tigers any more, you can have your share of chills, spills and thrills — with a natural version of luxury thrown in too. The first time I did this trip, a wave threw the raft nine feet into the air — and never mind that I couldn't swim. "What are you worried about?" asked Madhu Gurung, the guide. "We have grandmothers doing this trip!"

It proved addictive, the liquid diamonds bursting on your skin with every wave, the cosy nights around campfires on the river banks. But there was more to come — elephants, one-horned rhinos, and somewhere in the vicinity, as alarm calls of the deer told you, a tiger. The elephants came first; and if you're flying in, to the smallest airport in the world at Chitwan, you use the same ladder to get onto their backs as as the one you do to get off the plane. Sometimes, cattle have to be shooed off the runway before the plane can land.

The rocking motion of the elephant soon becomes painfully familiar, as you spend aeons upon its back, tracking wildlife at the strangest hours. Our elephant almost killed a chital as it lay hidden in grass as tall as him; the elephant reared back just in time. Another day, we were charged by a rhino; on a third, we came across pug marks so fresh the elephants squealed in alarm.

Are these wild creatures genuine? Of course. But the Tiger Tops people, grinning wickedly, tell some interesting stories. For instance, whoever told you rhinos and tigers are sworn enemies? They were once seen, ambling towards each other to say hello. It turned out one had the cigarette, the other the lighter....

■ MENKA SHIVDASANI

courtyard; but for them, there is a wealth of curios in the handicraft stalls en route. Persistent Nepalese stall owners will quote exorbitant rates, then quickly slash prices as you walk away. Meanwhile, tour groups are in danger of falling apart at Pashupatinath; one Hindu family on our bus disobeyed the guide and stayed in for the hour-long puja. They had some unholy things to say when the bus left without them!

Temples and palaces, handicrafts and crafty sellers have their own attraction. But after four days in Kathmandu, you might want to move on. Consider Pokhara, 200

SINGAPORE

A colourful mosaic

Antiseptic streets and endless shopping... that's the popular image of Singapore. But the 43-kilometre long island has much more to offer.

For outdoor types — and the kids love it — there's Singapore's famous Sentosa island resort. Cycling, boating, canoeing, windsurfing, golfing, skating — you name it, Sentosa has it. And if you're not feeling madly energetic, you can stick to just swimming. Or better still, curl up on a deck chair. Sentosa also has an excellent museum. Using advanced audio visual technology, the museum recreates two important events of World War II — the surrender of the British to the Japanese, and the subsequent reversal.

In the city, there is a wonderful zoo, with natural water and rock barriers instead of the usual iron bars. The animals include polar bears, iguanas, a white cobra and two Komodo dragons, the famous giant lizards of Indonesia which look like leftovers from the age of the dinosaurs. The zoo has a special orangutan breeding programme and also arranges breakfasts for tourists every day, when they can feed these huge but friendly animals. Likewise, at the Jurong Bird Park, tourists can breakfast among dozens of Singapore's famous singing birds. The park also has the world's largest walk-in aviary.

Immense care goes into maintaining such places — and, for that matter, all of Singapore. We even saw a man with a brush and a pail of water industriously scrubbing a tree!

But even in this city, replete with glittering skyscrapers, and shopping plazas and a futuristic Mass Rapid Transit underground rail system that has to be seen to be believed, the diverse cultural influences — Chinese, Malay, Indian — are not lost. Little India or Serangoon Road is really a bit like being back home, what with shops selling spices, *idli* and *dosa, saris* — complete with a friendly neighbourhood *paanwallah*.

Chinatown again is an exotic mosaic of small shops with Chinese silk, red tea pots, hats, slippers, vegetables and fruits (including the durian, with its overpowering aroma). Old women shuffle around in traditional blue blouses and baggy black pants, while housewives pass by in trishaws.

There is also the range of cuisines — Chinese, Indonesian, Malay. And the Chinese food is not just one monolithic category, but includes the provincial varieties like Hokkien, Hakka, Hainanese, Hunanese, Szechuan, Peking, Shanghainese and so on. And for lovers of sea food, the chefs of Singapore have ways of serving up crabs, prawns, lobsters, oysters, cuttlefish and squid that can leave one with mouthwatering memories for years. And while you're at it, you may as well check out the frogs' legs.

There are now hectic plans afoot to restore Singapore's colonial legacy. Perhaps Singaporeans have realised that having a modern, clean and efficient city is not enough for tourists; what visitors look for is local culture and colour. And also for some of the decadent attractions that Singapore was once renowned for! Perhaps that's why Bugis Street, known for its glitzy night life and transvestites, is being restored, "smells and all".

On a more respectable level, the stately Raffles Hotel, named after Sir Stamford Raffles, a British East India Company official who claimed Singapore as a regional base, is being renovated and restored to its former 19th century glory. Another building of that era, the Empress Place — named after Queen Victoria — has also been refurbished into a beautiful exhibition hall, displaying, among other things, rare and priceless treasures of the Chinese Qing dynasty.

And of course, there are Singapore's shopping malls. Most Indians make a beeline for two shops in Serangoon Road — Mustafa and Kalyan Sundaram. They cater specially to Indian tourists — with Hindi film songs playing in the background — and stock all the standard favourites, from two-in-ones to Camay soap. For classier shopping, try Orchard Road.

Perhaps one of the nicest things about Singapore is that it's so safe. You can move around the city till quite late, without any fear of chain snatchers or molesters. And people on the road are polite and helpful — including taxi drivers, not a breed known in most other parts of the world for charm and good manners.

GOA

Beyond the beach and feni

Think of Goa, think of the sand; of the sea breaking against rocks, or swishing gently along the shore. Think of sunset-shaded cocktails made of feni; of lobster thermidor and mussels. Think of Goa as a place where there's nothing to do — bliss or boredom depending on how often you've done it before.

Then think of another Goa, where feni is not merely drunk, but distilled; where glazed pottery is not just sold, but made; where genteel families live in ancient mansions full of treasures, and farmers atop 50-foot-high trees pick betel nuts.

"There's so much more to Goa than people think there is," says an excited Gautam Sen Gupta, the Taj Group's regional manager, sales and marketing (western region).

The Taj-run Fort Aguada Beach Resorts has just introduced special tours to give their guests an insight into another Goa. So far, they have had short conducted tours around the beaches and Mapusa market on their holiday packages. Now, they have introduced forays into history and the lush interiors of their land.

On Mondays and Wednesdays is the popular river cruise on the Mandovi to Old Goa, combined with a boat tour with dances and serenades against the setting sun. On Tuesdays, it's Vishnu Mandir on Savoi-Verem, with lunch at a rustic plantation, followed by a trek up a pineapple-laden hill to digest it all. On the Thursday Crafts Tour, you can visit a pottery making unit at Bicholim and see cashew feni being distilled. On Fridays, it's the Panjim Experience, complete with dinner in a 150-year-old home. Saturday is a cruise to Old Goa and the Countryside Tour. And on Sundays, it's a trip to Chapora Fort near Vagator beach, a walk down to Shree Siddheshwar Mandir and tea at a Goan mansion. Take your pick, and your walking shoes!

On the Crafts Tour at Bicholim earlier this month, Avril Rand, an English woman, tried her hand at the potter's wheel. All around, about 20 local girls pressed clay into moulds — giant tortoises, horses, dancers. Rand's efforts were not quite as perfect as their's but she was delighted at the chance to get involved.

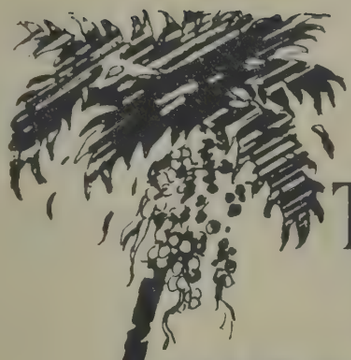
A few minutes later was another kind of heady experience — a cashew distillery, with its overpowering

The Viceroy's Arch in Old Goa: reliving the splendour of the past

aroma, the workers crushing the fruit with their feet, a taste of the first distill called *uraq*, and fresh roasted cashews.

The serene, shaded streets of the Latin Quarter in Goa's capital, Panjim, have a beauty quite different from that of the cashew fields. The owner of a 150-year-old home shows you around, with a century-old table standing in his living room and the stone walls two feet thick. In the dining room next to a 200-year-old chest, a traditional Goan meal is served.

And the food alone in Goa makes it worth the trip. Wherever you are, there is seafood — the Aguada has a seafood platter rich with lobster, tiger prawns and kingfish, but gourmet gluttony can be special at restaurants all along the beach. At Calangute one star-spangled night, there was blue marlin cooked in garlic butter. The rare catch, I was told, was the length of an Ambassador car.



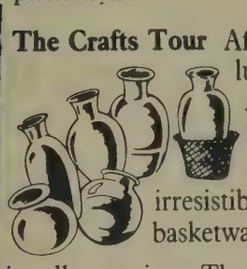
The food on the Countryside Tour was memorable too. Served on a 2,500-acre plantation, among 1,000 areca nut trees, it came in vessels made of dried betel leaves and on plates of plantain leaves. *Rajma* and prawn curry, *pulao* and pickle, fried prawn and clams from the neighbouring river. You discovered another use for fingernails, scooping the clams from their shells, throwing all sophistication to the winds. And for dessert, fresh jackfruit, and pineapple from one of 45,000 bushes in the vicinity. Mineral water gushing out of a nearby spring washed it all down.

And then the trek with geologist Suresh Mahambre as guide, picking wild berries on the way, and an occasional raw mango; the ache in your joints vanishing at the view. This is another image of the land, after the morning spent in Old Goa and its breathtaking churches with their incredible gilt wood carvings. The artisans, says a Taj guide, came from the village Ribandar where the salt pans are visible as you glide up the Mandovi.

If there is time, and energy, left, you could revisit 16th century Old Goa, "the Rome of the Orient", after the trek. There's the Church of St. Cajetan, the Se Cathedral, the ruins of the Church of St. Augustine and the Basilica of Bom Jesus which houses St. Francis Xavier's relics in a silver casket. Too bad the return journey is by bus, not back along the river as it was in the morning, when you'd passed the islands of Divar where the business class used to live, and Chorao, now a bird sanctuary.

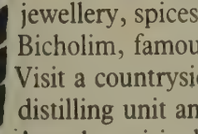
Even the Siberian crane recognises the charm of Goa. It stops at Chorao before moving on.

MENKA SHIVDASANI



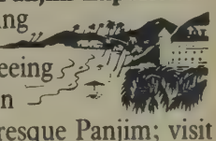
This summer, The Taj in Goa takes you on voyages of discovery.

Excursions into the Goan countryside — forts, plantations, unspoilt villages. With never-before tours, one for each day of the week. You'll discover that Goa is much more than sun, sand and sea!



Countryside Tour Post-breakfast coach trip to submerged Vishnu Mandir at Savoi-Verem. Enjoy a Hindu-Goan lunch on a plantation. Visit Kunbi tribal homes and a supari plantation.

The Crafts Tour After lunch, to Mapusa market – irresistible basketware, jewellery, spices. Then to Bicholim, famous for pottery. Visit a countryside cashew-distilling unit and return to Aguada, spirits high!



The Chapora Tour After lunch, a coach trip to Chapora for a trek up to the pre-Portuguese fort. Walk downhill to Vagator with its pretty fishing village and rock-cut Shree Siddheshwar Mandir. Teatime at a Goan mansion, and back home.

Old Goa & Sunset Boat Tour Afternoon cruise up Mandovi River. Visit Portuguese Goa's famous Cathedrals. At sunset, feni cocktails and cruise past Reis Magos fort, with Goan folk dances and music.

The Panjim Experience Evening sightseeing tour in picturesque Panjim; visit the old-world Latin Quarter, view panoramic cityscapes from Altinho. Shop awhile; stroll along Miramar Beach. Sundown brings cocktails and dinner at a Goan home.

The Taj Rediscover Goa Holiday Offer for 2 persons; 3 nights; upto 10 June 1991.	
The Taj Holiday Village :	A/C - Rs. 4,600 Non A/C - Rs. 3,450

KIHIM

Tented comfort

A wind-whipped sea along the Maharashtra coastline plays endless symphonies to a range of beaches — from Gorai to Mandwa to Alibag to Kihim — all within a few hours from Bombay. Of these, Kihim is the least known, though R.K. Mehra of Mehra Carpet Manufacturers (MCM) has lived there for nine years in a home built by Charles Correa; the Godrejs and the Mehras of Orkay Silk Mills have bungalows too. It was this beach that naturalist Salim Ali made his home as he watched the baby kingfishers and other birds.

Lately, it has become popular with picnickers desperate to escape from Bombay. It is close enough, with a one-and-a-half hour launch ride from Ferry Wharf to Rewas and a 20-minute auto ride along a scenic route. And for added convenience, for those who want it that way, thrice-weekly package tours take visitors from Gateway of India to the Kihim Beach Resort, at Rs.1,400 per couple for two nights and three days. Contact Maharashtra Tourism Development Corporation (MTDC) for bookings.

Originally built by MTDC, the tented camp has been taken over by the Mehras of MCM on a 60-year lease. Nestling on the Kihim shoreline, the 6-acre property houses 45 tents, complete with beds, steel cupboards and a toilet tiled with a sand-streaked design. Buffet meals with a home-cooked flavour are served here under a thatched roof, the freshly cooked seafood some distance away in deference to the vegetarians. "It's home food because I eat the same thing myself," laughs Mehra.

Just opposite the resort are some rather formidable rocks, but a few metres away to the left is a welcoming sea. The islands Undheri and Kundheri, the latter a naval base, overlook the waves. And further up along the beach is Navgaon, where the Kolis live, plying their trawlers at night to catch crabs

Other getaways

Kihim makes a superb gateaway for people living in Bombay. But where do those from up north or down south go for that quick holiday? Here are some destinations you could visit.

FROM DELHI

Timber Trail

The Timber Trail Resort is a panacea for tired travellers. Located on the Shimla-Kalka highway, 35 km and a two-hour drive away from Chandigarh, it nestles in the picturesque Shivaliks. A delightful cable car takes you to Timber Trail Heights on the hilltop. A single room at either place costs Rs.390, and a double, Rs.490.

Khajjiar

Tucked away in the Ravi valley and surrounded by gigantic deodar trees, Khajjiar highlights Himachal Pradesh's rich natural beauty. In the centre of a grassy meadow, 1.5 km long and 1 km wide, and surrounded by cedar forests, is a small lake, the *kund*. Khajjiar, 1,890 metres above sea level, is linked by metal road to Dalhousie, 27 kmaway.

From Delhi one has to go to Pathankot by train — by the Shalimar or Jhelum expresses, or the Jammu-Tawi and Kalka mails. The approximate rates for A/C first class is Rs.525 and second A/C is Rs.320. The first class fare is Rs.250 that and for second class is Rs.85. Pathankot is connected to Dalhousie by bus.

Himachal Pradesh Tourism has a number of lodges there. Holiday-makers can go trekking and golfing.

FROM MADRAS

Mamallapuram

Mamallapuram is 58 km south of Madras. Situated on the shore of Bay of Bengal, it was once a Pallava port and is full of unique monuments. A good road connects Mamallapuram with Madras. By rail, Chengalpattu on the Madras-Tiruchi section of southern railway, is 30 km to the west. There is also a flight from Madras.

Stay at the Ashok-Temple Bay (ITDC Beach Resort); Rs.395 for a single room (A/C), Rs.595 for a double. There's also the Beach Resort Complex, with rooms from Rs.175 for a single (non-A/C).

Kancheepuram

This golden city of temples is 76 km from Madras. Kancheepuram was the historic capital of the Pallavas, between the 6th and 9th centuries. It later became the citadel of the Cholas, the Vijayanagar kings, the Muslims and the British. It has been a centre of Tamil learning and culture for centuries. Adi Sankaracharya established his episcopal seat (Kamakotipeetam) here. Thus Kancheepuram was a meeting place of different cultures.

The nearest airport is Meenambakkam in Madras. By rail, it can be reached via Chengalpattu from Madras. It is connected with all major cities by road. Accommodation is at Hotel Tamilnadu (TTDC) where an A/C room costs Rs.170, and a non-A/C, Rs.110.

Chidambaram

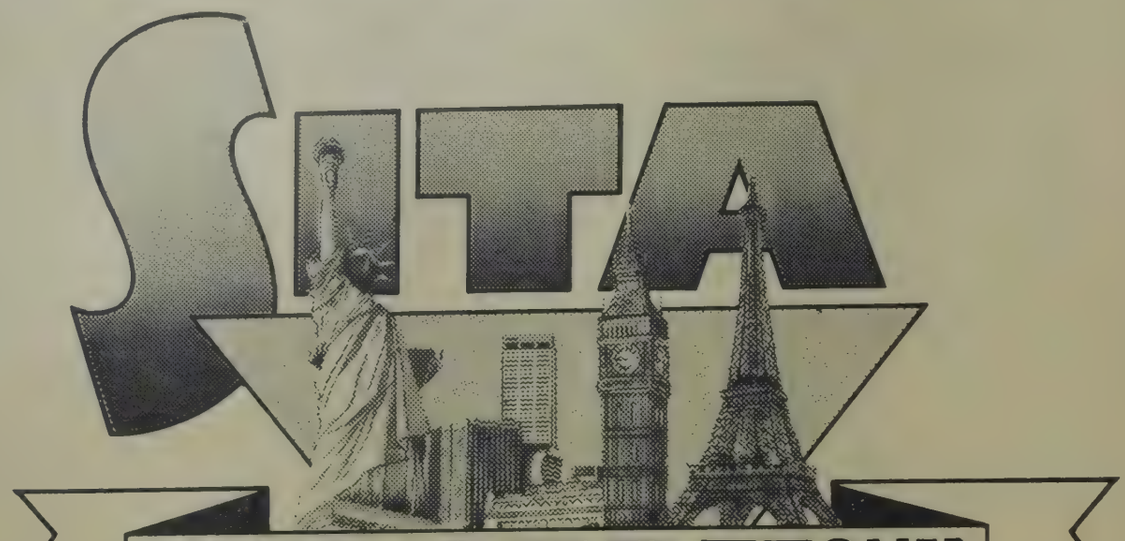
Chidambaram is also known as Thillai since the area was originally covered by a forest of *Thillai* shrubs. It is an important pilgrim centre and a holy place for Saivites as the famous Natarajan temple is located here. Pichavaram, a backwater resort, is 16 km east of Chidambaram. It covers an area of about 3,000 acres crisscrossed by backwaters, and is really a number of islands. The mangroves on the shores of these islands provide an alluring charm. It is an ideal place for water sport.

The nearest airport is Tiruchi, 194 km away. Vayudoot air strips are at Neyveli (45 km) and Pondicherry (70 km). It is connected by rail with Tiruchi, Madurai, Madras, Bangalore, Rameswaram and Tirupathi. It is also connected by road with all major towns.

Accommodation is at Hotel Tamilnadu (TTDC), with rooms starting at Rs.50 for a single, going up to Rs.260 for a deluxe air-conditioned room. The Arignar Anna Tourist Complex (Pichavaram) has double bed cottages at Rs.60.

Yercaud

Yercaud is in the Servaroyan hills (Shevaroy range) of Salem district with temperatures that range between 29 and 13 degrees C. With such a salubrious climate, Yercaud can be visited the year around. It is an hour's drive from Salem and is the least expensive among hill stations in India.



The nearest airport at Tiruchirapalli is connected to Madras and Madurai.

The nearest rail heads are at Salem junction (32 km). Bus services operate from the former and the Salem Municipal Bus stand to Yercaud frequently.

Here too, the TTDC's Hotel Tamilnadu has family rooms with three beds for Rs.185 between April and June. Double rooms are also available.

BI

ANI/BHUTI/SITA/91

Close to Bombay, yet so far away

bleeds when it is scratched.

At night, as you sip your drink, the clarity of the stars takes you by surprise. In the distance, past the coconut trees and neem, the city begins to twinkle under a deepening sky. And all the while, the sea murmurs, a few feet away.

In the morning, you are in the water again, savouring the splendour of the sea as you soak in the sun.

If you want a bit of history, take time off for a short walk past the Orkay property to a monument built in memory of the Bene-Israelis. Two thousand years ago, while fleeing from the Greeks, their ship, the *Antiodius Epaphanes* was wrecked at Navgaon.

For variety, Alibag and Mandwa are just a few minutes away. Vijay Mallya's caretaker is unlikely to let you view his vintage car collection in Mandwa, but the beach makes up for the disappointment. For a touch of excitement, consider a midnight trip to the Mandwa pier; as the water laps at the wooden supports, you just might glimpse a bit of smuggling as well.

And if you don't get caught in one of the luckily-not-frequent police raids while doing that, come back and tell your friends they ought to be visiting Kihim too.

KABINI

Call of the wild

They say the best thing to do when faced with a crocodile is to pinch its nostrils. The creature will be so confused it will open its jaws to breathe. All you have to do then is to slip in a log and jam the jaw. Then let go of the nostrils and swim to safety.

In practice, what happens is that you start screaming "Help!"

"Relax, this is adventure tourism," says Sundar, our man for every thrill, at the Kabini River Lodge, as he urges our coracle boatman to edge away slowly from the crocodile couple that we have disturbed at their siesta. "Don't put your hand in the water, and breathe normally," he says. Even this is quite difficult, as the coracle is just a layer of skin, buffalo hide, stretched and tarred over a frame of bamboo in a saucer shape with us at the bottom. The crocodiles have disappeared and could at any moment thrust their snouts from under us, but Sundar points out that it's they who are afraid of us, for we have drifted too close to their nesting ground.

The moment passes and we are once again being whirled around in two coracles, surrounded by some of the wildest scenery to be experienced in the south. A storm is bearing down at us. Birds in the artificially dammed Kabini reservoir are on the wing and we don't have to use Sundar's binoculars to count more than two dozen varieties.

Colonel John Wakefield, or Papa, as everybody calls him, is waiting for us in the heavy duty Maruti Gypsy. Could that be a smile that he is filtering through his Cossack moustache, as he watches us valiantly slithering through the mud, sliding on our bottoms, turning up our noses at a stinking dead fish being pecked at by a buzzard nearby, and just barely coping with the undergrowth?

Kabini River Lodge is not for the faint-hearted. The booking has to be confirmed at Bangalore, at the Shrungar Shopping complex on M.G. Road. There's no question of landing up at the Kabini Jungle Lodge and asking to see the manager.

As the tourist literature will tell you, the place was used as a Viceregal lodge and later by the Mysore Maharaja to entertain his special guests. The main building is red with tiled sloping roof and gables, verandahs with railings all around. It is set on a slight elevation, looking down towards the lake, and has a handsome formal garden in front. The new wings to accomodate the additional beds have been built in the same architectural style. After hurtling through the wilderness of H.D. Kote, or Heggaddevankote, as the district is known, the dignified order of the lodge takes you by surprise. Far away, you can catch a glimpse of the Brahma Giri hills.

Close to crocodiles on a coracle ride

"Lunch is at Gol Ghar," says the housekeeper, Ann, pointing towards the lake. We can see a large thatched structure, open on all sides like a Victorian folly, with cane furniture. Along one side, is a buffet counter. The staff appears with drinks, plates and the first signs of lunch. Two men carry a long metal trough with a burning log in the middle of it. They slide this through a slot under the service counter and this serves as a warming tray for the food.

At the same moment Papa Wakefield appears, assisted by his *aide-de-camp,* Sundar. Papa is leaning on a sturdy wooden stick. He takes one look at my boots and says, "Yes, umm, well, you better take this stick. You need it more than I do."

From then on events take an unreal technicolour film aura. There are rides in the Maruti, on elephant and in the coracle. The jungle unfolds under Papa's experienced hands until it seems we are standing at the very beginning of creation, insignificant bipeds dwarfed by the lords of the jungle, the teak trees filtering the light, through which pass the herds of deer, wild pig and, most magnificent of all, the elephants. We don't see tigers or the leopards.

On our return journey, Papa tells us about the problems of running a place like Kabini. It was started as a collaboration between the government of Karnataka and Tiger Tops India Pvt Ltd. "Most people don't understand that adventure tourism has nothing to do with entertainment," he explains. A lot of the visitors expect it to be a safari type of experience with tigers on call, video parlours, swimming pools and pony rides for the children. "We don't encourage young children. You can never tell what animals will do in the wild. We are reasonably prepared but a sudden cry could startle a herd of elephants." The fragile eco system can only take a small number of visitors at a time, he says. As we are talking, we can see a long line of villagers with bundles of firewood from the forest.

Later that evening, after watching the special wildlife movies, there is a camp-fire at Gol Ghar. A young forest ranger, S.N. Devaraj, talks of the endless battle between the forest department and poachers. He is also passionately against the Kabini river project that has changed the environment irrevocably. The 572 square kms of the Nagarhole sanctuary, of which Kabini is a small part, is a mere vestige of the once magnificent forests of Mysore. We begin to understand why Papa is so protective about "his" jungle. It's like sailing in an Ark filled with precious life through a wilderness of too much civilisation. We, the most destructive of the animals, have to be let in two by two, in controlled numbers, so as not to upset the balance. ■

PACKAGE TOURS

Both pleasure and peril

Package tours are big business, and the season has just begun. Like ready-to-wear garments or catered meals, they save time and bother. The clientele is "mainly businessmen", says Aslam Siwani of SITA Travels. "Companies also send dealers and sales executives abroad as an incentive." The package tour "season" extends from April to October. Some agencies also operate a few tours in November and December but the heaviest month is undoubtedly May. There are 13 departure dates for SOTC's "Classic Tour of Europe", and 12 for Raj Travels' "Grand Europe".

Most operators offer basically the same amenities. The price includes economy class air fare, accommodation at three and four star hotels; meals, coach tours, transfers and guides. The programme, naturally, meets the average tourist's needs. Several "sights" will be packed into one day. And inevitably, equal time will be devoted to shopping.

For some people, such structured programmes are exactly the opposite of everything a holiday should be. Sharada Dwivedi, a writer, says: "Half the fun of travelling is discovering tourist sites, hotels and new routes for one-self. There's much more adventure if you go on your own. Instead of going to ten cities I'd go to one city and see that city very well."

It is "first time" travellers who are the mainstay of the package tour industry, admits Meher Bhandara of the Travel Corporation of India Ltd (TCI). But if some tourists prefer to go it alone, many others genuinely prefer tours. Katy Irani, a Bombay housewife, is a veteran of five to six package tours and insists that it is the best way to travel: "They are so well-organised," she says. "In every city you know where to go and what to see. On your own, you don't get to see much and it works out to be very expensive."

Shop around for a package tour that will meet your needs. Though all tour advertisements sound pretty much the same, the ways in which travel agencies conduct the tours are different. And watch out for sharks. Rohini and Lipika Shankar, two Delhi schoolgirls who accompanied their parents to the Far East last summer, report disgustedly that they discovered their tour guide had overcharged them for optional island tours.

The Shankars chose a package which only included breakfast and they had a chance to savour local cuisine. They have, however, resolved not to go on a package tour in future as "you can't pick the people you travel with and being stuck with people you have nothing in common with is a major disadvantage on a holiday".

Every travel agency has a different profile. Thomas Cook deals only with domestic tours. "Though our clientele is from the upper income bracket, we are not more expensive than other agencies," stresses Divya Bhargava, senior executive, tours sales. "Our groups are quite compact, upmarket and basically cosmopolitan," says Ravinder Sharma, who manages DBS World Travel. DBS prides itself on the Far East tours. Siwani of SITA states that his agency offers its clients a personalised tour, reliability and a price guarantee. "SITA is popular in the Gulf," he says.

SOTC, in its beautifully produced booklet on Europe promises "delicious Indian meals in the luxury and elegance of the finest Indian restaurants in Europe.... The booklet says the agency has its "own cooks to make your favourite dishes in Switzerland". And Raj Travels, in its strictly utilitarian itinerary gives exactly the same assurance.

TCI's glossy brochure displays food by candle-light — Indian preparations, frankfurters, sea food, rolls and two signs spelling out "vegetarian" and "non-vegetarian". Bhandara amplifies: "We have a more cosmopolitan clientele and though we serve vegetarian food we do not serve Jain meals. In fact, about 30 per cent of our travellers enjoy continental food."

Travellers can also get tailor-made package tours, though often at extra cost. TCI, for instance, has a "Just Married" scheme for honeymooners.

In a fiercely competitive market, agencies try to provide "extras" like cocktail parties at five-star hotels to get members of tour groups acquainted with each other.

However, even as you're seduced by visions of snow-clad peaks, or palm-fringed beaches, it's best to be absolutely sure you can make that trip before you book. Penalties for cancellation by travellers are heavy. Curiously, if a travel agency is unable to operate a tour for any reason at all, it is not liable to pay compensation.

Srichakra Tyres

Despite above average capacity utilisation, bottomline lands in the red; rising interest burden erodes margins; dividend skipped; earlier year's writebacks enable closure of accounts with a positive balance

During the 18-month year ended December 1990, Srichakra expanded installed capacities from 1.2 million to 1.48 million tyres and from 1.2 million to 1.5 million tubes. However, this expanded capacity went into commercial production only from 1 April 1990. Despite production of tyres and tubes exceeding the installed capacity, the company's operations barely generated a cash profit of Rs.40 lakh on a turnover of Rs.32.97 crore at the end of the full year.

** 18 months*
‡ annualised
‡ Increase in equity due to conversion of debentures

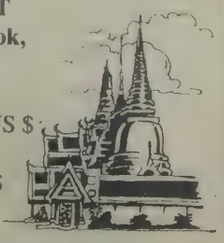
About 82 per cent (46 per cent last year) of operating profit was paid as interest. Gross profit margins shrunk to 1.2 from 4.4 per cent. As against the previous year's EPS of 90 paise which was distributed in full as dividend, in the year under review, there was a net loss of Rs.24 lakh. There was no dividend either. While charging depreciation, the useful life of certain assets have been re-computed leading to a lower charge for the period by Rs.30.04 lakh thereby bringing down the net loss. By writing back excess depreciation of earlier years amounting to Rs.21.38 lakh, the company has closed accounts with a positive surplus of Rs.4.59 lakh. Dissatisfied auditors have qualified this in their report.

Non-provision of gratuity of Rs.2.17 lakh which would be accounted for on a cash rather than accrual basis and the capitalisation of interest on long-term loans obtained from banks and financial institutions have increased the cost of fixed assets by Rs.37.22 lakh. These adjustments also have the auditors' qualification.

With a glut situation looming large over the tyre industry and an improved retreading technology affecting demand in the replacements market as well, Srichakra faces an uphill task.

Brooke Bond India

Moderate rise in turnover; decline in margins; dividend up 10 points; 1:3 bonus proposed; sale of paper and automotive units add Rs.5.19 crore to the bottomline; spices division being toned up; foods business expansion on cards



The year ended December 1990 saw lower volumes in the company's tea division. This was offset by a higher average price realisation of approximately Rs.15 per kg. As for coffee, both volume and price showed an upward trend. Performance of the spices division, however,

THE

Business India

GROUP

needs toning up and efforts in this direction are on. Exports were hit by the Gulf war and declined to Rs.42.71 crore from Rs.49.34 crore.

Overall sales rose by 18 per cent yielding a gross profit margin of 8.3 per cent (9.7 per cent). At net levels, while EPS declined marginally from Rs.6.39 to Rs.5.94, payout was hiked sharply by 20 points yielding a dividend per share of Rs.4.00 (Rs.3.00). The book value per share was Rs.22.01 (Rs.19.01). The company has also proposed a bonus in the ratio of one to three by capitalising Rs.14.72 crore out of its free reserves.

Brooke Bond has sold its paper and automotive units, both of which were non-profitable. This has added Rs.5.19 crore to the net profit for the period under review. Now, the company is seeking to strengthen its coffee operations by taking over Kothari General Foods. The terms for the acquisition are yet to be finalised. Plans are also under consideration for enlarging and consolidating the foods business by acquiring Kissan Products and venturing into noodles manufacture with Japanese participation. The parent company, Unilever, is expected to lend its technological expertise to turn Brooke Bond's diversification plans into successful ventures.

The scrip, which has moved between a low of Rs.68.50 and a high of Rs.175 in the last five years, now quotes at Rs.138.00 (18 April) discounting the latest earnings by 23 times.

Tea Estates

Poorer performance in second half than in first six months; fares well for full year; significant increase in margins; increase in exports; remunerative prices promise satisfactory future

Tea Estates is a Unilever group company whose produce caters mainly to the domestic market. Tea, coffee and cardamom are cultivated on its estates in the southern states. The company fared very well in the first half of 1989-90 but not so in the second half. For this period, net sales was less by 4.6 per cent, gross profit by 11.35 per cent and net profit by 3.63 per cent compared with the corresponding period last year.

However, the company has reported a very good performance for the full year 1989-90. Production was 7 per cent higher than last year, sales increased by 23 per cent from Rs.35.2 to Rs.43.53 crore and profit margins have improved significantly — from 21 per cent last year, gross profit margins have risen to 43 per cent while net profit margins have upped from 27 to 51 per cent. However, EPS rose only slightly from Rs.8.52 to Rs.8.9 even with a 50 per cent increase in equity capital. Exports at Rs.0.26 crore is still a small percentage of the turnover.

Tea Estates			(Rs crore)
Year ended	30 Dec 1990	31 Dec 1989	% change
Gross sales	43.53	35.20	+23
Other income	2.59	1.81	+43
Employees' costs	10.98	10.27	+7
Interest	0.01	0.01	
Gross profit	22.39	15.05	+49
Depreciation	0.58	0.54	+7
Tax*	10.06	7.01	+43
Net profit	11.75	7.5	+56
Equity capital	13.2	8.8	+50
Reserves & surplus	12.44	11.87	+5
Dividend (%)	60.00	60.00	
Market price (Rs)			
Current	156.50		
1990: High	225.00		
Low	98.00		

** Provision for taxation includes Rs.0.25 crore pertaining to previous year*

On the premise that tea prices will continue to be remunerative, the company expects to perform satisfactorily during 1991. Also, rains have been good until April and its performance is relatively insulated from likely vagaries in the export market.

RESULTS ANNOUNCED

Hind. Development Corporation

Stagnant turnover, jump in margins but dilution in EPS due to expanded equity

That's HDC's performance for the year ended March 1991. On a turnover of Rs.267.23 crore, gross profit margin has risen by 3 percentage points. Although the bottomline is up 29 per cent at Rs.16.14 crore, equity having tripled to Rs.32.93 crore, the EPS stands diluted at Rs.4.90 (Rs.15.56 on cum rights equity)

as against Rs.12.04 last year. The scrip quotes at Rs.92.50 (15 April 1991) discounting its earnings 19 times.

Widia (India)

A market leader in hard metals, this FERA company has stepped up earnings and dividend on ex-bonus equity

Turnover is up 19 per cent at Rs.68.04 crore yielding a gross profit of Rs.10.84 crore. At the net level, Widia earned Rs.62.30 per share (F.V. = Rs.100) and distributed Rs.20.00 per share as dividend as against an EPS of Rs.48.09 and dividend of Rs.18 per share in the previous year. The scrip quotes at Rs.1,300 (15 April 1991) and discounts these earnings nearly 21 times.

Chemfab Alkalis

A slight improvement in sales, an 8 percentage point drop in gross profit margin, reduced provision for depreciation

For the year ended March 1991 Chemfab, the south-based manufacturer of caustic soda, has earned a gross profit of Rs.4.24 crore (lower by 13 per cent) on net sales of Rs.12.53 crore (up 8 per cent). With a 39 per cent drop in depreciation charged, Chemfab was able to post a higher net profit of Rs.2.13 crore. With the tiniest equity base in the industry, although cash earnings per share declined to Rs.13.50 from Rs.15.54, EPS was higher at Rs.7.24 (Rs.5.17 last year) out of which Rs.2.00 will be paid out as dividend (Rs.1.80 last year). The market price at Rs.95 (15 April 1991) discounts these earnings 13 times.

Bhilwara Synthetics

Improved sales, better margins and a bottomline that's shaken off the red

For the year ended March 1991, this manufacturer of polyester/viscose (P/V) and polyester/woollen (P/W) blended fabrics has earned a gross profit of Rs.2.55 crore on a sales of Rs.48.07 crore (up 51 per cent). Gross profit margin is up by 1.5 per cent points to 5.3 per cent while net profit is Rs.75 lakh against a net loss of Rs.17 lakh in the previous year. With an EPS of Rs.2.03, the market price at Rs.24.00 (16 April 1991) gives a P/E ratio of 12.

Nippon Denro Ispat

Addition to product range and enhanced equity to service

For the first half ended December 1990, this flagship of the Ispat group has earned a gross profit of Rs.11.04 crore (down by 11 per cent) on a sales of Rs.198.85 crore (up 1 per cent). Gross profit margin at 5.5 per cent took a slight dip but with reduced depreciation provision, the bottomline stood at Rs.6.06 crore (up 7 per cent). With commercial production of PVC/Color coated sheets having commenced, this addition to the product line will contribute to the turnover in the second half. Just as well, for Nippon's equity capital also stands increased to Rs.26.81 crore. The scrip currently quotes at Rs.26.00 (16 April 1991).

IN BRIEF

Blue Blends is to buy 55 per cent of the equity of Magna Home Products, the soaps and toiletries company promoted by Satish Bhangar.

Hindustan Organic Chemicals' technology tie up with Chematos AB of Sweden for manufacture of TDI, an intermediate for polyurethane, has received government approval.

Modern Suitings have proposed an equity dividend of 25 per cent for the year ended December 1990.

Gujarat Alkalies has produced 1,27,780 mt of caustic soda for the year ended 1990-91, an all time high.

The **BPL** group's Japanese collaborator, Sanyo Electric Co has offered to buyback Rs.800 crore worth of products from them.

IPCL, the public sector petrochemicals giant, has recorded a turnover of Rs.1,325 crore for the year ended March 91, higher by 12 per cent from the previous year.

FACT has posted a total turnover of Rs.469 crore during 1990-91 while profit rose sharply to Rs.21 crore. The newly commissioned caprolactum plant made its maiden contribution of Rs.24 crore to total turnover.

Kudremukh Iron Ore Co has emerged tops in earning foreign exchange in the public sector during the year 1990-91. Its exports were valued at Rs.228.82 crore with net profit at Rs.58.11 crore.

ANZ Grindlays has launched a financial services company, Esanda Finance & Leasing Ltd with a 30 per cent equity participation.

GTC Industries have decided to pay an interim dividend of 16 per cent for the year ended 30 March 1991.

The **Credit Capital Finance Corporation** is launching a Rs.20-crore information technology fund to promote new ventures in the field.

20th Century Finance Corporation along with other promoters has signed an agreement to float the 20th Century Venture Capital Corporation with a view to offering venture capital services.

Jokai India has changed its name to Rossel Industries.

Kirloskar Cummins and Railway Carriage and Machine Works of Hungary have decided to set up a joint venture company to undertake the manufacture of state-of-the-art commercial vehicles in India.

Bharat Forge, a Kalyani group company, has sought permission to take over Kalyani Sharp by acquisition of more than 30 per cent of the latter's shares.

Hindustan Teleprinters, a public sector company, received clearance for manufacturing fax machines.

BASF India has exported products worth Rs.8.2 crore out of its total turnover of Rs.98 crore for the year ended March 1991.

Asea Brown Boveri has recommended an equity dividend of 27 per cent for the year ended December 1990.

Lupin Laboratories is promoting a new company called Lupin Chemicals to implement a Rs.60-crore fermentation project for manufacturing rifampicin.

Videocon Appliances is launching a Rs.150-crore expansion cum diversification programme. For part financing this programme, it is planning to enter the capital market with a Rs.90-crore debenture issue.

Jaiprakash Industries has commissioned its second 1 million tpa capacity cement plant at Jaypee Nagar, Reura.

G.L. Rexroth Industries is issuing rights shares in the ratio of 1:2.

Corn Products is issuing partly convertible debentures aggregating Rs.1.12 crore on a rights basis.

Rathi Udyog intends to come out with a rights issue in the ratio of 1:2 to part finance its expansion cum modernisation programme.

Flex Industries is coming out with a rights issue in the ratio of 1:2 to augment long-term working capital requirements and to meet normal capital expenditure.

STOCKMARKET REVIEW

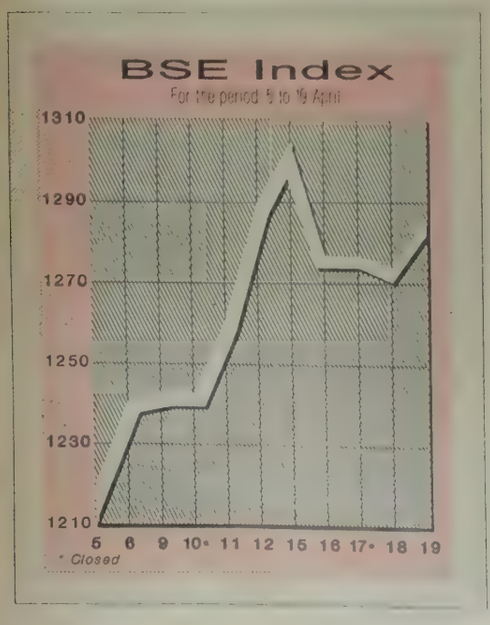
Political hopes boosts markets

(For the period 8 to 20 April 1991)

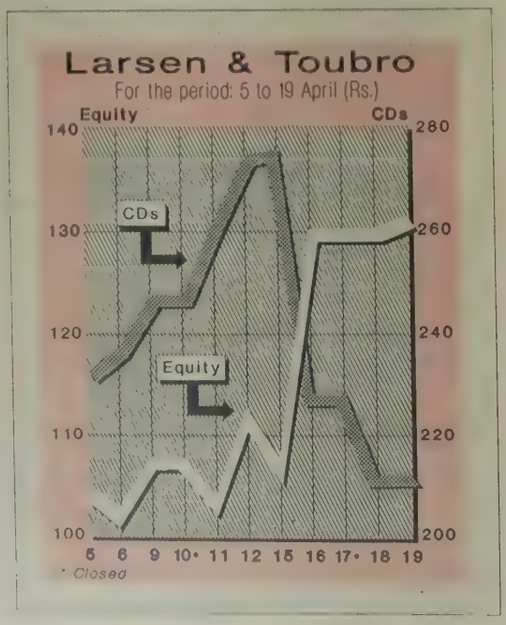
	6 April	20 April	per cent change over fortnight	year
BSE Sensitive Index	1218.12	1283.94	+ 5.4	+ 58.0
BSE National Index	610.22	640.58	+ 4.9	+ 46.1
Vol (Rs.cr) fortnight ended	76.18	138.66	+ 82.0	+ 36.0

Stockmarkets continued to soar and confound market watchers who saw no reason to change their forecast of a grim economic year. While the strength of money power — from mutual funds, non-residents and others — could not be denied, the result of the market's movements was that it has left the fundamentalists, including a particularly large group that made its mark in the late eighties (and also last year), sitting on the sidelines praying for a fall. However, given the muscle power that is facing them, they are waiting for the index to touch 1,400 before selling short.

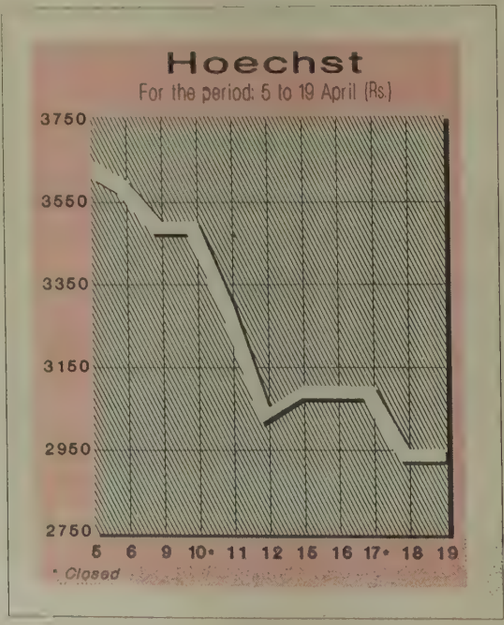
The synthetic fibre group, which has been performing poorly of late, will probably be the first to catch the short seller's eye as the group has done well in stockmarkets of late. Reliance Industries, for example, closed the fortnight at Rs.143, up from Rs.127.50 (–12 per cent) for a market value gain of Rs.230 crore on a heavy trading volume of a million shares a day. Similarly, Baroda Rayon and Century Enka have also risen over the fortnight.



Opinion polls' influence. The case of Reliance may turn out to be different from the rest of the synthetic fibre group because of the company's possible need to market its Rs.570 crore rights issue. This will depend on the political situation after the elections. Given that, most opinion polls show the Congress comfortably ahead of its rivals, and with its manifesto much appreciated by market circles, the market in general and Reliance shareholders in particular ought to be pleased.



Most of the bullish action continued for the third fortnight in a row to be concentrated on highly capitalised scrips. Apart from Reliance, the action continued to be focused on ACC and Tata Steel. ACC closed the fortnight at Rs.2520, up from Rs.2295 (–9.8 per cent) and Tata Steel closed at Rs.175.50, up from Rs.166 (–5.7 per cent). The cement market is strong with prices up over the fortnight by Rs.2 per 50 kg bag, despite a reported promise by the Cement Manufacturers' Association made to the commerce ministry that prices would be reduced by Rs.5 per bag.



Bombay Dyeing was also actively traded, with about a million shares changing hands over the fortnight. The scrip closed at Rs.240, up from Rs.225 (–6.7 per cent). The news that paraxylene imports (a major input for Bombay Dyeing's main product, DMT) had been restored to OGL (open general licence, and away from the restricted list) helped spur trading activity in the scrip. The move, in fact, means little in terms of saving costs for the company which is a registered actual user. Nevertheless, given the government's overriding desire to save foreign exchange, the move to shift paraxylene to OGL — which will undoubtedly spur speculation in the item along with heavy imports — was an odd decision. As odd as the promised rollback of cement prices followed by its actual increase.

Smaller shares active. Meanwhile, smaller shares were moderately active, with the entire B group doubling in daily turnover to Rs.30 crore by the end of the fortnight. The list of active scrips was a re-run of the previous fortnight — Jindal Strips, Wartsila Diesel, Kesoram, Birla Jute, Videocon International and Videocon Appliances. However, the second half of the fortnight was marked by profit taking in these scrips, following a smart rise in their prices in the first half of the fortnight.

The Supreme Court's judgement on Larsen & Toubro — that the mega issue be legally completed by the issue of fully paid up convertible debentures — caused Larsen's stock price to crash. This was because earlier indications were of an unfavourable judgment based on which speculators had built up positions. These were now being cleared out at a rapid pace, while arbitrageurs profited by short selling the equity and purchasing the convertible debt. As a result, the price difference between the two narrowed to the equivalent of Rs.20 per share, with full conversion still more than a year away *(see chart)*. Meanwhile, Hoechst also

crashed *(see chart)* as reports of a stagnant performance was heard in the market. About 10,000 shares were sold in the fortnight.

The market's undertone at the close of the fortnight continued to be firm. With money markets tightening, the monsoon forecast being for an indifferent monsoon and with fresh foreign exchange curbs likely, the firmness of markets had, as a seasoned market watcher put it, "Only one reason, the market has decided that the Congress is returning to power."

DEBENTURE TRADING

A shrinking sphere

The world of debenture trading is shrinking. Dilip Bagri, a stock broker who is the largest jobber (buyer and seller) for debentures on the Bombay Stock Exchange (BSE), claims that trading has steadily decreased by Rs.10 crore per year for the past three or four years. For example on 12 April 1991, the volume of debentures traded was worth only Rs.29.1 lakh compared to the Rs.150 crore of shares that changed hands.

This is bad news for the individual investing in debentures, because the market price of the debenture may bear no relation either to the company's performance or to the debenture's promised interest rate. The debentures market in the stock exchange is characterised by poor liquidity. As a result, even if company performance improves, the individual cannot buy debentures and bid up the market price as in the equity market. Nevertheless, many investors have got their feet wet by purchasing partly convertible debentures (PCDs) which they did for the purpose of obtaining equity shares. Once these debentures have been partly converted, the investor is left with an often untradeable non-convertible portion known as *khokhas*.

Not much liquidity. The liquid scrips are few. According to Bagri, Reliance Industries E&F (both non-convertible) and Reliance Petro B&C (both convertible) together make up 50 per cent of the trading. Debentures sometimes react strongly to market sentiment. For example on 16 April, when the Supreme Court asked Larsen & Toubro (L&T) to proceed with calls and debentures, L&T's CD shot up by Rs.45, from Rs.215 to Rs.260 (while its share price fell).

While individuals are sellers in the market, buyers on the floor are mutual funds, UTI, LIC and GIC with its subsidiaries, according to Ramesh Kumar, vice-president of Citibank. These players look for high yields from high quality debentures. Recently, some foreign banks like Grindlays, Citibank and Credit Lyonnais have got into the act by offering to purchase blue chip *khokhas*.

What sort of returns can a buyer of debentures hope for? While most individuals take into consideration the current yield (interest amount divided by the market price), a more sophisticated investor will look at the yield to maturity (YTM) which is the rate of return obtained if a debenture is held to maturity. If a bond sells at a discount, the YTM will always be higher than the current yield for an NCD. If the bond is a CD, the market price will also determine the yield.

MASTERGAIN

High risk, high gains

UTI's latest scheme in its 'Master' series of equity investment mutual funds is Mastergain. Mastershare was introduced in 1986 and Masterplan in March this year. As the name indicates, this is planned as a capital gains instrument. According to a UTI source, "This will be an aggressive growth fund. We plan to invest for capital gains. Hence, our return should compare with that of the stockmarket's average return over the past five years, that is, 25 per cent per annum." Mastergain is a high risk investment that includes a higher expected return.

Super targets. The target that Mastergain sets for itself is interesting. For one, the scheme stands apart from the highly successful Canstar and Boinanza, and others that promise a component of fixed returns. These latter — in order to provide fixed returns of near 15 per cent — have had to set aside a substantial portion (over 50 per cent) of the collected funds in fixed-return instruments such as debentures. This makes the fund safer but reduces the possibility of very high gains.

Mastergain entails a special tax advantage. Since UTI itself pays no income tax and since Mastergain plans to disburse only a modest dividend, most of the scheme's returns will come in the form of long-term capital gains after three years. Mastergain plans to repurchase 20 per cent of an individual's outstanding shares each year at net asset value from the third to the seventh year. In other words, as against a direct investment in shares which would fetch about 15 per cent of returns as high-tax dividends (based on past market behaviour) and the rest as lower-taxed capital gains, an investment in Mastergain would give the entire return as low-taxed capital gains.

Another useful feature is that Mastergain is an eligible investment for registered non-profit organisations. It gives them access to the returns of equity markets. Mastergain, however, will not be listed on the stock exchanges; the organisation is probably worried that if listed, it might quote at a discount like Mastershare. This is a disadvantage to investors to whom there is need for liquidity in the short term.

Poor marketing. UTI's initial marketing of the scheme is very poor. The letter of offer, for example, is vague about the investment strategy, gives no details of the repurchase prices stating only that it will be invested in equity. This gives it the flavour of being "just another" equity scheme. However, company sources claim that they can raise about Rs.200 crore. If the scheme receives a good response, UTI has plans to introduce similar offers in this financial year and in the future.

Investment limit	:	Minimum Rs.5000 and multiples of Rs.1,000 thereafter
Issue period	:	15 April '91 to June '91
Size of issue	:	Open
Period of holding	:	7 years
Redemption	:	20 per cent of net asset value every year from 3rd to 7th year.
Highlights	:	No assured return; high growth equity investment strategy with long-term capital gains; no listing on any stock exchange but transferable; eligible like other UTI capital gains schemes for Sec 80L and Sec 48(2) of the I.T. Act and Sec 5 of the W.T. Act.

Good marketing could highlight this unique high-growth scheme and perhaps raise hundreds of crores. The scheme attempts to tap the possibility that most investors are likely to risk a portion of their funds for higher gains.

Steel Tubes of India

Steel Tubes of India (STI) is an existing company which first opened its doors to the public in 1982. Four years later it re-entered the capital market to fund its backward integration project costing Rs.12 crore to manufacture 20,000 tpa of cold rolled (CR) strips. "Besides using it for captive consumption some of it is sold in the market" explains Ramesh B. Baheti, chairman and managing director, STI.

Currently, the company is undertaking a modernisation-cum-expansion scheme. On completion of the scheme, STI's cold drawn welded (CDW) tubes capacity will increase from 7,500 to 14,500 tpa while its cold rolled steel (CRS) strips and electric resistance welded (ERW) tubes capacity would increase by 15,400 and 3,800 tpa to 42,400 and 47,000 tpa respectively. The present capacity utilisation is placed at 75 per cent for the first two divisions and 100 per cent at the ERW division.

For the year ended March 1990, STI has notched a 51 per cent higher turnover of Rs.69 crore on which it will earn a 57 per cent higher net profit of Rs.1.52 crore. With this, STI's earnings per share works out to Rs.3.8 (Rs.2.42).

Steel Tubes of India		
Issue opens	:	6 May 1991
Size of the issue	:	Rs.8 crore
To Indian public	:	Rs.6.27 crore
Instrument	:	Convertible debentures of Rs.100 each
Promoter	:	Ramesh B. Baheti
Project	:	Modernisation-cum-expansion scheme
Cost of project	:	Rs.27 crore
Plant location	:	Dewas, Indore
Listing	:	Bombay, Indore, New Delhi

There is a gap between demand and supply for the company's raw material, hot rolled coils. Of the total demand 25 per cent is being imported. The continued depreciating rupee coupled with rising prices of imports could affect the future of this company if it does not revise its selling prices to reflect the same. Presently, STI does not periodically revise its selling price.

According to Baheti, STI has targeted a turnover of Rs.150 crore for 1992 by which time the expansions will be completed. The company's sales have been increasing since 1986 but profits have not kept pace. Baheti says, "the 1986 investment in CRS strips diluted the steel tube profits which reflected in a stagnant bottomline."

Adithya Exports

Adithya Exports Ltd (AEL) a Hyderabad-based company has been exporting bulk drugs since 1989. Trimethoprim BP and Dinitolmide BP (Vet) a veterinary drug are the two major drugs exported by the company. Helm AG of Germany and Marcel Quarre of France have been AEL's major buyers.

AEL has been procuring 100 per cent of its material for export from Adithya Organics Ltd (AOL), an associate concern. Within the next six months the company plans to tie up with other small-scale manufacturers to supplement its purchases.

Adithya Exports		
Issue opens	:	9 May 1991
Size of the issue	:	Rs.3 crore
To Indian public	:	Rs.1.40 crore
Instrument	:	Equity shares of Rs.10 each at par
Object of the issue	:	To augment working capital requirement
Promoter	:	M. Chandramouli Reddy
Listing	:	Bombay, Hyderabad

AEL recorded a turnover of Rs.10.20 lakh for March 1990, which grew to Rs.82.45 lakh for the nine months ended December 1990. But more than 50 per cent of its turnover accrues from duty drawback and cash compensatory support. AEL's management is banking on these incentives as well as the growing demand for bulk drugs made in India, to increase its turnover.

Super Forgings and Steels

In existence as a private limited company since 1968, Super Forgings and Steels Ltd (SFSL) went public in 1981. Prior to the present issue, in March 1991, the company issued bonus shares in the ratio of 2:5 which has increased its equity capital to Rs.84 lakh with 40 per cent held by the public. After the present issue the promoter would be diluting its stake by 20 per cent to 40 per cent of the expanded equity at Rs.3.8 crore.The current market price of the share is Rs.37 (ex-rights).

For the year ended March 1990 sales stood at Rs.26.9 crore while net profit was Rs.44 lakh. For the six months ended September 1990 the corresponding figures were Rs.15.4 crore and Rs.34 lakh. SFSL's net profit margin has been on the rise from 1 per cent in 1989 to 2 per cent in 1990. According to B.N. Modi, chairman and managing director of SFSL, the industry's net profit margin is between 4 to 6 per cent. The company's management hopes to achieve the industry margins once its expansion project reaches fruition.

Super Forgings		
Issue opens	:	29 April 1991
Size of the issue	:	Rs.3 crore
To Indian public	:	Rs.1.65 crore
Instrument	:	Equity shares of Rs.10 each at a premium of Rs.5 per share
Promoter	:	Baij Nath Modi
Project	:	To manufacture forged alloy and tool steels
Cost of project	:	Rs.4.5 crore
Plant location	:	Howrah, West Bengal
Listing	:	Bombay and Calcutta

For March 1991, Modi predicts a turnover of Rs.32 crore and a net profit of Rs.65 lakh. "The full impact of our present project and its value addition will be reflected in the March 1993 results," he added. With its new project the company hopes to increase its capacity from 15,000 to 24,000 tpa.

Bharati Telecom

Bharati Telecom Ltd (BTL) has been manufacturing electronic push button telephone instruments and telephone answering machines since June 1987 under the brand name Beetel. The former is manufactured in technical collaboration with Siemens, AG, of Germany and the latter in collaboration with Takachiho of Japan. The company also has a collaboration with Lucky Goldstar of South Korea for cordless telephones.

On the financial front turnover has jumped from Rs.3.15 crore for the year ended June 1988 to Rs.16.76 crore for the year ended March 1990. For the six

THE NEW VOL

VOLTAS LIMITED
Appliances Business Group 19, J.N. Heredia Marg, Ballard Estate, Bombay 400 038. Phone: 2618131

Until now you could not get an air conditioner as advanced as this

For some, 'good' is not good enough. At Voltas, we felt it was high time someone designed an air conditioner for them. Using the latest innovations in technology to battle compromise. We've done a thorough job of it. Starting with a powerhouse compressor designed to convert every unit of electricity into maximum cooling. Aided by 'triple-ripple' cooling fins to maximise heat exchange. And the new extra-drive fan featuring 3-speed control. Every detail finely tuned, right down to the unique 'slip-out' fabric filter. The result is stunning. Cooling that is quick, constant, noiseless... and evenly distributed. The New Crystal Air Conditioner from Voltas. Now you don't have to make the best of what you have. Simply have the best.

Bharati Telecom	
Issue opens	: 29 April 1991
Size of the issue	: Rs.4.59 crore
To Indian public	: Rs.2.97 crore
Instrument	: Equity shares of Rs.10 each at a premium of Rs.15 per share
Promoter	: Mittal family of Ludhiana
Project	: To increase the installed capacity of push button telephones from 200,000 to 500,000 pcs per annum
Cost of project	: Rs.7.35 crore
Plant location	: Ludhiana, Punjab and Gurgaon, Haryana
Listing	: Bombay, Delhi, Calcutta, Ludhiana

months ended September 1990 sales were Rs.7.95 crore and net profit was Rs.81 lakh, giving an EPS of Rs.4.9. However the company has declared its maiden dividend of 18 per cent for March 1990. The present rights-cum-public issue will boost the company's equity capital to Rs.4.35 crore.

At 90 per cent capacity utilisation the company claims itself to be a market leader in the production of push button telephones.

The company wants to go into exports and has already tied up with Premier Telecom products of the US, to supply 6,00,000 telephones within three years.

Aircommand India

Aircommand, incorporated in 1986 has been promoted by G.K. Panthaki a technocrat with 14 years experience in the field of airconditioning. At present, the company is trading in window and split airconditioners.

For the period ended February 1991, Aircommand had gross assets worth Rs.5.23 lakh while the annualised turnover stood at Rs.52.58 lakh. Being a small trading company, their net profit margins have always been lower than 3 per cent.

Aircommand is now setting up a manufacturing unit. The systems manufactured by the company will have automatic adjustments to outside temperature, built-in protection systems against load fluctuations, programmable on/off switch facilities and multifunctional remote controls. Aircommand will manufacture the systems in technical collaboration with Mitsubishi Heavy Industries Ltd, Japan.

The company estimates that the market for packaged and split airconditioners is growing at a rate of 40 per cent per annum.

According to the managing director G.K. Panthaki, each 1.5 ton unit will be targeted at the government and the corporate sector and will be sold at Rs.39,000. By 1992, Aircommand plans to capitalise on the rise in the disposable income of the common man by selling a smaller unit (less than half ton) at Rs.12,000.

Aircommand India	
Issue opens	: 29 April 1991
Size of the issue	: Rs.2.25 crore
To Indian public	: Rs.2.06 crore
Instrument	: Equity shares of Rs.10 each for cash
Promoter	: G.K. Panthaki
Project	: To manufacture 14,400 numbers per annum packaged type split industrial airconditioning systems, (Heat Pumps Models) in the range of 1.5 to 5 tonne.
Cost of project	: Rs.6.50 crore
Plant location	: Panchmahal, Gujarat
Listing	: Bombay, Ahmedabad, Baroda, Delhi

The plant is expected to go on stream by August 1991. In the first year of operation Panthaki expects to achieve a sales turnover of Rs.25 crore and a gross profit of Rs.2.57 crore, at 25 per cent capacity utilisation. He expects to achieve 100 per cent capacity utilisation by the fourth year of operation.

The success of the company will depend on how the target market perceives the company's airconditioners in a crowded market.

Polar Marmo Agglomerates

The Polar group is best known as one of the top three fan brands. The group has also diversified into unrelated areas like forged industrial grade hand tools, coated papers, industrial sockets and latex products.

It is now diversifying into bonded agglomerated marble slabs and tiles under a new company styled Polar Marmo Agglomerates Ltd (PMAL). They have obtained a technical and financial collaboration with Breton Srl Italy. Commercial production will commence by end April 1991.

Located in Jaipur, the plant should have no dearth of raw materials (marble stone and granite). The company plans to produce 30 per cent white cement slabs, while 70 per cent will be resin bonded slabs — a better and more expensive quality. The company will sell it's products at a price of Rs.60 to Rs.80 per square foot through a dealer sales network. However, institutional sales will be handled through the marketing department. Polar has already received enquiries from companies in the Middle East and the West.

The managing director of the company Anil Agarwal maintains that during the first year, the company will work at 60 per cent capacity obtaining a post tax profit of Rs.80 lakh on a turnover of Rs.21 crore. During the second and third year, Agarwal expects to increase capacity utilisation to 80 per cent and 90 per cent,

Polar Marmo Agglomerates	
Issue opens	: 29 April 1991
Size of the issue	: Rs.2.22 crore
To Indian public	: Rs.1.95 crore
Instrument	: Equity shares of Rs.10 each for cash at par
Promoter	: Polar Group
Project	: To manufacture agglomerated marble slabs & tiles with a 5.10 million sq ft per annum capacity
Cost of project	: Rs.15.06 crore
Plant location	: Udaipur, Rajasthan
Listing	: Bombay, Calcutta, Delhi and Jaipur

earning a post tax profit of Rs.220 lakh and Rs.302 lakh respectively. The EPS will increase from Rs.1.47 in the first year to Rs.4.05 in the second year. This is when the company plans to pay its first dividend.

Currently there are other manufacturers of agglomerated marbles. Kedia Agglomerated Marbles the sole competitor is also finanaced by Breton Srl. of Italy. As against Kedia's capacity of 8.3 million sq. feet, Polar will have a capacity of 5.10 million sq. feet.

Tamilnadu Telecommunication

Tamilnadu Telecommunication Ltd (TTL) is a new joint sector company promoted by Tamilnadu Industrial Development Corporation Ltd (TIDCO) and Telecommunication Consultants India Ltd (TCIL). They will chip in 26 and 27 per cent respectively in TTL's equity.

The project is being set up in technical collaboration with the Essex Group Inc. (EGI) of the US. The company hopes to increase sales from Rs.17.92 crore in the first year to Rs.38.23 crore in the third year.

Tamilnadu Telecommunication		
Issue opens	:	9 May 1991
Size of the issue	:	Rs.5 crore
To Indian public	:	Rs.4.46 crore
Instrument	:	Equity shares of Rs.10 each
Promoter	:	Tamilnadu Industrial Development Corporation Limited (TIDCO) and Telecommunication Consultants India Limited (TCIL)
Project	:	Installed capacity to manufacture 625,000 core kilometres of PIJFT cables per annum or 500,000 kilometres per annum on 80 per cent capacity utilisation
Cost of project	:	Rs.28.65 crore
Plant location	:	Arrakkonam, Tamilnadu
Listing	:	Bombay, Madras, New Delhi

The plant is designed to manufacture cables ranging from 50 to 2,400 pairs of desired gauge from 0.9mm to 0.4mm. Commercial production is expected to commence by the third quarter of this year. The DoT, which is the largest buyer, accounting for almost 90 per cent of the production, is facing a resource crunch and poor growth of switching facilities. This may have an adverse effect on the growth of the company.

Ceeta Polymers

Three years after going public, the seven-year-old Ceeta Polymers is now diversifying. The company has successfully manufactured synthetic woven fabrics at its unit in Balasore, Orissa. The new diversification plan envisages the manufacture of 2,650 tonnes per annum (tpa) of crimped yarn and 250 tpa air texturised yarn.

Ceeta Polymers		
Issue opens	:	30 April 1991
Size of the issue	:	Rs.3.35 crore
To Indian public	:	Rs.2.7 crore
Instrument	:	Equity shares of Rs.10 each
Promoter	:	G.S. Poddar
Project	:	To manufacture crimp and air texturised yarns
Cost of project	:	Rs.11.40 crore
Plant location	:	Udaipur, Rajasthan
Listing	:	Bombay, Ahmedabad, Delhi, Calcutta, Jaipur, Bhubaneshwar

This plan is synergetic in more ways than one. First, the company was promoted by Rajasthan Petro Synthetics Ltd (RPSL), which has been manufacturing polypropylene multi filament yarn (PPMFY) for the past four years. Having established itself in the market, RSPL is today a cash rich company. During 1989-90, it recorded a turnover of Rs.16.96 crore and a pre-tax profit of Rs.1.72 crore. Cash accruals were Rs.5.48 crore. Says K.S. Poddar, managing director of Ceeta Polymers, "Our entire requirement of raw material will be supplied to us by RPSL plant." A MoU has been signed by the two companies under which RPSL will provide the necessary knowhow, assist in selection of the plant and impart training to the operating personnel. It will also assist in marketing the company's products.

The product, used mainly for making hosiery, rugs and socks is gaining popularity. PPMFY is lighter in weight, more resistant to acids, chemicals and stains and has higher thermal conductivity than wool. It is also anti-allergic. "Its demand is estimated at around 6,000 tpa, while the country's installed capacity will reach only 5,000 tpa," adds Poddar.

Titan Foods and Fashion

Titan Foods and Fashion (TFF) is engaged in the business of exports of frult pulp and other processed foods. Within a span of two years, TFF has exported around 4,000 tonnes of fruit pulp valued over Rs.5 crore.

Until now, TFF has been following a policy of getting fruit pulp manufactured from different units under contract basis. However it has now decided to set up its own manufacturing unit.

Titan Foods & Fashions		
Issue opens	:	29 April 1991
Size of the issue	:	Rs.2.93 crore
To Indian public	:	Rs.1.50 crore
Instrument	:	Equity shares of Rs. 10 each
Promoter	:	O.K. Shaheed
Project	:	To set up export-oriented leather and food processing units
Cost of project	:	Rs. 5.05 crore
Plant location	:	Kengeri village, Bangalore
Listing	:	Bombay and Bangalore

Varun Shipping

Varun Shipping Ltd (VSL), a medium-sized shipping company, is a member of the Dilip Khatau group and is the second company in the group to have come to the capital market in the last quarter.

Currently, VSL, besides expanding its fleet, is diversifying the range to enter the bulk cargo sector. The company's fleet presently consists of five tankers and four anchor handling tug and supply vessels, hence the vagaries of the Baltic Index of freight, an index reflecting freight rates for dry bulk cargo never affected the company. But with this new acquisition plan, it will come under the BIFEX ambit. The acquisition is to be completed over a period of two years.

Varun Shipping		
Issue opens	:	29 April 1991
Size of the issue	:	Rs.18.70 crore
To Indian public	:	Rs.9.35 crore
Instrument	:	12 per cent fully convertable debentures of Rs.200
Promoter	:	Dilip Khatau
Object of the issue	:	To expand its fleet
Cost of expansion	:	Rs.190 crore
Listing	:	Bombay, Ahmedabad, Calcutta and Delhi

MEETING THE FUTURE

Business India Exhibitions, a division of the Business India Group, publishers of Business India, inside outside and the India magazine has organised several exhibitions over the last few years. These exhibitions have been runaway successes and are highly regarded by the industries they serve, making Business India Exhibitions one of the leading organisers of exhibitions in the country today.

The Business India Group invites you to participate at the following events:

CALENDAR OF EVENTS

1991	EVENTS
2-4 August Bangalore	**INT.EX** an exhibition of building material and interior design products brought to you by inside outside.
23-25 August Madras	**INT.EX** an exhibition of building material and interior design products brought to you by inside outside.
20-22 September New Delhi	**INT.EX** plus **The Furniture & Furnishing Special** brought to you by inside outside.
3-5 October Bangalore	**Careers Fair** — Expanding horizons in professional careers brought to you by Business India.
24-26 October New Delhi	**Careers Fair** — Expanding horizons in professional careers brought to you by Business India.
21-24 November Bombay	**INT.EX** an exhibition of building material and interior design products brought to you by inside outside. This is the largest trade fair of its kind.
12-14 December Bombay	**Careers Fair** — Expanding horizons in professional careers brought to you by Business India.
Dates to be announced Bombay	**The Money Show** — A personal investment and financial services exhibition brought to you by Business India.
1992	
Dates to be announced Bombay	**The Motor Show** — an exhibition of automobiles, service equipments, spare parts and accessories for the automobile industry brought to you by Business India.
6-9 February Bombay	**The Furniture & Furnishing Special** The largest exhibition of furniture, furnishing materials and accessories brought to you by inside outside.

Note: EPS: This represents the earnings after tax for the full year divided by the number of shares outstanding. EPS half year: after-tax earnings per share for six months taking into account announced half yearly profits. PE: ratio of market price to after tax per share. Yield: dividend as a percentage of market price

TCIL joins hands with TIDCO to promote Tamilnadu Telecommunications Ltd.

– a jelly filled cable project destined for a bright future.

ABOUT THE PROMOTERS

TCIL

★ Provides wide ranging consultancy services and executes turnkey contracts in the field of telecommunications and export of telecom equipment.

★ Operates in about 28 countries in Middle East, Africa, Asia, U.S.A., Europe and Australia.

★ Has won awards for excellent export performance, for highest growth of net worth amongst Public Sector Companies and for Best Public Sector Company in consultancy and contracting.

★ Large user of jelly filled cables for their turnkey jobs.

TIDCO

★ Dynamic industrial promotion organisation of Tamilnadu.

★ Has set up 56 projects with a total capital outlay of over Rs. 1200 crores.

★ Successful joint sector promotions include SPIC, Sakthi Soyas, Tamilnadu Petroproducts, Tamilnadu Dadha Pharmaceuticals, Titan Watches, UB Petroproducts, Ushta-Te Biotech, TANFAC, Pentasia Chemicals, Vanavil Dyes and Chemicals, etc.

Harnessing the potential of the Telecommunication industry

The Telecommunication Industry is growing by leaps and bounds. Not just in India but the world over. In India, as in many countries worldwide most new distribution cables are being laid with Polyethylene Insulated Jelly Filled Telecom Cables. No wonder, the demand for these cables is growing at an enormous rate.

A versatile Jelly Filled Cable Project

Enter Tamilnadu Telecommunications Ltd. (TTL). A Rs.28.65 crore project jointly promoted by Telecommunications Consultants India Ltd. (TCIL) and Tamilnadu Industrial Development Corporation Ltd. (TIDCO) for the manufacture of 6.25 lakh conductor kilometres of Jelly Filled Cables per annum. Located at Arakkonam in Tamilnadu, this plant will be among the more versatile in the country — with cables ranging from 50 to 2400 pairs of solid as well as foam skin insulation.

Latest Technology from a world leader

TTL has entered into a technical collaboration with Essex Group Inc. (EGI) of U.S.A. EGI is a pioneer in the field and 'Essex' cables are accepted by the telephone administrations throughout the world. A Fortune 500 Company, EGI is one of the world's largest producers of electrical wire and cable products.

Destined for a bright future

TTL's project is in an advanced stage of implementation and trial runs are already on. With a dedicated professional management team, the Company looks forward to serving the growing markets in India and abroad.

Soon, you'll have an opportunity to participate in its bright future.

TAMILNADU TELECOMMUNICATIONS LIMITED

Registered Office: Gee Gee Complex, 3rd Floor, 42 Anna Salai, Madras-600 002.

Your connection to prosperity.

Single bright spark

While the market is slowly recovering, our winners are slowly dwindling. This time, we have a sole winner — V.V. Rao. Congratulations!

Scrips	Prices as on Monday 4 March 1991 (Rs.)	Prices as on Monday 8 April 1991 (Rs.)	Ranks
Atlas Copco	64.00	81.00	1
Hindustan Lever	162.50	162.50	5
Colgate Palmolive	310.00	313.75	4
Madras Cement	4150.00	4000.00	6
Sudarshan Chem	137.50	140.00	3
Coromandel Fert.	62.50	75.00	2

Given below is a new list of six scrips, and their closing prices on 19 April, 1991. Pick the share that you think will rise the most in percentage terms by 20 May,1991 and rank it number one. Then choose the one that you expect will rise the second most and rank it number two. Then number three, and so on till rank six. It's as simple as that!

So, in this Investor Contest, you don't have to predict the price of shares; you merely have to rank the performance (in percentage terms) on the basis of the prices you expect each to reach on 20 May, 1991. You don't have to tell us either the prices or even the percentage changes you expect — only fill in the ranks from one to six.

Please note that if you assign the same rank to two scrips, then the following one should be ranked the next consecutive number. For example, if you rank two shares at number three, the next will be number four (in which case, of course, your last rank will be five).

Rules:

1. There is no entry fee.

2. The price mentioned last in the official quotation list will be taken as correct for purposes of calculation. If the stock exchange remains closed on the stated last day, the closing price on the prior day will be used.

3. Entries must be on the printed form given below. Any other entries will be disqualified.

4. Only one entry will be permitted per form.

5. Envelopes sent in should be marked Investor Contest. All entries should be sent to: Investor Contest, **Business India**, Wadia Building, 17/19 Dalal Street, Bombay 400 001, by 5 pm, 16 May, 1991.

6. Business India's decision on the winning entries is final and binding, and no correspondence in this regard will be entertained.

7. The contest is open only to residents of India. No employee (or any direct relation of an employee) of the **Business India group of publications** is entitled to enter the contest.

8. The prize of Rs.5,000 will not be carried forward if there is no winner. In the event that there is more than one winner, the prize will be shared equally.

Name of scrip	Prices as on Friday 19 April, 1991 (Rs.)	Rank as on Monday 20 May, 1991 (please fill in number)

ONE OF THE MOST PROGRESSIVE GROWTH COMPANIES IN INDIA BELIEVES THAT ALL ITS ACTIVITIES SHOULD SUBSERVE THE BASIC NEEDS OF OUR PEOPLE

"At Century, we are the first to dmit that our manufacturing units are ot in what most people call glamour r high profile industries. On the ontrary, we are in the basic industries: ie kind that are at the heart of national conomic growth.

Our commitment to the ountry's economic priorities has ade us the largest manufacturer-xporter in India. This year alone, we ill earn about Rs. 140 crores in hard urrency. And we are progressively xpanding our cement production to elp bridge the widening emand-supply gap.

We believe that we should strike harmonious note between our hareholders' and workers' interests and he interest of the nation. Our workers re happy and proud to belong to us.

Often three generations of the same family have been working with the company. Our shareholders too have a reason to be happy. After all, the value of Century's shares over the last 40 years has appreciated over 340 times, considering issue of bonus and right shares. And in the last decade alone, Century has contributed over Rs. 660 crores to the national exchequer. And now, to create vitally needed productive assets for the country, we propose to move into the critical areas of power and petrochemicals.

RUN YOUR FINGERS OVER THIS PAGE. TO EXPERIENCE A CEAT RADIAL RIDE.

Ceat Formula - I Radials are a different breed of tyre. Different by design. And by construction.

The ply-cords, running perpendicular or radial to the circumference of the tyre, enhance flexibility and the capacity to absorb shock.

Result: a smoother ride.

The special textile belt ensures tread rigidity. As well as sustained tread contact with the road.

Result: a superb grip, along with better traction, surer braking, and steering stability.

All of which adds up to enhanced tyre life, fuel economy and higher puncture resistance.

And, of course, better car control.

That's the advantage of having advanced tyre technology from Yokohama Rubber Company, Japan.

Ceat Formula - I Radials. A whole new dimension to driving.

FORMULA-I RADIALS

FOR BETTER CAR CONTROL

HTA 1762

After the counsellors, the courtiers

ALL THESE YEARS
By Raj Thapar. A memoir
Seminar Publications, 1991
pp.485, Rs.175 (hard cover)

Raj Thapar's *All These Years* is crammed, like a pomegranate, with succulence. Each ruby distinct and yet held compact in the rind of controlled recollection. Forty-two years are re-opened in the book's pages. Is this a journal or diary? Or is it what those daunted by the word 'autobiography' choose to call a memoir?

The genre eludes classification. But so did Raj Thapar, child of the "affectionate rigidities of a middle class Punjabi family" and her exceptional husband, the blunt and brilliant Romesh Thapar. They remained unclassifiable throughout their companionship in marriage, Marxism and urbanity — all three in their truest forms. Bombay, where Romesh worked on the editorial staff of *The Times of India*, was the venue of the first Raj-Romesh home.

"Let yourself go"

"Romesh was obsessed with women's lib. 'You have been suppressed for nineteen years, so just let yourself go. Find what you want to do — and forget the traditional ideas of housework — everything is running. Just leave it as it is'."

Everything 'ran' for several decades at quite an incredible clip with the Thapars, not just their home. People, various human types, flowed into their flat. An extraordinary assortment of people were Romesh's guests and Raj's charge everyday at a dinner table that was always set 'for five'. Why five? The number is odd. The invisible sixth, it is clear, was ideology.

"I understood little of it but found myself moving naturally and effortlessly, almost sleepwalking, towards the communists, who were as much part of the social elite of Bombay at the time as anyone else."

The Bombay of the *boxwallah*, the Willingdon Sports Club and the Parsi baronetcy locked fingers with the Bombay party headquarters (PHQ) of the CPI at Sandhurst Road, of Mulk Raj Anand and of the very agreeably Marxist Mohan Kumaramangalam. Raj and Romesh belonged to both worlds and could do so without awkwardness because of Romesh's intellectual autonomy and Raj's pellucid humanity. Raj's portrait of Mohan Kumaramangalam, and of P.C. Joshi, the then CPI general secretary, of the making of the party's weekly organ *People's Age*, of Romesh's work in theatre, of the RIN mutiny, and of Raj's rage at the Congress line on this brave defiance of imperial power — all these form themselves into a word-seismograph. Raj felt that the Congress in the late forties was in a position to give the British that final heave, but chose not to.

"I don't know any more how right or wrong we were but, in the forties, it all seemed crystal clear — this is what had to be done and no one was doing it. And since Nehru was our face, as it were, blame fell on him for being chicken-hearted, feeble-minded, failing to rise to the situation. My anger rose to fever-pitch and I flung out the photograph of Nehru which adorned our living room — it had been given to Romesh at some time during his college days — replacing it with one of Palme Dutt."

"I understood little of it but found myself moving naturally and effortlessly, almost sleepwalking, towards the communists, who were as much part of the social elite of Bombay at the time as anyone else"

The cult figure

Rajni Palme Dutt emerges from these early pages of the book in human tones. He was a cult, a 'climate of opinion', a school of behaviour for communism internationally. "He came, this angular, somewhat stooping, excessively clumsy man, shuffling in his gait as if constantly side-stepping just in case he crushed something or hurt someone."

In the forties, it all seemed crystal clear — this is what had to be done and no one was doing it. And since Nehru was our face, as it were, blame fell on him for being chicken-hearted, feeble-minded, failing to rise to the situation

Raj describes his time in Bombay. RPD clearly did something to Raj that was to abide, but not in the expected sense of Marxist corroboration. Rather, the opposite. Raj and Romesh had misgivings about the CPI's attitude to Jinnah and the demand for Partition. Raj, perhaps even more than Romesh, had brought to her visceral rejection of the concept of two nations a sense of the shared legacies of the Punjab's Hindu, Sikh and Muslim segments.

She found an unexpected and heart-uplifting solidarity for her stand in RPD. Raj describes this with a quiet satisfaction, without a trace of self-congratulation. And in so doing she has established much more than a consensus of opinion between a dissenting Marxist and a pre-eminent Marxist theoretician. She has shown the credentials that honest dialogue ought to have enjoyed within the orthodox fret-work of communist policy in India and England. The sloughing-off that we have witnessed in recent times of Marxism's doctrinaire hide would make Raj's encounter with RPD something of a pace-setter.

Raj's supple vocabulary is in its element in the portions of the work that deal with their stay in England: "When I looked out at London the next morning, the whole of Dickens came pouring out of my

consciousness. Grey was the colour of the sky, of the buildings, of the mounds of bombed rubble which punctuated the streets, and grey was the colour of the clothes which people wore as they tore down the road."

Her description of RPD is a narrative of sheer delight. It is in fact the first rate observation of a person whose ideology was a conviction, never a baggage. And who could therefore see things as they are while knowing what they are meant to be. It is in the part of the work dealing with their stay in England that Raj's Marxism acquires clear delineation. S.A. Dange visited London at the time.

"Let them taste blood"

"We arranged to meet over tea at our flat... and I poured out my anguish at being thousands of miles away from home when home, which was to be Pakistan, was burning away, with the angry frustration of many life-times finding fulfilment in brutal distortions, mutilations, using revenge and religion to wash down the horrors. Dange looked at me impassively, with almost a gleam of secret delight. 'Don't worry, Raj' he said. 'Let our people taste blood, let them learn how to draw it. It will make the coming revolution easier.' I shuddered then, but I shudder much more now just thinking about it. No amount of arguing shook his conviction that this was the beginning of a shake-up in the Indian psyche. I did not realise then how closely bonded were means to ends."

Back in India, they found that even in the two-and-a-half years they were away, much had changed. The CPI was in the throes of IPS, which stood for Inner Party Struggle. Whenever you asked where someone was, you got the reply, 'Oh, he is ipsing.'

But ipsing is a personality trait of Indians across political parties! With groupings and counter-groupings, often no stronger than one person per group, characterising our endeavours, large and small, public and private. In the latter part of her book, Raj describes some of those endeavours over a period of three and a half decades. Three and a half decades which saw their family grow by a daughter and son, move to Delhi, to set up a new home and *Seminar*.

The kaleidoscope turned, over these

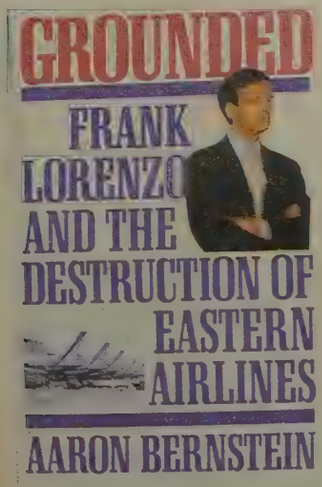
decades, to form some partners of exceptional power and promise, when socialism and *panchashila* as state policy seemed to spell a new millennium. But at its next turn the tinted segments became meaningless ciphers. The demise of Jawaharlal Nehru marked, for the Left, the setting of an indifferent sun. And yet for all its pallor it had, nonetheless, been a sun. The glinting icons of the sixties sank into the quicksands of the seventies.

Raj's portrayal of the last 15 years of her life is surcharged with what the word 'nostalgia' is meant to convey. She returns to those years, its hopes and disillusionments, affirmations and travesties, with pain

Nostalgia and deceit

Raj's portrayal of the last 15 years of her life is surcharged with what the word 'nostalgia' is meant to convey. She returns to those years, its hopes and disillusionments, affirmations and travesties, with pain. Envy, deceit, self-advancement, enter the portals of power using ideology — the tapestry of the human mind — as a doormat. What galls is that it does so in the name of the proletariat.

People, most of them still alive and ipsing in various political and official formations, figure in her narrative. But selective reproductions of these paragraphs can injure the spirit of the book which does not intend to show up any individual's deterioration in itself but as part of the evaporation of intellectual honesty from our times.



Salme and RPD, Beatrice and Sidney Webb, Dorothy Woodman and Kingsley Martin, Raj and Romesh Thapar. These are uncommon twosomes for whom the word 'spouse' would be singularly ill-fitting. That all these pairs mentioned belonged to the Left is a fortuitous accident. They belonged, more fundamentally, to the tradition that believes, with Adlai Stevenson, that: "If your cause is worthy it is not necessary to hope in order to undertake, nor is it necessary to succeed in order to persevere."

In an age of courtiers, counsellors make tragic figures. At a time when alliances thrive, disinterested companionship languishes. And when in the marbled corridors of power or dimly-lit PHQs, manipulation replaces action, something is in pain. *All These Years* may yet avail if readers — perhaps a generation from hence — see how bonded are means to ends, and see, too, the ugliness of hypocrisy.

How to heist a billion

GROUNDED: Frank Lorenzo and the Destruction of Eastern Airlines
By Aaron Bernstein
Simon and Schuster, 1990
Distributed by IBD, pp 256, Rs.375

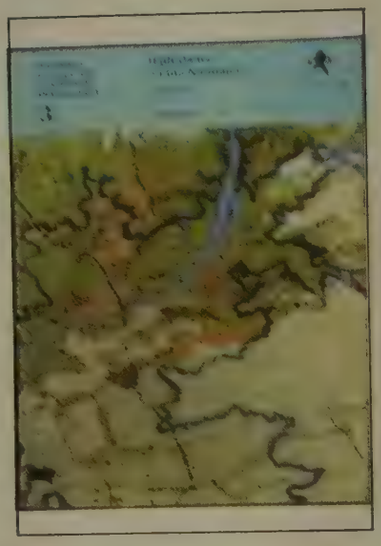
How to take the third largest airline in the US when it is going through bad times, prop it up with junk bonds and other financial shenanigans, and then run it into the ground... This is the story of Francisco Anthony Lorenzo, financial manipulator extraordinaire, who wanted to build himself not just a castle but an entire empire in the air... and failed. Because he saw the unions as his only stumbling block and went all out to smash them — little realising that people are the most important asset of a business, especially in a service industry.

The author, former labour editor at *Business Week*, has chronicled the process in detail. Rather too much detail, because he has to identify the *persona* almost every time he introduces them. Worse, the narration goes back and forth from February 1986, when Lorenzo took over Eastern to add it to his stable of airlines comprising Texas Air, Continental Airlines, People Express and Frontier Airlines, till April 1990 when, "little remains but ashes". This style may compare favourably with Eastern's own air shuttle operations — which too, Lorenzo put on the block — but it is not exactly easy reading.

Apart from the wholly un-English Americanisms — like *gotten* and *doable* — there are a number of outright mistakes too: testifying to the haste with which the book has been put together. The penultimate chapter on 'Lorenzo's Pyrrhic Victory' has the title of the last chapter — 'The Last Deal' — on a number of pages; the concluding chapter itself opens with "By December of 1990" when the author means 1989 — because he goes on about what followed, till the night of 18 April; and going back to 1986 (as Bernstein keeps doing) we have, "June 31, the day after Borman (Lorenzo's predecessor as president of Eastern) formally resigned"!

The book is, however, successful in bringing out the stark fact that one misdirected man in the commander's seat can make or break an airline. As Bernstein says in his introduction: "Frank Lorenzo exemplifies the failure of the traditional antagonistic methods of dealing with employees. He never understood that an airline's success depends on motivated workers providing quality services."

Lorenzo compounded this by resorting to a steady stripping of Eastern's assets — "burning up the furniture to heat the house" and "engaging in scorched-earth tactics", by which he "made off with net proceeds of up to $750 million in assets".



Reneging repeatedly

Lorenzo apparently never meant anything he promised during negotiations with employees, creditors, or prospective buyers: he reneged on deal after deal. When the unions went on strike on 4 March, 1989, it was the third time in his career that Lorenzo had grounded an airline in a bet-the-company attempt to beat organised labour. Though he won a major battle against the unions and put out of work a majority of the 42,000 people employed at Eastern when he bought it, he ultimately lost the airline to a man he had fired as president of Continental, Martin R. Shugrue Jr., whom the judge hearing Eastern's bankruptcy proceedings appointed as trustee.

"Lorenzo killed an airline," said another prospective buyer. "If he did it just to kill a union, that's unthinkable." At Eastern, says the author, Lorenzo's judgement became clouded by his "fanatical hatred" of labour unions. Would the airline's fate have been any different if Lorenzo had taken a softer approach? If he had come in making the kind of proposals that potential saviours in its dying days did, Bernstein concludes, a strong and viable airline might still have been flying.

Damning facts and stats

HIGH DAMS ON THE NARMADA: A HOLISTIC ANALYSIS OF THE RIVER VALLEY PROJECTS
By Vijay Paranjpye
INTACH, New Delhi, 1990, pp 320 (price not mentioned)

In the controversy over big dams, it is the proponents of mega-projects who have hitherto seemed to command superior knowledge and therefore greater power. But as the movement against big dams and other mega-projects evolves and attains maturity, this balance of advantage is about to undergo a decisive change.

The book under review is a welcome step in this direction. The author, who teaches economics at a Pune college, has spent many years analysing our experience with large dams from a holistic perspective. In the present volume, he turns to an examination of the controversial Narmada Sagar and Sardar Sarovar projects (NSP and SSP) on the Narmada. (An earlier publication by him, also in the INTACH series, presented a similar analysis of the Tehri dam.)

The case against the Narmada Valley Development Project is multidimensional and complex, and anti-dam activists have not always managed to present it effectively. Consequently, the general public has often failed to understand what the opposition is all about. The prevailing mindset takes it as axiomatic that big dams lead to progress and prosperity and challenging this fixed mental state is by no means easy. This is the challenge the author addresses in this book.

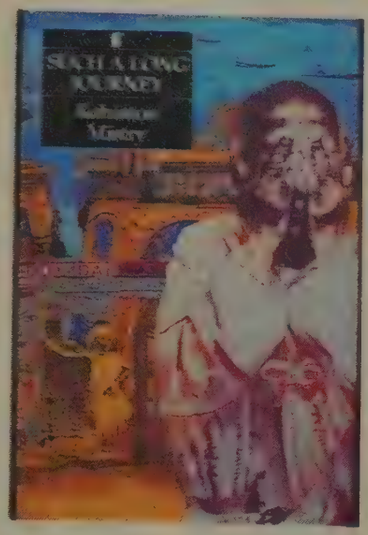
Considerable research has gone in

unearthing and bringing together all the relevant information — economic, environmental, social, developmental — in an attempt to substantiate the view that the project is an unmitigated disaster. Not everyone will be instantly converted to the author's viewpoint, but anyone with an open mind will entertain serious doubts about the Narmada project.

The author presents convincing arguments to show that the Narmada project is not only destructive in environmental and human terms but is disastrous even from a purely financial and developmental point of view. And he shows that far from being "Gujarat's life-line" and its "only hope", as the official view misleadingly claims, the SSP will leave unsolved the acute water crisis in a majority of Gujarat's chronically drought prone and arid areas. By the time the author is through, the project begins to look more and more like one of emperor Tughlak's grandiose yet foolhardy schemes.

The book shows that what is ignored and left out of account in the prevailing approach — our so-called "planned" approach to development — turns out in the end to be of decisive importance. The projects in question appear attractive only because of this selective vision — sometimes inadvertent and at other times deliberate — which takes too narrow a view of the totality of the project's consequences, and which has a built-in tendency to ignore or underplay the costs and exaggerate the benefits.

Grey areas



One only wishes that greater care had been taken in the presentation of the arguments and in editing the book. Small but important steps in the reasoning often remain obscure, either because they are glossed over or because the data or references needed to back up the author's assertions are either not provided or downright shoddy. Thus an opportunity to build a cast-iron case has, to some extent, been lost; and for this the absence of professional editing must bear a major part of the responsibility.

While these flaws detract somewhat from the overall impact of the book, this is nevertheless the most comprehensive attempt in print to present the case against the Narmada projects.

From darkness to light

SUCH A LONG JOURNEY
By Rohinton Mistry
Faber & Faber 1991
Distributed by Rupa & Co. pp.340, Rs.327

The past is unreachable. It can never be redeemed. Nor can any of its wrongs be righted: Almost everybody learns to accept this. Perhaps writers write because they don't. In earlier days, they dealt with this dilemma by writing the past out of their lives, today most choose to retreat into a catatonic trance.

• This is not to suggest that modern writing suffers from a lack of craft; it doesn't. What ails it rather, is the absence of substance: the razor, stropped to a cutting edge, more often than not, ends up sliding eerily over a face in a mirror. But Rohinton Mistry marries theme and technique: and the result is a brilliant first novel.

Attention to detail

Such A Long Journey sifts through the detritus of memory. And it is scrupulous in its attention to detail. It notes, for example, the fact that milk was not freely available and people had to often make do with watered-down varieties sold by men with dirty hands and bare feet. It records the emergence of the Shiv Sena. It describes hotels with signs that forbade discussions of God and politics. It talks of 'Christian girls' in miniskirts, their succulent thighs displayed, because those were times when the 'other' girls didn't. And it doesn't miss mentioning the fact that slum mothers searched for newspapers with pictures of Nixon and Kissinger for their children to 'shit' on, during the days of the Bangladesh war.

More importantly, the book chronicles many journeys. Its protagonist Gustad Noble painfully progresses from bewildered rage to an unsteady and sorrowful, but real, state of grace; and India, the country he happens to inhabit, moves from defeat in war to triumph. These are but two such journeys. There are many others. Some deal with movements in physical space; others with situations that seem static, yet change, because everything must, with the passage of time. And in others, men and women, coerced by forces they do not fully comprehend, travel deep into the wilds of their own souls.

These myriad journeys are not imbued with the gloss of a mythic, extra-real dimension. They brim with reality, and it's this hard-headed, hard-nosed grasp of the real that invests the narrative with power and vigour. Spare, taut metaphors weld the disparate journeys together into a seamless, often frightening, narrative coherence. And since the metaphors themselves are always tangible, at times even literal, language and theme mesh together like bone and muscle.

An instance

One passage which appears early on in the book illustrates this point: "But everyone knew the war with China froze Jawaharlal Nehru's heart, then broke it... His one overwhelming obsession now was, how to ensure that his darling daughter Indira... would become prime minister after him. This monomaniacal fixation occupied his days and nights which the treachery of Chou En-Lai had blighted for ever, darkened permanently, unlike the blacked-out cities, which returned to light after the conflict ended and people uncovered their doors and windows....

Gustad, however, left his blackout paper undisturbed. He said it helped the children to sleep better. Dilnavaz thought the idea was ridiculous, but she did not argue because his father had passed away recently in the nursing home. Perhaps, she thought, he found the darkness soothing after death's recent visitation."

At the end of the book, many more deaths later, Gustad tears the paper off his windows; and completes his lurching journey from darkness to light. The book's final achievement lies in the one point it trenchantly makes: no man can return to his past, nor can he escape his future.

■ NAVAL B. GHIARA

Lure of the lucre

Working overseas is like travelling by ship. If you get shipwrecked you have to cling to the wreckage till you are washed ashore. As against working back home which is like travelling by road. If you suffer a breakdown, you can always hitch a ride and reach your destination. Senior executives tempted by jobs abroad often do not realise this, as one discovers while conducting interviews for senior positions in Nigeria.

What strikes one as odd is the complete lack of serious thought one usually expects from a senior and successful manager while trying to reach an important career decision. The employers sent their representative to meet the shortlisted candidate and disabuse him of illusions.

Given the wide chasm in compensation levels between home and expatriate jobs, it is easy to understand the temptation behind an overseas offer. However, allowing this to submerge all other considerations could be a serious mistake. There are enough 'disaster' stories, of executives who aborted promising careers at home and went overseas, to warrant a hard look at the painful trade-offs involved. The decision to accept an expatriate job must come after careful and clear thinking.

Choose with care

It is vital to recognise one's objectives. Ask yourself: what exactly does one want out of an expatriate job? To what extent does the job opportunity satisfy each of these objectives? Guard against inevitable 'escalation' in goals such as net savings, once one gets accustomed to a different life style.

Picking good employers is as important as picking a good job while considering foreign assignments. Indian expatriates are usually employed by NRI groups located in the Far East Asia and East/West Africa, non-Indian family owned businesses, mainly Arab groups, in the Middle East, multinational companies/aid agencies, and Indian joint ventures. The first two groups are usually unknown quantities and need to be checked thoroughly. Applying through reputed professional firms cuts down the risk to some extent as they would usually run their own check before accepting an assignment. The track record of the employers in selecting and retaining senior professionals provides a better clue than the appointment contract does.

The other two groups of employers involve much less risk. However, remember that Indian joint venture companies seldom pay according to international norms and multinational companies' assignments are usually for short periods and in less favoured locations.

The trade-offs in choice of job can take the heaviest toll. The opportunities to upgrade oneself professionally must be carefully examined; otherwise those looking for 'challenges' may be in for a disappointment.

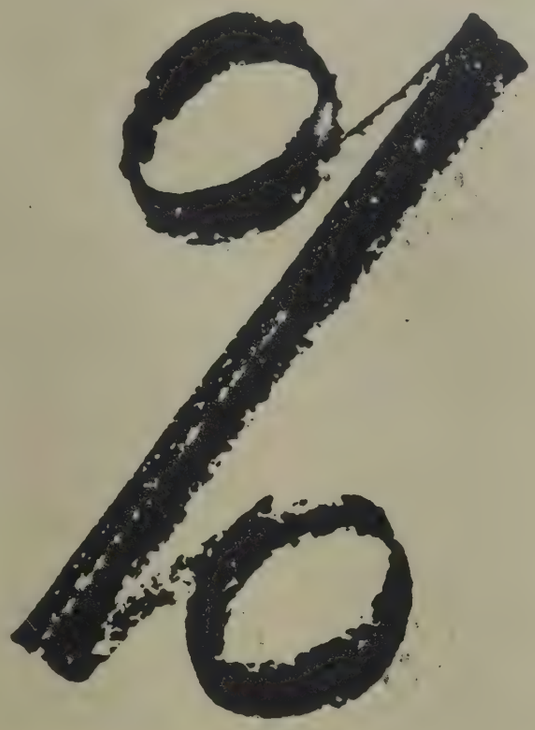
The employer expectations are quite different in terms of job performance. They want the minimum fuss (no management committees), less paper (no fancy reports) and direct action. The doers usually fit the bill better than the conceptual types.

Most aspirants fail to gauge the uncertainty over tenure and are easily persuaded to believe that they will somehow manage to hold on to an expat job once they get a foot through the door. The period of contract is a poor guide, for it depends on visa rules. Elementary precautions such as obtaining full information on granting and renewing of employment visas in the host country are certainly advisable.

Visas are usually granted for employment with a specific company and are not transferable, thus severely restricting the prospects of any job change. Expat jobs can evaporate for unforeseen reasons as well. Political turmoil, failure of business, foreclosure, takeover and restructuring, among other things, can pose a direct threat. The recent invasion of Kuwait is proof enough that these things happen.

Since the well-being of the family is the driving stimulus for seeking an expatriate job, family issues should never get relegated to the background. Education of children, parental and other social obligations back home and adjustment to a new environment are key issues.

Quality of life



The job location is critical to social and family life. From comparing the quality of life in a new location with what one was accustomed to in India, one soon shifts to comparing his lifestyle with that of other expatriates in the same location. So he must take care to include in the compensation package the perks like housing in a proper area, tuition for children in international schools etc so as to maintain acceptable standards.

What happens when you return? Thoughts of repatriation are bound to be vague while deciding on an expatriate assignment. Most executives talk about starting a business on their return without realising the scale of investment and the degree of competition involved. Taking up a job would be a more realistic option. But many find the positions and salaries offered distressingly below expectations, particularly when they see their colleagues, whom they had left behind in junior posts, occupying top slots. The family also will have to go through a painful resettlement ordeal and the economic security acquired through the overseas stint is of little comfort.

So, those who are offered an assignment abroad would do well to check on the employer, environment and service conditions before deciding to accept the offer.

We're happy to announce some record-breaking figures to go with this symbol

Indian Bank Mutual Fund is proud to declare the highest returns that any Mutual Fund has offered in its first year of operation. **17%** p.a. under the Ind Ratna Growth Scheme. And **14.25%** p.a. income distribution under the Swarna Pushpa Scheme. Copies of Balance Sheets are being despatched to the investors.

The high returns add to Indian Bank Mutual Fund's achievements of enrolling around 2 lakh investors, raising over Rs. 300 crores, launching four successful schemes in a year and being the only Mutual Fund in the country to have a scheme under Sec-88A of the Income Tax Act 1961.

The overwhelming public response and the excellent results we've achieved in our first year are all the encouragement we need for Ind Sagar and Ind Moti – two schemes we'll be launching soon.

Senior executive positions

A compilation of executive jobs advertised in **Business India** and other major publications between 8 and 21 April 1991.

THE FOUR BEST JOBS

- PRESIDENT * Madras * SAL Best in business * *Age/Qlfn* Around 50 years * MBA * *Reqd* 10-15 years experience in national/international airline * *Cont* The Executive Chairman, Phoenix Airlines, 27 Anandha Road, Alwarpet, Madras 600018 (ToI - 15.4)
- FINANCIAL ADVISOR * Delhi * SAL Rs.3 lakh + flat + car * *Age/Qlfn* 45-50 years * Chartered Accountant or MBA-finance * *Reqd* Experience in a large/reputed business group * *Cont* TFA/BPA/3072, B.P. Agrawal, Chairman, ABC Consultants Private Ltd, 43/3 Hazra Road, Calcutta 700019 (ToI - 8.4)
- PRESIDENT (International Trading Company) * Delhi * SAL Rs.3 lakh + flat + car * *Age/Qlfn* 40-45 years * NS * *Reqd* Export professional with knowledge of international markets. Should have at least 15 years relevent experience, including 5 years as head of merchant export operation * *Cont* PIT/BPA/3073, B.P. Agrawal, Chairman, ABC Consultants Pvt Ltd, 43/3 Hazra Road, Calcutta 700019 (ToI - 8.4)
- GENERAL MANAGER (Central Planning) * Bombay * SAL Excellent * *Age/Qlfn* 40-45 years * Chemical technologist * *Reqd* 15 years multifunctional experience, including 5 years in planning * *Cont* MS/5671, A.F. Ferguson Associates, P.B. No.1786, Bombay 400001 (ToI - 8.4)

NATIONAL

- GENERAL MANAGER (Marketing) * NS * SAL Rs.1.5 lakh plus perks * *Age/Qlfn* NS * Graduate * *Reqd* Minimum 5 years experience as a senior manager * *Cont* P B No.9906, Colaba Post Office, Bombay 400005 (ToI - 15.4)
- GENERAL MANAGER (Works) * NS * SAL Attractive * *Age/Qlfn* 42-47 years * PG in pharmacy/engineering * *Reqd* 12-15 years experience in shopfloor management of pharmaceutical operations including 5 years at senior level * *Cont* MD, Torrent Pharmaceuticals Ltd, Torrent House, Near Dinesh Hall, Ashram Road, Ahmedabad 380009 (ToI - 15.4)
- CHIEF EXECUTIVE * Metropolitan city * SAL NS * *Age/Qlfn* Around 45 years * Engineer * *Reqd* 20 years experience including 5 years at top management level * *Cont* Ms. Pratibha Sheth, Executive Director, Shilputsi Consultants, P.B No.9386, Bombay 400026 (ToI - 15.4)

WEST

- GENERAL MANAGER (Supermarket) * Bombay * SAL Attractive * *Age/Qlfn* NS * NS * *Reqd* Preferably marketing background in food industry * *Cont* GM/105, Mahajan & Aibara, 1 Chawla House, 62 Wodehouse Road, Colaba, Bombay 400005 (ToI - 8.4)
- CHIEF EXECUTIVE OFFICER * Bombay * SAL Attractive * *Age/Qlfn* NS * Professional * *Reqd* NS * *Cont* Box J717-S, Times of India, Bombay 400001 (ToI - 8.4)

SOUTH

- GENERAL MANAGER (Works) * South India * SAL Attractive * *Age/Qlfn* 40-45 years * First class mechanical engineer, with PG in production management * *Reqd* Experience in senior positions including responsibility for manufacturing, production planning and administration * *Cont* Box J 844-S, Times of India, Bombay 400001 (ToI - 20.4)

EAST

- GENERAL MANAGER * West Bengal * SAL NS * *Age/Qlfn* 40-45 years * NS * *Reqd* Should have strong techno-commercial orientation with a special flair for man management * *Cont* GMT/CAL/4100, T. Sengupta, General Manager, ABC Consultants Pvt Ltd, 6A Middleton St, Calcutta 700071 (S - 14.4)
- GENERAL MANAGER (Marketing) * Calcutta * SAL Very good * *Age/Qlfn* 35-40 years * Metallurgical or mechanical engineer * *Reqd* Proven record in any heavy industry with 10-12 years experience * *Cont* Noble House, Management and Placement Consultants, Post Box 3531, New Delhi (ToI - 15.4)
- HEAD OF FINANCE * Ranchi * SAL NS * *Age/Qlfn* 27-32 years * CA/Engineer or MBAs * *Reqd* Should have relevant experience of 6-9 years with specialisation in finance * *Cont* Deputy General Manager (Corporate Development), SRF Ltd, Express Building, 9-10 Bahadur Shah, Zafar Marg, New Delhi 110002 (S - 12.4)

OVERSEAS

- FINANCIAL CONTROLLER * Muscat * SAL Rs.30,000 pm tax free + perks * *Age/Qlfn* 35-45 years * Chartered Accountant, preferably graduate in costing, law or MBA * *Reqd* 10-15 years experience in an industrial organisation * *Cont* Ramesh P. Bhatia & Co, A-5 Everest, Tardeo, Bombay 400034 (ToI - 14.4)
- GENERAL MANAGER * Ghana * SAL Rs.2.5 lakh pa savings + perks * *Age/Qlfn* 35-40 years * Graduates in engineering or paper/plastic technology * *Reqd* General management experience in paper conversion/packaging * *Cont* CMP/F-4183, Datamatics Staffing Services, P.B. No.106, GPO, Bombay 400001 (ToI - 14.4)
- GROUP GENERAL MANAGER * Kenya * SAL Attractive * *Age/Qlfn* 35-45 years * Preferably engineer-MBA * *Reqd* Adequate general management experience * *Cont* CMP/F-4193, Datamatics Staffing Services, P.B. No.106, GPO, Bombay 400001 (ToI - 21.4)
- GENERAL MANAGER * Muscat * SAL Rs.30,000 pm + perks * *Age/Qlfn* Around 40-45 years * Engineer/MBA * *Reqd* Experience of at least 10-15 years in soft-drinks industry. Person heading profit centre preferred * *Cont* Ramesh P.Bhatia & Co, A-5 Everest, Tardeo, Bombay 400034 (ToI - 21.4)
- GENERAL MANAGER (Printing/Publishing) * Muscat * SAL Rs.30,000 pm + perks * *Age/Qlfn* Around 40 years * Preferably a degree in printing technology with MBA * *Reqd* 10-15 years senior management experience preferably in a printing press * *Cont* Ramesh P. Bhatia & Co, A-5, Everest, Tardeo, Bombay 400034 (ToI - 21.4)

PRESIDENT

CONSUMER DURABLES

Our clients, who are one of India's leading groups in the area of consumer durables and related products need an outstanding professional to head the operations of one of their companies.

The job carries total responsibility for setting up new projects and running the existing ones. The position reports to the **Managing Director.**

Aspirants should be mechanical/electrical engineers, in their early/mid-40s, preferably having qualifications in business management from a reputed institute. They should possess approximately 20 years of experience of which at least 8/10 years should have been as the head of mass manufacturing units in the automobile, consumer durable or engineering sector.

The successful candidate will be one with a proven track record of managing large manufacturing units with strict adherance to cost and quality standards. He should be able to lead a group of experienced senior managers and fuse them into an effective team. Exposure to dealings with international collaborators will be a distinct advantage. Knowledge of the latest mass manufacturing techniques and familiarity with sources/availability of machinery for the same is a must.

The compensation is liberal and negotiable to match the capabilities and aspirations of the successful candidate.

All applications will be treated in the strictest confidence and no reference will be made to our clients without the prior knowledge of the applicant.

Please send your detailed resume mentioning 2 references to :

DIRECTOR – FINANCE

Bombay **Attractive remuneration**

Automobile Products of India Ltd., a growth oriented automobile company which is part of a large group and has a collaboration with a reputed Japanese company requires a Director – Finance to be based at its head office at Bombay.

The Director – Finance will be overall in charge of all financial matters including the long term and short term financial planning and management, budgetary control and management information system, tax planning and financial controls. He will liaise with senior personnel in the financial institutions and banks.

Candidates should be chartered accountants with at least 20 – 22 years experience in finance and accounting out of which at least 10 years should be in senior financial positions in reputed manufacturing organisations.

The company will offer a very attractive compensation package in accordance and subject to the provisions of the Companies Act, 1956.

Please apply in strict confidence within 10 days to:

A. F. Ferguson Associates
Post Box No. 1786
Bombay 400 001

giving full particulars of age, qualifications, experience and salaries drawn. All applications and envelopes should be marked "Ref: MS/5661".

Shilputsi

SHILPUTSI CONSULTANTS have been retained to recruit a

CHIEF EXECUTIVE

Our clients are a well diversified, professionally managed industrial group. The position will head the largest and most profitable business of the group. The business has a well diversified portfolio and includes the manufacturing and marketing of industrial products which are market leaders in their respective segments. With a current turnover of around Rs. 175 crores, the business is poised for further expansion and growth. The position is based in a metropolitan city.

The job: The Chief Executive will be incharge of total operations including manufacturing, marketing, finance, personnel & R&D. He will be responsible for preparing and implementing business plans and strategy and will assume full responsibility for profit generation. We are looking for an outstanding professional who will motivate the team to take the business to greater heights of achievement.

Qualifications: The ideal candidate will be an Engineer with about 20 years of experience out of which atleast 5 years should be at top management level. Experience in managing large plants will be an advantage. He should have had a successful track record and should be capable of leading a team of senior colleagues.

Age: Around 45 years.
